

Table of Contents

Executive Summary	i
List of figures, tables, equations, and appendices	viii
Introduction	1
Chapter 1. Patterns of host suitability among pine species	3
Introduction	3
Methods	3
Results and discussion	3
Chapter 2. Growth and anti-herbivore defenses of red pine at Itasca State Park	7
Introduction	7
Methods	9
Results and discussion	10
Age and growth of mature red pines	10
Variation in growth and defenses among stands of old growth red pine	13
Constitutive defenses of mature red pines vs. young red pines	20
Comparison of red pine defenses in Itasca vs. sites more suitable for tree growth	21
Chapter 3. Bark beetle communities at Itasca State Park	25
Introduction	25
Methods	25
Results and discussion	27
Conclusions	31
Chapter 4. Cold tolerance and winter mortality of bark beetles at Itasca State Park	33
Introduction	33
Methods	33
Cold tolerance	33
Overwintering habitats	34
Microclimate of overwintering habitats	34
Results and discussion	34
Cold tolerance	34
Overwintering habitats	35
Microclimate of overwintering habitats	36
Conclusions	40
Chapter 5. Do bark beetles kill trees at Itasca State Park?	41
Introduction	41
Methods	41
Results and discussion	42
Symptoms of infested trees	42
Fate of infested trees	46
Previous growth vigor of infested trees	46
Conclusions	47
Chapter 6. Interactions between fire, bark beetles, and tree mortality	51
Introduction	51
Methods	52
Response of Itasca bark beetles to fire	52
Effects of prescribed fire on tree resin flow	52
Effects of experimental scorching on resin flow and beetles attacks	52
Results and discussion	53
Abundance of <i>Ips</i> in burned forests	53
Effects of prescribed fire on resin flow	54
Effects of experimental scorching on resin flow and beetle attacks	54
Feedbacks between fire, bark beetles, and tree mortality	54
Management recommendations to minimize tree mortality from prescribed fires	60
Appendices	63
