

## Observation Assessment

Date:

Librarian:

Faculty Member:

Course:

---

This means of assessing the achievement of learning outcomes is the deliberate act of looking at individual actions or behavior to obtain assessment information. Observations should always be linked directly to the identified learning outcomes for each instructional activity, to ensure that one is measuring what was taught.

Learning outcomes for the session:

- 1.
- 2.
- 3.
- 4.
- 5.

1. What questions did students ask during the session?

2. Please reflect on students' performance searching the online databases you demonstrated in class. Document the ways they included or failed to include concepts stressed in class (Boolean operators, truncation, keywords vs. subjects, etc.).
