

A Simple Book Repair Manual: Tipping in a Page

See video of repair: dartgo.org/sbr-15

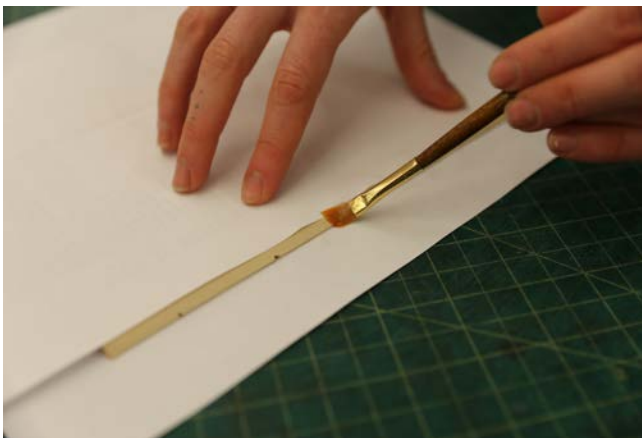

If a page has fallen out or is being replaced, you can reattach it by tipping it in. In the case of a missing page you may have to find a replacement through inter-library loan or Google Books. If that happens print the replacement page on acid-free alkaline buffered paper prior to tipping in.

Suggested Equipment & Supplies

- Adhesive (PVA or wheat paste)
- Small brush
- Bone folder
- Scrap paper
- Light weight

Procedure:

1. Trim replacement page to size of text block if necessary. Place the page to be tipped in between two sheets of waste paper with approximately 1/8 inch of the inner margin showing. Run a thin line of adhesive along this exposed area. Remove the waste paper.

2. Place the glued edge into the fold of the inner margin of the book where it belongs.

3. Shut the book and allow to dry for an hour.
