Evidence for Supported Employment (IPS)

Updated 7/08
Summary: Randomized Controlled Trials of Supported Employment (IPS)

• In 11 of 11 studies, SE had significantly better competitive employment outcomes than controls

• Mean across studies of consumers working competitively at some time:
  – 61% for supported employment
  – 23% for controls

Bond, 2008
Primary Evidence for Supported Employment

- 11 completed randomized controlled trials of high fidelity IPS
- 6 studies of day treatment programs converted to IPS programs
- 7 correlational studies of fidelity and competitive employment (studies to determine if better fidelity resulted in better outcomes)
Competitive Employment Rates in 11 Randomized Controlled Trials of Individual Placement and Support
