Nomogram for interpreting diagnostic test results (Likelihood ratio)

In this nomogram, a straight line drawn from a patient's pre-test probability of disease (which is estimated from experience, local data or published literature) through the LR for the test result that may be used, will point to the post-test probability of disease.

This interactive calculator can determine diagnostic test characteristics (sensitivity, specificity, likelihood ratios) and/or determine the post-test probability of disease given the pre-test probability and test characteristics. Given sample sizes, confidence intervals are also computed.
