Education Minor

The Education minor is designed to help students to build and use an integrated, multilevel understanding of learning and development based on critical analysis of theory, policy, and empirical data from education, neuroscience, and psychology. The courses explore how children grow, acquire language, think, reason, learn a variety of skills and knowledge; how they conceptualize their social, emotional, and moral worlds; and build an understanding of the purpose of education, goals, means and resolutions of critical questions about education, and methods for measuring success or failure.

The minor is composed of six courses: the introductory course EDUC001 and five other Education courses excluding 41-48. It is strongly recommended that students take EDUC001 first. Any cross-listed courses used for the Education minor requires sign-up in the Education enrollment. Updated course information for the year may be found on the department website at:
