

<b>Receptor-Mediated Endocytosis</b>	<b>Transcytosis</b>	<b>Pinocytosis</b>	<b>Phagocytosis</b>
all eukaryotic cells	polarized cells only	<<<	only professional phagocytes
specific receptors	<<<	no receptors: non-specific	yes and no
ligands $\leq$ 250 nm	<<<	<<<	ligands $\geq$ 250 nm
constitutive	<<<	<<<	triggered by ligand
clathrin coated pits	<<<	<<<	actin
transport vesicles of uniform size	<<<	<<<	vesicle size varies
lysosomal degradation	ligand utilized	<<<	<<<

<<< = same as RME
