Chris Rees, a Geisel MD/PhD candidate, is attempting to identify Nathan Smith Society students who might be interested in some very interesting research projects in Thayer in the summer of 2015. Note from Chris and his contact info below.

--Lee

Hi NSS Members,

One of the biomedical engineering labs at the Thayer School of Engineering here at Dartmouth is looking for undergraduate students with an interest in infectious diseases to work on one of several projects during the summer of 2015. We have positions available for motivated students who would work with a current PhD or MD-PhD candidate on projects related to the development of novel diagnostic techniques for the detection of common human bacterial pathogens, such as Staphyloccocus, Streptococcus, and Klebsiella, as well as the malaria parasite. If this might be of interest to you, please respond to the e-mail address below.

Best Wishes,
Chris Rees
MD-PhD candidate
