
Logging in to COEUS®

Because of a recent Oracle upgrade, Dartmouth has made some changes to the COEUS® log-in procedure. Previously, users logged in using the Kerberos authenticator. With the new release, this will no longer be necessary. The new release is scheduled to take place on **November 1, 2007** at **5pm** – there will be a brief (5-7 minutes) outage at that time.

The log-in window:

A screenshot of the Coeus login window. The window title is "Coeus". The main text reads "Enter a User ID and Password to log onto Coeus". There are two input fields: "User Name" with the text "Jackson P. Username" and "Password" with asterisks. There are "OK" and "Cancel" buttons to the right of each field. A small icon is visible on the left side of the window.

Users may now simply enter their sign-on name and password as it normally appears in the DND registry. The log-on is case sensitive, so note the punctuation, placement of middle initial, etc.

Another security caveat to the sign-on procedure is that, unlike Kerberos, COEUS® will not retain your sign-on name after you exit – it will be necessary to fully enter your entire sign-on name and password each time.

A full Flash animation describing the procedure may be found here:

<http://www.dartmouth.edu/~osp/resources/coeus/LoginChange102407.swf>

(NOTE: You will need Flash animation to view the above tutorial, and it is best viewed with your browser window fully maximized.)

As always, you may email the COEUS® Support Team at coeus-help@mac if there are any questions.
