webADI uploads require the following setting in Internet Explorer (IE), even if you don’t usually use IE as your browser.

Open Internet Explorer version you have on your computer:

Under Tools, choose “Internet Options”
On the Security tab, choose Trusted Sites, and click “Custom Level”;

NOTE: If this doesn’t work after you perform the steps under “Trusted sites”, you may also need to repeat the following steps with the “Internet” and “Local intranet” sites.
You will see a list of settings, in alphabetical order by the leftmost title.
Scroll down to Scripting and Enable all items in the list. Your list may not match this one exactly; enable all items in this Scripting section.
When all Scripting items have been Enabled, click OK.
Click Yes to confirm that you want to change the settings.
Close your Internet Explorer browser.
Re-open your journal entry and upload.

NOTE: If this doesn’t work after you perform the steps under “Trusted sites”, you may also need to repeat the above steps with the “Internet” and “Local intranet” sites.
