ABOUT THIS CATALOG

Volume LXXXV, August 2025

To support the launch of the new School of Arts and Sciences on July 1, several roles and titles mentioned in this catalog will be amended in the near future. For example, any reference to the 'Dean of the College' shall be amended to read 'Dean of the School of Arts and Sciences' or their designee.

This catalog has been prepared for the benefit of students, faculty, and officers of Dartmouth College, and of others wishing to know more about the College's programs and activities. The information contained herein is accurate as of the date of publication (August 2025), and the officers of the College know of no significant changes to be made in the near future, other than those mentioned above. However, Dartmouth College reserves the right to make from time to time such changes in its operations, programs, and activities, including cancellation of classes and campus closure, as the Trustees, faculty, and officers consider appropriate and in the best interests of the Dartmouth community.

Dartmouth College is committed to the principle of equal opportunity for all its students, faculty, employees, and applicants for admission and employment. For that reason, Dartmouth does not discriminate on the basis of race, color, religion, sex, age, sexual orientation, gender identity or expression, national origin, disability, or military or veteran status in its programs, organizations, and conditions of employment and admission.

Any person having inquiries or complaints concerning Dartmouth's compliance with this policy or with federal regulations relating to nondiscrimination is directed to contact the Office of Institutional Diversity & Equity, Parkhurst 006 (garden level), HB 6018, Hanover, New Hampshire 03755-3541, (603) 646-1606. The ADA Coordinator has been designated by Dartmouth to coordinate the institution's efforts to comply with the regulations implementing Section 504 and the Americans with Disabilities Act.

Dartmouth College is accredited by the New England Commission of Higher Education.

DARTMOUTH COLLEGE MISSION STATEMENT

Dartmouth College educates the most promising students and prepares them for a lifetime of learning and of responsible leadership, through a faculty dedicated to teaching and the creation of knowledge.

to Dartmouth and to each other is legendary and is a sustaining quality of the College.

Adopted May, 2007

Our Core Values

Dartmouth expects academic excellence and encourages independence of thought within a culture of collaboration.

Dartmouth faculty are passionate about teaching our students and are at the forefront of their scholarly or creative work.

Dartmouth embraces diversity with the knowledge that it significantly enhances the quality of a Dartmouth education.

Dartmouth recruits and admits outstanding students from all backgrounds, regardless of their financial means.

Dartmouth fosters lasting bonds among faculty, staff, and students, which encourage a culture of integrity, self-reliance, and collegiality and instill a sense of responsibility for each other and for the broader world.

Dartmouth supports the vigorous and open debate of ideas within a community marked by mutual respect.

Our Legacy

Since its founding in 1769 to educate Native students, English youth, and others, Dartmouth has provided an intimate and inspirational setting where talented faculty, students, and staff—diverse in background but united in purpose—contribute to the strength of an exciting academic community that cuts easily across disciplines.

Dartmouth is committed to providing the best undergraduate liberal arts experience and to providing outstanding graduate programs in the Dartmouth Medical School (founded 1797), the Thayer School of Engineering (1867), the Tuck School of Business (1900), and the graduate programs in the Arts and Sciences. Together they constitute an exceptional and rich learning environment. Dartmouth faculty and student research contributes substantially to the expansion of human understanding.

The College provides a comprehensive out-of-classroom experience, including service opportunities, engagement in the arts, and competitive athletic, recreational, and outdoor programs. Pioneering programs in computation and international education are hallmarks of the College. Dartmouth graduates are marked by an understanding of the importance of teamwork, a capacity for leadership, and their keen enjoyment of a vibrant community. Their loyalty

ORGANIZATION OF DARTMOUTH COLLEGE 2025-26

Board of Trustees

Governor Kelly Ayotte, B.A., J.D., (ex officio) Concord, NH

Sian L. Beilock, B.A., Ph.D., President

Constance W. Britton, A.B., New York, NY

Barry Caldwell, B.A., J.D., Washington, DC

Jeffrey M. Crowe, A.B., M.B.A., Palo Alto, CA

Eileen Chamberlain Donahoe, A.B., M.T.S., J.D., M.A., Ph.D., Portola Valley, CA

Susan M. Finegan, A.B., J.D., Newton, MA

James S. Frank, A.B., M.B.A., Chicago, IL

David Grain, B.A., M.B.A., Sarasota, FL

Will Griffith, A.B., M.B.A., San Francisco, CA

Odette A. Harris, A.B., M.D., M.P.H., Silicon Valley, CA

Susan S. Huang, A.B., J.D., M.B.A., New York, NY

Maia Josebachvili, A.B., San Francisco, CA

Neal K. Katyal, A.B., J.D., Washington, DC

Gregg R. Lemkau, A.B., Bedford, NY

Elizabeth Cahill Lempres, A.B., B.E., M.B.A., Boston, MA

Christopher H. Lord, A.B., M.B.A., Honolulu, HI

David M. McKenna, A.B., Sudbury, MA

M. Hadley Mullin, A.B., Ross, CA

Jane Pfaff Novak A.B., M.B.A., London, UK

Shonda L. Rhimes, A.B., M.F.A., New York, NY

Joyce A. Sackey, A.B., M.D., Palo Alto, CA

Todd B. Sisitsky, A.B., M.B.A., San Francisco, CA

Scott M. Stuart, A.B., M.B.A., Greenwich, CT

Jacob P. Tapper A.B., Washington, DC

Hilary Tompkins, A.B., J.D., Washington, DC

Berl Bernhard, A.B., LL.B., LL.D., A.M. (1974 to 1984)

Richard Main Bressler, A.B., A.M. (1984 to 1989)

John Fremont Steel, A.B., M.D., A.M. (1980 to 1990)

Robert Bernard Reich, A.B., M.A., J.D., A.M., LL.D. (1988 to 1993)

Robert Alan Danziger, A.B., M.B.A., A.M. (1984 to 1994)

Ann Fritz Hackett, A.B., M.B.A., A.M. (1982 to 1992, 1993 to 1995)

Edward John Rosenwald, Jr., A.B., M.B.A., A.M., LL.D. (1986 to 1996)

Joseph Deyo Mathewson, A.B., J.D., A.M. (1987 to 1997)

Kate Stith-Cabranes, A.B., M.P.P., J.D., A.M. (1989 to 2000)

Richard Morton Page, A.B., J.D., A.M. (1990 to 2000)

William Haven King, Jr., A.B., J.D., A.M. (1991 to 2001)

Barry Lee MacLean, B.S., M.S.E., A.M. (1991 to 2001)

Stephen Warren Bosworth, A.B., LL.D., A.M. (1992 to 2002)

Stanford Augustus Roman, Jr., A.B., M.D., M.P.H., A.M. (1992 to 2002)

David Marks Shribman, A.B., A.M., L.H.D. (1993 to 2003)

David Karr Shipler, A.B., Litt.D., A.M. (1993 to 2003)

Susan Grace Dentzer, A.B., A.M., LL.D. (1993 to 2004)

Jonathan Newcomb, A.B., M.B.A., A.M. (1995 to 2005)

William Horlick Neukom, A.B., LL.B., A.M. (1996 to 2007)

Nancy Kepes Jeton, A.B., M.R.P., A.M. (1997 to 2007)

Russell Lloyd Carson, A.B., M.B.A., A.M. (1999 to 2009)

Michael Chu, A.B., M.B.A., A.M. (2000 to 2009)

Karen Christina Francis, A.B., M.B.A., A.M. (2000 to 2009)

Todd Joseph Zywicki, A.B., M.A., J.D., A.M. (2005 to 2009)

Jose Walfredo Fernandez, A.B., J.D., A.M. (2003 to 2009)

Christine Burnley Bucklin, A.B., M.B.A., A.M. (2001 to 2010)

Pamela Jean Joyner, A.B., M.B.A., A.M. (2001 to 2010)

Leon David Black, A.B., M.B.A., A.M. (2002 to 2011)

LIVING FORMER TRUSTEES

David Ryder Weber, A.B., M.A., A.M. (1971 to 1980)

Albert George Mulley, Jr., A.B., M.P.P., M.D., A.M. (2004 to 2010)

Stephen Floyd Smith, A.B., J.D., A.M. (2007 to 2011)

John Joseph Donahoe, A.B., M.B.A., A.M. (2003 to 2012)

Robert Bradford Evans, A.B., M.B.A., A.M. (2003 to 2012)

Charles Edgar Haldeman, Jr., A.B., M.B.A., J.D., A.M. (2004 to 2012)

Thurman John Rodgers, A.B., M.S., Ph.D., A.M. (2004 to 2012)

Jim Yong Kim, A.B., M.D., Ph.D. (2009-2012)

Peter Mark Robinson, A.B., M.B.A., A.M. (2005 to 2013)

Trevor David Rees-Jones, A.B., J.D., A.M. (2010 to 2014)

Stephen Frank Mandel, Jr., A.B., M.B.A., A.M. (2007 to 2015)

Jeffrey Robert Immelt, A.B., M.B.A. (2008-2016)

Sherri Carroll Oberg, A.B., M.B.A. (2008-2016)

John Armand Rich, A.B., M.P.H., M.D. (2008-2016)

Steven Roth, A.B., M.B.A. (2008-2016)

Diana Lancaster Taylor, A.B., M.B.A., M.P.H., (2008-2016)

Denise Marcell Dupré, A.B., A.M. (2009-20017)

William Wilson Helman IV, A.B., M.B.A., A.M. (2009-2017)

Morton Matt Kondracke, A.B. (2010-2018)

John Buchanan Replogle, A.B., M.B.A. (2010-2018)

Peggy Epstein Tanner, A.B. (2010-2018)

Annette Gordon-Reed, A.B., J.D. (2010-2018)

Gail Koziara Boudreaux, A.B., M.B.A. (2011-2019)

Robert William Burgess, Jr., A.B., M.B.A. (2011-2019)

James George Coulter, A.B., M.B.A. (2011-2019)

Gregg Leslie Engles, A.B., J.D. (2011-2019)

Nathaniel Charles Fick, A.B., M.B.A., M.P.A. (2012-2020)

David Charles Hodgson, A.B., M.B.A. (2012-2020)

Richard Herrick Kimball, A.B., M.B.A. (2012-2020)

Benjamin Francis Wilson, A.B., J.D. (2012-2020)

Laurel Janet Richie, A.B., (2012-2021)

Emily Paviour Bakemeier, A.B., M.F.A., Ph.D. (2013-2021)

Mitchell Howard Kurz, A.B., M.B.A., M.Ed. (2013-2021)

Gregory Ben Maffei, A.B., M.B.A. (2014-2022)

Philip J. Hanlon, A.B., Ph.D. (2013-2023)

Carlos Rodríguez-Pastor, Jr., B.A., M.B.A. (2015-2023)

Elizabeth Cogan Fascitelli, A.B., M.B.A. (2015-2023)

Sarah Caroline Kerr, A.B., M.Ed. (2015-2023)

Daniel Lamarr Black, A.B. (2019-2023)

Jeffrey M. Blackburn, A.B., M.B.A., Seattle, WA

Erica Ruliffson Schultz, A.B., San Francisco, CA

Richard W. Lewis, A.B., A.M., London, UK

Elizabeth Mahoney Loughlin, A.B., M.A., A.M., Boston, MA

LIVING FORMER EX OFFICIO TRUSTEES

John Henry Sununu, B.S., M.S., Ph.D., A.M. (1983 to 1989)

Judd Gregg, A.B., J.D., LL.M., A.M. (1989 to 1993)

Jeanne Shaheen, B.A., M.S., A.M. (1996 to 2003)

Craig Benson, B.A., M.B.A., A.M. (2003 to 2005)

John Lynch, B.A., M.B.A., J.D., A.M. (2005 to 2013)

Margaret Hassan, B.A., J.D. (2013-2017)

Christopher Sununu, B.S. (2017 to 2025)

EX OFFICIO TRUSTEES

in relation to funds given by the State of New Hampshire

Theodore L. Gatsas, Councilor

Joseph D. Kenney, Councilor

Gordon J. MacDonald, The Chief Justice of the Supreme Court

Chuck Morse, The President of the Senate

Sherman Packard, The Speaker of the House of Representatives

Janet Stevens, Councilor

Cinde Warmington, Councilor

David K. Wheeler, Councilor

Board of Advisors of the Geisel School of Medicine

EX-OFFICIO MEMBERS

The President of Dartmouth College

The Provost of Dartmouth College

The Dean of the Geisel School of Medicine
 The President of Dartmouth-Hitchcock Clinic (Joanne M. Conroy, M.D., Hanover, NH)
 The Director of the White River Junction Veterans Administration Hospital
 (Brett D. Rusch, M.D., White River Junction, VT)
 The Executive Vice President of Dartmouth College
 (Richard G. Mills, Hanover, NH)
 The President of the Geisel Alumni Association (John P. Houde, M.D., Meriden, NH)

ADVISORS

Odette A. Harris, M.D., M.P.H., Silicon Valley, CA (Trustee)
 Jandel T. Allen-Davis, M.D., Highlands Ranch, CO

Administrative Organization

Sian L. Beilock, B.A., Ph.D., President

David F. Kotz, A.B., Ph.D., Interim Provost

Alexis Abramson, B.S., M.S., Ph.D., Dean of the Thayer
School of Engineering

Justin Anderson, B.A., Vice President for Communications

Cheryl A. Bascomb, A.B., Vice President for Alumni
Relations

Scott C. Brown, B.A., M.Ed., Ph.D., Dean of the College

Lee A. Coffin, B.A., Ed.M., Vice Provost for Enrollment
and Dean of Admissions and Financial Aid

Duane Compton, B.S., Ph.D., Dean of the Geisel School of
Medicine at Dartmouth

Mitchel W. Davis, B.A., A.M., Vice President and Chief
Information Officer

Shontay Delaloe, B.A., M.Ed., Ph.D., Senior Vice

President and Senior Diversity Officer

Joseph R. Doucet, B.A., Chief Technology Officer

R. Scott Frew, B.C., M.B.A., Chief Financial Officer

Michael M. Harrity, B.A., M.Ed, Haldeman Family
Director of Athletics and Recreation

Sandhya L. Iyer, B.A., J.D., General Counsel

Joshua Keniston, B.A., Ed.M., Vice President of Campus
Services

F. Jon Kull, A.B., Ph.D., Dean of the School of Graduate
and Advanced Studies

Robert W. Lasher, A.B., M.A., Senior Vice President for
Advancement

Sara R. Lester, B.A., J.D., Chief Human Resources Officer

Dean R. Madden, A.B., Ph.D., Vice Provost for Research

Susanne Mehrer, B.A., M.A., P.G.Dip.L.I.S., E.M.B.A.,
Dean of Libraries

Richard G. Mills, B.A., J.D., Executive Vice President

Alice A. Ruth, A.B., Chief Investment Officer

Matthew J. Slaughter, B.A., Ph.D., Dean of the Tuck
School of Business

Elizabeth F. Smith, B.A., Ph.D., Dean of the Faculty of
Arts and Sciences

The Faculty of Arts and Sciences

Active Faculty

The list is of A&S active faculty and research associates
for 2025-26 can be accessed at [https://faculty-
directory.dartmouth.edu/arts-sciences-faculty-directory](https://faculty-directory.dartmouth.edu/arts-sciences-faculty-directory).

Academic Administrators

Sian L. Beilock, Ph.D., President

Santiago Schnell (2025) Ph.D., Provost, Professor of
Mathematics

John M. Carey (2003) Ph.D., Interim Dean of the Faculty
of Arts and Sciences, John Wentworth Professor in the
Social Sciences, Professor of Government

Colleen G. Boggs (2001) Ph.D., Associate Dean for the
Arts and Humanities, Parents Distinguished Research
Professor in the Humanities, Professor of English and
Creative Writing

Matthew F. Delmont (2018) Ph.D., Guarini Associate
Dean of Interdisciplinary Programs and International
Studies, Sherman Fairchild Distinguished Professorship in
Emerging Fields, Professor of History

Jane E. G. Lipson (1987) Ph.D., Associate Dean for the
Sciences, Albert W. Smith Professorship in Chemistry

Benjamin A. Valentino (2003) Ph.D., Associate Dean for
the Social Sciences, Professor of Government

F. Jon Kull (2001) Ph.D., Dean of School of Graduate and

Advanced Studies, Rogers Professorship, Professor of Chemistry

Mary Lou Aleskie (2017) Howard L. Gilman '44 Director of the Hopkins Center

Jason Barabas (2020) Ph.D., Director of Rockefeller Center and Professor of Government

Rebecca E. Biron (2006) Ph.D., Director of the Leslie Center, Professor of Spanish and Portuguese

Lee Coffin (2016) Ed.M., Vice Provost for Enrollment and Dean of Admissions and Financial Aid

Thomas DeChiaro (2025) M.B.A., Interim Chief Information Officer

James E. Dobson (2012) Ph.D., Director of the Writing Program, Associate Professor of English and Creative Writing

Victoria Holt (2021), Norman E. McCulloch Jr. Director of the John Sloan Dickey Center for International Understanding

Anne Hudak (2007), Interim Dean of Undergraduate Student Affairs

Julie L. Rose (2014) Ph.D., Hans '80 and Kate Morris Director of the Ethics Institute, Associate Professor of Government

Nancy A.G. Vogele '85 (2021) M.Div., Chaplain and Director of the William Jewett Tucker Center

Susanne Mehrer (2016) M.B.A., Dean of Libraries and Librarian of the College

Eric Parsons (2016) M.P.A., Registrar for the Arts and Sciences

Erin DeSilva (2015) M.A., Director of the Dartmouth Center for the Advancement of Learning, Associate Provost, Digital and Online Learning

Daniel N. Rockmore (1991) Ph.D., Director of the Neukom Institute, William H. Neukom 1964 Distinguished Professor of Computational Science, Professor of Mathematics and Computer Science

Mike Harrity (2022), Haldeman Family Director of Athletics and Recreation

John Stomberg (2016) Ph.D., Virginia Rice Kelsey 1961s Director of the Hood Museum of Art

Geoffrey G. Parker (2016) Ph.D., Interim Faculty Director, Charles E. Hutchinson '68A Professor of Engineering

Innovation, Executive Director, Master of Engineering Management Program

Emeritus Faculty

Note: The listing is alphabetical; the date indicates the year of initial appointment.

Susan Ackerman (1990) Ph.D., Professor of Religion, Emerita

Sarah Allan (1995) Ph.D., Professor of Asian & Middle Eastern Languages and Literatures, Emerita

Hoyt S. Alverson (1968) Ph.D., Professor of Anthropology, Emeritus

Martin A. Arkowitz (1964) Ph.D., Professor of Mathematics, Emeritus

James L. Aronson (1998) Ph.D., Professor of Earth Science, Emeritus

Virginia C. Beahan (2003) M.F.A., Senior Lecturer of Studio Art, Emerita

David G. Becker (1982) Ph.D., Associate Professor of Government, Emeritus

Joseph J. BelBruno (1982) Ph.D., Professor of Chemistry, Emeritus and Research Professor of Chemistry

Ehud Z. Benor (1991) Ph.D., Associate Professor of Religion, Emeritus

Edward M. Berger (1975) Ph.D., Professor of Biological Sciences, Emeritus

Sharon E. Bickel (1997) Ph.D., Professor of Biological Sciences, Emerita

Susan R. Blader (1978) Ph.D., Associate Professor of Asian & Middle Eastern Languages and Literatures, Emerita

Lynda E. Boose (1985) Ph.D., Professor of English and Creative Writing, Emerita

Edward M. Bradley (1963) Ph.D., Professor of Classics, Emeritus

Meredith Braz (2006) M.A.T., Registrar, Emerita

James E. Brown (1990) M.F.A., Senior Lecturer of Film & Media Studies, Emeritus

Raul Bueno (1986) Ph.D., Professor of Spanish and Portuguese and Latin American, Latino, and Caribbean Studies, Emeritus

John L. Campbell (1996) Ph.D., Professor of Sociology, Emeritus

Robert Cantor (1984) Ph.D., Professor of Chemistry, Emeritus

Laura E. Conkey (1982) Ph.D., Associate Professor of Geography and Women's, Gender, and Sexuality Studies, Emerita

Katharine Conley (1992) Ph.D., Professor of French & Italian and Comparative Literature and Women's, Gender, and Sexuality Studies, Emerita

Thomas H. Cormen (1992) Ph.D., Professor of Computer Science, Emeritus

Kathleen A. Corrigan (1983) Ph.D., Associate Professor of Art History, Emerita

Catherine P. Cramer (1982) Ph.D., Associate Professor of Psychological and Brain Sciences, Emerita

Lewis A. Crickard (1987) M.F.A., Professor of Theater, Emeritus

Pamela Crossley (1985) Ph.D., Professor of History, Emerita

Nancy J. Crumbine (1992) Ph.D., Senior Lecturer of Writing, Emerita

William B. Dade (2003) Ph.D., Associate Professor of Earth Science, Emeritus

Margaret H. Darrow (1980) Ph.D., Professor of History and Women's, Gender, and Sexuality Studies, Emerita

Mary R. Desjardins (1997), Ph.D., Professor of Film and Media Studies, Emerita

Robert Ditchfield (1972) D.PHIL., Professor of Chemistry, Emeritus, and Research Professor of Chemistry

Peter G. Doyle (1999) Ph.D., Professor of Mathematics, Emeritus, and Research Professor of Mathematics

Robert L. Drysdale (1978) Ph.D., Professor of Computer Science, Emeritus

Bruce Duncan (1969) Ph.D., Professor of German Studies, Emeritus

David Ehrlich (1993) M.F.A., Visiting Professor of Film and Media Studies, Emeritus

Dale F. Eickelman (1989) Ph.D., Professor of Anthropology, Emeritus, and Research Professor of Anthropology

Kirk M. Endicott (1982) D.PHIL., Professor of Anthropology, Emeritus

Hans M. Ermarth (1970) Ph.D., Professor of History and Jewish Studies, Emeritus

Xiahong Feng (1994) Ph.D., Professor of Earth Sciences, Emeritus

Robert A. Fesen (1989) Ph.D., Professor of Physics & Astronomy, Emeritus

William A. Fischel (1973) Ph.D., Professor of Economics, Emeritus

Carol L. Folt (1983) Ph.D., Professor of Biological Sciences, Emerita

Linda L. Fowler (2003) Ph.D., Professor of Government, Emerita

Rodolfo A. Franconi (1997) Ph.D., Associate Professor of Spanish and Portuguese, Emeritus

Nancy K. Frankenberry (1977) Ph.D., Professor of Religion, Emerita

Andrew C. Friedland (1987) Ph.D., Professor of Environmental Studies, Emeritus

Michael Joseph Ganio (2019) M.F.A., Associate Professor of Theater, Emeritus

Andrew C. Garrod (1985) Ed.D., Professor of Education, Emeritus

Gene R. Garthwaite (1968) Ph.D., Professor of History, Emeritus

Gretchen H. Gerzina (2005) Ph.D., Professor of English and Creative Writing, Emerita

John J. Gilbert (1966) Ph.D., Professor of Biological Sciences, Emeritus

Carolyn S. Gordon (1990) Ph.D., Professor of Mathematics, Emerita, and Research Professor of Mathematics

Mary Jean Green (1974) Ph.D., Professor of French & Italian, Emerita

Ronald M. Green (1969) Ph.D., Professor of Religion, Emeritus

Gordon W. Gribble (1968) Ph.D., Professor of Chemistry, Emeritus, and Research Professor and Lecturer of Chemistry

Marcia Groszek (1997) Ph.D., Professor of Mathematics, Emerita

Alan L. Gustman (1969) Ph.D., Professor of Economics, Emeritus

Alexandra Halasz (1990) Ph.D., Associate Professor of English and Creative Writing, Emerita

Raymond L. Hall (1972) Ph.D., Professor of Sociology, Emeritus

Louise E. Hamlin (1990) B.F.A., Professor of Studio Art, Emeritus

Douglas E. Haynes (1983) Ph.D., Professor of History, Emeritus

Ernest Hebert (1987) B.A., Professor of English and Creative Writing, Emeritus

Marlene E. Heck (2000) Ph.D., Senior Lecturer of Art History, Emerita

Robert G. Henricks (1976) Ph.D., Professor of Religion, Emeritus

Lynn A. Higgins (1976) Ph.D., Professor of French & Italian, Emeritus

Richard T. Holmes (1967) Ph.D., Professor of Biological Sciences, Emeritus

Mary K. Hudson (1984) Ph.D., Professor of Physics & Astronomy, Emerita, and Research Professor of Physics & Astronomy

Howard C. Hughes (1980) Ph.D., Professor of Psychological and Brain Sciences, Emeritus

Russell P. Hughes (1976) Ph.D., Professor of Chemistry, Emeritus, and Research Professor of Chemistry

Jay G. Hull (1982), Ph.D., Professor of Psychological and Brain Sciences, Emeritus

Cynthia Huntington (1990) M.A., Professor of English and Creative Writing, Emerita

Peter A. Jacobi (1997) Ph.D., Professor of Chemistry, Emeritus, and Research Professor of Chemistry

G. Christian Jernstedt (1967) Ph.D., Professor of Psychological and Brain Sciences, Emeritus

Keala J. Jewell (1986) Ph.D., Professor of French & Italian and Comparative Literature and Women's, Gender, and Sexuality Studies, Emerita

Gary D. Johnson (1971) Ph.D., Professor of Earth Science, Emeritus

Jim M. Jordan (1980) Ph.D., Professor of Art History, Emeritus

Irene Kacandes (1994) Ph.D., Professor of German Studies and Comparative Literature, Emerita

Nelson M. Kasfir (1970) Ph.D., Professor of African and African American Studies and Government, Emeritus

Konrad O. Kenkel (1974) Ph.D., Associate Professor of German Studies, Emeritus

Francis Kennedy (1999) Ph.D., Professor of Engineering Sciences, Emeritus

Joy Kenseth (1976) Ph.D., Professor of Art History, Emerita

Deborah King (1982) Ph.D., Associate Professor of Sociology, Emerita

Robert E. Kleck (1966) Ph.D., Professor of Psychological and Brain Sciences, Emeritus

John M. Kopper (1986) Ph.D., Professor of Russian and Comparative Literature, Emeritus

Kenneth A. Korey (1972) Ph.D., Associate Professor of Anthropology, Emeritus

Richard L. Kremer (1985) Ph.D., Associate Professor of History, Emeritus

Paul D. Lagomarsino (1974) Ph.D., Associate Professor of History, Emeritus

Walter E. Lawrence III (1971) Ph.D., Professor of Physics & Astronomy, Emeritus

Amy L. Lawrence (1988) Ph.D., Professor of Film & Media Studies, Emerita

Robert N. Leaton (1964) Ph.D., Professor of Psychological and Brain Sciences, Emeritus

Richard N. Lebow (2002) Ph.D., Professor of Government, Emeritus

John Kemp Lee (2013) M.F.A., Senior Lecturer of Studio Art, Emeritus

David M. Lemal (1965) Ph.D., Professor of Chemistry, Emeritus

Thomas Luxon (1988) Ph.D., Professor of English, Emeritus

Francis J Magilligan (2002) Ph.D., Professor of Geography, Emeritus

Nancy P. Marion (1976) Ph.D., Professor of Economics, Emerita

Michael Mastanduno (1998) Ph.D., Professor of Government, Emeritus

Cleopatra Mathis (1982) M.F.A., Professor of English and Creative Writing, Emerita

C. Robertson McClung (2001) Ph.D., Professor of Biological Sciences, Emeritus

Patricia McKee (1979) Ph.D., Professor of English, Emerita

Delo E. Mook II (1970) Ph.D., Professor of Physics & Astronomy, Emeritus

Benjamin F. Moss (1988) M.F.A., Professor of Studio Art, Emeritus

Hua-yuan L. Mowry (1975) Ph.D., Associate Professor of Asian Societies Cultures and Languages, Emeritus

Marysa Navarro (1968) Ph.D., Professor of History and Latin American, Latino, and Caribbean Studies, Emerita

Joseph B. Nelson (1985) Ph.D., Professor of History and African and African American Studies, Emeritus

Melinda P. O'Neal (1979) D.M., Professor of Music, Emerita

Vera B. Palmer (2009) M.A., Senior Lecturer of Native American and Indigenous Studies, Emerita

Misagh Parsa (1989) Ph.D., Professor of Sociology, Emeritus

Beatriz Pastor (1985) Ph.D., Professor of Spanish and Portuguese, Emerita

David R. Peart (1985) Ph.D., Professor of Biological Sciences and Environmental Studies, Emeritus John F.

Pfister (2000) Ph.D., Senior Lecturer of Psychological and Brain Sciences, Emeritus

Carl B. Pomerance (2003) Ph.D., Professor of Mathematics, Emeritus, and Research Professor of Mathematics

Ulrike Rainer (1983) Ph.D., Associate Professor of German Studies, Emeritus

Colleen M. Randall (1990) Ph.D., Professor of Studio Art, Emerita

A. Kevin Reinhart (1992) Ph.D., Associate Professor of Religion, Emeritus

Louis A. Renza (1970) Ph.D., Professor of English and Creative Writing, Emeritus

Jeremy B. Rutter (1976) Ph.D., Professor of Classics, Emeritus

M. Anne Sa'adah (1984) Ph.D., Professor of Government, Emerita

Ivy T. Schweitzer (1983) Ph.D., Professor of English and Creative Writing, Emerita

John T. Scott (1977) Ph.D., Professor of Economics, Emeritus

William C. Scott (1966) Ph.D., Professor of Classics, Emeritus

Thomas R. Shemanske (1981) Ph.D., Research Professor of Mathematics, Emeritus

Kenneth E. Shewmaker (1967) Ph.D., Professor of History, Emeritus

Ellis Shookman (1987) Ph.D., Professor of German Studies, Emeritus

Brenda R. Silver (1972) Ph.D., Professor of English and Creative Writing, Emeritus

Walter Simons (1992) Ph.D., Professor of History, Emeritus

Jonathan S. Skinner (1995) Ph.D., Research Professor of Economics, Emeritus

Roger D. Sloboda (1977) Ph.D., Professor of Biological Sciences, Emeritus

Roger H. Soderberg (1962) Ph.D., Professor of Chemistry, Emeritus

Margaret E. Spicer (1974) M.F.A., Professor of Theater, Emeritus

Silvia D Spitta (1989) Ph.D., Professor of Spanish and Portuguese, Emeritus

Leo Spitzer (1967) Ph.D., Professor of History and Jewish Studies, Emeritus

William Summers (1984) Ph.D., Associate Professor of Music, Emeritus

Virginia E. Swain (1978) Ph.D., Professor of French & Italian and Comparative Literature, Emerita

Marsha Swislocki (1977) Ph.D., Associate Professor of Spanish and Portuguese and Comparative Literature, Emerita

James H. Tatum (1969) Ph.D., Professor of Classics, Emeritus

Paula E. Thompson (1979) Ph.D., Professor of Studio Art, Emerita

John R. Thorstensen (1980) Ph.D., Professor of Physics and Astronomy, Emeritus

Peter W. Travis (1970) Ph.D., Professor of English and Creative Writing and Women's, Gender, and Sexuality Studies, Emeritus

Roger B Ulrich (1989) Ph.D., Professor of Classics, Emeritus

Samuel J. Velez (1976) Ph.D., Associate Professor of Biological Sciences, Emeritus

Steven F. Venti (1982) Ph.D., Professor of Economic Policy, Emeritus

Roxana M. Verona (1990) Ph.D., Professor of French & Italian and Comparative Literature, Emerita

Ross A Virginia (1992) Ph.D., Professor of Environmental Studies, Emeritus

Keith L. Walker (1976) Ph.D., Professor of French & Italian, Emeritus

Dorothy Wallace (1987) Ph.D., Professor of Mathematics, Emerita

John Watanabe (1985) Ph.D., Associate Professor of Anthropology, Emeritus

David L Webb (1996) Ph.D., Professor of Mathematics, Emeritus

Gary A. Wegner (1982) Ph.D., Professor of Physics & Astronomy, Emeritus

Heide W. Whelan (1973) Ph.D., Professor of History, Emeritus

Margaret Williamson (1999) Ph.D., Associate Professor of Classics and Comparative Literature, Emerita

J. Kathleen Wine (1983) Ph.D., Associate Professor of French and Italian, Emerita

George L. Wolford (1969) Ph.D., Professor of Psychological and Brain Sciences, Emeritus, and Senior Lecturer of Psychological and Brain Sciences

Richard A. Wright (1985) Ph.D., Professor of Geography, Emeritus

Martin N. Wybourne (1997) Ph.D., Professor of Physics & Astronomy, Emeritus

David Wykes (1972) Ph.D., Professor of English and Creative Writing, Emeritus

Wen Xing (1999) Ph.D., Professor of Asian Societies, Cultures, and Languages, Emeritus

Emeritus Presidents

Philip J. Hanlon, Ph.D.

Jim Yong Kim, Ph.D.

James Wright, Ph.D. (deceased)

Divisions of the Faculty

For purposes of administration the Departments of the Faculty are grouped into three Divisions, as follows:

Arts and Humanities

Art History [ARTH]

Classics [CLAS]

East European, Eurasian, and Russian Studies [EEER]

English [ENGL] and Creative Writing [CRWT]

Film and Media Studies [FILM]

French [FREN] and Italian [ITAL]

German [GERM]

Music [MUS]

Philosophy [PHIL]

Religion [REL]

Spanish [SPAN] and Portuguese [PORT]

Studio Art [SART]

Theater [THEA]

Sciences

Biological Sciences [BIOL]

Chemistry [CHEM]

Computer Science [COSC]

Earth Sciences [EARS]

Engineering Sciences [ENGS]

Mathematics [MATH]

Physics [PHYS] and Astronomy [ASTR]

Psychological and Brain Sciences [PSYC]

Social Sciences

Anthropology [ANTH]

Economics [ECON]

Geography [GEOG]

Government [GOVT]

History [HIST]

Sociology [SOCY]

Each of these Departments is represented by its Chair on the corresponding Divisional Council, which has general supervision over matters affecting the Division. Most of the Departments offer one or more majors.

A fourth division, International and Interdisciplinary Studies (p. 19), consists of the interdisciplinary departments and programs.

The International and Interdisciplinary Studies

African and African American Studies [AAAS]

Asian Societies, Cultures, and Languages [ASCL]

Cognitive Science [COGS]

Comparative Literature [COLT]

Environmental Studies [ENVS]

Jewish Studies [JWST]

Latin American, Latino, and Caribbean Studies [LALACS]

Linguistics [LING]

Middle Eastern Studies [MES]

Native American Studies and Indigenous Studies [NAIS]

Quantitative Social Science [QSS]

Women's, Gender, and Sexuality Studies [WGSS]

Writing [WRIT]

The Chair of each department and program serves on the Council on International and Interdisciplinary Studies; this council has general supervision over matters affecting the interdisciplinary departments and programs. Several of the interdisciplinary departments and programs offer majors and/or minors.

REGULATIONS

Undergraduate Study

Admission

Applicants for first year admission have two deadline options. Candidates applying via the Early Decision program must submit applications by November 1 of the calendar year prior to the year in which they expect to enter college. Early Decision candidate notification takes place in mid-December. Candidates applying via the Regular Decision program must submit applications by the first business day of the calendar year in which they expect to enter college, typically on or about January 2. Regular Decision candidate notification takes place at the end of March.

Candidates for transfer admission must apply by March 1 of the calendar year in which they expect to matriculate. Transfer candidate notification takes place in May.

New students enroll only in the fall term.

A fuller statement of admission principles, policies, and procedures may be found online at <http://admissions.dartmouth.edu>. In addition, prospective first-year students may request more information about Dartmouth by using the online request form at <https://apply.dartmouth.edu/register/signmeup>.

Academic Honor

Dartmouth's Academic Honor Principle can be found in the Dartmouth Policy Portal.

Dartmouth's Academic Honor Policy for Undergraduate Students in Arts & Sciences can be found in the Dartmouth Policy Portal.

Faculty Guidelines for Responding to Violations of the Academic Honor Principle can be found in the Dartmouth Policy Portal.

Requirements for the Degree of Bachelor of Arts

The degree of Bachelor of Arts is awarded by the Board of Trustees to qualified students who have been recommended by the Faculty. Certain changes in degree requirements, which take effect for the Class of 1998 and

later classes, were voted by the Faculty and Trustees in 1992; members of the Class of 1997 and earlier classes should consult previous editions of this Catalog for details of the distribution and major requirements as they apply to them.

The degree requirements, given in detail below, fall into several basic categories: Residence (fall, winter, and spring of the first and year and summer following the sophomore year and two terms of senior year), Course Count (35 courses passed), Specific Course Requirements (including Writing and First-Year Seminar, Foreign Language and General Education requirements), a Wellness Requirement, and a Major Requirement. The details of each of these requirements are given in the following sections as they apply to students who matriculated as first-year students. Students who matriculated at Dartmouth after attending another institution of higher education should note the modifications of the graduation requirements that apply to them. To matriculate is to be accepted by Admissions and to be enrolled as a full-time degree-seeking student at Dartmouth College. Students officially matriculate on the first day classes begin for the term. Students studying as exchange students, as special community or as community high school students, are not matriculated at Dartmouth. Any credits these students earn prior to matriculation, if awarded after matriculation, may count as transfer credit only, and do not count towards meeting residency requirements.

I. A student must fulfill the academic requirements of the College and must, as an absolute minimum, complete six terms in residence, registered and enrolled in courses. (Terms spent elsewhere while enrolled in absentia in the various Dartmouth off-campus programs do not serve for any part of this requirement, nor do exchange or transfer programs.) A student must be in residence for all three terms of the first year, for the summer term following the sophomore year, and for two terms of the senior year, in every case being registered and enrolled in courses. A student will normally be enrolled for twelve terms but will be allowed thirteen if two of these are summer terms. For further details and information regarding certain exceptions, see the section on Enrollment Patterns.

II. A student must pass thirty-five courses, although this number may be reached in part by credits transferred from another institution. No credit will be awarded for a course dropped or withdrawn from before completion; unless the withdrawal is authorized, the course will be included with a failing grade in the student's cumulative average. No more than eight courses passed with the grade of D (including those received under the Non-Recording Option) may be counted toward the thirty-five courses required for graduation. No more than 17 transfer courses may be counted toward graduation.

No student may count toward graduation more than a combined total of eight final standings of CT (Credit), NC (No Credit), NR (Non-Recorded from courses under the Non-Recording Option), and E (when resulting from courses under the Non-Recording Option). *NOTE: CT and NC courses earned spring term 2020 are not included in this count.*

A student otherwise eligible for graduation but not in good academic standing as a result of their performance in the last term of enrollment preceding intended graduation may graduate only with the approval of the Committee on Standards. No student may graduate with the standing of Incomplete in any course even though the count of courses passed may exceed thirty-five.

Students are subject to the requirements listed in the *ORC/Catalog* in the year they matriculate. An exception is made for students in good standing who are readmitted after 10 years of absence from the College. These students should contact the Registrar and the chair of the department/program in which they wish to major. The Registrar works with the student to determine appropriate general education requirements, which could be a combination of prior and current requirements. The chair of the major department/program determines appropriate major requirements (and minor requirements, if applicable). An academic plan for graduation is reviewed, possibly modified, and approved by the Committee on Instruction. (Note: Readmission will be considered on a case-by-case basis; former students who have subsequently earned degrees elsewhere, who have been absent from the College for multiple decades, or who have significant requirements to fulfill are unlikely to be readmitted.)

III. A student must pass the following courses, although they may be substituted in part by credits on entrance or by proficiency demonstrated then or later. Either a passing letter grade or a CT (Credit) will suffice. The standing NR assigned under the Non-Recording Option will not serve.

1. Writing: Writing 5; Writing 2-3; or Humanities 1-2. Students must complete the requirement by the end of the second term of the first year. Writing 5, Writing 2-3, and Humanities 1-2 are not eligible for use of the Non-Recording Option.
2. First-Year Seminar: One seminar chosen from an approved list which is available on the College website: <http://writing-speech.dartmouth.edu/curriculum/writing-courses/first-year-seminars>. These seminars, which have Writing 5 (or 2-3) as prerequisite, are designed both to further the student's proficiency in writing and to provide an opportunity for participation in small group study and discussions with an instructor on a subject of mutual interest. This requirement must be completed during the first year. It is never possible to include a First-Year Seminar as an actual part of a major. No First-Year Seminar may be taken under the Non-

Recording Option. Beginning in the 2021-2022 academic year, First-Year Seminars do not satisfy General Education requirements (Distributive or World Culture Requirements).

3. Language: Foreign language courses numbered 1, 2, and 3; or, if competency has been demonstrated equivalent to the three terms of study in one language at the college level, a more advanced course in that same language OR a Dartmouth course in a different language that goes beyond the normal first term of study. If competency was demonstrated in a language not taught at Dartmouth, OR if the student has demonstrated full proficiency in a language other than English, the requirement may also be fulfilled with a course designated LRP (Language Requirement for Proficient Speakers).

Students will be informed during their New Student Orientation of the options that are available to them for satisfying the Language Requirement. Those students who enter Dartmouth with some degree of competency in a language other than English are responsible for making arrangements with the relevant department to demonstrate their level of competency via standardized tests, local placement tests, or other measures of competency.

A student must normally complete the requirement before the end of the seventh term, either in a language offered for admission or in another language begun at Dartmouth.² There are two options: (1) study on the Dartmouth campus in any of the languages offered, or (2) participation in one of Dartmouth's Language Study Abroad (LSA) programs offered in several of these languages.

Language courses numbered 1, 2, or 3 and other beginning language courses may not serve in partial satisfaction of the World Culture and Distributive Requirements. They may not be taken under the Non-Recording Option until the Foreign Language Requirement has been satisfied in another language (and then only if the department/program so authorizes); no course studied off-campus may be taken under the Option.

The language requirement may be substituted under certain disability-related circumstances. In these cases, the Language Requirement is fulfilled by taking a course specified by the Committee on Instruction (COI).

4. General Education Requirements: There are two separate requirements under this heading: World Culture Requirement and Distributive Requirement. These requirements are outlined below and are explained in detail later (including the codes used to designate which courses fall into which categories.)

- a. World Culture Requirement. Each student must take and pass one course in each of three areas: Western Cultures, Non-Western Cultures, and Culture and Identity
- b. Distributive Requirement. Each student must take and pass ten courses, as follows:
 - one in the Arts;
 - one in Literature;
 - one in Systems and Traditions of Thought, Meaning, and Value;
 - one in International or Comparative Study;
 - two in Social Analysis;
 - one in Quantitative and Deductive Sciences;
 - two in the Natural Sciences;
 - one in Technology or Applied Science.
 - *One of the courses in the Natural Science or Technology categories must have a laboratory, field, or experimental component.*

A course may satisfy categories in two of these requirements. For example, a course might satisfy the Western category in the World Culture requirement and the Literature category in the Distributive requirement. Consequently, by careful choice of courses, it is possible to satisfy all of these requirements with just ten courses. Note also that the fact that a course falls within the student's major department or program does not invalidate its use toward meeting these requirements. Courses satisfying general education requirements must be taken subsequent to college matriculation.

Credits received prior to matriculation, even for courses which would qualify for one or more of these requirements if taken after matriculation, do not count, even though they receive course credit or credit on entrance. Courses satisfying these requirements must be passed with a regular letter grade. Courses which are failed, for which the regular grade has been replaced by NR due to the student's election of the Non-Recording Option, or for which the grade is CT (Credit) or NC (No Credit) do not satisfy these requirements. Graduate courses (those numbered 100 or higher) never serve in satisfaction of any part of these requirements.

IV. Students who matriculated with the class of 2025 and earlier must satisfactorily complete the program of Physical Education (PE) as listed in the *ORC/Catalog* published during the year they matriculated at Dartmouth. Starting with those matriculated with the class of 2026 and beyond, students must complete satisfactorily the program of Wellness Education (WE) (p. 795).

V. A student must receive credit for completion of a major program at least satisfactorily, as certified by the

department, program, or other appropriate body supervising the major. The supervising body may in advance require a minimum grade average in the major or other demonstrations of learning in the field of the major. A student may elect a major no earlier than the first day of the fifth term in residence and must do so by the end of the student's fifth term, or immediately thereafter, depending upon the student's enrollment pattern. The major is elected by securing the approval of the appropriate department/program using the online major/minor system. See the Registrar's website for more information. A student may change major, or type of major (including the addition of a second major), at any time through the end of the first week of the last term in residence, but not thereafter.

A full statement of the purpose and the various forms of the major follows. Only those courses passed with a letter grade, or a grade of CT (Credit) if previously approved, may be counted in satisfaction of the major. Courses failed or taken under the Non-Recording Option and resulting in a standing of NR (Non-Recorded), may not be used toward completion of the major.

VI. A student is expected to make satisfactory progress at all times toward the degree. All students should be familiar with the requirements for satisfactory academic progress as set forth in the Student Handbook and the Financial Aid Handbook. The Committee on Standards has been empowered by the Faculty to place a student on Risk, Warning, or Probation, or to vote Suspension or Separation for failure to meet the academic standards detailed there.³

² *Under certain circumstances the Registrar will allow an extension of the seven-term rule; such action may allow a student, otherwise prevented by complications of course scheduling, to undertake the Language Study Abroad program.*

³ *Students who have disciplinary cases pending are not eligible for a degree until the case has been resolved. In any case when penalties are imposed, the case is not resolved until the suspension, period of probation, or other penalty has been completed.*

Students Matriculating after the First Year

For students who matriculate at Dartmouth after having spent one or two years at another institution, the academic regulations and degree requirements described above (and, in some cases, following) have been modified by vote of the Faculty on January 13, 1986 and May 1, 1989. The modifications are as follows.

1. Maximum number of course credits: Students transferring to Dartmouth will be allowed a maximum credit of 17 courses. No further transfer credits will be allowed after matriculation.
2. The minimum number of enrolled terms will be six for all transfer students.

3. A summer term residence will be required of all transfer students. Students transferring after their first year will be in residence the summer following their sophomore year. Students transferring after their second year will be encouraged to be in residence the summer after their fall matriculation. The Office of Admissions should complete the admissions process early enough to allow students to plan for the appropriate summer in residence and notify students accordingly.
4. No credits will be allowed in departments or programs not represented in the Dartmouth undergraduate curriculum for transfer students.
5. Non-Recording Option (NRO) and Credit/No Credit (CT/NC) elections: Students entering after their first year will be allowed 2 NR's and a total of 6 CT/NC plus NR's. Students entering after their second year will be allowed 1 NR and a total of 4 CT/NC plus NR's.
6. Two- and Four-Course Terms: Students entering after their first year will be allowed a two-course load in any two terms and a four-course load in any three terms. Students entering after their second year will be allowed a maximum of one two-course load and two four-course loads. Within those limits no permissions are required nor are there changes in tuition.
7. Students admitted after their first year must declare a major and an enrollment pattern according to the deadline for second-year students. Students admitted after their second year must declare a major and file an enrollment pattern during their first term in residence at Dartmouth.
8. Course equivalencies are determined by the Registrar or their designate. In the event of a question concerning the equivalency or appropriateness of a course, the department/program involved will be consulted. Courses applied for major credit must be approved by the major department/program.
9. Degree requirements for transfer students are the same as for all other students, with the exception of the First-Year Seminar, first-year residence, and wellness education requirements, which are waived. All transfer students must satisfy the senior residence requirement.

Degree Audit and Program Planner

DartWorks is a web-based application accessed on DartHub. It allows students and advisors to plan the student's academic program at Dartmouth. It consists of two components, a Degree Audit tool to help students and advisors monitor a student's progress toward completion of their general education and degree requirements, and a Program Planner for students to declare their majors and minors and to plan their major or minor program with the

help of a Faculty Advisor. Most majors are also included in the degree audit.

The Degree Audit displays how courses that have been completed count toward their requirements, and helps students and advisors see what courses and requirements still need to be completed before graduation. The Program Planner allows the student to indicate future courses they plan to take in the major/minor, by term, prior to receiving major/minor approval. It also has other features, such as the ability to compare courses planned versus courses taken. The Faculty Advisor may approve, adjust, or deny a major/minor plan after they review the student's program plan.

See the DartWorks Guides on how to use the Degree Audit tool to monitor your progress towards a degree and the Program Planner to declare your major and/or minor.

Student Information Site-DartHub

Each student has secure access to a student gateway, DartHub, to conduct many official transactions and to obtain personal academic and financial information.

Students use this system for official transactions such as to check in for each term, elect courses, file an enrollment pattern, order official transcripts, declare a major, and to apply for the degree. Personal academic and financial information such as class schedules, grades, and the DartWorks degree audit and major plan can be viewed here. Students also may use it to access personal financial information and use its alert system as a planning tool. Students are reminded of the Information Services Acceptable Use Policy when using Dartmouth systems.

Academic Support

Support for the academic work of individual students is available through numerous offices, programs, and individuals at the College. Included are faculty members who serve as first-year, sophomore or major advisors, the Pre-Major Advising Office, and the Office of the Dean of Undergraduate Students. Dartmouth provides an Integrated Academic Support Program for first-year students, an Academic Skills Center (including a Tutor Clearinghouse), and a Composition Center. Details may be found in the Student Handbook.

Accessibility and Course Accommodation Support for Students and Their Faculty

Dartmouth College adheres to the Americans with Disabilities Act and Section 504 of the Rehabilitation Act to ensure that no otherwise qualified students with disabilities are excluded from or denied the benefits of a Dartmouth collegiate experience. Student Accessibility Services (SAS) is the primary office responsible for

implementing accommodations/adjustments, services, and other supports in alignment with these laws for undergraduate and BE students with disabilities. (Graduate and professional students seeking disability-related accommodations and services should refer to <https://home.dartmouth.edu/accessibility> for designated contacts.)

SAS' primary functions center on supporting undergraduate students with disabilities and their faculty, and include:

- Engaging in an interactive process with students and academic partners to determine reasonable course accommodations that do not fundamentally alter essential course requirements.
- Supporting students and instructors with implementation of reasonable course accommodations by providing services such as accommodated exam administration in our Testing Center and text conversion into alternate formats.
- Ensuring equitable access through the provision of reasonable accommodations to Dartmouth's programs, services, and activities, and promoting an inclusive campus climate. These may include academic, housing, dining, off-campus program, and other types of accommodations.
- Serving as a resource to campus partners and incorporating accessibility into the broader diversity, equity, inclusion, and belonging efforts of the College.

Eligibility for services is based on a student's disability-related need, primarily evidenced by student history and any needed disability documentation. Undergraduate and BE students with disabilities who believe they may need accommodations or services are strongly encouraged to connect with SAS early in their academic career. To begin the process, students should visit SAS' Apply for Services page. Students with injuries or other temporary conditions are typically not considered disabled but will likely find SAS' online resources helpful.

Reasonable accommodations and services are determined on an individualized basis. These may include testing accommodations, notetaking assistance, alternate-format text, real-time captioning/ASL interpreting, assistive technology, mobility assistance, and/or others. Because many students' accommodations require technology, no-technology policies in courses represent a barrier to access. Regarding one of the most common technology accommodations, the office of the Dean of the Faculty of Arts & Sciences and SAS have determined that,

1. Students authorized by SAS to audio-record class sessions as a documented accommodation should be permitted to do so,
2. There are restrictions on the use of such recordings including the fair-use policy, and

3. Such recordings must be destroyed at the end of the course.

Faculty should contact Student.Accessibility.Services@Dartmouth.edu if they believe any recording exceptions are needed for a course. Faculty who wish to discuss their course technology use and policies or universal design to readily incorporate common accommodations into their courses should contact Learning.Design.Tech@Dartmouth.edu or DCAL@Dartmouth.edu.

Students and faculty have rights and responsibilities in the reasonable accommodation process. For instance, students need to request any approved accommodations in a timely manner and notify their instructors as early as possible. Please see student rights and responsibilities, faculty rights and responsibilities, and Faculty FAQs for more information. Students, faculty, staff, and others are always invited to visit the SAS website, email SAS, or call 603-646-9900.

If a student believes that a necessary accommodation has been denied or that a policy/procedure violation may have occurred, or that they have otherwise been subject to disability-related discrimination, the student should review Dartmouth's informal resolution and formal appeal processes to learn more about their options.

Language Requirement Substitution

The Dartmouth College language requirement is described in "Requirements for the Degree of Bachelor of Arts, III.3" and on the Registrar's website. Under rare circumstances, the language requirement may be substituted with a course for a student who has a disability-related need. Such substitution will not be granted in the absence of (1) a verified disability, (2) sufficient information about the petitioner's disability-related need for a substitution, and (3) approval for a substitution, all confirmed by Student Accessibility Services (SAS). Students who wish to inquire about a disability-related substitution of the language should contact SAS.

Petitions are submitted to SAS and will be considered only from students with documented disabilities who have not yet completed the language requirement. Students who are approved for language substitution by SAS must then select a course from a list of previously approved courses or work with SAS to identify at least two language-related substitution course options (with course descriptions and rationale provided) for Committee on Instruction (COI) review. A student may also petition to use a course they previously completed and passed at Dartmouth for substitution of the language requirement; however, advance approval of substitution courses is recommended.

The COI generally reviews language substitution petitions in the fall, winter, and spring. Petitions made over the

summer may not receive a response until the following fall term. As students are expected to complete the language requirement (or be granted a language substitution) by the end of the seventh term of enrollment, a student's substitution course should also be approved by this point.

Students who have been granted a language substitution:

Once SAS has determined that language course substitution is appropriate, the following occurs:

1. Student must complete a previously approved substitution course, notifying SAS of their intent to count it as their language substitution course, or submit a petition to the COI as described above. If no proposed course is approved by the COI, the student will need to petition again with different courses until at least one substitution course is approved. The student must notify SAS of their COI-approved substitution course and complete it.
2. All grades for elementary non-English language courses will not be incorporated into the student's cumulative grade point average. This provision is retroactive, so there may be effects on a student's existing cumulative grade point average. Students' transcripts will designate those grades and note that they are not incorporated into the grade point average, but the transcript will not contain direct information about the reason.
3. Language courses numbered 1, 2, or 3 and other beginning language courses may not be taken under the Non-Recording Option if they are being used to fulfill the language requirement. However, students have completed the language requirement (through substitution or other means) who still wish to enroll in any elementary language courses (typically numbered 1, 2, or 3) will be permitted to use the Non-Recording Option in those courses. All the regulations governing use of that option will apply except that students who have received a substitution are allowed a total of five (5) uses of the Non-Recording Option, two of which can be applied only to introductory courses in the same language. If the grade matches or surpasses a student's selection, it will appear on the transcript; any grade of NR will count as one of the five uses of the option allowed, and any grade of E will appear on the transcript. However, no grade assigned in the course will be incorporated into the student's grade point average.

Please review the SAS language requirement petition page or contact SAS for more information.

General Education Requirements: Categories

This section describes the categories of the General Education requirement. The following section addresses some procedural matters regarding these requirements.

1. World Culture Requirement. All Dartmouth undergraduates must satisfactorily complete one course from each of the three areas listed below:
 - a. Western Cultures (W). The cultures of the classical Judeo-Christian and Greco-Roman Mediterranean, and of Europe and its settlements. The disciplines of the Arts and Sciences as they are studied at Dartmouth developed in these cultures, as did the institution of the liberal arts college itself. For this reason, Dartmouth students are required to take at least one course with a focus on the cultures of the West.
 - b. Non-Western Cultures (NW). Non-Western cultures, including those with a history of colonialism. The world in which Dartmouth graduates will function demands an understanding of its non-Western majority. Knowledge of non-Western peoples, cultures, and histories is thus an increasing practical necessity as well as a form of intellectual enrichment. Courses that satisfy this requirement have as their primary focus understanding the diverse cultures of the non-Western world.
 - c. Culture and Identity (CI). All students are required to take a course studying how cultures shape and express identities. Courses satisfying this requirement examine how identity categories develop in cultures and as a result of interactions between cultures. Forms of identity to be studied may include but are not limited to those defined by race, gender, sexuality, class, religion, and ethnicity. Courses in this category may study the relations of culture and identity with reference to cultural productions from any part of the world.
2. Distributive Requirement (Dist). All Dartmouth undergraduates must satisfactorily complete ten courses divided as indicated below:
 - a. Arts (one course): (ART). Courses fulfilling this requirement usually focus on one or more art or media forms, using historical, critical, and/or participatory methods. Dartmouth aims to foster creativity, to encourage the acquisition of artistic skills and disciplines, and to equip students with the historical knowledge and interpretive powers that will allow them to be informed participants in the world of the arts and contemporary media.
 - b. Literature (one course): (LIT). Rigorous critical reading and writing are central to all academic discourse; although these skills are not taught exclusively in literature courses, they are actively cultivated in those courses. Knowledge and appreciation of literary texts, and of the diverse cultural histories embedded in them, remain crucial to any liberal arts education. In recent times, the

emergence of literary theory has transformed literary study and broadened the scope of literary criticism to include cultural and interdisciplinary perspectives. Literary theory also poses fundamental questions about the ways in which language and literature represent the world. Courses that satisfy this requirement are usually in the language and/or literature departments.

- c. Systems and Traditions of Thought, Meaning, and Value (one course): (TMV). Courses satisfying this requirement provide students with systematic, critical understanding of philosophical issues or systems of religious belief and practice. They address the ways human beings have conceptualized and put into practice claims about such topics as the meaning of human existence and the nature of truth, knowledge, or morality. Such courses are not restricted to a particular cultural, geographical, or historical focus and may include studies from a wide variety of cultures and time periods.
- d. International or Comparative Study (one course): (INT). In addition to understanding the traditions of particular cultures, an educated person needs to be aware that no nation, society, or culture exists in isolation. To an increasing degree, an international dimension informs all human endeavors, including economic, political, social, ideological, religious, and artistic ones. Thus, all students are required to elect one course that considers interrelationships among societies, cultures, or nations and/or the methods or approaches employed in comparative studies. We seek to ensure that Dartmouth students will be internationally as well as nationally informed.
- e. Social Analysis (two courses): (SOC). Courses in this category examine theories of individual and social human behavior, methods of social observation and analysis, historical analysis and inquiry, and issues of civic life and public policy. Social scientific and historical analyses are important tools in our efforts to understand ourselves and others, the contemporary world and its past. They also serve an important purpose in the development of public policy. Courses in social analysis familiarize students with the critical interpretation of evidence and such means of investigation as experiments, modeling, observation, comparison, statistical sampling, interviews and surveys, the use of records and artifacts.
- f. Quantitative and Deductive Science (one course): (QDS). Mathematical sciences are fundamental to much scientific and social scientific investigation, while the underlying mode of deductive reasoning

continues to inform many ways of obtaining knowledge. In this category, students must pass a course in mathematics, in mathematical statistics, or in symbolic logic, the underpinning of mathematical reasoning. Modern mathematics includes areas as diverse as topology, probability, and combinatorics, as well as the more familiar algebra, geometry, and analysis. An understanding of some basic mathematical techniques is essential for appreciating ways in which the world can be visualized and studied. At the same time, such understanding helps in testing the suitability of many of these visualizations and gives tools to examine the fit between natural phenomena and their abstract models.

- g. Natural and Physical Science (two courses): (SCI or SLA). These courses introduce students to scientific methods of inquiry as well as research methodology and interpretation. One of these courses must provide a laboratory, experimental, or field component as an integral part of its structure (courses in the Technology and Applied Science category may also be approved as satisfying the one-course laboratory requirement.) An understanding of the basic principles and terminology of science, and of the ways in which scientists obtain, validate, judge, test, and then re-judge information, is an essential form of education for this century and the next. Students should acquire some expertise in scientific discourse: in the ways in which facts are acquired, tested, and challenged, and in some of the scientific principles that help to explain physical, cosmological, chemical, and biological processes.

Many science courses are taught with coordinated laboratory activities. In some cases, these laboratories take the form of a field trip, outdoor or off-campus, to a site or facility at which the student can examine first-hand some phenomenon, feature, or object.

- h. Technology or Applied Science (one course): (TAS or TLA). These courses must include the methodology and theory of applied science, and may consider the social contexts, benefits, and threats of technology. They enable students to understand the process by which the discoveries of basic science have been translated into products, facilities, services, devices, and technical information. These courses address the principles underlying technology or applied science, rather than just making use of technology.

General Education Requirements: Procedures

Certain courses, such as Writing 2, 3, and 5, language courses numbered 1, 2 and 3 or equivalents, Independent Study courses, TUCK courses, and all graduate courses (courses numbered 100 and higher) do not qualify to

satisfy any part of the General Education requirements. Beginning in the 2021-2022 academic year, First-Year Seminars do not satisfy General Education requirements (Distributive or World Culture Requirements). All other courses may potentially satisfy one or more of these requirements. Departments and programs must propose their courses for such credit and have the proposals approved by the faculty Committee on Instruction (COI). Courses that have already received such approval are noted in this Catalog with codes described below. The exact category of each offering appear in the Timetable of Class Listings for each term.

While every effort has been made in this Catalog to provide information that is as accurate and complete as possible with regard to the categories satisfied by courses in the curriculum, it is inevitable that a few changes or additions will occur in the period between the time when this Catalog is published and before students elect courses for a term. Thus, information provided in the Timetable of Class Listings for each term will officially supersede that found in this Catalog (or in any other publication such as Department/Program websites). Students should take great care to check the distributive and world culture categories listed on the Timetable of Class Listings for the specific term in which they register for a course. These categories may, or may not, match what is listed in this Catalog.

It should be noted that some courses might almost equally well fall into either of two categories. However, with one exception noted below, each course may satisfy only one category for the Distributive requirement, and only one category for the World Culture requirement. In such situations a decision, which may be somewhat arbitrary, must be made as to which category to select. Students must follow the decision that has been made by the COI; there is no appeal of this decision, nor may students petition (then or later) to have a course count for them in a category other than the one selected by the department or program and approved by the COI. In cases where the category of a course has been changed, the category in effect for the term in which the course was taken will be used.

The following phrase or codes are used in the course listings in this Catalog to indicate the categories for each course:

World Culture Requirement (WCult):

W	Western Cultures
NW	Non-Western Cultures
CI	Culture and Identity

Distributive Requirement (Dist):

ART	Arts
LIT	Literature
TMV	Systems and Traditions of Thought, Meaning, and

Value

INT	International or Comparative Studies
SOC	Social Analysis
QDS	Quantitative and Deduction Sciences
SCI	Natural Sciences (without laboratory component)
SLA	Natural Sciences (with laboratory component)
TAS	Technology or Applied Science (without laboratory component)
TLA	Technology or Applied Science (with laboratory component)

Each course listing in the ORC/Catalog has information on General Education categories. For example, 'Dist: ART, WCult: NW' indicates that the course in question satisfies the Art category for the Distributive requirement and the Non-Western category of the World Culture Requirement. If no listing occurs (for example, if WCult does not appear) then the course does not satisfy any part of the requirement in question.

In the Distributive requirement, certain courses satisfy both the International and Comparative Studies category and a second category, and, for example, would be listed in the ORC/Catalog and Timetable as 'Dist: INT or ART'. However, in each case, a given course can satisfy only one requirement for any individual student (that is, in the example given, either INT or ART but not both). The INT category is the only category under the Distributive requirement that can be combined with another category in this way.

Note that the DartWorks degree audit may indicate that either INT or ART are complete in the example above, regardless of what the student may have ideally chosen. It selects the "best fit." In the end, however, as the student progresses, it will adjust.

The Major

The purpose of a major is to provide a coherent program of study in a discipline or area of knowledge. The College offers a number of options designed to meet the needs of students in their selected major programs of study. These options, in addition to Standard Departmental Majors and Program majors, include a Modified Major or a Special Major. A Modified Major usually comprises work in two departments or programs with emphasis in one. The Special Major exists to accommodate students who wish to design special interdisciplinary or interdivisional programs of study. It is also possible for a student to have combinations of majors and minors; however, a student cannot exceed two additional majors or minors beyond the required major (for a total of three).

No more than half of the courses required for the major, including prerequisites, may be satisfied by transfer.

In planning a major program of study, the student is urged to consider carefully these different options; each is described in detail in the designated section. Consultation with appropriate department or program chairs, advisers, and other faculty members is an important and necessary part of planning a major program. Procedures for students wishing to file more than one major are described in the Working Rules and Regulations Section.

The Committee on Instruction is empowered, for all types of major, to allow individual and general variations from the usual patterns that will assist a given student or improve a major without damaging the basic concept.

Culminating Experience in the Major

Each department and program includes among its major requirements a culminating activity, normally during the senior year, academically challenging and appropriate to the discipline and mission of the department or program. To this end, the following principles apply:

1. The requirement may involve individual projects (theses, directed research and writing, laboratory research, creative projects), senior seminar(s), group tutorials or colloquia, or some combination of these. If the requirement exclusively involves graded individual projects, a department or program may provide, on a regular basis, an informal but mandatory senior colloquium or set of group tutorials (these would not necessarily need to be graded). Their goal is to encourage students to exchange ideas, and to share with one another and with members of the faculty reports about progress with their individual projects.
2. The requirement will assume a solid grounding in the substance of the discipline and expect and encourage development of a relatively sophisticated understanding and use of its methods, thereby fostering the student's ability to articulate their work and ideas in writing, oral presentation, and/or discussion.
3. The requirement must be taken for credit and graded. All majors must satisfactorily complete this requirement.
4. The requirement must involve at least one course credit but may take the form of a single project extended over two or three terms (e.g. a 3-term tutorial, laboratory, creative or research/writing project) with credit and grade recorded upon completion of the final term of the project.
5. Departments/programs may offer more than one sort of senior academic activity in order to maintain rational teaching loads for faculty while providing appropriate options to be elected by or designated for students on the basis of their interests and academic achievements.

The implementation of this requirement for each individual major is described under the department or program section in this Catalog.

Standard Departmental or Program Major

The Standard Department or Program Major consists of eight to ten courses in the major subject in addition to those courses that are prerequisite to the major. (With the agreement of the major department/program at least some of the 'prerequisite' courses may be taken after declaring the major.) Prerequisite courses, unlike those that are part of the major, may be taken under the Non-Recording Option and, with the special approval of the department or program, need not necessarily be passed. Every course counted as an actual part of the major must be passed with a recorded letter grade or previously authorized CT; courses completed with standings of NC, NR, and E are not included.

The major must be a unified and coherent whole, not a series of relatively unrelated courses. When appropriate, however, courses from other departments or programs may be substituted for one or more in the area of the major. For instance, an English major often includes as one of the courses a comparative literature offering, or Chemistry, a physics course. However, such courses must serve in satisfaction of the major (not simply as a prerequisite to the major) in the other department or program unless a course has been specifically approved and listed in this Catalog as suitable for the major credit in the department or program of the student's major. Courses within the major, or offered by the major department or program, satisfy whatever Distributive, World Culture, or Interdisciplinary credits are normally attached to those courses. In other words, these requirements are completely independent of the choice of major.

The Department or Program may set a minimum grade average for admission to and/or completion of the major. It may also impose the requirement of a thesis, comprehensive examination, etc.

When a student finishes a standard major as outlined here, the Department or Program determines whether the student has adequately completed (i.e., passing, or reaching an announced minimum average) the courses of the major declared as part of the program plan, along with other specified requirements. If so, the Department or Program notifies the Registrar of the completion of the major and, accordingly, satisfaction of this requirement for graduation. On graduation, the student's record indicates completion of the major in, for example, Comparative Literature or Physics. No form of Honors or Distinction in the major is allowable unless the student has undertaken an Honors Program (see the next paragraph), although the student may receive overall (Latin) honors, e.g., Magna cum Laude, as the result of grade point average for all courses taken at Dartmouth.

Students with appropriate grade averages and the desire to do so may apply to do an Honors Program in the major (i.e., Honors Major). By so doing they may on graduation achieve Honors or High Honors in the major; please see The Honors Program and Honors in the Major.

The procedures for declaring a major are outlined under Working Rules and Regulations in the Catalog and on the Registrar's website. After a student declares a major and if it is approved or denied by the department or program, the student may make updates by consulting the authorized major adviser and submitting a revised major plan.

Modified Major

Departments and Programs may offer modified majors, intended to fit the needs of students who have a definite interest in the major department/program but are also interested in some specific problem or topic, the study of which depends on courses in related fields.

A modified major contains ten courses, six in one field and four in a second field or perhaps in more than one area. It should be planned as a unified, coherent whole, and not consist of a series of unrelated courses. Students must submit a statement to the primary department or program and to the Registrar, explaining their rationale for the courses selected for the modified major. (For those modified majors where the department/program has listed all of the required courses, no rationale need be submitted to the Registrar.) Each department or program sets its own prerequisite and prescribed courses for a Modified Major, within the limit described above, and in greater detail in the following paragraphs. Courses which form part of a modified major are subject to the same requirements described in the section 'Standard Department Major' described previously; they must serve in satisfaction of a major in the department or program offering the course unless specifically listed in this Catalog as suitable for a modified major. The Registrar may refuse to accept a modified major that does not meet the 'unified and coherent' requirement. If the issue cannot be resolved between the Registrar and the department(s) or programs(s) concerned, it will go to the Committee on Instruction for a decision.

The primary part of the major must consist of six courses in a single major-offering department/program (e.g., English, Biology, History, Comparative Literature). The secondary part must consist of four courses, none of which may bear the same department/program title as that of the primary part. (Exception: when a department or program offers officially distinct subjects, as indicated by differing names, an internal modified major may be constructed, e.g., six French and four Italian courses [or the converse].) Furthermore, there will always be at least one course prerequisite to the primary part and normally one or two prerequisites to the secondary part. In case the primary department/program has no prerequisites for its standard

major, seven courses are required in the primary part of a modified major.

If a student desires a modified major consisting of the necessary primary part with six courses from one department or program and four courses that are not from a single department or program as the second part, the major requires the approval of the chair (or approved faculty delegate) of the primary department/program only. There is no direct advantage to securing a second approval. When a student completes the major, it will be entered in the permanent record as, for instance, 'Psychology Modified,' with no indication of the second part appearing. This is Modified Major "type B."

It is also possible for a student to arrange a Modified Major that will receive full recognition. The student works with one major-offering department/program as the primary and another as the secondary. A non-major-offering department/program may also serve as the secondary field. The major plan must show six courses (plus prerequisites) in the primary field (standing for department or program) and four courses (plus prerequisites) in the secondary field. The various prerequisite courses should be identified. The primary field, as noted, must be a department or program authorized to offer a major; the plan will require the approval of the chair (or faculty delegate) of this department or program indicating specific and overall approval. The plan will also require the approval of the chair (or faculty delegate) for the secondary department or program, again indicating specific and overall approval. Both faculty members, in approving the plan, indicate that the resulting major is an intellectually integrated package; it must not be a 'major' and a 'minor' with little or no relationship between the two fields. When such a major has been completed, the final records will show a major for, say, 'History Modified with Economics,' or 'English Modified with Women's Studies.' This is Modified Major "type A." Please note that a student might take exactly the same courses, but not have the approval by the secondary department or program; if so, the major would be recorded as 'History Modified' or 'English Modified.'

In other respects, a modified major is like a standard one. A student may or may not carry out an Honors Program, the potential results being wholly similar. Please be sure to consult the last paragraph of the previous 'Standard Departmental Major' section and the Registrar's website for directions on declaring a major.

Special Major

Dartmouth offers a choice of established majors in a broad array of disciplines and interdisciplinary areas that follow contemporary trends in scholarship and meet most students' interests. In rare cases, when a suitable major, modified major, or combination of majors and minors does not suffice, a student may pursue a special major program of study, provided that it demonstrates intellectual

coherence and educational merit and has the approval of two faculty advisors and of the Council for Interdisciplinary Studies (CIS).

After consultation with appropriate faculty member(s), the student wishing to pursue a special major should submit in writing the proposed individualized program of study to the Assistant Dean of Faculty for Undergraduate Advising. The proposal should state the purpose and objective of the program of study and list ten interrelated courses, at least one of which must consist of independent study or research in association with a primary advisor. No more than three courses may consist primarily of independent reading, study, or research. If an independent research course in a special major has a minimum GPA requirement, the minimum GPA for the research course becomes a requirement for the special major. For advising assistance, the student should meet with the Assistant Dean of Faculty for Undergraduate Advising.

The proposal must also include a detailed supporting letter from the faculty member who agrees to be the primary advisor and the written endorsement of an additional faculty member who is the intended instructor of at least one of the ten courses, this faculty member to serve as secondary advisor.

In its review of a proposed special major program, the CIS will consider the intellectual coherence of the program and the academic qualifications of the applicant. The CIS will also consider the proposed special major in relation to current major/minor offerings at the College and in comparison to established programs of study at peer institutions. The CIS may, at its discretion, call upon the applicant and the advisors to explain the proposal in person.

Since the CIS does not meet in the summer, students due to file a major in or before the summer term should make application early in the spring term or should file a related standard major from which they may later shift. Petitions for a special major will not normally be considered by the CIS unless the petition is presented early enough to allow the student three full terms of regularly enrolled course work at Dartmouth before graduation.

Application for a special major is a demanding process requiring considerable time and many steps. The applicant should not apply for such a major unless the student has a carefully planned program that is of great personal interest. Often, the goals of the special major may be met through other means, such as major/minor combinations, major modifications, or a senior fellowship. A special major is not likely to be approved if the applicant is simply uninterested in pursuing a standard or modified major. The CIS requires evidence that one of these established majors will not suffice.

Upon approval of a special major, the CIS will notify the student, the advisors, the Assistant Dean of Faculty for

Undergraduate Advising and the Office of the Registrar. The notification letter will indicate the title of the major and list the courses therein. The major advisor and the CIS shall have the right to reconsider a program at any time they may regard the candidate's work as unsatisfactory. Moreover, changes in the course program of the special major will not be made without the approval of the student's primary advisor and the Assistant Dean for Undergraduate Advising, who will send confirmation of any changes to the Associate Dean for International and Interdisciplinary Programs, the Office of the Registrar, and the secondary advisor.

Upon the student's completion of the major program, and upon receipt of a recommendation from the two advisors, the CIS will decide the student's final standing in the major.

Senior Fellowships

By vote of the Board of Trustees, each year there is selected from the junior class a group of students (usually no more than ten, but in exceptional circumstances a maximum of twelve) to be Senior Fellows during the following year. The Senior Fellows are chosen from among students of such intellectual caliber, independence of character, and imaginative curiosity that they have become interested in some personal project of study that will contribute to their own intellectual growth. Every Senior Fellowship must involve a project in which the intellectual scope and breadth of imagination goes beyond that which can be accomplished by taking courses offered in the existing curriculum. These students are permitted all the freedom they are capable of using profitably within the framework of the undergraduate college. The Senior Fellowships constitute recognition of the existence within the College of the kind of responsible individualism that must ever be a part of education in a free, democratic society, and provide exceptional opportunity for self-education for those who are best able to use it.

The Committee on Senior Fellowships is responsible for selection and oversight of the Senior Fellows. The regulations governing the program are as follows:

1. Application for a Senior Fellowship: Members of the junior class may become candidates for Senior Fellowships by individual application. To be eligible, students must have attained a grade point average at the end of the fall term of junior year that places them in the top 40% of their class. The Committee on Instruction is empowered to make small downward adjustments of this requirement when the Committee on Senior Fellowships strongly supports the application of a candidate who does not quite qualify

In the planning and execution of this program a Fellow shall be responsible to some member of the Faculty who shall act as adviser. No member of the Faculty may act as

primary adviser for more than one Senior Fellow during an academic year. In the exceptional case where two or more students collaborate on a senior fellowship, each student must have a separate primary adviser. If the primary adviser is not a tenure line member of the Dartmouth Arts & Sciences faculty, one of the secondary advisers must meet that criterion.

Each candidate must file an application in the third week of the term, two terms before the Senior Fellowship is to begin. Included in the application shall be an application form, itemized budget, and a detailed description of the project: what the candidate proposes to do, the reasons for doing it, and plans for achieving the goals. The applicant must also submit an academic plan specifying proposed coursework and credits for the fellowship year. The plan must include six courses directly related to the Senior Fellowship project. At least four of the six must be Senior Fellowship courses, with the remainder (if any) from relevant department and program course offerings. The applicant's potential adviser shall submit to the Committee on Senior Fellowships, in support of the candidate's application, a comprehensive written statement in which the merit and feasibility of the project, the qualifications of the applicant, and the commitment of the adviser are fully discussed. In addition, two other faculty members must submit recommendation letters for the candidate. If the applicant has a secondary adviser, that faculty member must be one of the recommenders.

2. Selection of Senior Fellows: The Committee on Senior Fellowships will review all applications and select candidates to advance to the interview phase. Selected candidates and their potential advisers will be required to attend an interview with the Committee on Senior Fellowships. Once the interview process is complete, the Committee on Senior Fellowships will vote on the selection of Senior Fellows. A list of the newly appointed Senior Fellows will be forwarded to the President of the College, along with the name(s) of their faculty adviser(s) and information about their Fellowship project.
3. Requirements for Senior Fellows: The Fellowship year comprises three terms of registered enrollment, at least one of which must be spent primarily in residence. Fellows are enrolled for four to six Senior Fellow courses over the three terms of the Fellowship, in addition to the other courses specified in their academic plans. Fellows must be enrolled in at least one Senior Fellow course in each of the three terms of the Fellowship. The Senior Fellow courses are graded on a Credit/No Credit basis, and citations are not awarded for Senior Fellow courses. Supervised independent research away from campus will count as an R-term. Senior Fellows are required to complete a total of thirty-five course credits before the end of their Fellowship year. Fellows must complete all distributive

and related requirements by the end of the second term of the Fellowship. The total number of courses in the three terms shall not exceed nine. All course enrollments and academic plans must be approved by the Committee on Senior Fellowships.

Fellows shall not be required to complete a major but may do so if they so desire; they do not receive any reduction in the requirements for a major. No part of the Senior Fellowship work may be submitted for departmental major honors. Students who plan to finish a major in addition to the Senior Fellowship should be aware that they must complete all of the major's requirements, including a culminating experience if required. The Senior Fellowship does not fulfill the culminating experience requirement for a major.

4. Continuation of Senior Fellowships: The Fellowship appointment is provisional for one term. Continuation for the remaining two terms requires the Committee on Senior Fellowship's approval of a Fellow's accomplishments and rate of progress during the first term. In making its determination, the Committee on Senior Fellowships shall evaluate a written report from the student, a detailed analysis and recommendation of the primary adviser, and such additional information as may be required. Senior Fellows should have a plan to complete a major in time for graduation in the event that the Fellowship is discontinued at the end of the first term.
5. Completion of a Senior Fellowship: Senior Fellowship projects are evaluated by three or more examiners. Except in special circumstances, at least one of the members is expected to be from outside the College. At the end of the first term of the Senior Fellowship, the candidate's primary adviser will recommend two or more examiners, in addition to the primary adviser, to serve on the candidate's Examining Committee. The Committee on Senior Fellowships must approve the list of examiners as well as any subsequent changes to the list.

Each member of the Examining Committee for a Senior Fellow will make a recommendation to the Committee on Senior Fellowships as to whether the Senior Fellow has completed the Fellowship and whether a completed Fellowship should be considered for Honors or High Honors. The Committee on Senior Fellowships will determine the final standing for each Senior Fellow based on the recommendations of all members of the Examining Committees and will notify the Registrar of these final standings. This standing shall become part of the Fellow's permanent record.

The Fellow must submit a draft of the project to the primary adviser by the end of the third week of the final term of the fellowship. The student's final Senior Fellowship project must be completed and submitted to the

Examining Committee three weeks before the beginning of the final examination period in the third term of the fellowship. Each Fellow must make an oral presentation to the Examining Committee within two weeks of submitting the final project. In addition, each Fellow must present the final project to the Dartmouth community in a public forum prior to the beginning of the final examination period in the third term of the fellowship.

Senior Fellows who do not meet these deadlines are not eligible for Honors or High Honors. In addition, the Committee on Senior Fellowships may declare failing a Senior Fellow whose work has not been of satisfactory quality. If this occurs, the Senior Fellow will not receive credit for one or more of the Senior Fellowship courses in the third term of the Fellowship. The Committee shall in such cases specify the requirements to be fulfilled before the degree is granted.

6. Tuition Reduction for Senior Fellows: All Senior Fellows are entitled to attend their final term at Dartmouth College tuition-free. Since this provision may have differing effects on individual students, a Senior Fellow has two options:
 - a. Tuition remission for the final term (for students receiving financial aid, this will mean a reduction in the self-help package for the entire year); or
 - b. A graduate fellowship equal to one term's tuition. The amount of the fellowship is based on the Dartmouth College tuition in the year in which the student completed the fellowship.

Senior Fellows who are receiving financial aid should contact the Financial Aid Office to discuss these two options before making a decision. Senior Fellows who are not receiving financial aid should contact Campus Billing and DartCard Services.

The Honors Program

Each of the various forms of major makes available an Honors Program that is required of candidates for Honors or High Honors in the major, the awarding of these to be decided upon when the student's department/program or other appropriate supervisory body is about to certify to the Registrar the completion of the major.

The program requires work that is clearly greater in depth and scope than that expected in the normal major program. As soon as a student declares a major, the student should receive a description of the Honors Program including requirements for eligibility, the procedure for admission, and the name of the faculty member in charge of the program.

This additional undertaking shall take the form of supervised independent work on an individual or small-group basis to enable students to progress toward an understanding of their major field at an accelerated pace. It

includes a thesis — or its equivalent, such as an experimental investigation — as well as the writing of papers or other creative activity suitable to the major subject. Beyond these stipulations a department/program (or other supervisory body) may at its discretion impose such additional requirements as a start upon the Honors Program in the junior year, a more demanding reading program than it requires of regular major students, and the use of honors courses or honors seminars. Examinations in the Honors Program will be regulated by the department or program. Students may receive a maximum of two course credits for participation in the program.

Admission to an Honors Program is by application to and with the consent of the department/program or other supervisory body. Each department or program publishes in this Catalog the criteria and procedure for admission to its Honors Program. The minimum requirement for admission is a grade point average of 3.0 in the major and a 3.0 general College average at the beginning of the senior year or at any other time that an application for admission is made. The Committee on Instruction is empowered to make small downward adjustments of these requirements when a department or program strongly supports the application of a candidate who does not quite qualify.

As indicated above, Honors Programs will vary, but all will include independent, sustained work. Those students who satisfactorily complete the Honors Program with a 'B+' average or better will earn Honors recognition in their major or, in appropriate cases, High Honors. High Honors will be granted only by vote of the department or program on the basis of outstanding independent work. Departments and programs are urged to make an interim evaluation of honors students after one term and to recommend the continuation of those students only whose work demonstrates the capacity for satisfactory (B+) work. Students who satisfactorily complete the Honors Program will have entered on their permanent record, e.g., High Honors in Chemistry, or Honors in History.

No record will be kept for completion of an Honors Program in the absence of the awarding of Honors or High Honors, since the department or program has thereby indicated that the performance was not 'satisfactory' (in the applied sense of the word).

Honors work in the Special Major requires a recommendation from the student's two advisers with full description of the planned approach to the Council on Interdisciplinary Studies; this recommendation must be submitted in time for the Committee to make its decision by October 1 of the senior year.

Students not meeting the usual requirements for the Honors Program may seek special admission to an Honors Program with department or program support and approval of the Committee on Instruction.

The Minor

Students who wish to elect a minor must officially sign up for it no later than the end of the first week of the last term in residence prior to graduation (and after they have an approved major on their record.)

A student cannot exceed two additional majors or minors beyond the required major (for a total of three). If the minor has been completed at the time of graduation, it will then be noted on the student's transcript, but the fact that a student is working toward a minor will not appear on the transcript prior to graduation. It will, however, appear on the student's degree audit.

Minors may be offered by departments, programs, or groups of faculty, and must be approved by the Faculty. A minor consists of at least six courses, no more than two of which may be designated as prerequisites (although more than two prerequisites may be required). The courses beyond prerequisite must be suitable for the major in those departments and programs offering a major, or of similar level in other departments and programs. The entire program for each minor is to form a unified and coherent intellectual whole. One or more faculty members will be designated as advisers for each minor.

A student enrolls in a minor by declaring the minor and submitting a plan, similar to declaring a major, indicating the courses constituting the minor program along with the terms in which the courses will be taken. See the Registrar's Office website for procedures on declaring a minor. In general, a minor may not be in the same department or program as the student's major. There are some exceptions to this; examples include: French with Italian, Physics with Astronomy, and Computer Science with Digital Arts. For a complete list of invalid major/minor and modifier combinations see the Invalid Combinations page of the *DartWorks Guide*. Departments/Programs may petition the Committee on Instruction for any additional combinations. As with Dual Majors, no course may count toward both a major and a minor or toward both of two minors (although a course may be part of one of these and prerequisite to the other, or prerequisite to both, subject to the approval of both departments or programs). At most one course in the minor, including prerequisite courses, in which the standing of NR is received may be used toward satisfying the minor. Individual departments or programs may disallow courses with NR standing to count toward their minors; see the individual department or program information in this Catalog to determine whether courses with NR standing are allowed to count toward their minors.

No more than half of all courses required for the minor, including prerequisites, may be satisfied by transfer.

A student may develop a special interdisciplinary minor working directly with two or more faculty advisors. A proposal for a special minor, including a written rationale,

must be approved by the Council for Interdisciplinary Programs. A special minor normally shall include no more than one course taken prior to petition and approval.

After consultation with appropriate faculty member(s), the student wishing to pursue a special minor should submit in writing the proposed individualized program of study to the Assistant Dean of Faculty for Undergraduate Advising.

Statement of Credits

For a student who was registered fall 1985 or later all courses are in the form of course units. Each course count unit may be considered the equivalent of a semester course worth 3.5 semester hours (4.5 if a laboratory course) or 5 quarter hours (6.7 if a laboratory course.) This statement appears with undergraduate official transcripts issued as of academic year 2018-2019 and thereafter.

Scholarship Ratings

Regularly Graded Courses: Since the fall term of 1973-1974, the grade assigned at the completion of a course has been one of the following: A, A-, B+, B, B-, C+, C, C-, D, or E. The following guidelines offer general criteria for evaluation and grading, with 'plus' or 'minus' designations indicating that, in the opinion of the instructor, the student has performed at a level slightly higher or lower than the norm for that category.

- A: 1. Excellent mastery of course material
 - 2. Student performance indicates a very high degree of originality, creativity, or both
 - 3. Excellent performance in analysis, synthesis, and critical expression, oral or written
 - 4. Student works independently with unusual effectiveness
- B: 1. Good mastery of course material
 - 2. Student performance demonstrates a high degree of originality, creativity, or both
 - 3. Good performance in analysis, synthesis, and critical expression, oral or written
 - 4. Student works well independently
- C: 1. Acceptable mastery of course material
 - 2. Student demonstrates some degree of originality, creativity, or both
 - 3. Acceptable performance in analysis, synthesis, and critical expression, oral or written
 - 4. Student works independently at an acceptable level
- D: 1. Deficient in mastery of course material

2. Originality, creativity, or both apparently absent from performance

3. Deficient performance in analysis, synthesis, and critical expression, oral or written

4. Ability to work independently deficient

E: 1. Serious deficiency in mastery of course material

2. Originality, creativity, or both clearly lacking

3. Seriously deficient performance in analysis, synthesis, and critical expression, oral or written

4. Cannot work independently

The following grade point values are assigned: A, 4; A-, 3 2/3; B+, 3 1/3; B, 3; B-, 2 2/3; C+, 2 1/3; C, 2; C-, 1 2/3; D, 1; and E, 0.

In view of the many grades assignable and differences in faculty policies, every faculty member will explicitly declare criteria for grading to students in their courses and provide as much information as possible with respect to an individual student's progress and the evaluation of the final grade assigned.

A course assigned a grade of E does not add to the student's total (course count) counting toward the minimum of 35 for graduation, nor does it serve in satisfying any other graduation requirement. The E is, however, a permanent part of the student's record, is included in all calculations of the student's grade point average and is shown on transcripts.

On May 23, 1994, the Faculty voted that transcripts and student grade reports should indicate, along with the grade earned, the median grade given in the class as well as the class enrollment. Departments and Programs may recommend, with approval of the Committee on Instruction, that certain courses (e.g., honors classes, independent study) be exempted from this provision. Courses with enrollments of less than ten are also exempted. At the bottom of the transcript there is a summary statement of the following type: 'Exceeded the median grade in 13 courses; equaled the median grade in 7 courses; below the median grade in 13 courses; 33 courses taken eligible for this comparison.' This provision applies to members of the Class of 1998 and later classes.

A student who has failed a course may elect it again. In this situation both of the grades are recorded and included in the cumulative average; only one course credit is earned. The same general principle applies to Credit/No Credit courses.

At the end of each term every undergraduate may view a grade report listing the courses taken, the grade in each, the term and total overall course count, and the grade point average for the term and overall. This information is available on DartHub.

At the end of each term every student's term and cumulative grade point average (GPA) are calculated. The GPA calculation includes solely courses taken at Dartmouth on a regular A through E grading scale (GPA courses). The calculation uses quality points which are three times the usual grade values to prevent the accumulation of errors: an A counts as 12 points, A- as 11, B+ as 10, B as 9, B- as 8, C+ as 7, C as 6, C- as 5, D as 3, and E as 0. The GPA is the sum of the quality points divided by three times the GPA courses. This quotient is rounded to two decimal places.

The grade reports show alongside a course entry, when appropriate, an asterisk to indicate the intention of the instructor to award a citation. Citations are designed to procure an official record of information about undergraduates who have made particularly favorable impressions on members of the faculty because of their unusual talents, dependability, initiative, resourcefulness, or other meritorious characteristics that are not indicated adequately by academic grades. The actual statement of citation is included with a student's transcript whenever such is issued unless the instructor has failed to supply it at the time of issuance of the transcript or the student does not wish it to be included.

If a student has elected a course under the Non-Recording Option, the grade assigned by the instructor is shown on the grade report, then the limiting grade selected by the student, and finally the officially recorded standing. If the assigned grade has at least matched the grade limit, the assigned grade becomes the official grade; if not, the standing 'NR' (Non-Recorded) is posted unless the assigned grade is E. Please consult the section on the Non-Recording Option.

It should be noted that grades that are high enough to satisfy the various degree requirements may not be indicative of overall satisfactory progress and may lead to action by the Committee on Standards; consult the Student Handbook.

Final Grades:

Final grades are the responsibility of the instructor.

Student-Initiated Appeal:

- A student who questions the appropriateness of a grade confers with the instructor.
- If the instructor agrees, the instructor makes a written request to the Registrar, with the approval and co-signature of the department/program Chair.
- The instructor must indicate one or more specific ways in which the student was done an injustice. A simple change of mind will not suffice.

- It may not be made on the grounds of course work completed after the term in which the course was offered other than in the case of an official incomplete.
- If the instructor refuses to make a grade change:
 - The student may appeal, in turn, to the Chair, the Associate Dean of the Faculty for the appropriate division, and the Dean of the Faculty; it is unusual for such appeal to go beyond the Chair.
- The student must initiate the appeal to the instructor, in writing, by the last day of the term following that in which the course was taken.
- The instructor must submit the final grade to the Registrar by the last day of the *second* term following the term in which the course was taken.
- If the student has been graduated, only the department/program Chair may initiate a grade change. It must be submitted within one year of the student's graduation in the case of clerical, computational or other similar administrative error.

Instructor-Initiated Grade Change:

- The Instructor makes a written request to the Registrar, with the approval and co-signature of the department/program Chair.
 - The Instructor must indicate one or more specific ways in which the student was done an injustice. A simple change of mind will not suffice.
 - It may not be made on the grounds of course work completed after the term in which the course was offered other than in the case of an official incomplete.
- The Instructor must submit the final grade to the Registrar by the last day of the term following the term in which the course was taken.
- If the Registrar refuses to make the change, the instructor may appeal to the Dean of Faculty;
- If the student has been graduated, only the department/program Chair may only initiate a grade change. It must be within one year of the student's graduation and only in the case of clerical, computational or other similar administrative error.

Note: These procedures also apply to undergraduate courses with the subject TUCK, however where required the Tuck School of Business Dean designates the appropriate Chair equivalent within the Tuck structure. If the appeal goes further, it proceeds to the Tuck Dean.

Temporary Transcript Designations

There are various circumstances in which the final grade in a course cannot be submitted by the instructor during the usual period immediately following the end of the final examination period. Three different designations, I (Incomplete), ON (On-Going), or AD (Administrative Delay), may appear temporarily on the end of term grade reports and on transcripts, depending on the circumstances, as described below.

There is no grade of Incomplete. Incomplete is a temporary notation placed on a student's record to indicate that the work in a course has not yet been completed and therefore a grade has not yet been submitted by the instructor. The assignment of Incomplete in a course may be made only by the Dean of the College⁴ upon request of the student and the instructor. Failure to complete a course on time without prior approval by the Dean will result in the grade of E. Generally speaking, an Incomplete is approved when there are circumstances that are judged to be beyond reasonable control by the student.

⁴ *Although the original vote of the Faculty was specific, all of the Deans in the Undergraduate Deans Office are qualified to act in the context of Incompletes.*

If the request is based on such an academic reason as an unanticipated difficulty in obtaining sources or the failure of a critical experiment, the student should consult first with the instructor. Approval by the instructor of the student's request should be in writing and should set forth the circumstances. This document should then be sent directly to the Dean of the College.

If the request for an Incomplete is based on non-academic reasons (illness, unavoidable absence, etc.), the student should make it directly to the Dean of the College who will grant or deny the request after consultation with the instructor in the course.

All Incompletes are granted for a specific period to be established jointly by the student and the instructor with the concurrence of the Dean of the College. If the student fails to complete the work of the course within the agreed period and no extension is granted, the instructor reports the appropriate grade for the student based on the student's performance, no credit being allowed for the fraction of the work not turned in. If the instructor fails to report a grade, the Dean, after consultation with the instructor, the department or program chairman, or both, may ask the Registrar to record the grade of E (or in courses offered on the Credit/No Credit basis, the final standing of NC). Extensions of time beyond the original deadline are granted only in exceptional cases. A request for an extension must be received by the Dean of the College before the established period has expired and are granted or denied after consultation with the instructor.

NOTE: All requests for the temporary standing of Incomplete must be received by the Dean of the College on

or before the last day of the corresponding examination period.

The designation ON (On-Going) may be used on transcripts when the assignments of a single course necessarily extend beyond the limit of a single term. Examples of such circumstances are certain senior honors courses where the work in a preliminary course cannot be evaluated until a second term of a thesis or other project is completed. It is also used for certain Music courses where three (3) terms are required to complete the course whereupon one credit is earned in the final term.

The *ORC/Catalog* course description indicates those courses in which a grade of "ON" may be assigned. Grades for any course not having such permission must be assigned at the end of the term in which the course is offered. For ongoing courses, except for Music courses described above, the first term of a two-term ongoing grade is replaced with same final grade as the final term when no other grade has been assigned. Students may receive no more than two (2) credits for a single ongoing course. In the case where the "ON" is assigned for certain three-term Music courses and a single credit is earned, the grade is earned, and the course load is applied in the final term only.

The designation AD (Administrative Delay) may be used on transcripts when the grades of one or more students in a course cannot be reported on time due to administrative or personal factors, but where the use of an Incomplete is not appropriate. Examples of such circumstances are a serious illness of the instructor at the time grades are due, or delays in receiving grades from Off-Campus programs. Requests for use of this designation, including an agreement on the date when the final grades will be submitted, will be made by the instructor or Chair to the Registrar.

Credit/No Credit Courses

Certain courses are offered on a Credit/No Credit basis. A student electing one of these courses receives a grade of CT (Credit) or NC (No Credit). A grade of NC is defined as failure to complete the course satisfactorily according to criteria to be announced by the instructor at the beginning of the term. Such a course will be counted, if the grade is CT, toward the minimum of thirty-five needed for graduation. A course with grade of CT or NC may not be used to satisfy a General Education requirement. If approved previously, a Credit/No Credit course may be counted toward the Major Requirement.

Courses under this system carry no grade units and are not used in establishing a cumulative average. If a student receives a grade of NC, the course is recorded as such, and no increase in course count is achieved.⁵ As in regularly graded courses, there can be a temporary standing of Incomplete.

⁵Students should note that, although a grade of NC does not affect the Dartmouth grade point average, certain outside agencies may count such grades as E's and will recalculate the student's grade point average to reflect this. Check their website for waivers related to COVID-19.

While endorsing the system here indicated, the Faculty believes it necessary to ensure that students have on their records an adequate number of regular letter grades. A limit has been set for each student of overall eight final standings of CT, NC, NR, and E (the last standing only when assigned in an NRO course). Accordingly, the degree of use of 'Credit/No Credit' courses affects the election of courses under NRO and vice-versa. (If a student never uses the Non-Recording Option or does so but always regains the eligibility temporarily invested, that student may accordingly elect as many as eight Credit/No Credit courses.)

The concept of essentially non-graded courses was developed mainly to offer an improved way of dealing with subject matter that is intrinsically ill-suited for grading. It may be applied, however, to any area when an instructor desires, provided in every case that the authorization of the Department or Program offering the course has been obtained sufficiently in advance. An individual course may accordingly be offered in different terms as a regularly graded course or in the fashion described here. The Registrar's Office website, including a link on the Timetable of Class Meetings lists the Credit/No Credit courses for the given term. No change in either direction may be made after publication of the published list and no individual student may be graded in a fashion different from the announced pattern.

In a given term all sections of a course offered that term in two or more sections must be offered under the same pattern: all must be regularly graded, or all must be Credit/No Credit (with the pattern having been earlier announced, as indicated previously).

Students should be sure to recognize the differences between a Credit/No Credit course and a course taken under the Non-Recording Option, as described in the following section. A department or program sets the grading pattern for a Credit/No Credit course. A student may elect a CT/NC course but may not determine the grading mode. However, the student does have the option to choose the Non-Recording Option unless the course has been placed 'out of bounds.'

Non-Recording Option

To support and encourage students who would like to elect courses that may pose greater than usual academic risk, the Faculty offers the Non-Recording Option to undergraduate students.

Eligibility - Students

Available to all students who are enrolled and taking courses except for students on Probation, Warning, or the first term following assignment of Risk.

Description

- Students may elect to receive an NR in one regularly graded course per term except for any courses departments or programs have indicated as “out-of-bounds”. The faculty member will submit a letter grade which will not be shown on transcripts or included in the calculation of students’ grade point averages.
- Students may either indicate that they wish to receive an NR, regardless of what grade the instructor assigns, or indicate the lowest grade they wish to display on their transcript.

Grades and GPA

- A regular letter grade is assigned by the instructor and recorded internally.
- If a student receives an NR:
 - The letter grade submitted by the instructor, while not used in computing any recorded grade average, is available for internal use (e.g., in connection with the limit on the number of D’s allowable).
- A ‘non-recorded’ D will be counted toward the maximum of eight D’s allowable in the minimum course count for the degree
 - It will make the student liable for academic action by the Committee on Standards.
- If an E grade is recorded it displays on the transcript and is averaged in the calculation of students’ GPA.

Eligibility – Courses

- Various departments and programs, or instructors, believe certain courses are unsuitable for use of the option. They are considered “out of bounds”.
 - A list of courses that are “out of bounds” is maintained and published by the Registrar on the Timetable of Class Meetings each term.
 - In addition to individual “out of bounds” courses, students may not use the NR option for any:
 - First-Year Seminars
 - Courses studied off-campus
 - Courses taken in satisfaction of the Language Requirement or prior thereto
 - Graduate courses

Restrictions - Faculty

- Departments and programs may not make any change to or from the out-of-bounds status for their course(s) following the publication of the Timetable of Class Meetings for a given term.
- Departments and Programs may not grant an exemption from the out-of-bounds status to an individual student.
- Instructors assign a regular letter grade.
 - Instructors are not informed which members of their class have elected the option.
 - Instructors may, however, know how many students elected the option.

Restrictions – Students

- Each undergraduate is allowed one NR in a term.
- Students may have up to a maximum of three total uses of the option that result in a standing of ‘Non-Recorded’ (NR) over their Dartmouth career; *For exceptions to the limit of three uses, see the section on Language Requirement Substitutions.*
- A course that receives NR is included in the student’s sum of credits toward graduation.
- A standing of NR prevents the course from being used to satisfy:
 - Distributive requirements
 - The World Culture requirement
 - Major requirements.
- An NR may, however, be used to satisfy:
 - Prerequisite courses to the major
 - At most one course in the minor, including prerequisite courses.
- Uses of the option resulting in the standing of NR or the grade of E (up to the maximum of three) are included in the total of eight courses that may be taken Credit/No Credit or under the Non-Recording Option.
- Students should note the crucial NRO dates published on the term calendar for selecting the option, changing the course chosen, withdrawing from the election of the option, and for altering the choice of grade.
 - The Registrar does not grant extensions of NRO deadlines for any but the most extenuating and compelling circumstances.
 - Should a student withdraw from the course selected for NRO after the end of the initial fifteen days, they do not use the eligibility associated with the

designated course but are not able to make use of NRO in that term.

- Students sometimes desire the release of the concealed letter grade, for example for use in a major, for general education credit, or for admission to a graduate school. Such requests are not considered.

Procedure

- Within the first fifteen days (usually eleven class days) of a term a student may indicate use of the Non-Recording Option for one course each term.
- The student indicates the lowest letter grade they are willing to have recorded and used in averaging for each course.
- The student may also, instead of a letter grade, indicate the intention to have a final standing in the course of NR (Non-Recorded).
- At any time after this initial period, but not later than five class days before the last day of classes for the term, a student may revise the choice of lowest acceptable grade or of NR.

Outcomes

- There are three possible outcomes for a course under the option:
 - If the grade assigned by the instructor matches or surpasses the student's final choice, it is entered and serves in all respects as a regular letter grade.
 - If the grade is not an "E" but otherwise lower than the student's final selection, or the student chose to receive an NR, the entry on the student's permanent record and on transcripts is NR.
 - The standing of NR is permanent: requests to revoke it and reveal the letter grade originally assigned by the instructor must be refused.
 - Should the assigned letter grade be E, this grade is recorded and averaged in the normal fashion no matter whether the student chose a grade or NR. The student receives no course credit.

Special Students

Special Students are non-degree candidates who are admitted on a temporary basis. They include academically prepared area high school students who participate in Dartmouth's Community High School Program (CHSP), administered by the Dean of Admissions, and qualified College students admitted through the Admissions Office for the summer term only.

In addition, the Dean of the Faculty may, in extraordinary, rare circumstances admit a special student temporarily for one or more terms other than summer term.

While the degree regulations do not apply to Special Students, most of those applying to specific courses and College Regulations do; Special Students should note particularly the following section on 'Working Rules and Procedures.' High school students should refer to the Community High School Program web page.

Enrollment Patterns (D-Plans)

First-Year Residence

All students must be on-campus in residence (R) during fall, winter, and spring of their first year. Shortly after the start of the spring term every first-year student must submit their enrollment pattern (D-Plan) for the remaining nine terms. The pattern must be within a period of four academic years (within fifteen terms after matriculation) and designed to meet degree requirements. After the first year, students may substitute an Off-Campus Program term (O) for one or more of the remaining nine terms.

Transfer students will have fewer terms to complete their requirements. They are subject to the number of terms to complete their degree as confirmed by the Registrar at the end of their first term. The number of terms in residence depends on the initial number of credits which transferred to Dartmouth.

After this initial enrollment, students may make subsequent changes in their enrollment pattern (D-Plan) online using DartHub.

Sophomore Summer Residence Requirement

All students are expected to be in residence during the summer term that immediately follows the sophomore year to take advantage of the presence of an entire class during that time. Dartmouth-sponsored off-campus summer programs or substitution of another summer residence term may be used in satisfaction of the sophomore summer residence requirement.

The Registrar may waive the requirement of a summer residence term with support from the appropriate Dartmouth official. It will be granted only in *truly exceptional* circumstances when demonstrated that it will significantly enrich that student's Dartmouth academic program. Other circumstances that may merit a waiver include cases of demonstrable serious financial hardship, a serious personal or health problem, or participation in varsity athletics in the fall, winter, and spring terms of every year. However, no more than eight percent of the class (including exemptions for three-term athletes) will be allowed for any college class. Students who receive a delay for sophomore summer are expected to be in residence the following summer.

Senior Residence Requirement

Seniors are expected to be in residence at least two terms their senior year. The senior year is normally considered the fourth year after matriculation. For students who graduate earlier or later, the senior year is the final academic year the students are enrolled. Students should plan carefully prior to senior year to ensure they meet this requirement. At most students may have seven fall or spring residence (R) terms in total unless one or more of those terms is participation in an Off-Campus Program (O).

Students who had expected to graduate spring term of the fourth year after matriculation but are unable to do so for whatever reason may enroll an additional term to complete their degree. The additional term may be during the subsequent summer or winter term (only).

Petitions to the Registrar for exceptions

Students may submit an enrollment pattern (D-Plan) petition to the Registrar for requests that do not meet the requirements above. Petitions must be accompanied by a copy of the student's approved major plan and in many cases require support for the exception by the appropriate Dartmouth official. Students submit all enrollment pattern (D-Plan) petitions to the Registrar each term no later than one week prior to the last day of the term.

Students who desire to file an enrollment pattern (D-Plan) distributing the thirty-five courses over a period of five academic years (sixteen to nineteen elapsed terms) or to change a previously approved pattern to a new one of this type, must petition the Registrar. Five-year patterns will not be reviewed until a student has progressed well into the sophomore year and has an approved major on their academic record.

In planning and modifying their enrollment pattern (D-Plan), students should be careful to accrue enough leave terms in the sophomore and junior years to avoid having a thirteen-term pattern when only twelve terms were required. Students who have or will have met all graduation requirements after twelve terms are not approved for additional terms. (The desire to add or complete a minor, additional major, or participate in an off-campus program does not qualify a student to enroll additional terms.)

Students may appeal the Registrar's decision to a subcommittee of the Committee on Standards, as described in the *Organization of the Faculty of Dartmouth College*.

Additional notes

Students who wish to take more than four consecutive terms with an enrollment pattern (D-Plan) of only leave (L) or administrative withdrawal (A) terms must withdraw from the College after the fourth such term by contacting the Undergraduate Deans Office.

International students should consult with the Office of Visa and Immigration Services about implications for their

visa status in SEVIS before initiating more than one leave (L) term within the United States or before initiating a withdrawal.

Off-Campus Activities

Students have a variety of opportunities for studying off-campus. Dartmouth strongly encourages students to study through Dartmouth-sponsored programs and exchange programs. In addition, students may independently seek out programs offered by other institutions which Dartmouth refers to as transfer terms. The Frank J. Guarini Institute for International Education administers Dartmouth-sponsored credit-bearing programs and applications to participate in exchange programs. The Office of the Registrar administers transfer term applications as well as exchange and transfer course approvals.

To be eligible for a Dartmouth-sponsored off-campus program or exchange program, accepted students must be in good standing, must not have the temporary standing of Incomplete in any course, and must have completed the First-Year Seminar requirement. The rules for approval of transfer courses taken while on an exchange program are the same as for all transfer courses. (See 3 below, Transfer Credit from other Institution.) Students who wish to participate in a transfer term must petition the Committee on Instruction (COI) outlining how the transfer term meets their academic goals.

Only programs taught by Dartmouth faculty, i.e. Dartmouth L.S.A. (L.S.A.+) and Dartmouth F.S.P. carry Dartmouth course credit. The Committee on Off-Campus Activities (COCA) is charged to review and supervise all Dartmouth-sponsored off-campus academic programs and activities. Other off-campus coursework activity, exchange programs or non-Dartmouth programs may be eligible for transfer credit.

The Off-Campus Programs Office determines the cost of each of the programs. While tuition remains the same, the total cost of most programs exceeds the cost of a term spend on campus due to increased travel and living/food costs. Students who receive need-based financial aid will receive scholarship assistance to cover costs in excess of those of a typical term, and their expected family contribution (EFC) will remain the same as a term here on Campus. If you have a work expectation for the term, it will be replaced by scholarship funding for programs that span the entire term. Work is not replaced for fall plus programs as students are in Hanover for the 10-week term and remain eligible to work.

The Committee on Instruction is charged with the oversight of transfer terms. Students may transfer no more than four Dartmouth-equivalent course credits from other institutions toward the degree at Dartmouth and transfer credits received for courses taken at other institutions prior to matriculation count toward the maximum permissible

total of four. A student participating in a transfer term pays an application fee to Dartmouth for each term of participation. No Dartmouth scholarship aid is available to students enrolled in an academic institution with which Dartmouth has no formal exchange agreement.

Dartmouth College does not investigate the issues of safety and security in the various transfer programs students may consider when taking a transfer term; it is the students' responsibility to investigate these issues. Dartmouth urges students to explore with their parents all issues of safety and security.

1. **Guarini Institute Off-Campus Programs:** Officially recognized programs that are administered and led by Dartmouth Faculty. Students receive specific course credits and grades. A list of programs is published on the Guarini Institute website.

The Guarini Institute website describes all programs in detail. Note: The Arabic, Chinese, Film Studies, German, Japanese, Portuguese, Russian, Spanish, and Theater summer programs serve in satisfaction of the summer residence requirement.

Candidates for Foreign Study (FSP) and Language Study Abroad (LSA) Programs apply online via the Guarini Institute website by the appropriate deadlines; selection is made by the sponsoring department or program. It is the student's responsibility to review information on the Guarini Institute website or contact the Guarini Institute staff for application deadline information. Although the Language Requirement is, by regulation, to be completed by the end of the seventh term, the Registrar can grant an extension to permit L.S.A. study at a later time if a student's program of study prevents earlier enrollment.

Specific Dartmouth course credit and grade can be given only for a course taught or directly supervised by a Dartmouth faculty member. Students must elect a three-course load; two- and four-course loads are not allowed on Dartmouth off-campus academic programs. Courses taken on such programs are out of bounds for the use of the Non-Recording Option. Students are expected to be at their program for its full duration.

For academic off-campus program courses delivered in the English language, elective courses must be closely related to the subject of the program and an integral part of an officially defined undergraduate Arts and Sciences curriculum. Thus, pre-professional, technical, business or graduate courses are not acceptable. The elective course does not satisfy distributive or world-culture requirements unless such requirements have been assigned by the Committee on Instruction at the time the off-campus program is authorized.

A senior who participates in an off-campus program must obtain special permission from their major department or program; such approval is strongly advised for juniors as well. A senior may, with the permission of the chair of the

major department/program and the Registrar, replace one of the required residence terms by a term of off-campus study in the principal field of the major, provided such will be of great benefit to the student's program and will in no way interfere with proper completion of the major or other requirements.

No Dartmouth student may participate in more than three terms of Dartmouth-sponsored off-campus programs (i.e., L.S.A. and/or F.S.P., etc.) for academic credit, except by special permission by the COCA based on a written petition presenting valid academic reasons and strongly supported by the student's major department or program.

2. **Transfer Credit from Dartmouth Exchange Programs:** A student may participate in one of Dartmouth's established Exchange Programs by applying online via the Guarini Institute website by the appropriate deadline. Grades received in courses transferred from other institutions are not recorded on the Dartmouth transcript or included in the Dartmouth cumulative average. Credits earned on Exchange Programs are included in the maximum of four transfer credits allowed toward the degree. Information regarding procedures for pre-approval of transfer credit from exchange programs is available from the Guarini Institute and the Registrar's Office.

It is the student's responsibility to seek and obtain department or program pre-approval for the transferability of each course, for distributive and world culture attributes, and for possible major and/or minor credit, if appropriate.

3. **Transfer Credit from other Institutions:** Students desiring transfer of course credit from any other institution not part of a formal exchange program with Dartmouth submit a Transfer Credit Application and Transfer Credit Approval Form to the Office of the Registrar by the appropriate deadline date listed on the Registrar's website. A non-refundable, non-petitionable application fee of \$2,200 is assessed for the winter, spring, and summer terms. No fee is assessed for fall term. To initiate the process, students should review the policies and procedures on the Registrar's web site regarding transfer credit, research transfer term possibilities by talking with professors and reviewing online resources, and prepare a statement describing how they plan to incorporate the transfer term into their Dartmouth academic program. Students obtain the required transfer credit application forms on the Registrar website. Following are the policies surrounding transfer credit:

- a. Prior Dartmouth approval is required for the specific program as well as individual courses. It requires review and approval by a sub-committee of the Committee on Instruction, the Registrar, and the Departments/Programs accepting transfer of the courses. It is the student's responsibility to initiate the process and to seek and obtain department or program approval for the transferability of each course. This would include distributive and world

- culture attributes, as well as possible major and/or minor credit, if appropriate.
- b. Potentially acceptable programs and undergraduate courses. Courses offered by accredited degree-granting institutions are potentially acceptable for transfer credit provided the courses are an integral part of an officially defined undergraduate Arts and Sciences curriculum; online courses, those given by extension programs, or internship programs are not transferable. Students should be aware that some departments and programs have restrictive policies toward transfer credit.
 - c. Length of term. For each potential transfer course, students must be enrolled for a minimum of three weeks and thirty contact hours per Dartmouth course credit.
 - d. Credits, grading, and general education attributes. A minimum of three semester hours or four quarter hours are required to earn one Dartmouth course credit. A minimum grade of C quality or better must be earned. Grades received in courses transferred from other institutions are not recorded on the Dartmouth transcript or included in the Dartmouth cumulative grade point average. A pass/fail course is not accepted in the absence of proof that the grade is a minimum C quality. Courses elected under such a grading option do not carry distributive or world culture attributes.
 - e. Deadlines. Deadlines for each term and the Transfer Term Application and Transfer Credit Approval forms are available on the Registrar's website and from the Office of the Registrar.
 - f. Approvals. A sub-committee of the Committee on Instruction (COI) reviews each Transfer Term Application and will inform the student whether or not their transfer term has been approved. Approval of a course(s) by department/programs is required but not sufficient for transferability. Normally no more than 5 students may participate in the same program in the same term.
 - g. Course changes. A student with approved plans for an exchange or transfer term at another institution, who finds after enrollment that an approved course is not available, may apply for approval of a substitute course. After the transfer term starts, it may be possible to substitute a course for one that was approved previously, but such approval is not guaranteed. Additional non-related courses are not approved. Students must contact the Registrar's Office to initiate such changes.
 - h. Transcripts. Upon completion of the transfer term the student must personally request that an official transcript from the host institution be sent directly to the Dartmouth College Registrar's Office. All

transcripts must be on file in the Registrar's Office by the end of the term immediately following the transfer term. No credit is entered on the Dartmouth record until an official transcript has been received from the transfer institution.

- i. Limits of transfer credit. Students admitted as first-year students may transfer a maximum of four course credits toward the thirty-five required for the Dartmouth degree, whether such credits have been earned prior to matriculation or subsequently. Students with special academic plans may petition the Registrar for transfer study up to a total of one academic year (i.e., nine credits). Normally one additional credit may be approved, and the Committee on Instruction may review petitions for further credits when unusual circumstances arise.

Academic Standing Limits on Transfer Courses

Normally, because of residence requirements, the option of studying during the fall, winter, and spring terms at another institution for transfer credit is not open to first-year students or to seniors. Students on probation or withdrawn on probation, or those suspended or withdrawn with prejudice, are also ineligible except in the following instances:

1. Probation. Students on probation (or withdrawn on probation) may, with the strong support of a dean, and prior to enrolling at another institution, petition the Committee on Instruction (COI) in advance for permission to take courses at that institution for credit toward the Dartmouth degree; the resulting credits are included in the maximum of four allowed toward the degree. Students whose academic standing changes to probation after approval of the transfer term are then on probation, and permission for the transfer term is automatically revoked. Such students who enroll in another institution will not be awarded transfer credit without further petition to the COI as indicated above.
2. Suspension. Students who have been suspended for a definite period and who take courses after the period of suspension ends but before they have been officially readmitted to Dartmouth may, with the strong support of the Dean of the College, petition the COI to be allowed to apply for transfer credit. Students submitting such petitions should present convincing reasons for transferring the desired courses and be aware that (a) only courses taken after the period of suspension has ended may be considered for transfer credit (for students withdrawn with prejudice, no courses taken during the first three terms after leaving Dartmouth will be considered for transfer credit), (b) in no case will COI grant permission to transfer more than four courses taken prior to readmission, and (c) those transferring courses under such circumstances ordinarily must return to Dartmouth for at least one term in residence before graduating. Students whose

academic standing changes to suspension after approval of the transfer term are then on suspension, and permission for the transfer term is automatically revoked. Such students may not apply for transfer credit from another institution without further petitioning the COI after the period of suspension ends but before they have been officially readmitted to Dartmouth, as indicated above.

3. Suspension or withdrawal with prejudice. Students who have been suspended or withdrawn with prejudice and subsequently readmitted may apply for transfer credit for courses that they take after readmission but before they actually return to Dartmouth. The regular rules and deadlines for receiving transfer credit will normally apply in such cases.

Transfer Credits for Matriculating Transfer Students

Only students admitted by Dartmouth Admissions Office to Dartmouth College as transfer students qualify for the special regulations that follow. Transfer students may not transfer further credits after matriculation. This prohibition includes exchange terms and other transfer work.

Students who have spent one or more years at another institution before matriculation at Dartmouth are subject to various special academic regulations. The eighth of these relates to the transfer of credit: 'Course equivalencies are determined by the Registrar or their designate. In the event of a question regarding the equivalency or appropriateness of a course, the department or program involved will be consulted. Courses applied for major credit must be approved by the major department or program.'

The basic principle guiding this regulation is that credit for matriculating transfer students is granted based on the same criteria that it is based for students who matriculate as first year students. Pre-matriculation credits on entrance (such as Advanced Placement) given by the original institution are evaluated according to Dartmouth standards. There are exceptions to this general principle, for example departments or programs which restrict transfer credit (for instance, only to majors) or which place certain courses out of bounds for transfer credit (for instance, elementary language courses) may approve such credits for matriculating transfer students, assuming the courses qualify otherwise. Also, matriculating transfer students may transfer credit from Community Colleges if the department or program approves the credit.

Transfer students are notified upon admission that they must submit syllabi for all work requested for transfer credit, official transcripts, SAT, ACT, AP, and other scores unless they are available from the Admissions Office. These transfer credits are evaluated by the same criteria and procedures used for currently enrolled students going away on transfer terms. This includes methods of conversion of quarter or semester hour courses into the Dartmouth course credit system, determination of

distributive credit, language requirement completion, etc. Only courses and/or credits that were not used to satisfy any high school graduation requirements are eligible for transfer. Once a student has filed a major or minor, any courses in the major or minor field that have already been granted degree credit are reviewed for approval for major or minor credit by the appropriate academic department or program. It should be noted, however, that no more than half of all courses required for the minor or major, including prerequisites, may be satisfied by transfer.

All transfer credits will be evaluated, and credit placed on the student's record before the end of the first term of enrollment, provided that the transfer documentation is received prior to the start of the term.

Credits and Proficiencies on Entrance

Prematriculation credit is any credit such as credit on entrance or transfer credit earned prior to matriculation (before starting at Dartmouth). Credit on entrance is recognized for achievement on a test that may be equivalent to a course, however it does not reduce the number of credits (35) required for graduation. Examples of tests include Advanced Placement (AP), International Baccalaureate (IB), A-Levels, SATs and local placement tests.

Both course credit and credit on entrance appear on the academic transcript. Credit on entrance, such as AP credit will be listed on the transcript showing either an "EX," for exemption, or with a "CR," and with 0 credits. Placements ("PLC") as well as a summary of prematriculation credits are available on students' DartWorks degree audit.

The evidence that may be used to demonstrate mastery of college-level work is limited to: (1) standardized test scores (Scholastic Assessment and Subject Tests, AP exams, British A-Levels, International Baccalaureate), (2) official transcripts from four-year colleges, and (3) Dartmouth placement exams. The awarding of prematriculation credit based on French, Swiss, Italian and German Baccalaureate results is evaluated on a case-by-case basis and is limited to two credits on entrance granted in any one discipline.

See the Registrar's Office website for more information on credit on entrance.

Working Rules and Regulations

Course Loads

The normal course load in each of the four terms of the academic year is three courses. While two- or four-course loads are allowed within specified limits, no matriculated undergraduate may have in any term a load of fewer than two courses or may in any term take, or receive credit for,

five or more courses. Any registered student not officially enrolled in at least two courses by the end of the tenth day of classes in a term is liable for administrative withdrawal.

Should a student have what they believe is a compelling reason for adding a course after the tenth day, a petition may be addressed to the Registrar. The petition must explain fully the circumstances that have arisen since the start of the term to cause the request and must be accompanied by written permission from the intended instructor. Regulations regarding withdrawal from courses after the tenth day of classes are enumerated elsewhere in the *ORC/Catalog*.

Two-Course Loads

A student may have a two-course load in any three terms, as a maximum, during their college career. There is no reduction in tuition associated with the taking of a two-course load. (See the section on tuition reduction for possible exceptions involving disabilities.) The end of the tenth day of classes of any term is the deadline for a student to reduce a course load from three to two or increase it from two to three. No change in either direction may be made after that date. See the first paragraph of this section for the possibility of filing a petition to add a course. There are no special restrictions as to the taking of Credit/No Credit courses or courses under the Non-Recording Option that apply to the course load chosen. Election of a two-course load is intended to permit increased concentration of effort upon the student's courses or to allow other unofficial academic effort. Although it is not necessary for a student to have at least one extra course credit accumulated before undertaking a two-course term, the election of a reduced load should not impair normal progress toward graduation.

Four-Course Loads

A student may without permission or extra charge undertake during a college career a four-course load up to a maximum of four times. Each qualifying student has until the end of the tenth day of classes of any term after the student's first term of enrollment at the College, within the maximum of four, to add a fourth course. Note: It is not possible to elect four courses until the term in question has begun. A fourth course may be dropped until the end of the sixth week of classes. After the end of the sixth week, the rules for withdrawal from courses apply and one of the four uses of this provision is thereby lost.

A student who has already exhausted the quota of four, four-course loads may undertake additional four-course loads only by permission of the Registrar and the Chair of the Committee on Instruction (COI). Such permission is intended to allow students to take advantage of unexpected opportunities or to deal with unavoidable scheduling conflicts, not to allow students to do more than can be

accommodated by the ordinary quota of four-course terms or to graduate early. There is no extra charge.

Permission to undertake a four-course load beyond the quota of four must be justified by petition to the Registrar and the Chair of the COI, explaining the value of the intended course of study and the necessity of the additional four-course term. The petition must be accompanied by a letter of support from the student's major department or major advisor endorsing the value of the intended course of study and indicating the student's capacity for the additional work. If the four-course load includes course credit for reading, independent study, or independent research, the petition must also be accompanied by a letter from the instructor of that course, verifying that the intellectual content, time commitment, academic requirements, and grading policy are at least equivalent to the demands of a classroom course.

Election of Courses

After approximately seven weeks of each term every student scheduled to be enrolled with a D-plan of 'R' (Resident) or 'O' (Off-Campus Program) elects courses for the following term. All students make use of the newly published Timetable of Class Meetings each term which updates this *ORC/Catalog*.

On occasion a student who has already taken and passed a course will wish to elect it again, sometimes with the intention of improving upon the earlier performance. Such is not allowable unless a student gains permission from the Registrar to elect such a course as a no-credit, grade-only, non-averaged third or fourth course. Such a course does not count in that term's course load. Students may not elect a course that has been renumbered but is wholly or effectively identical to one already passed; they should also make sure that a repetition in course number is not also a repetition in content that will lead to loss of credit.

A student who has failed a course may elect it again. In this situation both of the grades are recorded and hence both are included in the cumulative average; only one course credit is earned. The same general principle applies to Credit/No Credit courses.

Full directions for electing courses are outlined on the Registrar's Office website. Numerous courses have enrollment limits set prior to release of the Timetable; others are limited as enrollments grow. If the demand exceeds the limit, students are enrolled according to priorities established by the offering departments and programs. Dartmouth College reserves the right to make changes in the offering of any listed course and to cancel it when the enrollment is fewer than five students.

Students registering for courses that require instructor permission, a prerequisite override, or any other special permission/override must first consult with the instructor and/or the instructor's proxy, if appropriate, and provide

the instructor with their ID number so the instructor may apply the appropriate permission/override to their record. After the permission/override has been applied, the student receives a confirmation email that the permission/override was applied. The student then registers for the course. Students who have not obtained a permission/override are not permitted to register for the course. After submitting their courses, students review their class schedule to ensure they have entered it correctly. Students are responsible for ensuring that their schedule is accurate. Students should note that addition of their name to Dartmouth's learning management system, Canvas, without registration in DartHub does not constitute official registration for the course and may result in a loss of expected credit.

Many courses at the College have prerequisites, either in the form of prior course work, permission of the instructor, or both. It is the responsibility of each individual student to see that he or she has met the requirements for each course elected. Failure to heed published prerequisites may place the student in an untenable position in the course. Effective in the 2003 summer term, an instructor may require a student to drop a course during the first eight class days of the term if the student lacks the published prerequisite courses. Some departments/programs use prerequisite checking and do not allow a student to gain entry without a prerequisite override, while some departments/programs simply list prerequisite requirements in this Catalog. In either case, the student is required to meet the prerequisites listed.

Each term, students who have filed proper course elections for the following term may make changes in them through the last day of classes in the current term.

Undergraduate students may enroll for graduate courses taught by faculty members in Dartmouth departments and programs within the Arts and Sciences with permission of the instructor of the course and may receive credit towards their Bachelor of Arts degree. Undergraduate students may only receive credit towards their Bachelor of Arts degree for graduate courses offered by other Dartmouth graduate programs if the course is cross-listed as an undergraduate Arts and Sciences course. *Students must enroll in the undergraduate section of the cross-listed course and receive a final letter grade.

*(Arts and Sciences courses are those with undergraduate departments and programs overseen by the Dean of Faculty of Arts and Sciences. See "Divisions of the Faculty" for a list of those departments and programs.)

Auditing a Course

Any student wishing to earn credit for a course offered at Dartmouth must elect the course for a term in which he or she will be registered (having the enrollment pattern letter R or O), paying tuition, and performing in that term the full normal work of the course. Accordingly, it is not permissible for a student to do the work of a course when

not registered and then elect it for credit later when officially registered.

With the permission of the instructor, a student may choose to audit a course instead of electing it for credit. The student should not expect to participate in class discussion or laboratory work or expect the instructor to read or grade any work the student undertakes. No formal record is kept concerning courses audited; the student may not call on the instructor to write letters concerning their accomplishment or suggesting the quality of performance.

Registration and Course Changes

At the beginning of each term students must check-in online using DartHub. Students may begin check-in the day before classes begin and have until the end of the third day of class to complete check-in. This process requires the on-line verification/update of the student's local address, emergency information, confirmation of missing student information, an enrollment commitment for the term, and other important information. The check-in process indicates any holds that may have been placed due to failure to settle the tuition bill or Dartmouth Card account or meet certain other College requirements. If holds exist, information is provided to indicate where and how to remove the holds. (Note: In-person processes to remove holds must be recorded during regular office hours, M-F, 8am-4pm, and may require completion earlier than the published deadline date. All online transactions must be completed before midnight of the published deadline date.)

A fifty-dollar charge will be made for check-in after the deadline. Students may submit a petition to Campus Billing and DartCard Services for a fee waiver only if supporting documentation from the office who initiated the hold is provided. (Petitions without supporting documentation will not be considered.) Any student scheduled to be in residence who has not completed the check-in procedure ten calendar days after the term begins is subject to administrative withdrawal from college immediately thereafter. Any student whose enrollment pattern calls for a residence term (R), but whose plans change, should be sure to change the pattern by the end of the ten days.

Beginning with the first day of classes, students are eligible to change courses online using DartHub. Each term a five-day period is available for the adding, dropping, or exchanging of courses or sections. Information about adding, dropping and exchanging courses using DartHub are on the Registrar's website. During the second five class days of a term students may add or exchange courses only by securing the approval of the instructor of the intended new course(s). Students should note that the last day of this period is the tenth class day of the term, i.e., the final day to settle on a load of three or, if desired and allowable, two or four courses. Any

student not officially enrolled at the end of the tenth day of classes in any term in at least two courses becomes liable for administrative withdrawal by the Dean of the College.

After this second five-day period a student may exchange courses only under certain conditions. They must obtain the written approval of the instructor of the intended new course, the written certification of the instructor of the course the student wishes to drop that he or she is not failing the course, and the written agreement of the Registrar to the overall change. Courses that are normally approved for exchange, per the Committee on Instruction, include section changes, those where the subject matter is essentially the same, where there was inappropriate placement within the same department/program (for example language courses), thesis and independent study courses, or courses that may be offered with or without laboratories. Completely unrelated courses and those exchanged late in the term are not normally approved.

On May 29, 1995, the Faculty approved changes in procedures for dropping or withdrawing from courses. These procedures took effect with the 1995 Summer term.

Each term is divided into three parts with regard to the rules and procedures governing course drops and withdrawals. The specific dates involved appear in the Academic Calendar. As the various deadlines are regulated by faculty policy and are consistently administered, students should be careful to be aware of them each term.

During the first ten class days of a term, as indicated above, students may drop courses as they please. Courses dropped in this period will not appear on the transcript. For students taking four courses, this period extends to the end of the sixth week.

After this period, and until ten class days before the last class day of the term, students may withdraw from a course at their own discretion. They must, as a courtesy, notify their instructor of their intention, submit the withdrawal to the Office of the Registrar on or before the withdrawal deadline. The course remains on the student's transcript with the notation W for Withdrew. First-year students must also obtain the signature of one of the Deans of Undergraduate Students. Neither the instructor nor dean has the authority to forbid the withdrawal (excepting the case of first-year Writing and first-year seminar courses). Note: Requests to remove a W from the transcript will not be considered.

During the last ten days of classes in the term until the final examination begins, students must petition to withdraw from a course. Such petitions must be accompanied by a written response from the instructor in the course, and confirmation that the student has discussed the matter with one of the Deans of Undergraduate Students. It will be expected that almost none of these petitions will be approved except in the most extreme medical or other circumstances, arising after the deadline.

Petitions are reviewed and approved or denied by a committee that meets weekly during this period. Students whose petitions are denied may appeal to the COS Subcommittee. Once the final examination period has begun, it will be assumed that students intend to complete their courses, and no course withdrawal requests will be accepted.

It is important to note that no student may have more than three terms in which he or she is enrolled in only two courses (courses from which the student has withdrawn do not count toward the course load). A student may never be enrolled in just one course.

At any time during a term, students may view their course schedule on DartHub to confirm the courses in which they are officially enrolled, as well as classrooms and instructors. Checking this source in the first two weeks of the term is strongly advised to ensure that course elections officially on file match the student's intentions.

Administration of Courses; Scheduling of Final Examinations; Pre-Examination Break

Not later than two weeks after the start of each academic term, every course instructor should provide students with a list of the papers, reports, examinations, and other requirements that are the components for a grade in the course, and the approximate dates on which the work is due.

By vote of the Faculty, effective the spring term of 1981-1982, during the last five days of classes of each term, no major tests or examinations may be given. Routine quizzes and drills may, however, be administered. Also, by vote of the Faculty, in every term there shall be a mandatory two-day break (Pre-Examination Break) between the last day of classes and the first final examination, during which no classes or tests may be scheduled. The academic calendar lists the various dates term by term. Because of the adoption of Memorial Day as a College holiday in 1998, the two days of the Pre-Examination Break in spring term will normally fall on Monday (Memorial Day) and the following Thursday, with final class days on Tuesday and Wednesday and examinations beginning on Friday.

Since problems sometimes arise in the reconciling of classroom and extracurricular schedules, the Executive Committee of the Faculty has established the regulations of the following three paragraphs:

“Regular class attendance is expected of all students. Though academic schedules may sometimes conflict with College-sponsored or College-recognized extracurricular events, there are no excused absences for participants in such activities. Students who participate in athletics, debates, concerts, or other activities should check their calendars to see that these events do not conflict with their academic schedules. Should such conflicts occur or be anticipated, each student is responsible for discussing the

matter with their instructor at the beginning of the appropriate term. Instructors may be accommodating if approached well in advance of the critical date.

Such accommodations can be made only when the conflict occurs because of a scheduled College-sponsored or College-recognized event. No participant should expect to be excused in order to attend a team meeting or orientation session, practice session, meal, or other such activity.

No College-sponsored or College-recognized regular-season event may be scheduled during a Pre-examination break or a Final examination period except with the permission of the Provost, Dean of Faculty, and Dean of the College. One such exception is the regularly scheduled Saturday football game that is scheduled during the fall final examination period; during this time normally final examinations are suspended.”

The Registrar announces the annual schedule of final examinations at the beginning of the academic year, effective fall term 2002. The schedule is arranged so that any instructor can allow up to three hours for the final exam. If a student is scheduled to have two examinations in actual conflict or three examinations on a single calendar day, the student may seek relief from one of the instructors to take that examination at another mutually convenient time during the final examination period. Therefore, students should be prepared to be available for examinations through the last day of the examination period. It is not uncommon for a student to have two examinations on a single calendar day or three examinations in two days. In these circumstances, no adjustment should be expected.

All regularly scheduled final examinations occur during the announced examination period; no undergraduate may be either allowed or required to take any final examination prior to the start of the examination period. Take home examinations, papers, or assignments due after the last day of class cannot be due earlier than the end of the second day of the examination period or the time of the regularly scheduled exam. (By vote of the faculty on May 23, 2005.) A student who is not able to take a final examination or otherwise complete a course on time due to illness or other compelling cause must work with the instructor and the Dean of the College Office to make arrangements for an Incomplete well in advance of the examination or other deadline. Be sure to consult the section on standings of ‘Incomplete.’

Final Grades

Whether or not there is a final examination, the instructor submits grades no later than four days after the end of the final examination period, subject to the following stipulations:

- In those courses in which there is the requirement of a term paper or overall project, but no final examination,

instructors may defer the required date for students to submit this work as late into the examination period as they may find convenient, provided that the final grades are nonetheless reported to the Registrar no later than four days after the close of the examination period.

- If, however, the paper or project is to be submitted prior to the beginning of the examination period, the final grades are to be reported no later than five days after the start of the examination period.
- For all final examinations scheduled after the Sunday prior to Thanksgiving Day in the fall term, the instructor reports final grades to the Registrar no later than the Wednesday after Thanksgiving Day.
- For spring term final grades for seniors are to be reported no later than 10:00 a.m. the Thursday prior to Commencement.

Several days thereafter, the Office of the Registrar posts final grades. At that time, students may access their grades on DartHub. Should you wish to learn a grade prior to this you must obtain it from your instructor. By vote of the Faculty every instructor has the obligation to make grades available to the students; the instructor may leave grades with an administrator, ask you to supply a self-addressed postcard, or use any other convenient method that does not violate confidentiality. The Office of the Registrar will not supply these grades; such is done only in the case of standings of Incomplete for which grades have since been assigned.

Final grades are the responsibility of the instructor.

Student-Initiated Appeal:

- A student who questions the appropriateness of a grade confers with the instructor;
- If the instructor agrees, the instructor makes a written request to the Registrar of the College, with the approval and co-signature of the department/program Chair;
 - The instructor must indicate one or more specific ways in which the student was done an injustice. A simple change of mind will not suffice.
 - It may not be made on the grounds of course work completed after the term in which the course was offered other than in the case of an official incomplete.
- If the instructor refuses to make a grade change:
 - The student may appeal, in turn, to the Chair, the Associate Dean of the Faculty for the appropriate division, and the Dean of the Faculty; it is unusual for such appeal to go beyond the Chair.

- The student must initiate the appeal to the instructor, in writing, by the last day of the term following that in which the course was taken.
- The instructor must submit the final grade to the Registrar by the last day of the *second* term following the term in which the course was taken.
- If the student has been graduated, only the department/program Chair may initiate a grade change. It must be submitted within one year of the student's graduation and only in the case of clerical, computational or other similar administrative error.

Instructor-Initiated Grade Change:

- The Instructor makes a written request to the Registrar of the College, with the approval and co-signature of the department/program Chair;
 - The Instructor must indicate one or more specific ways in which the student was done an injustice. A simple change of mind will not suffice.
 - The Instructor must submit the final grade to the Registrar by the last day of the term following the term in which the course was taken.
 - It may not be made on the grounds of course work completed after the term in which the course was offered other than in the case of an official incomplete.
 - If the Registrar refuses to make the change, the instructor may appeal to the Dean of Faculty.
 - If, however, the student has been graduated, the department/program Chair may initiate a grade change. It must be submitted within one year of the student's graduation and only in the case of clerical, computational or other similar administrative error.

Note: These procedures also apply to undergraduate courses with the subject TUCK, however where required the Tuck School of Business Dean designates the appropriate Chair equivalent within the Tuck structure. If the appeal goes further, it proceeds to the Tuck Dean.

Election of a Major

As indicated under the Requirements for the Degree, students declare a choice of major after the beginning, and must do so by the end of their fifth term of residence or, in some cases, immediately thereafter.

Students in residence (R) during the winter term of their second year may start the major declaration process at the start of winter term and must declare it by the second Thursday of spring term, whether or not they will be in residence that term. As a practical matter, most students who will not be enrolled in the spring term must declare

their major before leaving at the end of the winter. Students not in residence in their second winter will be required to declare their major by the last day of class in their next term of residence. Since no student is required to declare a major before the end of the fifth term of enrollment (R, O, and X all being included) in a few cases the deadline for declaring is delayed from that indicated above until the end of the fifth term of enrollment is reached.

Early in the appropriate term, every student required to declare a major submits a major plan using DartWorks which requires the approval of the chair of the appropriate department or program (or other authorized faculty member designated by the chair). The student also lists the courses that are prerequisite to the major and the culminating experience. Detailed instructions for major declaration and the use of DartWorks are available on the Registrar's website.

Important Note: In working out your major with the department or program adviser you may find it necessary to modify your enrollment pattern (D-plan). If you do modify your D-plan, be sure to alter your official D-plan accessed from DartHub or by contacting the Office of the Registrar. It is the official enrollment pattern as filed with the Registrar and as displayed in DartHub, not what is listed in DartWorks program planner or any other document, that certifies your actual enrollment pattern (D-plan).

Clearly, it takes a great deal of time and effort to work out a desirable major program, and the more individualized it is, the more thought, consultation, and possible committee action will be required. Be sure to become familiar with the descriptions in this Catalog. Highly structured standard majors, such as Engineering Sciences, and worthwhile individualized ones, although quite opposite in nature, are likely to require the earliest starts and most careful planning and early discussions. Bear in mind that most advanced and many fundamental courses are offered only once a year, and that quite a few are offered only every other year. As indicated earlier, it is to allow the careful planning especially needed for the Dartmouth Plan that this Catalog covers a two-year period.

Frequently students are reluctant to sign up for a major because they do not feel sure enough that they are ready to make a suitable choice. They should not worry unduly in this respect: what is necessary is to make a start. Many students change to another major; there is no penalty of any sort for making a change but note that students may not change major (or type of major, including the addition of a second major) later than the first week of their last term in residence.

As indicated earlier in this Catalog, there are three main possibilities for majoring, namely, the Standard Major, the Modified Major, and the Special Major. You should be sure to review these descriptions. As suggested by the

name, most students pursue a Standard Major as offered by most departments and programs.

Multiple Majors

Many students major in two or more separate fields, often quite dissimilar, for instance, Theater and Government. To do so, the student must submit separate major plans to each department or program, approved by all Chairs. Multiple majors may not be within the same department or program except when a department/program offers separate and dissimilar majors. *(Astronomy and Physics, French and Italian, and Spanish and Portuguese). The culminating experience must be satisfied for all majors. In designing the multiple major program, it is not possible to use any individual course as part of more than a single major (although a course may be part of one major and prerequisite to the other, or prerequisite to each major). A student may start with one major and later add, through appropriate submission, a second or third. Any of the majors may be Standard, Modified, or Special. The student may at any time decide to return to a single major by officially dropping one or more of the majors. See the Registrar's website for detailed instructions on procedures. The regulation concerning the deadline for making a change of major (or type of major) is not intended to keep a student who has been carrying a multiple major from dropping one or more majors in the last days of the term preceding graduation.

*NOTE: Invalid major combinations are not approved within the same department/program and departments and programs should take care when advising to identify any conflicting majors.

Preparation for Graduation

A Dartmouth student of the Class of 1988 or later class is eligible for graduation at the end of any term in which he or she has completed at least six terms in residence with course count of at least thirty-five and the various other requirements, including the completion of the major as certified by the major department or program.

Students whose enrollment patterns indicate that they plan to receive the degree during the current academic year must apply for the degree. Students are annually notified of deadlines and instructions for this process. The student must indicate exact plans for completing the minimum 35 credits required, that is, by what combination of R, O, X, and T study the total will be achieved. Students who have studied elsewhere and failed to supply a suitable transcript of credits eligible for transfer, and certain others, may not be approached since they do not appear to be current degree candidates. It is up to them and to any student who wishes to graduate at other than the usual time to inform the Office of the Registrar and their major department or program of this intention. No student who has failed to apply for the degree will be graduated. In addition, students who have or will have met graduation

requirements after twelve terms (or fewer if a transfer student and if sufficient credits have been transferred to Dartmouth) are expected to apply to be graduated. They will be included on the graduation list.

Students are advised not to study off-campus or to plan to transfer credits in their last term, particularly if it is the spring term: the only acceptable evidence of work performed is a Dartmouth faculty grade report or an official transcript in the case of transfer credits. Students who do hope to transfer credits in time for graduation must, therefore, order an official transcript to be delivered directly to the Registrar's Office at the earliest possible date.

It is the duty of each student to keep track of progress in completing the various requirements. Each student has access to DartWorks, a degree audit report that is available on DartHub. The audit indicates the current standing of the student with respect to each degree requirement (other than those pertaining to a few majors).

No student may graduate who has any course recorded as incomplete, ON, or AD, no matter how large the course count. The problem may be resolved by normal completion of the course or conceivably by a drop without penalty if authorized by the Registrar and if the final course count is still at least thirty-five. Otherwise, the course may be assigned the grade of E without credit, provided again the final course count is still adequate.

Academic Standing

All students are considered to be in good academic standing who are eligible to enroll the next term. Note, however, the following regulation:

A student not in good academic standing as a result of their performance in the last term of enrollment preceding intended graduation, but otherwise eligible for graduation, may graduate only with special approval of the Committee on Standards.

Honors

General (Latin) Honors

The regulations of the following three paragraphs apply to the awarding on graduation of the degree of Bachelor of Arts summa cum laude, magna cum laude, or cum laude:

A student with final average exactly matching or exceeding the final cumulative average of the lowest standing of the past three academic years' top 5% of graduates will be awarded the degree summa cum laude.

A student with lower standing but with final average exactly matching or exceeding the final cumulative average of the lowest standing of the past three academic years' top 15% of graduates will be awarded the degree magna cum laude.

A student with lower standing but with final average exactly matching or exceeding the final cumulative average of the lowest standing of the past three academic years' top 35% of graduates will be awarded the degree cum laude.

The lowest averages for these three groups of graduates in the three academic years 2023-2025 were, in descending order, 3.97, 3.92, 3.83. Accordingly, these values govern the awarding of the corresponding honors in 2025-2026.

A Senior Fellow may be eligible for these honors by application of the regulations already given, provided that the Committee on Senior Fellowships certifies that the level of the student's work during the fellowship year justifies the awarding of the honor.

The students who attain the first and second highest standings in each graduating class shall be given respectively valedictory and salutatory honors (which shall not necessarily consist of appointments as commencement speakers). No student shall be eligible for salutatory or valedictory honors who has not been enrolled at Dartmouth College (enrolled in either a resident term, exchange term, or a Dartmouth sponsored off-campus program) for at least nine (9) terms.

The following selection process was established in 2014 for determining the Valedictory speaker:

- The Registrar determines in mid-May the possible Valedictory candidates based on the highest GPA in the graduating class, and informs the Dean of the College and the Dean of Faculty of those candidates.
- Students in this group are asked by the Dean of the College whether they are interested in speaking at Commencement if they attain Valedictory rank and, if they are, that they inform the Dean of the College of this.
- The candidates interested in speaking are considered by a Committee consisting of the Dean of Faculty, two of the Associate Deans of Faculty, the Dean of the College, and two of the Associate Deans of the College. This committee will devise and articulate a set of criteria and make a recommendation directly to the President.
- The President makes the final decision about who will speak at Commencement. The students are informed of the decision by the Dean of the College or designate.
- If, in a particular year, none of the Valedictory candidates wishes to speak, the Salutatorian candidates will be invited to be considered. The same process should be used as the one for selecting the Valedictory Speaker.

Honors in the Major

Students with sufficiently high grade point averages overall and in their major may be admitted to the corresponding Honors Program. For details of admission and requirements see The Honors Program section in this *ORC/Catalog*. To be certified for graduation they, like other students, must complete in at least passing fashion all of the courses of their major along with any other

requirements normally specified by the department or program.

Those graduating honors candidates who achieve at least a B+ average in the work of the Honors Program (but not necessarily an overall minimum B+ average in the major) will have officially completed the Honors Program and will so earn Honors in their major. If the department or program deems that the student has performed outstanding independent work, it may assign High Honors in the major by an individual vote.

Honors or High Honors in the major will be entered on a student's permanent record, e.g., Honors in History or High Honors in Chemistry. No entry will be made concerning Honors or completion of an Honors Program for a student who does not achieve the indicated B+ average in the work of the Honors Program.

A number of departments and programs have described fully their Honors Programs in the description of their majors; others refer to this statement and to the general requirements for the Honors Program.

Honor List

At the close of the spring term an Honor List is calculated for all the classes, based upon the work of the year starting the previous summer, and divided into three groups; to be included, students must have been enrolled for at least two of the terms, have received at least five regularly recorded grades (i.e., other than CT, NC, or NR), and have no standing of Incomplete in any course for the year. The regulations of the following three paragraphs apply:

An eligible student with annual average exactly matching or exceeding the annual average of the lowest standing of the previous year's top 5% of eligible students will be placed in the first honor group (i.e., will be designated as a Rufus Choate Scholar) for the year.

An eligible student with lower standing but with annual average exactly matching or exceeding the annual average of the lowest standing of the previous year's top 15% of eligible students will be placed in the second honor group for the year.

An eligible student with lower standing but with annual average exactly matching or exceeding the annual average of the lowest standing of the previous year's top 35% of eligible students will be placed in the third honor group for the year.

Approximately January 1 in the current academic year the annual averages for the past academic year of all the eligible students of that year (as defined in the first paragraph) will be examined and the lowest annual averages for the students in the top 5%, top 15%, and top 35% will be determined. These values accordingly govern the placement in honor groups for 2025-2026. Preliminary examination suggests that the required averages will closely approximate, in descending order 4.00, 3.96, 3.88.

Phi Beta Kappa

Phi Beta Kappa is an honorary society, originally founded at the College of William and Mary in 1776, in which membership is conferred for high scholastic standing only. The Alpha of New Hampshire was established at Dartmouth in 1787, being the fourth oldest chapter in the country. Membership is determined by vote of the chapter according to scholarship record, no initiative being taken by the student. The secretary-treasurer and chapter contact is Kate Soule.

The following persons are eligible for regular membership:

1. Any undergraduate who on October 15 of the fall term three years after matriculation has completed at least eight R (Residence) or O (Off-Campus) terms at Dartmouth College, and who then ranks in cumulative average among the twenty highest in that category. To be considered on October 15, such a student should have completed (with final grades) all courses for previous terms; if such is impossible, the student may present the reasons to the Chapter Secretary for due consideration.
2. Any student who at the time of graduation from Dartmouth College has a cumulative average no lower than the average achieved by graduates within the top tenth of those graduating in the preceding three academic years. If the application of this figure results in the selection of less than ten percent of the graduating class, additional students will be invited to join Phi Beta Kappa to bring the total membership to ten percent of the graduating class.
3. No student who has been suspended from Dartmouth College is eligible for membership in Phi Beta Kappa.

Note: The cumulative average required of candidates during the academic year 2025-2026 is 3.94 which was the dividing line for the top tenth of those graduated in the academic years 2022-2023 to 2024-2025.

The Society of Sigma Xi

Sigma Xi is a scientific honor society, originally established at Cornell University in 1886. Its mission is to honor scientific accomplishments, to encourage and enhance the worldwide appreciation and support of original investigation in science and technology, and to foster a creative and dynamic interaction among science, technology, and society. A fundamental responsibility of the Society is honoring research scientists or those with aptitude for research. Candidates are nominated by full members of Sigma Xi. Membership is determined by a vote of the Dartmouth College chapter's Committee on Admissions. The president of the Dartmouth College chapter is Dean E. Wilcox, the vice-president is Timothy P. Smith, the treasurer is Douglas W. Van Citters, and the secretary is Robyn Barbato.

The following persons are eligible for associate and full membership:

1. Associate Membership. Nominees for Associate Member should be seniors or early graduate (e.g., master's) students who have demonstrated strong aptitude for scientific research. They must have done research that has resulted in an excellent written report, which should be available to the Committee on Admissions if requested. They should also have a demonstrated interest in further study and/or research in a pure or applied science.
2. Full Membership. Nominees for election or promotion to Member should be graduate students in the final stage of a Ph.D. program, or those who have already completed the Ph.D. (including postdoctoral associates and faculty members). They should have demonstrated noteworthy achievement in research, as evidenced by a completed Ph.D. dissertation or at least two published papers on their research, at least one of which lists the nominee as the principal author.

Fellowships and Scholarships

James O. Freedman Presidential Scholars

The James O. Freedman Presidential Scholars Program was initiated under the auspices of the Faculty of Arts and Sciences in 1988 to encourage and facilitate the attainment of intellectual and artistic excellence among Dartmouth undergraduates. In 2007 the program was renamed in honor of James O. Freedman who was President of Dartmouth College from 1987 through 1998. The James O. Freedman Presidential Scholar Research Assistantships offer students the opportunity to serve as research assistants to individual members of the faculty. This venture in student-faculty collaboration introduces third-year students to approaches and methods of research that may prove useful in their own future scholarship. By working closely on a project with individual faculty mentors, juniors receive apprenticeship training in research that may facilitate pursuit of an honors thesis or Senior Fellowship.

The assistantships are two terms in length and must be completed during the junior year. The two terms can be sequential or may be split by mutual agreement of the student and directing faculty member. Assistantships must be completed during R (residence) terms when both the student and faculty are on campus. It is expected that students devote the equivalent time and effort to the research as they would to an academic class (approximately 10 hours a week throughout the academic term). Students receive a stipend at the end of each research term but may opt to receive one course credit for the second term of the research assistantship in lieu of the stipend if this is deemed appropriate by the directing

faculty member (subject to department criteria). Students pursuing this option must register for Independent Study credit through the faculty mentor's department/program and the Registrar prior to the start of the term.

Assistantships for which Independent Study credit is to be granted will involve a greater time commitment and intellectual engagement than non-credit assistantships. Students who do not elect or qualify for this option will receive a stipend for the second term of the assistantship. Students may not receive both stipend and credit for the same research.

Upon completion of two terms of research and submission of all required documentation, the student's transcript will carry the notation James O. Freedman Presidential Scholar Research Assistant. To be designated a James O. Freedman Presidential Scholar at Commencement, students must successfully complete the honors program in their major department/program or receive honors for the project for which they were appointed a Senior Fellow.

Eligible students are notified in winter term of their sophomore year. To be eligible, students must have attained a grade point average at the end of the fall term that places them in the top 40% of their class. Students interested in the program are responsible for contacting potential faculty mentors and arranging interviews. If a student and faculty mentor agree on a project, students submit an online application and faculty endorse the application. Final decisions are made by the Office of Undergraduate Research. If the number of students applying for the program exceeds the number of Presidential Scholar stipends available, acceptance to the program will be made on the basis of academic standing and the relevance of the assistantship to the student's course of study.

Students may obtain further information in the Office of Undergraduate Advising and Research.

Awards for Graduate Study

The office of Fellowship Advising oversees the application process for multiple national and international fellowships (including the Fulbright, Rhodes, Marshall, and Schwarzman) and for Dartmouth College post-graduate fellowships and prizes.

Dartmouth-funded grants are awarded each year to seniors and recent graduates (up to five years after graduation) for graduate study or to pursue research or an independent project in the U.S. or abroad. There are three categories of Dartmouth post-graduate fellowships:

- Fellowships for graduate study

- Fellowships for post-graduate projects (including a special grant for applicants in the fields of architecture, urban planning, land conservation, historic preservation, architectural and urban history and/or art history)
- Prizes for seniors intending to pursue a career in the law

Information about the application processes for all grants can be found on the Fellowship Advising website.

Financial Aid

Scholarships, federal grants, subsidized and unsubsidized loans, and employment are administered by the Financial Aid Office for the benefit of students who are unable to meet the full cost of a college education through their own and their families' reasonable efforts.

Scholarships and grants are gifts made to students with financial need and are offered as part of a financial aid 'package' that may also include loans and employment. Scholarship students continue to receive aid throughout their undergraduate years, for the first twelve terms of enrollment, as long as their need continues. Renewal applications must be filed each year. In addition to demonstrating financial need, students must make satisfactory progress toward the degree, as described fully in the Student Handbook.

Need-based College loans, Federal Perkins Loans, and both subsidized and unsubsidized Federal Direct Loans through the Federal Direct Lending Program enable the College to offer financial assistance each year to more students than could otherwise be aided.

Many employment opportunities are available to students on campus and in the community. These employment opportunities are for students who are eligible for Federal Work-Study as well as those who are not eligible. Employment information can be found at www.dartmouth.edu/~seo.

The Financial Aid Office can provide information concerning a variety of private and federal parent loan plans to supplement family resources and offer suggestions on other college financing options and plans. For full information on all available financial aid, families should contact the Financial Aid Office (McNutt Hall). Additionally, current and prospective students can access financial aid general information and forms at <https://financialaid.dartmouth.edu>.

For financial aid purposes, students are considered to be sophomores at the end of the spring term of their first year following matriculation if they have completed three terms, or whenever they have a course count of 7; to be juniors at the end of the spring term of their second year following matriculation if they have completed five terms with 14 course credits, or whenever they have a course count of 17; to be seniors at the end of the spring term of

their third year following matriculation if they have completed eight terms with 23 course credits, or whenever they have a course count of 26. For the purposes of this classification, a ‘completed term’ means a term in which the student had an enrollment pattern of R, O, X, or T and received Dartmouth credit for at least two courses. Students receiving credits upon matriculation will be considered to have completed one term of work if two or more credits are granted, two terms if five or more credits are granted, and three terms if eight or more credits are granted.

Students participating in the Army ROTC program are eligible to apply for Army ROTC scholarships on a competitive basis to commence during their first year. Contact the ROTC Office in Leverone Field House for additional information.

College Charges

Tuition Charges

Tuition of twenty-three thousand sixty-nine dollars (\$23,069) per term is charged each student for instruction, instructional facilities, and other services. Although this tuition charge covers the normal three-course load, students may, without permission or extra charge, elect a fourth course during each of four terms during their college career. After use of the four allowed four-course terms a supplementary charge of seven thousand six-hundred ninety dollars (\$7,690) will be assessed. Students should consult the Student Handbook and the Regulations section of this Catalog for details of the regulations concerning extra courses. Students taking a two-course load receive no reduction in tuition.

The Trustees believe that all Dartmouth students should appreciate that the tuition charge covers about one half of the cost to the College of each student’s education at Dartmouth. For the remainder, he or she is the beneficiary of endowments received during the last two centuries from those who wish to support Dartmouth’s kind of education, from current gifts, and especially from the very generous support of the Dartmouth Alumni Fund.

Tuition charges listed above apply to the summer, fall, winter, and spring terms of the academic year 2025-2026. Charges for the summer term of 2026-2027 will be announced at a later date.

Students who require reduced course loads because of disability-related circumstances, as approved by Student Accessibility Services (SAS), that significantly affect the number of terms they need to be enrolled at Dartmouth to be graduated may be eligible for reduced tuition through Campus Billing. Permission from the Registrar for a reduced course load is not sufficient grounds for tuition reduction. Tuition-reduction requests to Campus Billing must be submitted after SAS approves a reduced course load. If a student who has been granted tuition reduction

then takes a normal course load, the student must re-petition for reduced course load and reduced tuition in subsequent terms. Reduced tuition eligibility may also be reviewed if a student’s disability-related circumstances change significantly. For more details, please see SAS’ reduced course load page. Inquiries about reduced course load due to disability should be sent to the SAS office, while inquiries about reduced tuition should be sent to Campus Billing.

Room and Meal Charges

Students living in College residence halls are charged rents that vary depending on the quarters occupied. Room rent will be four thousand one hundred ninety-three (\$4,193) per term for the 2025-2026 academic year. If College property is damaged, those found responsible are charged for the required repairs.

All students are required to purchase a nonrefundable dining plan each term they are living in College or College-approved housing. All first-year students will receive the Ivy Unlimited plan. In addition, first year students may be charged two hundred fifty dollars (\$250.00) for meals during the Orientation program.

More information about dining plans and costs at Dartmouth can be found at the Dining Services (DDS) website (<https://dining.dartmouth.edu/>). To make a dining plan selection, please visit the Dartmouth Card Office website (https://www.dartmouth.edu/finance/tuition/dartmouth_card/id_card_accounts/dining_plan_change_requests.php). Meal plan application form is now on StarPortal (available via DartHub).

Room and board charges are billed to students through their Dartmouth student account. Payment is due by the date indicated on the student account statement subject to a late charge if the payment deadline is not met. Please refer to regulations covering payment of student charges for information regarding assessment of late charges.

Computing Equipment Charges

All first-year and transfer students are charged for the required purchase of a basic package of computing equipment to be used in their education, unless granted a waiver by the Director of Computing. Ownership of adequate computing equipment would justify such a waiver. Purchase of computing equipment in addition to the basic package is at the option of the student.

Class Dues

At the beginning of their first-year undergraduate students are assessed a one-time charge of thirty-two dollars (\$32). Funds collected from these charges will be made available to that class council over the four years that class is in attendance at the College.

Document Fee

In their first term of enrollment each undergraduate is assessed a one-time document fee of two hundred twenty-eight dollars (\$228). This fee entitles the student to an unlimited number of official transcripts. Additionally, the fee covers a number of services offered by the undergraduate Center for Professional Development while the student attends Dartmouth. The fee continues to cover unlimited transcripts post attendance.

General Student Services Fee

All undergraduate students are assessed a four-hundred twenty-one dollar (\$421) General Student Services fee each term enrolled. The general fee partially supports a variety of services provided for all enrolled undergraduate students including but not limited to technology costs, library services and facilities, and recreation activities and facilities.

International Services Fee

The one hundred twenty-one dollar (\$121) per term international services fee helps offset costs generated by the visa sponsorship process and the support services offered to international students. This fee is assessed to all actively enrolled international students at the College—both undergraduate and graduate. An international student for the purposes of this fee is defined as one who is not a U.S. citizen or a U.S. permanent resident, and who holds, or is applying for, a valid U.S. visa or immigration status under Dartmouth's sponsorship.

Student Activities Fee

All undergraduate students are assessed a one hundred thirty-six dollar (\$136) Student Activities fee for each term in residence. Funds collected from these charges will be used to support the Student Assembly, other co-curricular organizations, and campus-wide cultural, educational, social, and athletic activities. Student Activities fee funds are managed directly by students through the Council on Student Organizations (COSO).

Health Access Fee

The one hundred twenty-nine dollar (\$129) per term fee supports the College's continuing commitment to providing health services to enrolled undergraduate, graduate and professional students. These services include those listed on the College's Health Service website at: <https://students.dartmouth.edu/health-service/>

Health Insurance Charges

All full-time students must purchase the Dartmouth Student Group Health Plan (DSGHP) unless they complete the waiver process. A nonrefundable fee of four thousand five hundred fifty-six dollars (\$4,556) will be billed to the student account, except those having an approved waiver,

in early July for the 2025-2026 plan year. To begin the waiver process, go to the DSGHP website located at: <https://students.dartmouth.edu/health-service/fees-insurance/insurance/waiver-information>. Please note that waivers received after July 1, 2025, will incur late fees.

Supplemental Course Fees

In limited circumstances supplemental fees may be assessed for students enrolling in certain courses. Supplemental course fees must meet the standards detailed below to be processed on the student bill. Courses for which such fees will be levied will be identified in any course descriptions published in this Catalog or its supplements.

Special course fees must be recommended to the Executive Vice President by the responsible faculty Dean, and generally will be approved only when the following three criteria are met:

1. The fee must be required of each member of the class,
2. The fee must be the same for each class member, and
3. The services or goods related to the fee must be warranted by special circumstances and not be readily available from local vendors.

Students will be notified of actual fee amounts no later than the first week of class.

Miscellaneous Charges

The following miscellaneous fees and penalties are commonly applied:

A penalty of fifty dollars (\$50) is imposed on any student who fails to check-in by the prescribed deadline at the opening of any term.

A non-refundable application fee of two thousand two hundred dollars (\$2,200) is assessed for the winter, spring, and summer terms. No fee is assessed for fall term.

A separate charge will be assessed for late payment of any student account bill. Payment is due and payable not later than the due date indicated on the billing statement. If payment is not made by the specified due date a late charge equal to 1.5% of the amount payable will be assessed.

A charge of twenty-five dollars (\$25) will be assessed when a personal check or on-line payment is offered in payment of charges on a student's account and the check or payment is not honored.

Student Penalty Fees and Fines Policy

Fines and penalty fees may be assessed to students for various rule infractions and violations of policy. With due notification penalty fees and fines may be charged to the student's Administrative Fees and Fines Account. Failure to pay such fines or penalties may prevent a student's registration or release of transcripts or a diploma.

The Executive Vice President shall review and in consultation with the Student Assembly and Graduate Student Council approve all student fines and penalty fees that may be assessed. Student fines shall be consistently applied within the Dartmouth Community and will be approved only when the following criteria are met:

The amount of the fine or assessment must be reasonably related to the costs and/or seriousness of the infraction or violation of policy.

Revenue realized from the assessment of penalty fees and fines will be recorded to a general revenue account of the College. Generally, such revenue may not accrue to the department that assesses the fine.

Administrative costs associated with assessing and posting fines, hearing appeals, and collecting payments can be substantial, accordingly, alternative means to ensure compliance with rules and regulations must be considered before a penalty fee or fine will be approved.

Once the Executive Vice President has approved a penalty fee or fine, the following requirements or procedures must be met:

All rule infractions and violations of policy which will result in the assessment of a fine or penalty fee, must be identified in the Student Handbook and appropriate College or departmental materials and mailings. Specific reference shall be made in the Student Handbook that fines and penalty fees may be appealed.

Departmental materials shall include the amount of the fine, a statement of purpose, the circumstances under which penalty fees or fines are assessed, and the consequences of noncompliance.

Departments must publicize in their materials and mailings or by other means that an appeals process exists for students or parents who believe that their individual circumstances warrant an exception to assessment of the penalty fee or fine. Specific information should be available in connection with the handling of appeals and appeals must be heard and resolved within a timely manner.

Students who commit rule infractions subject to a fine or penalty must be notified that a violation has occurred and that a charge is being assessed. If a fine is caused by the student's failure to meet a published deadline, notification of the fee is not required.

Fines and penalty assessments must be submitted to the Dartmouth Card Office within 30 days of the date the violation has been confirmed. Fees and fines may not be charged to a student's administrative account once the 30-day period has lapsed or the student is no longer enrolled because of graduation or withdrawal from the College. In cases where fees are assessed to reimburse the College for the actual cost of damages, fines must be submitted to the Dartmouth Card Office as soon as possible after final costs

have been determined, but no longer than 30 days. Note: departments and offices may not receive or deposit direct payments from students for fines or penalty fees. They must be submitted to the Dartmouth Card Office.

If it is determined that a fine has been assessed incorrectly or waiver of the penalty fee has been approved as a result of the appeals process, the appropriate credit must be expeditiously applied to the student's Administrative Fees and Fines account.

Regulations Covering Payment of Student Account Charges

Account statements for tuition, room, and board will be available on D-Pay, Dartmouth's electronic billing and payment system, approximately six weeks before the beginning of each term. When the account statement is available, an electronic mail message is sent to the student and anyone else authorized by the student. Payment is due approximately 25 days after the statement is available; the exact due date will be indicated on the statement. If payment is not made by the specified due date, a late charge equal to 1.5% of the amount payable will be assessed.

No student will be permitted to enroll for any term unless the total amount due, including tuition, room rent, and applicable board charges has been paid in full.

The flexibility of the Dartmouth Plan makes it possible for an upper-class student, through a change in term patterns, to incur a tuition charge or other charges after statements have been produced. In such instances, since tuition, room charges, and dining plan charges are fixed or determined prior to the start of the term, the student must pay these charges by the payment deadline established even though a statement reflecting the charges may not have been produced and made available.

All students enrolled at the College have an account in their name through which tuition, room and board, and other costs of attendance are billed. Periodic account statements reflecting charges and credits posted to this account will be available on D-Pay. Financial aid awards which have been confirmed and documented, but not posted to a student's bill, can be considered as anticipated credits in calculating the balance due and any known when the statement is produced will be reflected on the statement. All necessary steps for processing such awards must be met before they will be accepted as deductions.

No transcript of a student's record will be issued until amounts due the College have been paid, nor will a senior receive a diploma until all College and community financial commitments have been met. In instances where a student's account becomes delinquent through flagrant neglect, the student may be subject to disciplinary action.

In those instances where a personal check or online payment is offered in payment of charges on a student's

account and the check or on-line payment is not honored, a charge of twenty-five dollars (\$25) will be assessed. If the returned check or rejected on-line payment was the means of meeting an amount due or registration deadline, the deadline will not be considered met and the appropriate penalties relating to failure to meet the deadline may be assessed. The College reserves the right to demand payment by money order, certified check, or other mode of payment acceptable to the College in instances of repeat offenders. Additionally, flagrant or habitual offenders may be subject to disciplinary action.

Refund Policy

REFUND POLICY

Tuition

Refunds for students who withdraw after tuition has been paid, but prior to registration and the first day of classes, will be 100% of tuition. After the beginning of classes, refunds will be calculated as follows: a refund of 100% for withdrawal during the first week of the term, a refund of 90% for withdrawal during the second week of the term, a refund of 75% for withdrawal during the third week of the term, a refund of 50% for withdrawal during the fourth week of the term, and a refund of 25% for withdrawal during the fifth week of the term. No refund will be made after the fifth week of the term. The term begins on the first day of classes; the first week is the first 7 days beginning with the first day of classes.

Meals

Students who withdraw in the first week of the term will receive 100% meal plan refund. Students who withdraw in the second week will receive a 90% meal plan refund. Meal plan refunds will be calculated on a pro rata basis for any student who withdraws voluntarily or who is dismissed from the College after the second week.

Residence Hall Room Rents

The policy for residence hall room rent is identical to the tuition refund policy: 100% before classes begin; 100% during the first week; 90% during the second week; 75% during the third week; 50% during the fourth week; and 25% during the fifth week. There is no refund after the fifth week. This policy applies to all dormitory rooms and to room rents in College-owned fraternities and organizations.

Other Charges

Charges for computing equipment and for Dartmouth Student Group Health Plan are non-refundable. Other miscellaneous fees and charges, including student activity

fees will be refunded during the first two weeks according to the percentage listed above during this term.

Adjustments to Dartmouth scholarship awards will be calculated by the Financial Aid Office based on the date of withdrawal and percentage of tuition refunded.

Adjustments to federal aid eligibility (Pell Grants, SEOG Grants, Federal Work-Study, Direct Loans, and PLUS Loans) will be calculated by the Financial Aid Office using the pro rata refund formula proscribed by federal regulation. This applies to any student whose enrollment ends prior to the completion of 60% of the term. Federal aid earned is based on a proration of the time enrolled. For example, 1 of 10 weeks completed earns 10% of federal aid awarded. The 90% of federal aid unearned would be returned.

All necessary scholarship adjustments and return of federal funds are recorded to the student's account. Any credit balance remaining after these adjustments are complete may be returned to the student or family. All requests for student account refunds shall be submitted in writing to Campus Billing and any balance due the student upon the making of such adjustments shall be paid to the student within 30 days.

For more information about financial aid adjustments related to withdrawal, please contact the Financial Aid Office.

NOTE: For complete information regarding student life, and appropriate regulations, consult the Student Handbook

Student Residence

Dartmouth is a residential college. Therefore, all first-year students who are not married or in a college-recognized domestic partnership are required to live on campus during their first three academic terms at Dartmouth. Housing is not required after the first year. All remaining registered undergraduates who are not married or in a college-recognized domestic partnership may live in College undergraduate housing or in a College-recognized coed/fraternity, sorority, or undergraduate society house if space is available. Students who reside off campus during an enrolled term must file a local address as part of the on-line check-in process. Enrolled Dartmouth students may not live in coed, fraternity, sorority, or undergraduate society houses that are not recognized by the College.

NOTE.: For complete information regarding residence life and appropriate regulations, consult the Student Handbook, the Office of Residential Life publication Welcome Home, or the Student Life web site.

Graduate Study

Professional Schools

The Professional Schools of Dartmouth College are the Geisel School of Medicine, the Thayer School of Engineering, and the Tuck School of Business. Information on their entrance requirements, courses of instruction, and other matters is published in separate catalogs, which may be obtained from the Registrar of each School. For requirements for the degrees of Doctor of Medicine, Master of Public Health, Bachelor of Engineering, Master of Engineering Management, Master of Engineering, and Master of Business Administration, see the catalogs of the Geisel School of Medicine, the Thayer School of Engineering, and the Tuck School of Business, respectively.

The Degree of Master of Fine Arts

Graduate work is offered leading to the degree of Master of Fine Arts in the field of Sonic Practices.

To receive the degree of Master of Fine Arts from Dartmouth College, a graduate student must have spent at least seven terms in residence at Dartmouth and must have received credit for eight courses at the graduate level. These courses may be replaced in part by research or special study approved and supervised by the department accepting the student for graduate work, provided that not more than four of the required courses may be so replaced. Additional requirements may be imposed by the individual departments.

Candidates whose preparation is deemed deficient by the department accepting the candidate may be required to correct this deficiency by taking courses in addition to those required for the degree.

A thesis is required of candidates for the Master of Fine Arts degree.

The Degree of Master of Science

Graduate work is offered leading to the degree of Master of Science in Chemistry, Computer Science, Earth Sciences, Engineering Sciences and Master of Energy Transition.

Refer to the Thayer School catalog for graduate work leading to the degree of Master of Engineering Management (MEM) or Master of Engineering (MEng) and the Geisel School catalog for the degree of Master of Public Health (MPH) and Health Science Education Master of Science programs (Epidemiology, Health Data Science, Healthcare Research, Implementation Science and Medical Informatics).

To receive the degree of Master of Science from Dartmouth College, a graduate student must have spent at least three terms in residence at Dartmouth and must have

received credit for eight courses at the graduate level. These courses may be replaced in part by research or special study approved and supervised by the department accepting the student for graduate work, provided that not more than four of the required courses may be so replaced. Additional requirements may be imposed by the individual departments.

Candidates whose preparation is deemed deficient by the department accepting the candidate may be required to correct this deficiency by taking courses in addition to those required for the degree.

Graduate Degrees from the Guarini School of Graduate and Advanced Studies

The Guarini School of Graduate and Advanced Studies awards all of Dartmouth's PhD, M.S., MALS, MFA, and M.A. degrees across a broad range of programs, including several interdisciplinary programs and doctoral programs connected to the professional schools at Dartmouth. The requirements for the degrees awarded by the Guarini School of Graduate and Advanced Studies are described below. Inquiries regarding graduate study should be addressed to the department to which admission is sought. Visit our website at: <https://graduate.dartmouth.edu/>

Graduate Special Students: Under special circumstances holders of the Bachelor's degree may be admitted to College courses and register as Graduate Special Students. Permission to register must be secured from the Dean of the Guarini School of Graduate and Advanced Studies. Students in this category are not candidates for any Dartmouth degree.

Grades: Course work and grades are only one component of graduate education, and the grading system is designed to reflect this. The following grades will be used in courses acceptable for credit toward a graduate degree:

HP: High Pass, indicating work of quality which is distinctly superior to that normally expected of a graduate student.

P: Pass, indicating work of good quality, worthy of graduate credit. This would be the most common grade denoting satisfactory graduate performance.

LP: Low Pass, indicating work which is acceptable for graduate credit, but in which the student exhibited one or more serious deficiencies. Graduate programs may limit the number of LP grades acceptable for a degree.

CT: Credit, indicating satisfactory work in certain courses, such as research courses, in which assignment of a grade of HP, P, or LP is considered inappropriate. The grade CT is not intended as a routine alternative to the HP, P, and LP system, and CT is the only passing grade in a course in which it is used. Approval of the use of CT in any course

must be obtained from the Council on Graduate Studies by the graduate department offering the course.

NC: No Credit, indicating work which is not acceptable for graduate credit.

When it is not possible to assign a grade in a course at the end of the term, the instructor may request permission to record the temporary status of Incomplete. Use of Incomplete will require approval of the Graduate Registrar and the request must include an agreed upon completion date. All Incompletes for any term must be removed by the end of the following term and may be extended only upon approval of the Dean of Guarini School. Incomplete grades which have not been resolved by submission of a permanent grade will revert to No Credit after the stated deadline.

The designation ON (On-going) may be used when the work of a course extends beyond the limit of a single term, such as in Research Rotation.

Graduate students enrolled in courses for which they are not receiving graduate credit will be graded using the undergraduate grading system.

Transfer of Credit: Upon recommendation of the department accepting the student for graduate work, credit for graduate courses (not research) taken may be granted by the Registrar of the Guarini School. No more than three of the courses required for the Master's degree or more than six for the PhD degree may be fulfilled in this way.

Course Changes: Courses may be added or dropped at any time during the first two weeks of a term. Courses dropped after that will normally result in a grade of No Credit. Exceptions for unusual circumstances require the joint approval of the instructor, the student's advisor or graduate committee (depending on the program) and the Guarini School of Graduate and Advanced Studies Registrar. A student wishing to drop a course after this deadline must be passing the course with a minimum grade of P at the time the request is made.

It is expected that the requirements for the PhD degree will be completed no later than seven years after initial enrollment, unless the student enters with a Master's Degree in their field of proposed study, in which case the student is expected to complete the doctorate in five years. Failure to complete the work in the time periods specified or failure to meet the academic standards of the student's graduate program shall necessitate reevaluation of the student's progress and may result in a notice of termination.

The Degree of Master of Arts

Graduate work is offered leading to the degree of Master of Arts in the fields of Comparative Literature.

To receive the degree of Master of Arts from Dartmouth College, a graduate student must have spent at least three

terms in residence at Dartmouth and must have received credit for eight courses at the graduate level. These courses may be replaced in part by research or special study approved and supervised by the department accepting the student for graduate work, provided that not more than four of the required courses may be so replaced. Additional requirements may be imposed by the individual departments.

Candidates whose preparation is deemed deficient by the department accepting the candidate may be required to correct this deficiency by taking courses in addition to those required for the degree.

The Degree of Doctor of Philosophy

The Guarini School of Graduate and Advanced Studies offers programs leading to the PhD degree in the following areas: biochemistry and cell biology; biological sciences; cancer biology; chemistry; cognitive neuroscience; computer science; earth sciences; ecology, evolution, environment & society (EEES); engineering sciences; health policy and clinical practice; integrative neuroscience; mathematics; microbiology and immunology; molecular and systems biology; physics and astronomy; psychological and brain sciences; and quantitative biomedical sciences. Refer to the Medical School catalog for the program leading to the Doctor of Medicine (MD) degree.

Degree requirements are established by the individual departments. Further information about these programs may be obtained by looking under the offerings of the appropriate department in this Catalog or by writing to that department.

The Degree of Master of Arts in Liberal Studies

The Guarini School of Graduate and Advanced Studies offers a graduate program leading to the degree of Master of Arts in Liberal Studies (MALS). This program, which is also available to current Dartmouth employees, features an interdisciplinary approach to advanced study in the liberal arts. It is intended for students dedicated to furthering their liberal education by both directed and independent study.

MALS participants design an individualized plan of study in consultation with the program's faculty advisors, choosing courses from a series of special interdisciplinary courses offered by the MALS Program as well as from regular offerings of the College. Completion of the MALS coursework normally requires a minimum of two summers plus another term of study at Dartmouth. While it is possible to take courses on a year-round basis, a student must be in residence for a minimum of one summer, participating in two summer symposia or one symposium and an approved symposium substitute. All MALS students also produce a thesis as the final program component to receive the degree.

Dartmouth College's MALS program is a member of the Association of Graduate Liberal Studies Programs. For more information on the MALS Program at Dartmouth, visit their web site <http://www.dartmouth.edu/~mals/> or send an e-mail to: MALS.Program@Dartmouth.EDU.

Special Interdisciplinary Training Programs

The Guarini School offers several interdisciplinary training programs including Medical Physics, MD/MS Program in Biomedical Engineering, PhD Engineering Innovation Program, MD/PhD, and PhD/MBA.

INSTRUCTION

Course Election

Students elect their courses for the following term in the preceding regular term using DartHub. The details are explained on the Registrar's website for each term, which is made available to students just before course election. The Timetable of Class Meetings includes an up-to-date listing of courses scheduled to be offered and indicates any courses with limits on enrollment or which require permission of the instructor. It also includes the most accurate and up-to-date information on the distributive and world culture attribute associated with the course. Students should pay close attention to this and note that it may not match what is listed elsewhere. For example, the information on the Timetable supersedes information that may appear next to courses in this Catalog. Exact dates of when the Timetable of Class Meetings becomes available are published in the academic term calendar. Students who elect courses late lose priorities in limited enrollment courses.

Prerequisite

Some courses have prerequisites which are stated in terms of class standing in college, the requirement of the completion of certain specified courses, and/or the obtaining of instructor permission. While some departments/programs use DartHub for prerequisite checking, some list prerequisites in this Catalog only. In either case, the student is responsible for meeting prerequisite requirements.

Numbering and Level

The number of each course indicates the level of the course. Numbers 1-9 are used primarily to designate courses on an introductory level; numbers 10-79 are used for the general course offerings of the department or program. The significance of the various levels depends on the needs of the department or program, but the higher numbers generally indicate courses of more advanced and specialized nature. Numbers 80-89 are used for certain special types of courses, such as seminars, thesis courses, independent study, and honors courses. The numbers 90-99 are used for certain advanced undergraduate major courses. Numbers 100-299 are used for graduate courses. Special topics courses, and certain other related courses, are numbered using a two-digit leading number followed by a "point," then a two-digit number starting with .01 for the first topic, .02 for the next, etc.

Time Sequence

In the course listings to be found on the following pages, below the line with the course number and the title there appear in most cases two-digit numbers, indicating the year, and letters F (fall), W (winter), S (spring), or X (summer), to show the term(s). In most cases, a symbol follows (after a colon) to indicate the time sequence(s) in which the course is to be offered, usually according to the following weekly schedule.

65-Minute periods three times weekly:

8L	MWF	7:30-8:35	x-period:	Th: 7:45-8:35
9L	MWF	8:50-9:55	x-period:	Th 9:05-9:55
10	MWF	10:10-11:15	x-period:	Th 12:15-1:05
11	MWF	11:30-12:35	x-period:	Tu 12:15-1:05
12	MWF	12:50-1:55	x-period:	Tu 1:20-2:10
2	MWF	2:10-3:15	x-period:	Th 1:20-2:10

50-Minute periods four times weekly:

8S	MTuThF	7:45-8:35	x-period:	W 7:45-8:35
9S	MTuThF	9:05-9:55	x-period:	W 9:05-9:55

110-Minute periods twice weekly:

10A	TuTh	10:10-12:00	x-period:	F 3:30-4:20
2A	TuTh	2:25-4:15	x-period:	W 5:30-6:20
3A	MW	3:30-5:20	x-period:	M 5:30-6:20
3B	TuTh	4:30-6:20	x-period:	F 4:35-5:25
6A	MTh	6:30-8:20	x-period:	Tu 6:30-7:20

180-Minute period once weekly:

6B	W	6:30-9:30	x-period:	Tu 7:30-8:20
----	---	-----------	-----------	--------------

It should be noted that there are two possible modes of conducting classes in the 8 or 9 periods, depending upon the instructor's preference for frequent meetings and need for use of x-periods.

Laboratory periods are most commonly scheduled in the afternoon, but morning and evening sessions are also held.

Various courses are listed as 'Arrange' since the sequence has not yet been set or the meetings will be tutorial. Dartmouth reserves the right to alter, including cancellation of course offerings if enrollments (fewer than five students), resources and/or other circumstances in the judgment of the Trustees and Administration require.

Weekly Schedule Diagram

Note: when scheduling a required class meeting outside the normally scheduled times, faculty members are encouraged to provide specific date and time information to students in advance.

DEPARTMENTS/PROGRAMS AND COURSES - UNDERGRADUATE

African and African American Studies

Chair: Matthew Delmont

Appointed Professors: R. M. Baum (AAAS, Religion), M. A. Chaney (English), A. A. Coly (AAAS, Comparative Literature), L. Edmondson (AAAS), T. D. Keaton (AAAS), J. W. Shipley (AAAS), Appointed Associate Professors: N. Maskiell (AAAS); Appointed Assistant Professors: M. Chochotte (AAAS), K. M. Middleton (AAAS); Associated Faculty: Shaonta' Allen (Assistant Professor, Sociology), M. F. Delmont (Professor, History), A. Martin (Assistant Professor, Music), A. H. Neely (Associate Professor, Geography), J. Rabig (Associate Professor, History), N. Sackeyfio-Lenoch (Associate Professor, History); Affiliated Faculty: K. J. Brown (Associate Professor, English), W. Cheng (Professor, Music), S. A. Moodie (Associate Professor, English), M. White Ndounou (Associate Professor, Theater), I. E. Kwayana (Assistant Professor, Film and Media Studies), Ernesto Mercado-Montero (Assistant Professor, History)

The Department African and African American Studies (AAAS) offers a multidisciplinary program designed to provide students with a critical understanding of the history, art and cultures, economics, politics and social organization of the African diaspora. The focused as well as comparative study of Africa, North America and the Caribbean are central components of the program. Students explore the innovative scholarship within the field of African and African American Studies while integrating theoretical perspectives and methodologies from various disciplines.

To view African and African American Studies courses, click here (p. 63).

Requirements for the Major

The AAAS major consists of eleven courses:

1. Two survey courses (must include one of the following: AAAS 9, AAAS 10 or AAAS 11).
One African survey course: AAAS 11, AAAS 14, AAAS 15, AAAS 18, or AAAS 19.
One African-American survey course: AAAS 10, AAAS 12, or AAAS 13.

2. Eight elective courses, including at least two courses from each of the following distributive designations. The program office has a current list of courses satisfying each distributive requirement.

Two courses with SOC, TMV, or TAS.

Two courses with ART or LIT.

One course focused on Africa and one course on African America (including the Caribbean) must be among the eight elective courses. AAAS 10, AAAS 11, AAAS 12, AAAS 13, AAAS 14, AAAS 15, AAAS 18, or AAAS 19 may be used to fulfill this requirement, but more advanced courses are strongly recommended.

3. One of the following culminating experience options:
Senior Seminars: AAAS 90-96.
Senior Independent Research: AAAS 97 (p. 91).
Honors Thesis: AAAS 98 and AAAS 99 (p. 91).

Majors are encouraged to take at least one diaspora course, which may be used to satisfy either area requirement. Courses with the INT distributive designation may satisfy either of the disciplinary requirements. With approval of the Chair, one associated course may be counted toward the major.

Requirements for the Modified Major

African and African American Studies may be undertaken as the secondary part of a modified major. A modified major should be planned to form a coherent program of study with the major. The requirements are four courses in African and African American Studies in addition to those listed for a modified major in the particular department or program. Early approval of a modified major should be obtained from the student's major department or program and from the African and African American Studies Program.

Requirements for the Minor

Students desiring a minor in African and African American Studies must complete six courses. Minors are encouraged to take Senior Seminars and Senior Independent Research courses as part of their four electives. In order to officially file the minor, students must meet with the Chair or a program faculty member to discuss minor requirements and to arrange for online approval.

The Minor consists of six courses:

1. Two Introductory courses chosen from:
AAAS 9: Introduction to AAAS Diaspora Studies,
AAAS 10: Introduction to African American Studies.
AAAS 11: Introduction to African Studies.
2. Four additional elective AAAS courses.

Off-Campus Study

Accra, Ghana

AAAS offers a biennial Foreign Study Program (FSP) in Accra, Ghana, in the fall term. Classes are taught on the campus of the University of Ghana, Legon, with faculty and lecturers drawn from the University and elsewhere in Ghana, and a Dartmouth faculty member affiliated with AAAS. In this program, classroom learning is integrated with research conducted in the community and local archives as well as visits to important historical and cultural sites in Accra and throughout Ghana. Students will have the opportunity to participate in volunteer and other community engagement activities during the term. There are no prerequisites for this FSP, but preference for admission will be given to students who have completed at least one African Studies course.

For more information visit the Ghana Foreign Study Program page.

Paris, France

AAAS offers an FSP in Paris, France, entitled *Afro/Black Paris, The African Diaspora in the City of Light*. The AAAS Paris FSP takes place in one of the most extraordinary destinations in the world. It embodies experiential learning, and is intensive, interdisciplinary, and immersive. Comprised of three courses taught in English, this Program offers a unique opportunity to explore "another Paris," the exceptional and lived-experience that we refer to as Afro/Black Paris, described by former students as "life-altering!" Professor Trica Keaton is the Faculty Director. For more information visit the Paris Foreign Study Program page.

Honors Program

Qualified majors may apply for admission to the Honors Program during the second or third terms of their junior year. Completion of the Honors Program is prerequisite to graduation with Honors or High Honors in the major subject. In order to qualify for an Honors Program at Dartmouth College, the student must have at the time of application a cumulative grade point average of 3.0 in all subjects and a 3.3 grade point average in the major. During two terms of the senior year the honors student will pursue the project under the guidance of a selected primary faculty advisor and a secondary reader by enrolling in AAAS 98/AAAS 99 (p. 91). The student is expected to produce a substantial thesis as the culmination of the project. A grade of A or A- over the two terms earns High Honors; and a Grade of B+ in the first term is satisfactory to continue for Honors. 1. 2.

AAAS - African and African American Studies Courses

To view African and African American Studies Requirements, [click here](#) (p. 62).

AAAS 7 - First Year Seminar

Offered: Fall.

AAAS 9 - Introduction to AAAS Diaspora Studies

Introduction to AAAS Diaspora Studies is a pluridisciplinary comparative and trans-historical course composed of three three-week units, respectively Africa, the Caribbean, and the United States. In addition to literary and social sciences texts, the course will consider music, the visual arts, science, diaspora theory, and research strategies. Topics include the coloniality of modernity; religio-racial self-fashioning; Diaspora identity and identification; African diaspora gender and sexuality; cuisine; pathogenicity, disease and chemical catastrophes.

Degree Requirement Attributes: Dist:INT; WCult:CI

AAAS 10 - Introduction to African-American Studies

A multidisciplinary investigation into the lives and cultures of people of African descent in the Americas. Topics may include: the African background, religion and the black church, popular culture, slavery and resistance, morality and literacy, the civil rights movement, black nationalism, theories of race and race relations.

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 11 - Introduction to African Studies

This course introduces a global socio-historical framework within which to examine Africa in relation to multiple African Diasporas and notions of mobility. Considering the historical contexts of contact between Africa, Europe, and the Americas, we examine cultural, economic, and philosophic aspects of Africa. We will examine how ideas of what it means to be African culturally, racially, and politically are continually produced and contested. The moment of independence of many African nation-states from European colonial rule in the mid 20th century operates as a centering point from which we will examine economics, race, politics, and artistic expressions. We will consider ideas of "tradition" and "modernity," representations of Africa, more recent processes of commodification, as well as various cultural and political responses to them.

Degree Requirement Attributes: Dist:SOC; WCult:NW

AAAS 12 - Early America and African American History: From the Colonial Era to the Gold Rush

This course examines the history of African Americans in early America, from the colonial period to the Gold Rush. This class will explore the formation of both free and enslaved black communities in the early northeastern states and the expansion of slavery westward in the South and later in the American West. By analyzing primary and secondary sources, students will gain a comprehensive understanding of the historical development of African

Americans' ideas and practices around major themes in the field such as labor, economics, politics, and kinship.

Cross-Listed as: HIST 016

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 13 - Black America since the Civil War

This course is a continuation of HIST 16. Among the topics to be discussed are Black Reconstruction, segregation and disfranchisement, migration, nationalism, Blacks and the New Deal, the impact of war on Blacks, and the 1960s. Open to all classes.

Cross-Listed as: HIST 17

Degree Requirement Attributes: Dist:SOC; WCult:W

AAAS 14 - Pre-Colonial African History

Instructor: Sackeyfio-Lenoch

This course will examine the social and economic history of Africa to 1800. Several interrelated themes of social organization, the expansion of trade, rise of new social classes, the emergence and disintegration of various states and European intervention will be discussed. Through our readings, we will visit every major historical region of Africa (north, east, central, west and south) at least once during the semester to illuminate the various themes.

Cross-Listed as: HIST 5.01

Degree Requirement Attributes: Dist:SOC; WCult:NW

AAAS 15 - History of Africa since 1800

Instructor: Sackeyfio-Lenoch

This course explores some of the major historical processes unfolding in Africa since 1800. Our analysis will focus on social and economic history as we examine Africa's integration into the international economy during the nineteenth century, the rise of new social classes, and the creation of the colonial and post-colonial state. Our primary case studies will be drawn from east, west and southern Africa to highlight both the similarities and differences of their historical development. Open to all classes.

Cross-Listed as: HIST 66

Degree Requirement Attributes: Dist:SOC; WCult:NW

AAAS 16 - History, Culture and Society: The Many Faces of Latin America

Instructor: varies

The Spanish discovery and conquest of this continent created Latin America and the Caribbean out of the diverse and complex realities of the pre-Columbian world. Since colonial times Latin American and Caribbean cultures have developed against a background of cultural repression, racial conflict, political domination, colonial exploitation,

and gender inequality. And yet, in the midst of all this turmoil, Latin America and the Caribbean have produced an extraordinary variety and wealth of artistic creations, ranging from literature to the visual arts, from music to film. In this course we will turn to some of the works by Latin American and Caribbean artists and writers in an attempt to illuminate and explore some of the wonders of the cultural dynamics that shape the many faces of what we call Latin America and the Caribbean.

Cross-Listed as: LACS 4

Degree Requirement Attributes: Dist:LIT; WCult:NW

AAAS 18.03 - Introduction to African Religions

Instructor: Baum

This course introduces the study of Indigenous African Religions, their cosmologies, histories, ritual structures, and their relationships to other aspects of African cultures. Of particular importance will be ideas of gendered spiritual power, the spread of African-inspired religions to the Americas, and the nature of orally transmitted religious traditions. Conversion to Islam and Christianity and reconversion from these religions will also be studied. Finally, we examine the role of African religions in post-colonial African societies and the impact of globalization. Open to all.

Cross-Listed as: REL 014

Degree Requirement Attributes: Dist:TMV; WCult:NW

AAAS 19 - Africa and the World

This course focuses on links between Africa and other parts of the world, in particular Europe and Asia. Readings, lectures, and discussions will address travel and migration, economics and trade, identity formation, empire, and cultural production. Rather than viewing Africa as separate from global processes, the course will address historical phenomena across oceans, deserts, cultures, and languages to demonstrate both the diversity of experiences and the long-term global connections among disparate parts of the world.

Cross-Listed as: HIST 5.08

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

AAAS 20 - Feminist Theory

This seminar is designed to provide an overview of significant themes and debates within feminist theory. It is organized around several topic areas - most centrally Intersectionality and the Body (including the racially marked body, the covered body and the body in motion, across both national and gender boundaries).

Cross-Listed as: GOVT 86.35 WGSS 67.05

Degree Requirement Attributes: Dist:SOC

AAAS 20.01 - Dartmouth Black Lives

This course equips students with research methods, critical frameworks, and interview skills to document the lives of Black alumni and contribute to an archive of oral sources on Black history at Dartmouth. Students will be immersed in the theory and practice of oral history, a field in which historians conduct collaborative interviews with narrators to create new records of past events.

Cross-Listed as: HIST 10.04

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 20.02 - Race and Archival Silences

This course will cover the methods scholars use to uncover narratives that seem to lie outside of the traditional archive, broadly defined. We will look at the history and foundations of archival practice, with a specific focus on the rise of archives in the United States, and the effect that race and this history have had on the ways historical narratives are constructed. Does recent scholarly interest in such silences actually distort the records that do exist for marginalized people? We will analyze strategies for reading "silences" in the archival record, such as critical fabulation, reading "against the grain," and "presencing." We will also analyze the critical debate around the concept of archival "silences."

Cross-Listed as: HIST 10.06

Degree Requirement Attributes: Dist:SOC; WCult:W

AAAS 20.06 - Race, Slavery and the Family

Ideas of family and practices of slavery have stood as enduring concepts within human communities across time and geography, shaping every facet of social organization. But to what extent were they intertwined? How do region, gender, religion, race and socioeconomic status affect the ways in which both slavery and family were constructed and understood? Do these conceptions change over time? Together, we will explore various notions of slavery and the family as well as diverse historical disciplines that wrestle with the varied legacies of these ideas. The events, ideas, and themes that shape the study of slavery as it relates to the construction of the family are controversial and challenging. They wrought seismic change in the past and still shape modern-day political, social, and even religious debates. This course is not intended to tell you what to think about the interaction between slavery and the family but equip you with the tools to explore and come to your own informed conclusions.

Cross-Listed as: HIST 16.03

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 20.07 - Early America and African American History: From the Colonial Era to the Gold Rush

This course examines the history of African Americans in early America, from the colonial period to the Gold Rush. This class will explore the formation of both free and enslaved black communities in the early northeastern states and the expansion of slavery westward in the South and later in the American West. By analyzing primary and secondary sources, students will gain a comprehensive understanding of the historical development of African Americans' ideas and practices around major themes in the field such as labor, economics, politics, and kinship.

Cross-Listed as: HIST 13.02

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 20.15 - Introduction to Black Feminist Thought

What is Black Feminist Thought? Why Black Feminist Thought? And just whom is Black Feminist Thought for? This course considers the disciplinary formations and political happenings of Black Feminist Thought in the United States—from its role in the university department to its presence on the ground. Highlighting interlocking issues related to gender, sexuality, race, and economics, we will mine political speeches, visual art, live performance, literature, and theoretical discourse.

Cross-Listed as: WGSS 66.04

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 20.50 - Lest We Forget: History, Collective Memory and Slavery at Dartmouth

Instructor: King

Beyond noting that Wheelock owned slaves, little is known of Dartmouth's other historical connections, if any, to the institution of slavery. This research seminar investigates the college's economic entanglement in the trade and slaveholding; as a site for the intellectual legitimization and contestation of slavery; and the contributions of enslaved persons to its development. We will also review the origins, findings and responses to similar collective memory projects at other institutions including Brown, Emory and Yale.

Cross-Listed as: SOCY 79.08

Degree Requirement Attributes: Dist:SOC

AAAS 21 - Racial Justice

This course introduces students to major contemporary racial justice debates. It also considers how theories of racial justice might better include the concerns of women of color as well as LGBT and trans persons of color. Throughout the course we will examine questions such as: What constitutes racial injustice? How is gender implicated in said injustice? What, if anything, do blacks and other people of color owe to one another? Should political

possibility and pragmatism bound thinking regarding corrective racial justice?

Cross-Listed as: GOVT 27 WGSS 40.03

Degree Requirement Attributes: Dist:SOC

AAAS 21.05 - Carceral Geographies: Explaining Mass Incarceration in the US

Why are there so many people incarcerated in the United States and why are so many people in the US and beyond calling for an end to police violence, some even for the abolition of policing? Is mass incarceration an inevitable product of slavery and Jim Crow? Why did prisons expand in the United States as crime rates were going down? Was it the War on Drugs, or the long term effects of housing discrimination? This course is designed to explore and explain these questions by unpacking the roles of surveillance, criminalization, policing and incarceration to historical and contemporary US state formation and global capitalism. Proceeding from the idea that carceral geographies such as prison towns, policing, and surveillance are spatial fixes for social, economic, and political crises, we will engage scholarship from a variety of fields including: critical prison studies, geography, cultural studies, gender and sexuality studies, and critical ethnic studies. Students will have an opportunity to understand the historical and contemporary organization of people, places, ideas, and infrastructure that makes up US carceral geographies of the United States. This course requires dedicated and rigorous reading. Each week we will read an entire book and analyze it in depth to create shared language and understandings about carceral geographies. |||f

Degree Requirement Attributes: Dist:SOC

AAAS 21.10 - Race and Modernity: W.E.B. DuBois, James Baldwin, Lorraine Hansberry

This course will examine the classical works of three towering modern intellectuals: W.E.B. Du Bois, James Baldwin, and Lorraine Hansberry. We will wrestle with the rich formulations, subtle arguments, and courageous visions of three Black thinkers who continue to speak with power and passion to our turbulent times.

Cross-Listed as: ENGL 53.43 PHIL 01.17

Degree Requirement Attributes: Dist:LIT; WCult:W

AAAS 21.15 - Black Ethnicities in the United States

This course examines the historical processes of identity formation among varied groups of African-descended people in the United States, problematizing the concept of "African-American" by interrogating the history of the Gullah-Geechee, the Black Seminoles, the Freedmen (Choctaw, Cherokee, and Chickasaw), and the Creoles of the Gulf Coast (Louisiana, Mississippi, and Alabama). In particular, students will examine the ethnogenesis of these

groups and, where appropriate, the phenomenon of emerging linguistic distinctiveness, and the historical relationship between linguistic minority groups and Anglo-American hegemony.

Cross-Listed as: HIST 09.06

Degree Requirement Attributes: Dist:SOC; WCult:W

AAAS 21.50 - The Color Line, Lynching and the Black Public Sphere: Social & Political Thought of Ida Wells & DuBois

This course will explore the black public sphere through close readings of the writings of W.E.B. Du Bois and Ida B. Wells as well as secondary source material on these thinkers as well as the black public sphere itself.

Cross-Listed as: GOVT 86.36

Degree Requirement Attributes: Dist:TMV

AAAS 21.75 - Black Political Thought

This course will explore the black political thought from the antebellum period through the middle of the twentieth century. The course will include the political writings of major black political thinkers such as Frederick Douglass, Harriet Jacobs, Booker T. Washington, W. E. B. Du Bois, Ida B Wells, Martin Luther King, Jr. and Ella Baker as well as secondary source material on these thinkers.

Cross-Listed as: GOVT 60.19

Degree Requirement Attributes: Dist:TMV

AAAS 21.76 - Black Political Theory

This class examines main ideas and key thinkers within African American, Black American, and Africana political theory. This course compares goals, viewpoints, and strategies of various African American political and social movements of resistance and social and political voices that helped to shape them. Rather than proceeding chronologically, the course is structured around thematic units designed to give a foundational understanding of the development of Africana, Black American, and African American thought on a series of major socio-political topics, such as class, nationality, race, white supremacy, gender, body politics, and culture. The course is structured to give students an understanding of these topics and the multiplicity of methods employed in Black socio-political theory and philosophy.

Cross-Listed as: PHIL 38.05

Degree Requirement Attributes: Dist:TMV

AAAS 21.77 - Racial Capitalism

This class provides students with an advanced geographic understanding of the relationship between race and capitalism using three core questions: What is racial capitalism, and under what conditions did it emerge? How do we understand the role of the Atlantic World

historically in the development of this economic system?
How do these histories permeate into 20th century and early 21st century global economic policy?

Cross-Listed as: GEOG 72.02

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 22 - Religion and the Civil Rights Movement

Instructor: Booker

This course presents the religious dimensions of civil rights activism in twentieth-century United States history. Students will explore the theologies of African American Protestants, liberal religious thinkers, and adherents to Gandhian philosophy as they waged nonviolent struggle against Jim Crow oppression in the United States. In-class discussions and exercises will examine the religious rhetoric and creative protest strategies of movement activists. Open to all.

Cross-Listed as: REL 061

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 22.10 - African American Religion and Culture in Jim Crow America

Instructor: Booker

Jim Crow segregation in the United States compelled many African American men and women to use their bodies—their hands, feet, and voices—to create sacred scenes, sounds, and spaces to articulate their existence in America. This seminar focuses on religious production to explore African American culture in the post-Civil War era. Students will analyze a variety of sources, including music, visual art, film, religious architecture, sermons, food, theater, photography, and news media. Not open to students who have received credit for AAAS 80.08.

Cross-Listed as: AAAS 80.08 REL 054

Degree Requirement Attributes: Dist:TMV; WCult:CI

AAAS 22.50 - Islam in America

This course is about Muslims in America, past, present, and future—how American Islam is an extension of global Islam and how it is uniquely American. As we study religious identity and understandings of Islam in enslaved Muslim narratives, the civil rights movement, waves of immigration, pre- and post- 9/11, current Muslim geopolitics, we pay close attention to theorizations of contested histories, race, gender, and class dynamics, intersectionality, model minorityhood, assimilation, discrimination. We will also study Malcolm X's visit to Dartmouth, and the significance of the Malcolm X murals in Dartmouth's Shabazz Center.

Cross-Listed as: REL 026 REL 16.03

Degree Requirement Attributes: Dist:TMV; WCult:W

AAAS 23 - Black Sports: Theorizing Blackness in Contemporary Athletics Culture

This course examines Black athletes' cultural, historical, and political impact on American society. We will pay particular attention to how Black athletes of all genders respond to racial injustice and the call of protest, hypersexualization and the politics of desire, exploitation and issues of image likeness, and public scandal and celebrity. Through theories in Black Studies and Gender and Sexuality Studies, we will consider how athletes navigate their Blackness, giftedness, and love of the game.

Cross-Listed as: HIST 030

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 24 - The Black Radical Tradition in America

This course introduces major currents in the history of black radical thought, with a particular focus on the U.S. after emancipation. This class encourages students to define and evaluate radicalism in the shifting contexts of various liberation struggles. By exploring dissenting visions of social organization and alternative definitions of citizenship and freedom as expressed through nonviolence, armed rebellion, black nationalism, Pan Africanism, socialism, communism, anticolonialism, feminism, queer theory and integrationism, students will confront the meaning of the intersection of race, gender, class and sexuality in social movements.

Cross-Listed as: HIST 037

Degree Requirement Attributes: Dist:SOC; WCult:W

AAAS 24.50 - Contemporary Black Political Thought and the Modern World

In the era and “return” of mass political social movements, the question is perhaps *not* what is the most urgent political struggle of today; rather, what remains unheard, unseen, and unthought in the struggle for political freedom? This course seeks to familiarize students with the works of contemporary black political thinkers who have contributed to the rich theoretical developments and productive tensions in Black Studies, discourses on black resistance and freedom struggle, and political action itself. The course focuses on several key concepts—such as civic and social death, sovereignty, the collective unconscious, the radical imagination—as a way to examine notions of agency and the psychic life of racial violence, particularly in the context of the United States. What is the dream-work of Black freedom? And how do dreams of (black) freedom become realized and/or barred from larger socio-political, economic, and legal structures to the more abstract registers of language, aesthetics, culture, and the imagination? The course investigates the theoretical tenets within contemporary Black Studies *as* critical theory, arguing that these are equally contributive to the

continental philosophical tradition on questions of life, rights, civil society, and personhood.

Degree Requirement Attributes: Dist:SOC; WCult:W

AAAS 25 - Constructing Black Womanhood

Instructor: King

This course is a critical examination of the historical and contemporary status of black women in the United States, as presented in fiction, primary accounts, and social science literature. We will explore the nature, extent, and consequences of the multiple discriminations of race, sex, and class, as the context in which these women shaped their social roles and identities within the black community and the larger society. We will consider the themes of family, motherhood, and sexuality; educational, economic and political participation; aesthetics and religious traditions; self and social images.

Cross-Listed as: SOCY 046 WGSS 33.01

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 26 - Toni Morrison

Instructor: Moodie

This course is an in-depth study of Toni Morrison's major fictional works. We will also read critical responses by and about the author. We will examine Morrison's earliest and arguably most foundational and influential works. Required texts will include, *The Bluest Eye*, *Sula*, *Song of Solomon*, *Tar Baby*, *Beloved*, *A Mercy*, and *Conversations with Toni Morrison*. Central to our exploration will be an analysis of Morrison's observation that "the past affects the present." Therefore, we will explore the social and historical factors that contribute to Morrison's artistic constructions. Some of the issues we will examine include, alternative constructions of female community and genealogy, and representations of race, class, nationhood, and identity.

AAAS 27 - Transformative Spiritual Journeys. Contemporary Memoirs of African American Religion

Instructor: Booker

This course presents African Americans who have created religious and spiritual lives amid the variety of possibilities for religious belonging in the second half of the twentieth century and the early twenty-first century. By engaging an emerging canon of autobiographies, we will take seriously the writings of theologians, religious laity, spiritual gurus, hip hop philosophers, LGBT clergy, religious minorities, and scholars of religion as foundational for considering contemporary religious authority through popular and/or institutional forms of African American religious

leadership. Themes of spiritual formation and religious belonging as a process—healing, self-making, writing, growing up, renouncing, dreaming, and liberating—characterize the religious journeys of the African American writers, thinkers, and leaders whose works we will examine. Each weekly session will also incorporate relevant audiovisual religious media, including online exhibits, documentary films, recorded sermons, tv series, performance art, and music.

AAAS 28.10 - Race, Space, and Nature

Ideas of racial difference are frequently advanced as "natural" truths about the world, linked to normative conceptions of environmental relations. Reciprocally, racism—as a set of deadly ideological and material practices articulated around purported group differences—has profoundly shaped conceptions of non-human nature. This course asks how race is inflected in the politics and practices through which humans interact with the "natural" world, and explores the implications for contemporary movements and mobilizations for environmental justice.

AAAS 31 - Black Theater, U.S.A.

Instructor: Varies

This course will examine African American playwrights, drama, and theater from 1959 to the present. Further exploration will focus on the impact of civil rights, the Black Arts movement, and cultural aesthetics on the form, style, and content of African American plays. Readings will include plays of Hansberry, Baldwin, Baraka, Kennedy, Childress, Shange, Wolfe, Wilson, Parks and others. Open to all classes.

AAAS 31.10 - Dance Theatre of Harlem Workshop: Collaborative Storytelling Through Movement

Instructor: Ndounou, Heginbotham

Synthesizing aspects of cultural storytelling, theater, movement, activism and biography, this course is focused on the creation of new performance work. Students will have a rare opportunity to engage with the singular Dance Theatre of Harlem (DTH) during their summer residency at Dartmouth College. This course explores the company's relationship and history with ballets that tell a story and the potential for collaborative storytelling across platforms. During THEA 10.57, students will also create, collaborate, and organize performances of their own movement-based works.

AAAS 31.50 - Black Theatre Workshop: The August Wilson Experience

Using legendary playwright, August Wilson's ten-play cycle of African Americans' experiences throughout American history as our inspiration, this course provides hands-on, experiential learning of acting, script analysis, and theatrical production. With no previous performance, design, or production experience required, students will read Wilson's plays and related commentary with opportunities to perform selected scenes from the Wilson cycle while exploring possibilities for design and technical elements. In this process-oriented course, students also learn basic acting techniques by strengthening observation and listening skills, risktaking, imagination, improvisation, concentration, exploration of self, voice, and body. Activities include textual analysis of Wilson's plays and related works as well as documenting and revising performance philosophy and process. While providing a safe space for exploring the roles we play in our daily lives and taking on the roles of others in given or imagined circumstances, students will learn widely accepted theories, practices, and terminology of the actor's craft in order to facilitate the practice, writing, and discussion of acting and producing Wilson's plays and others.

AAAS 31.90 - Black Theatre & Storytelling Workshop in XR: Reimagining The Purple Flower (1928)

Instructor: Ndounou

Recognizing the intrinsic value of Black lives and Black storytelling across media platforms, this course will explore the staging of Black theatre texts in virtual reality (VR) and related XR technology. Participants will explore VR technology at the intersection of Black cultural storytelling through the performance of monologues and

scenes as well as design/tech, music and movement culminating into a pilot production of Marita Bonner's *The Purple Flower* (1928), a non-realistic, one-act play that pushes the boundaries of theatrical staging. No prior experience or pre-requisites required.

AAAS 32.01 - Race & Gender in American Film

This course is an introduction to the history of race and gender in American film. These fundamental social constructs in American life have been central to the development of American film narrative from the beginnings of cinema at the turn of the twentieth century. In turn, American films have profoundly shaped the ways that we think about race and gender and racialized and gendered beings. We will analyze the shifting and situational meanings of race and gender throughout the twentieth century, and in particular, how they have been influenced by the forces of history, including wars, economic depressions, and social movements. While we will focus our attention on Hollywood cinema of the "golden age", the period from the 1920s-1960, we will also spend significant time considering American independent cinema and the post-classical period of filmmaking from the 1960s to the present. In our consideration of race and racialized peoples, we will include African Americans, Native Americans, Asian Americans and Latinos. Our discussions of gender will be expansive to include not just women and femininity, but men and masculinity as well.

AAAS 32.02 - Black Queer Literature and Film

This seminar will combine elements of black (trans) feminist theory and black queer theory to examine the written works and films/videos by and about lesbians, bisexual, transgender, gay and queer Black people. Emphasis will be on tracing the emergence of black literary and cinematic voices from the late twentieth century to the present. We will read poetry, fiction and essays as well as watch films with an eye towards understanding the historical and theoretical construction of sexual and gender identities, politics and sexual/cultural practices in Black communities. Special attention will be paid to the construction of race, gender and sexual identities in North America, the Caribbean and the United Kingdom.

AAAS 32.05 - Cinema of Black Protest

This course considers Black histories of protest in conjunction with the history of Black representation in

film. We will analyze historical documents, scholarly articles, legal cases and historical accounts of the major moments in Black resistance in the United States. We will begin with the protests against lynching in the early twentieth century and the Civil Rights and Black power era of the 1970's Blaxploitation film genre through contemporary independent films. We will discuss issues of race and gender, racism, sexuality and homophobia as well as misogyny and sexism in Black representation. Students will be expected to watch and discuss films as well as read scholarly articles on race theory, queer theory, feminist theory and cultural criticism.

AAAS 32.15 - The Making of 21st Century Exhibits: Curating a National Black Theater Museum/Institution

Instructor: Ndounou

This course is designed for those interested in theatre and performance, African American studies, history, and culture. Students will study influences on the development of black theater and performance in the USA as well as processes for preserving, curating, and exhibiting culture in institutions, examining how museum concepts intersect and/or collide with representations of black history and culture. In collaboration with the Hattiloo Theatre in Memphis and the DeVos Institute of Arts Management, who are drafting plans for an institution devoted to black theatre practitioners, students will determine and develop content for an interactive venue. They will consider strategies for the use of technology and live exhibits, involving black communities in exhibits and curation, and providing access to diverse communities. Projects and findings will be shared with the institution's developers and will be considered in their ongoing plans. The course will include a visit to the National Museum of African American History and Culture in Washington.

AAAS 32.50 - Black LGBTQ History

This course is an introduction to the study of Black LGBTQ history in the United States. We will examine a range of primary and secondary source material from the nineteenth century through the late twentieth century. This material includes documentaries, scholarship, newspaper articles, newsletters, diaries and letters. We will look at sexual relationships in the nineteenth century among slaves and free people as well as the cultures of sexual diversity and gender transgression a couple of generations after slavery that gave rise to the jazz age and the Harlem

Renaissance. We will also take a look at post-war America, the Civil Rights and Black Power era for their moments of sexual expression and gender variance as well as repression. The course will continue to examine Black experience into the AIDS crisis, gay marriage debates and transgender rights movements.

Cross-Listed as: WGSS 65.08

Degree Requirement Attributes: Dist:SOC; WCult:W

AAAS 33.10 - Rituals of Breath: Black Performance and Resistance

This interdisciplinary course explores the historical legacy of public rituals of extreme violence against African American peoples as both sites of anti-black state and non-state sanctioned disciplinary projects as well as time-spaces of radical resistance. From the slave trade to life and labor under conditions of slavery to post-reconstruction segregation to lynching to police violence, American history can be read through the changing nature of the public torture of Black peoples. At the center of these forms of violence are the control of breath as life force and sign of freedom. This course examines the murder of Eric Garner in 2014 in a police-executed choke hold as a key event that both harkens back to a long history of lynchings and shootings and also to a history of how Black communities have organized around and resisted these forms of violence. Aesthetic representation has been intimately connected to anti-Black racial violence from photographs and postcards of lynchings in which white perpetrators pose alongside dead Black bodies to representations of Emmitt Till's mutilated body at his funeral in an open casket to video of Rodney King's beating to the continuing stream of video and images of extra-judicial killings of black citizens. Generations of artists in film, theater, painting/sculpture, dance, and across media have challenged and confronted this aesthetics of violence. This course explores theories of ritual and performance to understand how artists and communities come together as collectives to contextualize and re-present impossible terrors. Artists and political organizers use aesthetics and collective action to transform the horror of being subject to violence at any moment into rituals of potential social transformation. This course then teaches students theories of ritual and performance as ways that communities have historically engaged and confronted histories of anti-Black violences in order to conceive of new future possibilities in the face of disciplinary actions meant to contain and choke black people(s). In some manner, the course links African American experiences of violence and resistance to those of other African peoples around the world. This course is team taught and also draws upon the expertise of various faculty at Dartmouth. This course aims to link theories of Black life and performance to active practices of performance-making, interrogating the intersections between art and scholarship.

Degree Requirement Attributes: Dist:ART; WCult:CI

AAAS 34 - Early Black American Literature

Instructor: Chaney

A study of the foundations of Black American literature and thought, from the colonial period through the era of Booker T. Washington. The course will concentrate on the way in which developing Afro-American literature met the challenges posed successively by slavery, abolition, emancipation, and the struggle to determine directions for the twentieth century. Selections will include: Wheatley, *Life and Works*; Brown, *Clotel*; Douglass, *Narrative*; Washington, *Up from Slavery*; DuBois, *Souls of Black Folk*; Dunbar, *Sport of the Gods*; Chestnut, *House Behind the Cedars*; Harriet Wilson, *Our Nig*; Johnson, *The Autobiography of an Ex-Coloured Man*; and poems by F. W. Harper, Paul L. Dunbar and Ann Spencer.

Cross-Listed as: ENGL 30

Degree Requirement Attributes: Dist:LIT; WCult:W

AAAS 35 - Modern Black American Literature

Instructor: Varies

A study of African American literature from the Harlem Renaissance to the present, this course will focus on emerging and diverging traditions of writing by African Americans. We shall also investigate the changing forms and contexts of 'racial representation' in the United States. Works may include those by Hurston, Hughes, Wright, Ellison, Morrison, Schuyler, West, Murray, Gates, Parks.

Cross-Listed as: ENGL 33

Degree Requirement Attributes: Dist:LIT; WCult:W

AAAS 35.01 - Black Elegies

This course is structured around iterations of black grief within, but mostly beyond the genre of poetry. What curator Okwui Enwezor calls the contemporary "emergency of black grief" is over four centuries old. We will explore modes of release from black cultural producers who attend to the multiple losses sustained by black subjects. The resulting productions span the range of representation from dance, painting, photography, music, film, and craftwork. The course will be organized around three parts, each focusing on the sensorial: *Sight*, *Sound*, and *Touch*. Together we will consider what it means to mourn in an antiblack world resistant to acknowledging the violences endured by black subjects in the United States and beyond its borders.

Cross-Listed as: ENGL 73.03 WGSS 66.11

Degree Requirement Attributes: Dist:LIT; WCult:CI

AAAS 35.02 - Disability and Madness in African American Literature and Film

Disability and madness are often overlooked analytic and lived experience in African American Studies and African American criticism, though recent work in Black disability studies is shifting this. The goal of this course is to pull disability and madness to the center of course readings to understand the complexities of Black life, such as: grief, sexuality and gender identity, geography, and the impact of incarceration and institutionalization. Students will be asked to approach canonical texts and less familiar texts for messier readings, unraveling(s) and ravings that complicate Black life. Likewise, we will watch film adaptations that also represent disability and madness on screen. Because disability and madness are recurrently represented visually, as is race, this course will trace representation from the page to the screen as part of a deeper understanding of how disability and race become co-constituted in American culture. Lastly, we will ask, again and again: what does disability and madness look like in literature? What images, language, etc., are used to represent disability and madness as it intersects with Blackness? And finally, what things are made possible through a disabled and mad lens? How are freedom, injury (and healing), and salvation better imagined through disability and madness?

Cross-Listed as: ENGL 53.54 WGSS 66.27

Degree Requirement Attributes: Dist:LIT; WCult:W

AAAS 35.03 - The Idea of Black Culture

The Idea of Black Culture offers a reading of conceptualizations of the subject of black culture across a historical time line that begins with W.E.B. DuBois's *Souls of Black Folk* (1903) and proceeds through successive periods of black cultural apprenticeship in the geopolitical context of the Americas. Those eras may be characterized according to four broad rubrics or temporal themes as follows: 1) the Pan-African movement, pursued as a practice by black activists at the turn of the twentieth century and after the end of WWI; 2) the era of decolonization and the mounting of the Civil and human rights campaigns in the United States, the Caribbean, and independence movements on the Sub-Saharan African Continent, which events share the global context of the "Cold War" (from the Marshall Plan to the collapse of the Berlin Wall, 1989, and the dismantling of the Soviet Union, 1991); 3) the birth of the Black Studies movement (alongside the resurgence of black nationalism) and the development of the new epistemologies of the post-'sixties and beyond, and finally 4) the emergence of the concept of the African Diaspora and the post-race/post-colonial thematics of the late twentieth-early twenty-first century, marked by the presidency of Barack Obama. Each of these eras of human and social engagement has engendered its own distinctive work on the idea of black culture. This seminar will examine some of those ideas by analyzing

selective texts by W.E.B. DuBois, C.L.R. James, Aimé Césaire, and Frantz Fanon. The course will be taught in two halves, beginning with the seminal texts of canonical figures like Du Bois, and proceeding to a critical inquiry into the projects of contemporary scholars and theorists that will include selective work by Saidiya Hartmann, Fred Moten, Nahum Chandler, Denise da Silva, and Frank Wilderson, as well as other representative figures of the schools of Afro-Pessimism and Critical Race Theory.

Cross-Listed as: ENGL 53.51

Degree Requirement Attributes: Dist:LIT; WCult:CI

AAAS 35.05 - Black Speculative Worlds

This course will explore futuristic speculative worlds as they are imagined by major Black women writers in the field of science fiction and fantasy, specifically focusing on works by Octavia Butler, Nalo Hopkinson, and N.K. Jemisin. We will explore utopias/dystopias and post-apocalyptic alien worlds in order to interrogate the ways in which they reflect and comment on our own human condition. Understanding each literary text as a thought experiment in its own right, we will unpack various themes associated with the reconfiguring of the constructs of race, class, gender and sexuality as well as Black women's reproductive rights and politics. We will closely analyze alien invasion contagion narratives that comment on the histories of slavery, settler colonialism, and imperialism, and that speak to the operations of white supremacy. Lastly, we will examine how a revisionist mode of writing functions as an essential part of Black feminist speculative thought.

Cross-Listed as: ENGL 53.57 WGSS 66.31

AAAS 35.50 - Introduction to African American Environmental Thought: The Black Outdoors

Instructor: Bennett

The persistence of black life, and blackness as a way of thinking about the organization of both human and nonhuman forms of life, has been absolutely central to the story of the United States and the Americas more broadly. This course provides an interdisciplinary exploration of the writing of thinkers from across the African diaspora, with special emphasis on literary works and criticism centrally concerned with the intersections of black literary studies and African American environmental thought. We will draw on a range of texts in order to wrestle with some of the key concerns of African American writers from the 19th century through the present. Students will be introduced

to a range of methods and approaches to the meta-disciplinary work of black literary studies. By the end of the course, students will be expected to possess a working knowledge of several major themes, figures and moments within the black expressive tradition.

Cross-Listed as: ENGL 53.29

Degree Requirement Attributes: Dist:LIT; WCult:W

AAAS 35.60 - Poetry for the People

Instructor: Bennett

The central concern of this class is the historical relationship between the social lives of everyday people and U.S. American poetics, with a special emphasis on what June Jordan once termed the “difficult miracle of Black poetry in America.” How does poetry help us to know one another? And how might we better understand the particular role of poetry, of *poesis*, for those historically barred from the very practice of reading or writing, from ownership (even of one's own body), and various generally recognized forms of belonging? For the purposes of this course, these will be some of our animating questions.

As a group, we will study the works of Audre Lorde, Toni Morrison, Tongo Eisen-Martin, Jericho Brown, and Claudia Rankine, among others. Largely toward the end of elaborating, in concert, a working theory of social poetics, a poetics of sociality, a new way for us to be together in a cultural moment marked by distance, as well as the disintegration of the public commons. In the midst of this ongoing catastrophe, this state of emergency and emergence, this course will seek to chart a way forward using the instruments left to us by luminaries both dead and living, a cloud of witnesses beckoning us toward a future with room enough for all of us to flourish.

Cross-Listed as: ENGL 53.48

Degree Requirement Attributes: Dist:LIT; WCult:CI

AAAS 36.50 - Rasta and Rastafari

Instructor: Campbell

This course examines the Rastafari spiritual and political movement from its genesis in Jamaica to its transformation into a global phenomenon. Today's perception of Rastafari is informed by popular images of marijuana smoking, reggae musicians and a laid-back lifestyle. Consequently, Rasta is often mistaken for practicing a countercultural phenomenon of no global significance, a poster child for the undesirable other, or merely a misguided rebel. Rastafari however, is significantly more profound. Rastafari has offered, cloaked in revolutionary black hermeneutics, some of the sharpest critiques against European imperialism and exploitation. Despite the presence of burgeoning scholarship, Rasta's global significance remains hidden in the fissures of most historical discourses and behind the haze of marijuana smoke created by popular understandings of the movement. This course employs monographs, scholarly articles, documentary films and primary sources and music to and explore Rastafarian ideologies that among other things, promoted decolonization while decrying racism and imperialism. It is open to students seeking to broaden their

knowledge of religions and socio-political movements in the African diaspora.

Degree Requirement Attributes: WCult:NW

AAAS 39 - Jazz: Black Creative Music and American Culture

The music known as ‘jazz’ has been one of the most revolutionary and influential artistic movements of the past century. *Jazz: Black Creative Music and American Culture* will provide a basic historical overview of the music, with major themes including the relationship between composition and improvisation; the reinvention of traditional roles of performer, composer, bandleader, and collective ensemble; and the music’s connection to African-American history and the civil rights movement. Not open to students who have received credit for MUS 05.01, MUS 05.02, AAAS 39.01, or AAAS 39.02.

Cross-Listed as: MUS 005

Degree Requirement Attributes: Dist:ART

AAAS 39.01 - History of Jazz to 1965

This course examines jazz from its origins to 1965, with special attention given to pivotal figures such as Louis Armstrong, Charlie Parker, Miles Davis and John Coltrane. Class work includes listening to, analyzing, and discussing jazz recordings and watching jazz films. Students will also attend live jazz performances and read about the artists who brought this music to life, with the goal being to increase understanding, appreciation and enjoyment of this great American art form.

Cross-Listed as: MUS 5.01

Degree Requirement Attributes: Dist:ART; WCult:W

AAAS 39.02 - History of Jazz since 1959

Instructor: Glasgo

This class examines developments in jazz, starting with historic 1959 recordings by Ornette, Coltrane and Miles Davis, followed by soul jazz, modal jazz, jazz funk, the avant-garde, big bands, Afro-Latin jazz and world jazz. Class work includes close listening, discussions, collaborations and in-class presentations. Students also complete required reading, listening and writing assignments and attend jazz performances, resulting in a deeper understanding and appreciation for jazz and improvisation, both worldwide and in our daily lives.

Cross-Listed as: MUS 5.02

Degree Requirement Attributes: Dist:ART; WCult:W

AAAS 39.03 - Advanced Studies in Jazz History: A Century of Jazz at Dartmouth

Advanced Studies in Jazz History offers students the opportunity for in-depth research into specific topics pertaining to Black Creative Music. This term we will be

turning our gaze inward, exploring Dartmouth’s own history with jazz and other forms of Black music over the past century. Through a combination of primary source research, interviews and oral history, and creative storytelling and writing, the goal of this course is to generate lasting, honest, insightful, and engaging documentation of the complicated history of jazz at Dartmouth.

Cross-Listed as: MUS 45.12

Degree Requirement Attributes: Dist:ART

AAAS 39.05 - Utility of Death and Dying in African American Music

This course explores the topics of death and dying and their multiple uses across the span of African American music from the time of enslavement to the present day. Through an engagement with sound recordings, scholarly writings, journalism, lyrical analysis, film, and other sources, we will expand our understanding of how and why death is so frequently invoked in African American music. Although some reasons for these invocations - for instance, loss or mourning - may seem obvious, this course will require us to reframe our perceptions of death as simply the ending point of life. As we will learn, death and dying can serve a number of purposes, from ‘deadness’ serving as a necessary aesthetic for creation, to death being an integral part of an artist’s identity.

Degree Requirement Attributes: Dist:ART; WCult:W

AAAS 39.06 - Hip-Hop in the United States

Instructor: Martin

This course is an introduction to hip-hop music and culture, intended to offer interdisciplinary perspectives on what is one of the most popular genres in the United States. From its humble origins in New York to now, hip-hop and rap music have changed the sonic landscape of the US and the world. We will examine rap music and hip-hop culture as artistic and sociological phenomena with emphasis on historical, cultural, economic and political contexts. Discussions will include the coexistence of various hip-hop styles, their appropriation by the music industry, and controversies resulting from the exploitation of hip-hop music and culture as a commodity for national and global consumption.

Cross-Listed as: MUS 18.02

AAAS 39.08 - Black Sound Studies

This upper-level reading and writing intensive seminar explores the field of Black sound studies. We will explore Black music, sound technologies, performance styles, aesthetics, and sonic epistemologies, all the while asking what might Black sound studies be and why. Each week, we will engage a text and an album together, moving through the sound sources of both pieces to generate moments of connection and silence between the two.

Cross-Listed as: MUS 24.01

Degree Requirement Attributes: Dist:ART; WCult:CI

AAAS 39.09 - Music and Social Justice

This course asks what we can do for music and what music can do for the world. Our research and discussions lead us not simply to concrete examples of music functioning as an agent of change, but furthermore to contested notions of what it even means (and takes) to claim that something—society, art, people, culture, values—has undergone notable transformation. How do we think and talk about change via discourses of reform, revolution, rehabilitation, activism, innovation, progress, and productivity? What are some distinguishing features of music and sound that might enable them to serve as flashpoints or vehicles for change? And how might you—in this class and beyond—engage with music and its technologies to fulfill causes most meaningful to you?

Cross-Listed as: MUS 45.04

Degree Requirement Attributes: Dist:ART; WCult:CI

AAAS 40 - Gender Identities and Politics in Africa

Instructor: Coly

This interdisciplinary course explores the constructions of gender identities in different African socio-cultural contexts. The emphasis is on contemporary Africa, although we will discuss some of the historical framework of these identities. We will read historical accounts of gender in some pre-colonial African societies, investigate the impact of colonialism, and examine gender in some anti-colonial movements. We will also analyze gender in urban and rural contexts, and address such questions as homosexuality and gay rights.

Cross-Listed as: WGSS 34.02

Degree Requirement Attributes: Dist:INT; WCult:CI

AAAS 42 - Women, Religion and Social Change in Africa

Instructor: Baum

This introductory, multidisciplinary course examines women's religions ideas, beliefs, concerns, actions, rituals and socio-cultural experiences in African societies and cultures from a comparative, historical and gender perspective. We will look at women's experiences of social change in African religions, the encounter with Islam, slavery, Christianity, and colonialism. We will analyze the articulations of economic and political power or lack of power in religious ideas as we ask questions such as: What are the different antecedents and circumstances in which women exercise or are denied agency, leadership, power and happiness in their communities? Texts will include nonfiction, fiction, and film narratives. Open to all students.

AAAS 44 - Contemporary Africa: Exploring Myths, Engaging Realities

This course focuses on processes, relationships, and experiences that have shaped, and continue to shape, the lives of Africans in many different contexts. These include issues of ecology and food production, age, gender, ethnicity, exchange, colonialism, apartheid, and development. We will then embark on in depth readings of ethnographies that engage these issues and themes. In the processes we will move beyond prevailing stereotypes about Africa, to engage the full complexity of its contemporary realities.

Cross-Listed as: ANTH 036

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

AAAS 45.01 - Environmental Crises & Human Rights

Environmental crises are occurring around the world at a rate never seen before. Lake Chad. Indonesia. The DRC. Martinique. The Niger Delta. These places have become tragically associated with most of the ecological issues threatening our planet. In this course, we will turn to recent texts and media to investigate the extent of rising waters and displacement, drought and exodus, pollution, and deforestation, as such and as linked to human rights, in an attempt to understand the violence of the contemporary crises playing out in locations already plagued with inequalities and human rights violations. In our analysis, we will also consider the rise of climate migration and what it means for the future of these regions, as well as what literature has to offer to represent environmental crises.

Cross-Listed as: COLT 70.07

AAAS 46 - History of Modern South Africa

Instructor: Sackeyfio-Lenoch

After an initial overview of colonialism in Africa, this course will concentrate on Southern Africa, with special emphasis on the historical development, effects, and implications of the racial situation in the Republic of South Africa. Readings will be drawn from primary and secondary materials and from works of fiction. Illustrative films will be shown, and some opportunity offered to compare the history of race relations in South Africa with that in other African countries and in the United States. Open to all classes.

AAAS 51 - African Literatures: Masterpieces of Literature from Africa

Instructor: Coly

This course is designed to provide students with a specific and global view of the diversity of literatures from the African continent. We will read texts written in English or translated from French, Portuguese, Arabic and African languages. Through novels, short stories, poetry, and drama, we will explore such topics as the colonial encounter, the conflict between tradition and modernity, the negotiation of African identities, post-independence disillusion, gender issues, apartheid and post-apartheid. In discussing this variety of literatures from a comparative context, we will assess the similarities and the differences apparent in the cultures and historical contexts from which they emerge. Readings include Chinua Achebe's *Things Fall Apart*, Naguib Mahfouz's *Midaq Alley*, Calixthe Beyala's *The Sun Hath Looked Upon Me*, Camara Laye's *The African Child*, and Luandino Vieira's *Luanda*.

AAAS 54 - Postcolonial African Drama

This course explores selected theatre and performance traditions of sub-Saharan Africa. How do African playwrights negotiate and transform the colonial legacy of Western drama, and how do they use theater to challenge neocolonial regimes and to advance ideas of democracy, human rights, and gender equality? Plays from Nigeria, South Africa, Kenya, and Uganda receive special emphasis. No prior knowledge of African studies or theater is necessary, just a willingness to expand critical and creative horizons.

Cross-Listed as: THEA 23

Degree Requirement Attributes: Dist:ART; WCult:NW

AAAS 54.05 - Feminist and Queer Africa on Stage & Screen

This course explores representations of feminist and queer Africa in theatre, dance, and film. How do female-identified, nonbinary, and/or queer African artists use creative expression to navigate and challenge neocolonial, heteropatriarchal regimes and advance ideas of LGBTQIA rights and gender equality? Although several countries will be considered during the term, Kenya and Uganda receive a particular emphasis. All students are welcome; no prior knowledge of Africa and/or theories of gender and sexuality are needed.

Degree Requirement Attributes: Dist:ART; WCult:NW

AAAS 55.01 - African Cinema

This course focuses on the cinemas of Francophone Africa. We will examine early Western filmic representations of Africans as savages devoid of culture and history. We will

then examine how African filmmakers have challenged those images by creating new depictions of their societies, offering Africa through African eyes. We will explore the social, historical, and political contexts of these films and explore their aesthetic and narrative characteristics. We will discuss issues and theories related to the definition of the so-called third world cinema, postcolonial cinema, and postmodern cinema.

AAAS 55.02 - The Idea of Africa: Deconstructing Race in the Iconography of a Continent

This course will consider the mapping of race onto the idea of Africa and how Africa came to constitute a unique racial category. We will therefore conduct an “archeology of race” and engage the argument by historians of race in Africa that Africa was a major laboratory of race. Our primary material will consist of motion pictures, in an effort to reckon with the role of motion pictures as prime technologies of racial othering and their deep imbrications in colonial projects.

Cross-Listed as: FILM 44.12

AAAS 56 - The African Political Novel

Instructor: Coly

This course examines the relationship between politics and the novel in Africa. I have selected novels from different parts of Africa. We will approach the selected novels as instruments of political interest and products of political contexts. We will then proceed to put these novels in a triangular conversation with political theorists of Africa and the political philosophies of African leaders. Topics include democracy and governance, clientelism and patrimonialism, failed states, gender, and grassroots activism.

AAAS 60 - Slavery and Emancipation in Latin America and the Caribbean

For over 300 years, Africans were transported to Latin America and the Caribbean to work as enslaved laborers. This course will examine the history of African slavery in the region from the beginning of the Atlantic slave trade to the abolition of slavery in Brazil in 1888. For each class session, students will review primary source documents such as autobiographies, slave codes, plantation journals, visual images, and anti-slavery tracts as well as historical scholarship.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

AAAS 60.01 - Plantations and Slavery in the Americas

Instructor: Musselwhite

The plantation evolved in the Americas as a place for European exploitation of colonial environments and enslaved laborers. It played a foundational role in shaping settler colonialism, racial slavery, and capitalism across the Americas and it has also framed debates around the legacies of slavery and colonial appropriation up to the present. This course explores the evolution of the plantation as an institution and an ideology of racialized exploitation, but also traces enslaved peoples’ resistance to the plantation and their construction of rival geographies and institutions.

AAAS 60.50 - Racial Geographies: Race and the Politics of Place

This course will explore various themes surrounding the ways in which race shapes the way we understand ideas of place. With a focus on Africa and its diaspora, the course looks at the movement of people and ideas inherent in the concept of diaspora and reflects on how people also reshape social worlds that challenge the way we commonly understand the world to be divided (i.e. by political territories like “countries” or by physical geographies like “continents”). The goal of the course is to start with the concept of “Blackness” and unpack the complexity of various other racial and spatial categories like “Sub-Saharan Africa” “Arab North Africa” “the West” and “diaspora.” The three general themes of territory, flows, and space/futurisms, will be explored in relation to the way they are experienced by people in everyday life, therefore the readings will primarily be ethnographic, following African descendant communities in Africa, Europe and the Americas. However, we will tackle these issues through

history and fiction writings as well. Not open to students who have received credit for GEOG 063.

AAAS 61.05 - Haiti and American Empire: History of Revolutions and Authoritarianism

Instructor: Chochotte

The course explores the historical struggle between democracy and authoritarianism in Haiti throughout its two hundred seventeen years of independence as a free black nation, which also makes the island one of the oldest sovereign countries in the Western Hemisphere. To understand the island's history, students are expected to read what historians and writers have written about Haiti; and to read the primary letters of frantic French planters, rebellious African slaves, egalitarian peasants, entrepreneurial market women, conscientious revolutionaries, exuberant military generals, loquacious politicians, feared dictators, and dreaded militias through time. The course will, indeed, move through four important, though overlapping, historical moments. First, we begin with an examination of the 1791-1804 Haitian Revolution when enslaved Africans revolted against the French colonial planters to successfully abolish slavery and to achieve national independence. Second, we read through the formation of grassroots and institutional democratic traditions in the nineteenth century and how they were undone during the 1915-1934 US Occupation of Haiti, where US President Woodrow Wilson ordered the American military to invade Haiti and control the island for almost two decades. Third, we will explore how the undoing of democracy led to the rise of the Francois and Jean-Claude Duvalier dictatorship (1957-1971) and its dreaded militia called the *tonton makout* militia (often spelled in the following French orthography: *tonton macoutes*). Finally, we will conclude the class by looking at how and why the Haitian peasantry overthrew the dictatorship to replace it with the democratically elected President Jean-Bertrand Aristide (1991).

Cross-Listed as: LACS 25.09

AAAS 63 - Race Matters - Race Made to Matter

Instructor: Keaton

What is race? What are the effects of race in our everyday life? How has science shaped our understanding of race and human diversity? This course explores how and why race is a social construction with profound implications in our social world not only in the U.S. but also beyond its shores. Diverse sciences have established that human beings are well over 99% genetically identical, but race remains a potent vision through division that has been *made* and *made to matter* across multiple spheres of life. This ranges from ancestry testing to our identities to how we are categorized to where we live and whom we are taught to love and hate in society. How race intersects with socio-economic disparities related to inclusion and exclusion are among the topics examined in this course.

AAAS 64 - Afro/Black Europe

The goal of this course is to examine the contemporary experiences of people racialized as black in Europe—including those who do not self-identify as such—and analyze aspects of race and racialized relations that are unique to Europe. Through guest lectures, reading, and film, students will gain a critical awareness of race/racialization and its impact in a variety of European countries, and attain exposure to an evolving, international field of inquiry: Afro/Black European Studies.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

AAAS 65 - Introduction to Postcolonial Literature

Instructor: Khan

An introduction to the themes and foundational texts of postcolonial literature in English. We will read and discuss novels by writers from former British colonies in Africa, South Asia, the Caribbean, and the postcolonial diaspora, with attention to the particularities of their diverse cultures and colonial histories. Our study of the literary texts will incorporate critical and theoretical essays, oral presentations, and brief background lectures. Authors may include Chinua Achebe, Ngugi wa Thiong'o, V.S. Naipaul, Merle Hodge, Anita Desai, Bessie Head, Nadine Gordimer, Paule Marshall, Tsitsi Dangarembga, Salman Rushdie, Earl Lovelace, Arundhati Roy.

Degree Requirement Attributes: Dist:INT or LIT;
WCult:NW

AAAS 65.01 - Revolutionary Imagination: Religion, Modernity, and the Otherwise

In this course, students work together to reckon with our dystopic present—and to build a dynamic toolkit for imagining and realizing more livable futures. To do so, we capacitate a vibrant understanding of religion (in theory and method) and examine the potentialities that this approach to religion opens in emergent movements for social change. Through interdisciplinary coursework and ethnographic research, this course trains students to study and practice everyday life towards futures otherwise. Open to all.

AAAS 65.06 - Jews and Race

The question of Jewish difference has been foundational in the formation of both Christendom and Islam. Of course, the question of race, and the racialization of the Jews, is often thought to be modern phenomenon when Race Science became prominent in the nineteenth century. But

lately scholars have begun to re-think the category of race in connection with modernity and to reconsider race as a construct that extends back at least into the Middle Ages.

\f

This course will look at the long historical trajectory of Jews and race, beginning in the Middle Ages and focusing primarily on European modernity, America, including the complex alliance of Jews and Blacks from slavery to BLM, the role of race in the Israeli/Palestinian conflict and the rise of Islamophobia. The goal of this course is to better understand the nature of Jews as a *genos/race/ethos/people* as they are labeled by others as well as how they self-identify. Jews identified as a “race,” and were identified as such by others, until the 1930s, after which *ethnos* served as a substitute. The question of “whiteness” loomed large for Jews in America; are Jews white, and if so, what are the implications of their “whiteness”? Finally, we will explore more recent iterations of this vexing issue in contemporary politics that includes “Jews of Color,” Zionism, Israel/Palestine, conversion to Judaism, and progressive politics in America.

AAAS 65.65 - Silence, Exile, and Cunning: Comparing Jewish and African Diasporic Literatures

Instructor: Caplan

The diasporic subject is by definition a dislocated subject. This dislocation manifests itself not only with respect to space, but also in relationship to history, language, political power, and above all in the psychological relationship that diasporic subjects maintain with themselves. This course will focus on two primary examples of diaspora in the late nineteenth and twentieth centuries, Jews and Africans, to examine the multiplicity of relationships among language, literary structure, as well as gender and sexuality that inform the construction of diasporic literatures. Although this course cannot be comprehensive in its survey of either Jewish or African literatures, it will offer suggestive juxtapositions of the two to emphasize commonalities between their historical and political experience. It will also explore how the once exceptional condition of diaspora increasingly has become representative for more and more people in the world today.

AAAS 66 - B/black Migration: Diversity, Identity, and Solidarity Politics in the U.S. and Beyond

Instructor: Keaton

This course will explore tensions and misunderstandings between people referred to as “B/black im/migrants” and

“B/black natives.” Questions for interrogation include: Who is “African American,” “B/black,” and/or “native?” Who decides? What accounts for hostilities among groups racialized and politicized as “b/Black?” What issues do newcomers confront when immigrating to a highly racialized society? Focusing on the United States, students will also travel through time and space exploring this topic’s relationship to global anti-blackness and anti-racism.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

AAAS 67.06 - African Diaspora Women Writers

Instructor: Brown

This course will be organized around four themes prevalent in contemporary portrayals of Black women across the African diaspora. The themes, *Body*, *Voice*, *Memory*, and *Movement* provide a center from which discussions of agency, representation and counter-narrative can be situated within a larger discourse of canon formation. We will explore various parts of the United States and the Caribbean through analyses of literature and visual culture, paying particular attention to shifting dialogues of culture and identity. Among the central questions posed will be: What constitutes a feminist ideology in black women’s literature? How are images of subjection and victimization re-appropriated by Black women writers and image-makers and utilized for their own empowerment? What are the penalties inherent when a Black woman “comes to voice” in the arena of self-representation?

AAAS 67.09 - Self, Subject, Photography

Instructor: Brown

Before the oft-reproduced social-media mechanism of the selfie, there existed (and still does) the artistic self-portrait. Utilized in the creative realm to create a representation of the artist as both subject and object, self-portraits can be whimsical, grim, tantalizing, performative, or combative. In this course we will examine gendered constructions of self-portraiture as they exist in poetry, memoir, and photography. Specifically, our task will be to examine the registers of possibility present when women use their bodies and stories to claim authorial space. Our goal during the term will be to think through all of the mechanisms of the self that are deployed in the context of artistic practice. Students will produce their own photographic self-portraits and write an analytical paper on a contemporary writer or visual artist.

Cross-Listed as: ENGL 63.29 WGSS 66.08

AAAS 68 - Afro/Black Paris

Instructor: Keaton

This course takes students on a journey, not to a place but rather *through* a lived experience in France, one referred to as “Afro/Black Paris.” In exploring the lives, times, and representations of African descended people in French cinema and various readings, students will gain an understanding of broader social issues pertaining to identity, exclusion and inclusion, race, racialization, racism, and anti-racism alongside ideologies and myths of Paris and France as colorblind and race-free.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

AAAS 68.01 - Everyday French Beginning Learners

This immersive French language course is specifically designed for beginners who aim to rapidly acquire practical communication skills in everyday French while participating in AAAS’ Afro/Black Paris FSP. This course offers an interactive, hands-on approach that enables students to gain essential oral and written proficiency for navigating common real-life situations and interactions. By the end of the course, students will be equipped to engage confidently in elementary French conversation, understand key vocabulary related to everyday life in French society, and interact in common social situations. This course does not count towards satisfying the foreign language requirement.

AAAS 68.02 - Everyday French for Intermediate and Advanced Learners

This intensive, immersive French course is tailored for advanced students participating in AAAS’ Afro/Black Paris FSP. Combining interactive learning with real-world application, the course provides students with opportunities to refine their spoken and written French through hands-on activities and authentic, everyday interactions. Throughout the program, students will deepen their proficiency in navigating social situations, cultural contexts, and conversations in French. By the end of the course, students will confidently engage in intermediate-level French for common social situations. This course does not count towards satisfying the foreign language requirement.

AAAS 68.08 - Afro/Black Paris in Film and Life

Instructor: Keaton

This course takes students on a journey, not to an actual place per se in France, but rather through a lived experience, known as “Afro/Black Paris.” Paris, an historical site of freedom from racial enslavement, has long been a contested home and homeland for Africans and their descendants, that is, diverse people racialized as black

whose presence in Paris results from colonization, exile, expatriation, and im/migration, including African Americans. The City of Light is arguably one of the most beautiful and exciting destinations in the world. However, all that glitters is not gold. Matters of race and anti-blackness co-exist with a variety of myths, narratives, and representations of Paris and France as color-blind and race-free. Through French film, students will explore these and related issues and thereby gain a broader understanding of pressing social questions, involving anti-racism, belonging, inequality, racism, and their intersections. This course follows a lecture-discussion format.

WCult:CI

AAAS 68.10 - Afro/Black Paris: Past, Present, and Future

Instructor: Keaton

What is “Afro/Black Paris?” This study away course is designed to take students on a journey not to a destination called “Black Paris,” but rather *through* the lived experiences of African descended people—from racial enslavement until today—who have been racialized-as-black in a “raceblind” France. What are the myths and realities associated with life in Paris and France, past, present, and future? What accounts for African American immigration to the City of Light? What does belonging look like in this extraordinary city that Ernest Hemingway refers to as “a moveable feast?” Or, as James Baldwin writes, “[i]n America, the color of my skin had stood between myself and me; in Europe, that barrier was down.” Was it? – one of many pertinent questions examined in this course.

Degree Requirement Attributes: Dist:INT, SOC; WCult:CI

AAAS 68.20 - French Museums and the African Diaspora

This course delves into the intersections of art, race, and representation within French museum collections, with a particular focus on Africans and African descended peoples in France and beyond. Key debates and questions addressed in this course include: How have museums in France “acquired” their African and diasporic art collections? What is the value of uncovering and/or amplifying the backstories or narratives of black figures depicted in European art? What are the implications of the presence—or absence—of art objects by people of African descent in national museums, and what do omissions and silences reveal about museum curatorial practices in France? By engaging these issues in relation to broader themes and concepts of de/coloniality, modernity, and race, students will gain a deeper understanding of the evolving role of museums not only as heritage sites but

also sites vested with cultural, historical, and memory that gesture to futures yet untold.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

AAAS 69 - The Politics of Beauty and the Black Female Body

Instructor: Keaton

Feminine attractiveness is racialized in societies across the globe. This course examines the politics of beauty and its ramifications in the lives of B/black women and those identified as such in the U.S. and beyond. Drawing from scholarly and popular reading and visual material, and framed by feminist thought, the course will explore the historical and contemporary relevance of this diasporic issue. Students will interrogate beauty politics at the level of theory and lived experience.

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 80.05 - 10 Weeks, 10 Professors: #BlackLivesMatter

Instructor: varies

This collaboratively taught course seeks to answer the call of activists around the country to examine racialization, state violence, and inequality in the context of the #BlackLivesMatter movement. To begin, it offers a context for the events in Ferguson, Missouri in 2014. Then, it situates those events in a broader history of race and racism in the United States. Finally, the course highlights black feminist and queer approaches to questions of trauma, community, politics, and survival.

AAAS 80.10 - The Historical Philosophy of W.E.B. DuBois

This course will examine the historical philosophy of the towering Black scholar and great freedom fighter of the 20th century. We shall engage in close readings of DuBois' classic work, *The Souls of Black Folk* (1903) as well as subsequent essays in his magisterial corpus, especially his classic autobiography, *Dusk of Dawn* (1940).

Cross-Listed as: ENGL 53.40 PHIL 01.13

AAAS 81.01 - The Black Arts Movement

This course explores the literature, art, and criticism of the Black Arts Movement. The artistic corollary to the Black Power movement, the Black Arts Movement flourished in the 1960s and 1970s as artists/activists sought to put a revolutionary cultural politics into practice around the country. The Black Arts Movement had far-reaching implications for the way artists and writers think about race, history, authorship, and the relationship between artistic production and political liberation. We'll explore these issues in work by Amiri Baraka, Sonia Sanchez, Larry Neal, and others who forged the traditionally-defined Black Arts Movement in Harlem. We'll also trace the movement's flowering around country, where local political struggles and artistic traditions in Chicago, Newark, Los Angeles, and Detroit shaped distinctive regional variations of the Black Arts Movement. We'll consider how the literature of the Black Arts Movement intersected with other cultural currents of the time, its critics, and the persistence of its themes in contemporary culture.

AAAS 81.05 - Telling Stories for Social Change

Our social structure is full of unseen, unspoken, and unheard dynamics that create visible and invisible social walls. Students in this course have the unique opportunity to collaborate with a group of people from behind those social walls from two different perspectives: theoretical and practical. Students study the causes of this invisibility and social isolation (mainly pertaining to incarceration and addiction) by participating in an interdisciplinary arts program with local community members from these invisible populations while at the same time attending discussion-based seminars. This combination of practice and theory asks for students to go beyond a critical reflection on our society by contributing to constructive social actions towards change.

Cross-Listed as: WGSS 66.05

Degree Requirement Attributes: Dist:ART; WCult:CI

AAAS 81.07 - Black Noir

In this course, we will study black American literature that focuses the noir genre on black people themselves. We will read gritty, urban crime novels that attempt to expose inequities in black American lives and dispel the notion that a descent from whiteness results in blackness. Rather, the black people in these texts exist in darkness because they are living in alienated communities. We shall investigate how the noir genre is altered when “noirs” are the subjects and the authors. In addition to primary texts, the course will engage critical responses to these works.

AAAS 81.08 - A Legacy of Tenderness:" Black Women's Creative Archive

This class studies the aesthetic/creative workings of 20th and 21st centuries Black women, who identify as/with feminism and womanism. We will prioritize the beauty of the often-understudied intersections of disability/crip, and trans and nonbinary, and intersex lived experiences and political praxis. Through visual art, poetry and prose, film, and music we will converse over Black ways of knowing and being beyond the normative. By the end of the quarter, we will be better able to articulate the general terrain of Black feminist and womanist creative works, with the hope of expanding (and deconstructing) the archive of Black Women's Studies.

Cross-Listed as: WGSS 66.23

Degree Requirement Attributes: Dist:ART; WCult:W

AAAS 81.10 - James Baldwin: From the Civil Rights Movement to Black Lives Matter

The 2016 film *I Am Not Your Negro* encourages a new generation to explore the life and work of James Baldwin (1924–1987). Directed by Haitian-born filmmaker Raoul Peck, *I Am Not Your Negro* is a provocative documentary that envisions a book Baldwin never finished by providing insight into Baldwin’s relationship with three men who were assassinated before their fortieth birthdays—Medgar Evers, Malcolm X, and Martin Luther King, Jr.

In this course we will interrogate questions of race, sexuality, violence, and migration. Our current political moment encourages the examination of these issues while Baldwin’s life and work provides the ideal vantage point for their investigation. Using *I Am Not Your Negro* as our starting point, Baldwin’s life and work will allow us the opportunity to explore transatlantic discourses on nationality, sexuality, race, gender, and religion. We will also explore the work of other writers including Richard Wright, Frantz Fanon, Audre Lorde, and Ta-Nehisi Coates.

Cross-Listed as: ENGL 53.28

AAAS 81.11 - Sensing Race, Gender, and Sexuality: Exploring Megan Thee Stallion

In this moment, characterized by the prominence of Black Southern women and femmes in hip-hop, conversations regarding race, gender, and sexuality have shaped Black popular culture’s landscape in both fruitful and reductive ways. One could argue that since 2020, Black femme hip-hop – in its music, aesthetics, performance, and celebrity culture – has created avenues through which to explore topics such as misogynoir, femme embodiment, political critique, violence, and hip-hop’s evolving legacy, on a collective scale. Beginning with Black popular culture as a framework, this course examines knowledge production as it manifests across Black women and femme hip-hop. And with a focus on Houston rapper, Megan Thee Stallion, we will attend to the conversations initiated through lyrics, tone, body parts, beefs and adlibs.

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 82.05 - Dave the Potter: Slavery Between Pots and Poems

Instructor: Chaney

This course examines the work of David Drake, a South Carolinian slave who made some of the largest ceramic storage vessels in America during the 1850s, signing them and etching sayings and poems onto them as well. This seminar engages with Drake’s poetry-pottery through critical and historical research, interpretive writing, and our

own creative adventures in ceramic handicrafts. In addition to writing your own updated imitations of Dave Drake's poetry and attempting ceramic facsimiles of his earthenware, students will also spend time in the letterpress studio as a means of acquiring a deeper historical and aesthetic appreciation of Dave's life and work; it was while working as a typesetter for a regional newspaper that Dave acquired literacy. As a culminating assignment, students will contribute chapters to a scholarly book on Drake, which the instructor will edit.

AAAS 82.10 - Queer Literatures of Slavery

This junior colloquium asks how and why we might bring the perspectives and methods of queer studies to bear upon the history of slavery—and vice versa. We will examine questions of gender and sexuality, kinship and belonging, desire and the erotic, and history and futurity through readings in fiction, poetry, and drama alongside key works in the history of gender and sexuality, queer theory, and queer of color critique. Students will also develop critical skills and strategies for producing scholarship in literary and cultural studies, culminating in an original research paper.

Degree Requirement Attributes: Dist:LIT; WCult:CI

AAAS 82.11 - Reading Between the Color Lines in 19th-Century American Literature

How are persons racialized as both Black and White portrayed in nineteenth-century American literature? What cultural or political meanings do interracial experiences convey? And what hopes and fears are aroused by stories of people whose lives straddle a color line defined by slavery, racial capitalism, anti-blackness, border war, indigenous dispossession and genocide? Informed by Black Studies approaches to literary representations, this course examines life writing, short stories, poems, and novels about mixed-race, interracial, and biracial subjects of the nineteenth century, a period of tumultuous change for those misnamed by the racializing logics of the time as mulatto/mulatta, metis, mestiza/mestizo, quadroon, or octoroon. Assignments and readings in the course are designed to inspire students to question how these identities were central in shaping American racial imaginaries, cultural ideologies, material realities, and political possibilities.

Cross-Listed as: ENGL 52.20

Degree Requirement Attributes: Dist:LIT; WCult:CI

AAAS 83.05 - African Religions of the Americas

This class introduces the history and practices of African-derived religious traditions as they have developed in the

Caribbean, Latin America, and Black American communities in the United States. These religious systems will be discussed with reference to their mainstream representation (as "voodoo") and analyzed according to the more complex realities of their practitioners' everyday lives. Three themes to be explored in each tradition include 1) gender identity; 2) racial identity and resistance; and 3) aesthetics. Open to all classes.

Degree Requirement Attributes: Dist:INT or TMV; WCult:CI

AAAS 83.06 - Caribbean Lyric and Literature

Instructor: Moodie

This course will look at several issues that reappear throughout the work of a variety of Caribbean writers from former British colonies. These concerns include (but are not limited to) notions of exile, the importance of language and music, the articulation of identity in varying post-colonial states, and representations of gender, race and ethnicity. The class will also analyze the socio-political events in particular nations and the ways in which these events influence writing in the archipelago. We will also examine the ways in which a strong tradition of music as protest influences the production of particular poetic forms in Trinidad and Jamaica. The class will move from early twentieth century writers like Claude McKay to the important contributions of later writers such as Kamau Brathwaite, Jamaica Kincaid, George Lamming, V.S. Naipaul, Sam Selvon, Olive Senior and Derek Walcott. We will examine the more recent innovations in form, as musical elements are introduced by writers such as Mikey Smith and Kwame Dawes. Each week's readings will be supplemented with seminal critical writings including excerpts from the text *The Empire Writes Back*.

Degree Requirement Attributes: Dist:LIT; WCult:CI

AAAS 83.07 - Cuba in the Black Atlantic: Slavery and Its Legacies

Among the first territories colonized by the Spanish Empire, Cuba was a main hub of the Atlantic slave trade from the sixteenth through the nineteenth century. Over one million African slaves were trafficked to this Caribbean island. With Cuba as our main port of entry, this course introduces students to the history of African diasporic societies and politics in Latin America and the Caribbean from the late colonial period to the twentieth century. Often treated as figures with no political vision or power, black people were long relegated to the margins of our understandings of history.

AAAS 83.08 - The Global Caribbean

Instructor: Kivland

Paradise or plantation? Cultural destination or economic periphery? Capitalist birthplace or IMF delinquent? From the Columbian conquest to contemporary tourism, the Caribbean has borne the burdens and opportunities of being an intercontinental crossroads. Colonial governments, enslaved Africans, indentured servants, and foreign settlers have all made the Caribbean an exemplar of modernity and globalization—for better or worse. Drawing on social scientific, literary, and policy texts, this course offers an historically deep and geographically broad anthropology of the Caribbean.

AAAS 83.09 - Consuming Culture?: Food & Identity Across the Afro-Americas

This interdisciplinary course intends to examine an array of socio-cultural questions about Afro-Latin America and the role that food has had in constructing and imagining Afro-Latin American communities and subjectivities. By placing Afro-Latin America at the center as subjects and knowledge producers, this course commits to an intentional practice of learning from and of the Global South and decentering the United States, and the west more broadly, within the arena of political, intellectual, and cultural production. Beginning with Brazil, the country that has the largest Afro-descendent population outside of Africa and once heralded internationally as a “racial democracy,” we will examine the ways that food has served to both reinforce and disrupt socio-cultural assumptions and stereotypes related to race, gender, and class. We will examine food’s relationship to questions of gender norms, sexuality and labor and place these conceptualizations in dialogue with other countries and Afro-descendent populations across the Americas. We will end the course placing Afro-Latin America in dialogue with the Afro-Latinx diaspora and African Americans.

Cross-Listed as: LACS 30.19

AAAS 83.10 - Childhood, Memory, and the Caribbean

Have you ever wondered what it's like to grow up in Haiti, Surinam, Guadeloupe, Cuba, or the Dominican Republic? In this course, students will embark on a literary journey through the Caribbean, examining coming-of-age stories that unravel the complex tapestry of postcolonial experiences.

The course will introduce students to a diverse array of literary works from the Caribbean, offering insights into the nuanced perspectives of postcolonial authors. Engaging with critical theories from key thinkers such as Frantz

Fanon, Edouard Glissant, Carole Boyce Davies, and Antonio Benitez-Rojo, students will analyze the intellectual frameworks that shape Caribbean literature.

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

AAAS 85.01 - South African Literature in English

This course will examine works by South African men and women of various ethnicities who have chosen to write in English since the publication of Olive Schreiner's *Story of an African Farm* in 1883. This richly diverse literature will be tracked through the cultural and political history of South Africa with primary emphasis on the twentieth and twenty-first centuries before and after the fall of Apartheid. Confrontation between black militancy and white oppression characterizes much writing and social interaction in South Africa before the fall of Apartheid, but complex forms of multi-ethnic coexistence and interchange have also been evident since the first white settlement of the country in 1652. Recent work by J.M. Coetzee and Zakes Mda among others explores the difficult, unmapped terrain of post-Apartheid South Africa. Works by the following writers may be included in the course: Olive Schreiner, Solomon Plaatje, Bessie Head, Nadine Gordimer, Zoe Wicomb, Alan Paton, J.M Coetzee, Njabulo Ndebele, Athol Fugard, Nelson Mandela.

Cross-Listed as: ENGL 55.13

AAAS 86.04 - Social, Political, and Cultural Trends in Contemporary Brazil

Instructor: Minchillo

This class will be taught in English and will explore social, political, and economic issues in contemporary Brazil. Since 2013, the climate in Brazilian society has become more and more tense due to a series of street protests and polarized public debates on race, class, political representation, democracy, religion, gender, sexuality, environmental protection and economic justice. The present scenario in Brazil will be discussed in relation to historical and cultural contexts. Materials for the course will include films, documentaries, music, and a wide variety of readings (mainstream media, blogs, academic essays, official documents, fiction). Invited guests (scholars, activists, journalists, artists) will deliver lectures, in presentational or remote way.

AAAS 87.06 - 20th Century African Art

This course is designed to introduce undergraduate students to African art in the twentieth century. It charts the development and dimensions of artistic expressions and cultural production in Africa from the colonial period to the contemporary. By looking at various case studies comparatively, the course explores the intersection of developments in artistic practice and identity, and cultural production, and sweeping changes in the political, social and economic spheres in Africa. It considers the effects of colonialism, postcolonial conditions, neocolonialism, economic liberalism, and globalization on cultural production and artistic practice. Following a chronological format, it will attempt to cover the different sub-regions of the continent but draws substantial amount of examples from sub-Saharan Africa.

AAAS 87.07 - Globalization and the African Continent

This course on globalization seeks to ultimately provide students with a conceptually grounded understanding of the four aspects of globalization: the economic, the political, the social and the cultural. Four objectives guide this course. The first is to introduce students to the main topics and debates related to the issue of globalization. A second goal is to provide students with an array of conceptual and empirical tools that are useful in framing discussions of globalization. Third, we will explore the multifaceted ways in which globalization manifests itself and its complex impacts on individuals and societies. Finally, we will discuss the multiple ways in which individuals and collectives are challenging and shaping globalization in the contemporary world. In all of this, our emphasis will be on the developing world in general and Africa in particular.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

AAAS 87.08 - Indigenous Slavery in Ghana and Africa

Using the Atlantic slave trade as a backdrop the course provides an introduction to slavery in Ghana and Africa and the Atlantic slave trade out of West Africa. Instead of presenting a comprehensive survey, covering every aspect of this vast subject, this course takes a topical approach by focusing on a selection of themes and issues that are

crucial to developing an understanding of slavery in Ghana and Africa and the slave trade across the Atlantic. Themes to be covered include African and European agency in slavery and slave trade; slavery and slave trade in framing the social structure of Ghana; the legacies of slavery in Ghana and Africa and the ways in which slavery is remembered in Ghana. Throughout the course, we will pay attention to the debilitating effects of slavery and the slave trade on Africa and on its development.

Degree Requirement Attributes: Dist:SOC; WCult:NW

AAAS 87.09 - African Popular Culture

Instructor: Shipley

This course introduces a global socio-historical framework within which to examine African popular cultures across the continent and as they circulate globally. Considering the historical contexts of contact between Africa, Europe, and--- the Americas, we will explore cultural, economic, and philosophic aspects of African expressive cultures. Focusing on Ghana, Nigeria, and South Africa, we will study music, film, dance, social media, theater, and literature, and consider how ideas of what it means to be African are produced and contested through these media. No prerequisites required.

AAAS 87.12 - Africa's Time? An Interdisciplinary Survey of Temporality and Power

Centered in Africa, this course explores the theme of temporality through attention to history, anthropology, philosophy, and popular theoretical physics. There will be no mathematical calculation required. However, we will consider difficult formulas of another type. Is time a constant across cultures and reference frames both physical and ontological? How do past, present, and future

intersect? How has the perception of time influenced historical encounters on the African continent and within the African diaspora? How does time relate to ancestry and power?

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

AAAS 88.08 - Ethnography of Violence

Instructor: Kivland

Violence is widely recognized as a problem in modern society, with policies and interventions to combat violence, or employ it, dominating local and global politics. Yet the meaning of violence is seldom analyzed. Using an ethnographic lens, this course explores violence as both an embodied experience and a culturally and politically mediated event. We examine spectacular and everyday violence forms of violence in terms of manifestations of power, structures of inequality, perceptions of difference, and politics of representation. Ethnographic studies are drawn from, among others, Mozambique, Haiti, and Harlem. An introduction to the cultural anthropology of violence, this course raises key questions about violence in a globalized world and explores how to study it anthropologically. This course is not open to students who have received credit for ANTH 12.03.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

AAAS 88.11 - Atlantic Slavery/Atlantic Freedom

When does slavery find itself chiasmatically mirrored in freedom? From the recent Hollywood blockbuster *12 Years a Slave* (2013) to the streets of Ferguson and Baltimore, the legacies of slavery and racial violence continue to cast their shadow over horizons of emancipationist history even as America commemorates the sesquicentennial of the U.S. Civil War. In this course we will revisit the literatures of

slavery and antislavery in the Atlantic world from the eighteenth century to the present. Our novels and stories imagine episodes of slavery, slave rebellion, and fugitive flights to freedom across two centuries: from early transatlantic crossings of slaves and servants to the New World; to Tacky's Revolt and its place in what Vincent Brown has recently called the "Coromantee Archipelago" in eighteenth century slave rebellion; to the spectacular soundings of the Haiti Revolution in the Age of Revolutions; to the messianic prophecies of Nat Turner in the early nineteenth century; to slave rebellions at sea; and finally to fugitive slave fictions in the abolitionist decade leading up to the Civil War.

Degree Requirement Attributes: Dist:LIT; WCult:NW

AAAS 88.12 - From Diaspora Practices to Theory

What is an epic and how do its imaginary, cultural, and rhetorical impulses of displacement, unknown cartographies, madness, new identities, conceptual crossroads and translation lead to an eventual theorization of diaspora? The course has three inter-related goals: to study six examples of epic in the Black Diaspora moving from West Africa to the Anglo-Franco-Hispano-phone Caribbean; 2. to relate these texts to diaspora pathogen and food-ways, spiritual practices and converging African and New World histories; and 3. to consider diaspora and *chaos theory*.

Cross-Listed as: ENGL 53.35

Degree Requirement Attributes: Dist:LIT; WCult:CI

AAAS 88.13 - Women Writing Memoir

Instructor: Moodie

This course examines the autobiographical writing of a variety of women from across the globe. Paying attention to the socio-political contexts within which these women write, we will discuss the ways in which these authors negotiate different worlds while being marginalized along vectors such as race, class, and gender. For this reason, the class is inherently interdisciplinary. Most of the works we will examine have achieved significant critical acclaim, and we will also examine the artistic innovations in these narratives. Texts will include works such as Staceyann Chinn's *The Other Side of Paradise*, Jackie Kay's *Red Dust Road*, Jeanette Winterson's *Why Be Happy When You Could Be Normal?*, Malala Yousafzai's *I am Malala*, Janet Mock's *Redefining Realness* and Marjane Satrapi's *Persepolis*.

Cross-Listed as: ENGL 53.30

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

AAAS 88.14 - Cities, Subjects & Sonic Africa

This course poses the questions: What has been the role of musical expression in shaping the experiences of Africans throughout the world? How does sound function as a site of socio-political contestation that reflects and shapes ideas about race, identity, place and belonging? To answer these questions, we situate specific ethnographic case studies within an interdisciplinary framework. Texts, performances, media, and experiential workshops all form an integral part of this course.

Cross-Listed as: MUS 45.08

Degree Requirement Attributes: Dist:ART; WCult:NW

AAAS 88.15 - Black Women's Activism, 1970-present

In this course we will explore several genres of writing, grounded in an intellectual engagement with the creative, scholarly, and activist writing of Black women of all genders from 1970 to the present. How does Black women's activism constitute a political intellectual tradition that impacts how we do research and pose questions? How does black women's activism refigure the categories and categorization of knowledge and knowledge production? What does it mean to write oneself into existence if and when knowledge is premised on their epistemic and actual disappearance? This course approaches Black women's intellectual and cultural production as one entry point into the project of creating from nothing, writing to become, writing as an act of survival, and writing to envision and practice new worlds. These are all vital skills in a rapidly transforming social, economic, political and climatic landscapes.

Cross-Listed as: GEOG 062 WGSS 40.04

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 88.16 - Sovereignty, Race, and Rights

Instructor: Shipley

This course examines the colonial legacies of rights, race, gender, and difference and their significance for contemporary global politics and development. By taking an socio-historical approach to the idea of rights we will make connections between sovereignty, the rule of law, representational practices, economy, and citizenship. We will use a critical eye to explore the conditions of possibility that allow states, development organizations, donor agencies, and individuals to unwittingly reproduce centuries-old tropes of poverty, degradation, and helplessness of non-Western peoples. Examining various institutionally structured encounters between Europeans and non-Western peoples we unpack assumptions about the naturalness of power. In postcolonial societies the tensions between ideas of tradition and modernity structure many conflicts over rights, citizenship, and the role of the individual in society.

Cross-Listed as: ANTH 50.22

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

AAAS 88.17 - Filmmaking and Visual Culture

Instructor: Shipley

In this course we both learn to make films and to examine theories of visual art, sound, film, and digital media. We will learn how to think about and make sounds and images in historically and ethnographically rich ways. In the process we examine notions of power, difference, history, culture, race, class, gender. Twentieth-century politics were intimately linked to the rapid development of radio, television, film, video, and digital media. These media have creatively engaged with local cultural practices around the world in reshaping the nature of artistic expression, national, gendered, and racial difference, and political power. We examine notions of visibility from the perspective of African and African diasporic political configurations and aesthetic responses. This course explores the politics and pragmatics of art, photography, and film in order to delineate visual, sonic, and embodied ways of presenting and experiencing the world particularly in relation to race and gender.

Cross-Listed as: ANTH 50.21

Degree Requirement Attributes: Dist:SOC; WCult:NW

AAAS 88.18 - Black Feminisms in the French Atlantic

French colonialism and particularly French transatlantic slavery between the 17th and 19th centuries produced a shared linguistic and cultural legacy as well as a sustained political struggle carried by Black populations in France, sub-Saharan Africa, the Caribbean, and Québec. Although combatting racial inequality and white supremacy is generally understood through the lens of movements in the US, or the example of South African apartheid, this course invites students to consider such undertakings from a fundamentally transnational point of view by focusing on Black Feminisms in the French-speaking African diaspora. Open to all students. Text, lectures and discussion in English.

Cross-Listed as: FRIT 37.03

Degree Requirement Attributes: Dist:INT; WCult:CI

AAAS 88.19 - Contemporary African American Visual Artists

Instructor: Chaney

This course provides an overview of contemporary African American visual artists and their cultural impact. Attention will be given to significant artists and movements (Kara Walker, Kyle Baker, Kehinde Wiley, Afro-Futurism, etc.) and to the new conceptualizations in art history brought about by them. Students will gain critical skills of visual

literacy as they analyze drawings, paintings, and other visual media, while also learning to ground such observations within aesthetic, cultural, historical, and larger theoretical contexts. Student work will consist of presentations, short papers, and a gallery project, in which students present their own independent research in a collaborative student show. Open to all.

Degree Requirement Attributes: Dist:ART; WCult:W

AAAS 88.20 - Music and the Racial Imagination

This course investigates how the construction, imagination, and lived experience of race has influenced musical production, reception, and analysis. We begin by addressing the history of the concept of race, then turn to a series of musical case studies that variously articulate music's relationship to the construction and negotiation of racial categories. Topics are primarily drawn from the U.S. and include: Asian American hip hop; the "race record" industry; country music and "whiteness," amongst others.

Degree Requirement Attributes: Dist:ART; WCult:NW

AAAS 88.22 - Black Womanhood and The Meaning of Freedom

This course centers gender in its inquiry into the social traditions and political strategies that defined Black women's lives in the western hemisphere between the 17th and early 20th centuries. By examining the conditions of Black women's unfreedom and their shifting survival strategies, we discover how Black women have imagined, pursued, and experienced freedom. The beginning of the course focuses on Black women's labors during slavery, highlighting important interventions made by feminist scholars about gendered division of labor, reproduction, and precarity. The latter part of the course investigates women's life-sustaining community formations and resistance to statesanctioned domination, including the construction of rival geographies, women's inspired use of eroticism, and their persistent efforts to exercise discursive resistance. Harnessing critical scholarship across disciplines, this course offers a broad perspective on Black women's subjectivity, theories of freedom, and their importance to the history of the modern world. This discussion-based seminar is organized thematically and spans a wide range of temporalities and terrains; we explore the gendered and racialized histories of the United States, Cuba, Barbados, Haiti, Brazil, Jamaica, and the Dominican Republic. While different countries have distinct histories, this course encourages a comparative, cross-cultural, and transnational analytic approach to examining how race, gender, and class have circumscribed women's lives in the western hemisphere and shaped their understanding of freedom.

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 88.23 - The Black Atlantic: Africans and African Descendants in the Colonial Era

This course examines the history of the Black diaspora in the Atlantic World during the early modern/colonial era (c. 1400s-1700s). It will follow a flexible chronological pathway and a thematic methodology to analyze the Atlantic slave trade, in addition to how people of African descent navigated racial ideologies, colonial violence, and imperial expansion. Students will develop a notion of the Black Atlantic that includes Africa, Europe, the Caribbean, North America, and South America.

AAAS 89 - Independent Study in African and African American Studies

Available to students who wish to independently explore aspects of African and African American Studies which are not included in courses currently offered at Dartmouth. Open to qualified students with permission of the course instructor and the Chair. (Obtain Proposal Form in the program office.) No student may take more than two such courses without the approval of the program. Open to sophomores, juniors, and seniors. The AAAS faculty.

AAAS 90 - Senior Seminar

Senior Seminar

AAAS 90.01 - Identity and Power in the Americas

Instructor: Baldez

This course examines how different forms of collective identity—including class, race, ethnicity, indigeneity and gender—have shaped Latin American and Latino politics in the 20th and 21st centuries. We will focus on a range of cases in Latin America and the U.S. to address the following questions: In what ways does the state create and sustain certain categories of identity as the basis for political inclusion and exclusion? What explains changes in the political salience of certain categories of collective identity? Why do some identities become politically salient and others do not? How have forms of political representation changed over the past century? How does state policy affect the ability of groups to mobilize and press for demands? How do organized groups affect state policy? What are the possibilities and limitations of identity-based mobilization?

AAAS 90.02 - Prophetism in the Black World

Instructor: Baum

This seminar utilizes historical, anthropological, and comparative religions perspectives to examine the relatively widespread phenomena of prophetism in the black world. We will explore the lives and prophetic careers of people who claimed direct revelation from a supreme being or lesser spirits in indigenous African religions, Islam, and African and African-American Christianity. We will examine such movements before European occupation as well as the colonial and post-colonial eras. We will also examine African-American movements from the period of slavery and the twentieth century. Topics will include women's prophetic movements, religious critiques of underdevelopment, the process of inculturation of Islam and Christianity, and the role of religion in resistance to foreign or domestic domination.

Cross-Listed as: REL 80

Degree Requirement Attributes: Dist:TMV; WCult:CI

AAAS 90.07 - From Africans to African Americans: Perspectives on the Creation of African Diasporas

Instructor: Baum

This seminar will explore the diversity of African cultures in early modern Africa and the impact of the Atlantic slave trade, the experience of the Middle Passage, and the creation of diasporic cultures in the Americas. Using a variety of sources, including ethnographies, films, and literature, students will consider the richness of African cultures from the sixteenth to the eighteenth centuries and their influence in the creation of new cultural traditions in the Americas. Open to students who have taken one course in AAAS or who have permission from the instructor.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

AAAS 90.09 - Carceral Geographies: Explaining Mass Incarceration in the US

Why are there so many people incarcerated in the United States and why are so many people in the US and beyond calling for an end to police violence, some even for the abolition of policing? Is mass incarceration an inevitable product of slavery and Jim Crow? Why did prisons expand in the United States as crime rates were going down? Was it the War on Drugs, or the long term effects of housing discrimination? This course is designed to explore and explain these questions by unpacking the roles of surveillance, criminalization, policing and incarceration to historical and contemporary US state formation and global capitalism. Proceeding from the idea that carceral geographies such as prison towns, policing, and surveillance are spatial fixes for social, economic, and political crises, we will engage scholarship from a variety of fields including: critical prison studies, geography, cultural studies, gender and sexuality studies, and critical ethnic studies. Students will have an opportunity to

understand the historical and contemporary organization of people, places, ideas, and infrastructure that makes up US carceral geographies of the United States. This course requires dedicated and rigorous reading. Each week we will read an entire book and analyze it in depth to create shared language and understandings about carceral geographies. \\\f

AAAS 90.10 - Modern Black Spiritualities

Instructor: Booker

This advanced seminar places contemporary black religions at the center of the study of African-descended peoples. Through recent books in the ethnography of Africana religions, spiritual communities in Africa, the Caribbean, and North America that have established communities in the United States will constitute the focus of our course readings and anchor our weekly discussions. As an advanced seminar, our meetings will allow participants to interrogate the authors of these ethnographies. We will assess how these accounts have conceptualized the African diaspora and the vantages ("insiders" and "outsiders") from which they describe religious beliefs, practices, and institutions. Beyond considering the commonalities and distinctions in form and practice that characterize various African diasporic religious practices, participants will also work to understand the constructions of race and belonging, ethnic identity, gender, sexuality, class, and geographic location that affect the lives of black religious adherents.

Degree Requirement Attributes: Dist:INT or TMV; WCult:CI

AAAS 90.12 - Aesthetics and Power

This course explores the relationship of aesthetics to power across artistic media, public spectacles, and in daily life. European modernity has tended to posit images, sounds, and performances as signs of a world "out there" that recreated in ritual contexts facilitate individual transcendence through an almost spiritual experience. We will examine how West African and African diasporic notions of modern aesthetics tend to offer a counterpoint by enacting theories of representation that are more explicitly performative and socially dialogic. In the 1950s and 1960s people across Africa and African peoples in the Americas and the Caribbean fought for political rights and sovereignty. Aesthetic forms were crucial to these projects. Political power was contested in economic and institutional ways, but people experienced it through their bodies and senses. The power to control political and economic order is enacted in the realms of signs, desires, and value. Moral dichotomies between beautiful or ugly, expensive or cheap, important or illegible, appear to be about aesthetics alone

but are in fact ways that power is produced, naturalized, and contested. We examine art media as well as political and social forms as a way to understand how broad forms of power shape both everyday and spectacular experiences and how individuals and collectives use expression as a way to contest the terms of power. In political terms, we explore rituals of state as events through which power is produced and contested in embodied ways. Producing loyal citizens requires a nation-state to create rituals that orient people to feel like they are part of a shared collective experience. This course will draw upon transdisciplinary approaches to understanding aesthetics including ethnographic, literary and theatre studies, political analysis, performance analysis, musicology.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

AAAS 90.13 - Black Medicine: Racist Legacies and Critical Interventions

As a phrase, “Black Medicine” marks the numerous ways that medicine (as a field, practice, and knowledge base) and Blackness (as a race of people, an aesthetic, a symbol) have always been interconnected in American society. Black Medicine, on the one hand, notes the abuse of Black people’s bodies in pursuit of medical knowledge and technological advancement. In this regard, all medicine is Black, as all medicine exists alongside race and power. On the other hand, Black Medicine also expresses forward-looking interventions in medicine that are necessarily antiracist and anti-ableist. The history of medicine in the United States deserves to be studied for its missteps and breakthroughs, but the future of medicine deserves to be written differently.

Degree Requirement Attributes: Dist:SOC; WCult:CI

AAAS 91.02 - 20th Century Protest Poetry

In light of recent protest movements that target issues of race and gender, the prescient words of numerous artists continue to be evoked and volleyed about in contemporary media outlets. Yet the contexts of many of these utterances are largely ignored. Delving into some of these contexts and engaging many of these artists’ larger oeuvre, this course is a multidisciplinary investigation of major protest poets of the twentieth century. It explores the ways in which poets living in the United States, and particularly members of historically marginalized communities, not only pushed back at the powers-that-be, but continuously saw and articulated themselves as simultaneously a part *of* and a part *from* larger “American” society. The course wrestles with the well-known and often contentious topics: race, class, and gender. Starting with turn-of-the-century writers like Claude McKay—whose words have become synonymous with outspoken critiques of World War I and the “Red Scare”—and ending with contemporary writers like Balakian and Chin, the course moves chronologically.

Some of the writers it examines include, Peter Balakian, Amiri Baraka, Staceyann Chin, Lucille Clifton, Mayda Del Valle, Karen Garabrant, Allen Ginsberg, Zbigniew Herbert, Robert Lowell, Juan Felipe Herrera, Langston Hughes, Etheridge Knight, Denise Levertov, Haki Madhubuti, Jill McDonough, Claude McKay, Alice Notley, Emmy Perez, Adrienne Rich, Sylvia Plath, Sonia Sanchez, and Dorothy Tse.

AAAS 91.03 - African Religions, Health, and Healing Traditions

Instructor: Baum

This seminar examines the complex interaction of African, Christian, Muslim, and Western medical traditions in the understanding of, diagnosis of, and healing of illnesses within African societies. This is a capstone course for the AAAS major and minor and will include a major term paper. Cases will be drawn from anthropological, comparative religious, historical, literary, and artistic perspectives.

Cross-Listed as: REL 74.15

Degree Requirement Attributes: Dist:INT or TMV;
WCult:NW

AAAS 91.05 - Maroons to Marley: Jamaica's Role in Worldwide Revolutions from Slavery to the Present Day

In 1738, a hundred years before legal emancipation came to England’s New World slave colonies, Jamaica’s Maroons forced the colonial power to sign a treaty granting sovereignty to Maroon communities across the Caribbean island. As the first Africans in the New World to achieve this feat, Maroon warriors directly and indirectly influenced abolitionist and revolutionary movements throughout the Americas—including, of course, revolts in Haiti and the United States. These warriors continued to inspire the revolutionary actions of other oppressed and/or enslaved individuals for generations, and indeed, a revolutionary ethos pervades Jamaican culture and artistic production from the colonial period to the present moment. This course traces the impact of “Jamaican” revolutionary figures on other revolutionary figures and events worldwide. Moving chronologically, from colonialism to the present day, the course examines influences such as African/Jamaican Maroon *leaders* direct impact on other revolutions throughout the Americas; Mary Seacole’s exchanges with and impact on Florence Nightingale during the Crimean War; Marcus Garvey’s impact on the Harlem Renaissance and the Rastafari religion; Claude McKay’s revolutionary impact on vernacular poetics and on the “Red Scare;” Louise Bennett’s mid-twentieth century revolutionary, feminist, vernacular poetics and her impact

on female performers in the Americas, Europe, and Africa; Bob Marley and Damian Marley's impact on politics and revolutionary movements in Liberia and Ghana; and finally, the impact of Staceyann Chin's outspoken poetics on LGBTQ rights in the Caribbean and in other marginalized African diasporic communities. Not open to students who have received credit for AAAS 62.50.

AAAS 97 - Senior Independent Research in African and African American Studies

For senior African and African American Studies majors toward the culminating experience, with permission of selected instructor and the Chair. (Obtain Proposal Form in the program office.)

AAAS 98 - Honors Thesis in African and African American Studies

The honors student will pursue the project under guidance of a selected faculty member and with permission of the Chair. See "A Guide to Honors in African and African American Studies" in the program office.

Students are awarded one course credit for successful completion of this course upon completion of AAAS-099. Students register for AAAS-098 and receive a grade of "ON" (ongoing) at the end of the term. Students then register for AAAS-099 the subsequent term to complete the coursework. A final grade will replace the "ON" in AAAS-098 upon completion of AAAS-099.

AAAS 99 - Honors Thesis in African and African American Studies

The honors student will pursue the project under guidance of a selected faculty member and with permission of the Chair. See "A Guide to Honors in African and African American Studies" in the program office.

Students are awarded one course credit for successful completion of this course. Students who have registered for AAAS-098 register for AAAS-099 to complete the coursework. A final grade will replace the "ON" for AAAS-098 upon completion of this course for a total of 2 credits for AAAS-098 and AAAS-099.

Associated Courses

Associated courses are those with a central focus on aspects of Africa and/or the African diaspora. These courses may be offered by various departments and programs. Associated courses, including those not on this list, may count toward a major or minor in AAAS. To obtain credit, students must petition the AAAS Steering Committee, outlining how their work in a particular course forms part of a coherent course of study in AAAS.

Contact the Department Administrator, Julie Gilman, for further information.

Requirements for the Major

The *Major in Anthropology* comprises ten courses, to be selected as follows:

1. Two introductory courses from the following six courses: ANTH 01, 03, 05, 06, 08, or 09
2. Seven other Anthropology courses. Courses must include at least one from each sub-field: ARCH, CULT, and BIOL.
3. A Culminating Experience Seminar which is designated by course numbers in the 70s above ANTH 70, (e.g. 72, 73, 74, 75, 76, 77, 78). One seminar is usually offered in each fall, winter, and spring term.

NOTE: Every course counted as an actual part of the major must be passed with a recorded letter grade.

NOTE: In designing the multiple major program, it is not possible to use any individual course as part of more than a single major (although a course may be part of one major and prerequisite to the other, or prerequisite to each major).

Statistics: All anthropology majors are encouraged to take a course in statistics. Students who plan to undertake independent research, especially in archaeology or biological anthropology, and any student considering attending graduate school in anthropology or related fields should take at least one statistics course: e.g., GOVT 10, MATH 10, QSS 15, PSYC 10, SOCY 10.

Concentrations: Anthropology majors may choose to concentrate in a sub-field of anthropology by taking at least four courses in: archaeology, biological anthropology, or cultural anthropology.

Archaeology is the scientific study of past human behavior and societies from material remains of the earliest human ancestors to recent times. Students concentrating in archaeology should take at least one topical course and one regional course in archaeology. Students interested in graduate studies in archaeology should take a statistics course and have fieldwork experience that can be gained by enrolling in an archaeological field school through Dartmouth or another institution.

Biological anthropology is the study of human biological variation and evolution. Biological anthropologists seek to document and explain the patterning of biological variation among contemporary human populations, trace the evolution of our lineage through time in the fossil record, and provide a comparative perspective on human uniqueness by placing our species in the context of other living primates. Students concentrating in biological anthropology are advised to take a course in statistics, as well as one or more advanced courses in biological sciences.

Cultural anthropology addresses broad questions about what it means to be human in contemporary societies and cultures, as well as those of the recent past. Cultural anthropologists systematically explore topics such as technology and material culture, social organization, economies, political and legal systems, language, ideologies and religions, health and illness, and social change. Students concentrating in cultural anthropology are strongly advised to take the course in ethnographic research methods, ANTH 18. Students planning on graduate studies in cultural anthropology or related fields are advised to take Main Currents in Anthropology, ANTH 73.

Under special circumstances, students may petition the Anthropology faculty to substitute a course from another department or program to count for the Anthropology

major. The petition should be submitted to the Chair, along with a copy of the syllabus for the substitute course and a list of the student's major courses. The petition must be approved by a vote of the Anthropology Department faculty.

Modified Major

The Modified Major consists of seven courses in anthropology plus four courses above the prerequisite level in one or more other department(s) or program(s). Of the anthropology courses, one must be ANTH 03, 05, 06, 08, or 09 and another must be a culminating experience— ANTH 72, 73, 74, 75, 76, 77, or 78. The seven major courses must include at least one course from TWO of the three sub-fields (ARCH, BIOL, CULT). Students wishing to modify their Anthropology major **must submit a written rationale that makes clear the coherence and purpose of their modified major**. This rationale must be reviewed by and approved by any faculty in the Anthropology department, and must also be submitted to the Registrar.

If you are interested in pursuing the Honors Program and the faculty approves your thesis proposal, you must enroll in ANTH 88. ***This course would be counted as the twelfth course beyond the eleven required to complete the modified major.***

Minors in Anthropology

The *Minor in Anthropology* comprises six courses, as follows:

1. One introductory course *from the following courses: ANTH 03, 05, 06, 08, or 09.*
2. One course from each of the following three subject areas: Archaeology (ARCH), Biological Anthropology (BIOL), and Cultural Anthropology (CULT); the introductory course may count toward the subject area courses.
3. Any three additional courses from the department's offerings.

NOTE: As with Dual Majors, no course may count toward both a major and a minor or toward both of two minors.

The ***Anthropology Minor in Global Health*** consists of six courses, as follows:

1. An introductory course: *ANTH 03, 05, 06, 08, or 09.*
2. At least one course from each of the following five core approaches to the study of global health:
 - Biological Approaches - ANTH 06 (if not used for the intro course), 12.18, 20, 40, 41, 43, 62, 64, 70 or courses outside of ANTH such as the infectious disease section of BIOL 11
 - Cultural Approaches - ANTH 04, 09 (if not used for the intro course); 12.01, 14, 27, 31, 32, 36, 37, 47, 48, 51, 58, 65

- **Interdisciplinary Approaches** - any ANTH course that exposes you to more than one subfield (biological, archaeological, linguistic, cultural) or otherwise stretches your exposure to the discipline and aligns with your interest in global health, or a course outside of ANTH such as SOCY 34, 35, 65; GEOG 21.01, 8.01, 56; HIST 08.01, 36; ENGS 06, 12; PBPL 26
- **Methodological Approaches** - ANTH 18 or another qualitative methods course such as SOCY 11, GEOG 11; a statistics course such as PSYC 10 or SOCY 10 (provided this is not counting toward your major); or a course that explores research methods applicable to global health problems such as GEOG 56, ENGS 12, MATH 04
- **Social Studies of Medicine, Health and Disease** - ANTH 17, 45, 55, 60 or courses outside of ANTH such as SOCY 34, 35, 65; GEOG 21.01; HIST 08.01, 36.

Students should submit with their declaration a brief rationale indicating which courses satisfy each of the various sections of the minor (Introductory, Biological, Cultural, Interdisciplinary, Methodological, Social Studies of Medicine, Health and Disease).

Four of the six courses for the minor must be taken within the Anthropology department. Students cannot use the same course to satisfy more than one requirement. NOTE: As with dual majors, no course may count toward both a major and a minor or toward both of two minors. Students wishing to substitute courses not listed above should petition the Anthropology Department in writing in consultation with a department faculty member.

Honors Program

Students applying to the honors program must meet the minimum College requirements of a 3.0 grade point average and a 3.3 grade point average in the major. By the end of the third term preceding their graduation, applicants will ordinarily have completed, with a minimum grade of A-, a preparatory reading course (ANTH 85) and will have submitted an Honors thesis proposal for work to be supervised by a primary faculty advisor. Admission to the program is by vote of the Department faculty, which may appoint one or more secondary advisors. Applicants will ordinarily have completed, with a minimum grade of A-, an independent research course (ANTH 87) during the Fall term of their senior year with their faculty advisor for the project.

Students admitted to the honors program must enroll in ANTH 88, Anthropology Honors, *in addition to the ten courses ordinarily required in the standard major or eleven courses in the case of a modified major*. ANTH 88 may be taken only once; most thesis students will enroll in ANTH 88 in the Winter term of their senior year and take an "Ongoing" for this course, completing it in Spring term of their senior year. Honors students should consult with

their advisor about taking ANTH 87, Research Course, and the appropriate sequence of courses for their thesis preparation and writing. The honors project, which culminates in a substantial independent thesis, will be submitted to the primary advisor at least four weeks prior to graduation. Those students completing the program with a grade of A- or higher in their honors course will receive honors recognition in the major. High honors may be awarded by faculty vote for truly exceptional work.

Please note that this does not count as your Senior Seminar/Culminating Experience.

For more detailed information on expectations and requirements for submitting an honors thesis proposal, please see the Anthropology website.

SUMMARY OF ANTHROPOLOGY CURRICULUM

The subject areas within the curriculum are outlined in the following list.

Introductory Anthropology: 3, 4, 5, 6, 8, 9, 11, 13, 14, 17, 20

Archaeology: 5, 8, 11, 13, 21, 22, 29, 39, 50.03, 50.05, 50.37, 50.39, 50.45, 50.47, 50.50, 50.60, 50.62, 75, 77

Biological Anthropology: 6, 20, 25, 38, 40, 41, 42, 43, 50.30, 50.43, 50.44, 50.46, 50.55, 50.61, 62, 64, 66, 70, 74, 76

Cultural Anthropology: 1, 3, 4, 7, 9, 12.01, 12.14, 12.19, 12.23, 12.24, 12.26, 14, 15, 17, 18, 19, 26, 27, 28, 31, 32, 33, 35, 36, 37, 44, 45, 48, 49, 50.17, 50.21, 50.22, 50.25, 50.31, 50.34, 50.36, 50.38, 50.40, 50.41, 50.42, 50.43, 50.48, 50.49, 50.56, 50.58, 51, 52, 54, 55, 58, 60, 65, 72, 73

Culminating Seminars: 72, 73, 74, 75, 76, 77, 78

Independent Study: 85, 87, 88

ANTH - Anthropology Courses

To view Anthropology requirements, click here.

ANTH 1 - Introduction to Anthropology

Instructor: TBD

This course explores the unity and diversity of humankind by examining our evolution as a single biological species that nonetheless depends for its survival on learned-and therefore varied as well as variable-patterns of cultural adaptation. Lectures and readings address the relationship between the material conditions of our existence, our

unique human capacity for creative thought and action, and changes in the size and scale of human societies.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

ANTH 3 - Introduction to Cultural Anthropology

Instructor: Boke or Novacich

Cultural anthropology is the study of human ways of life in the broadest possible comparative perspective. Cultural anthropologists are interested in all types of societies, from hunting and gathering bands to modern industrial states. The aim of cultural anthropology is to document the full range of human cultural adaptations and achievements and to discern in this great diversity the underlying covariations among and changes in human ecology, institutions and ideologies.

Offered: Fall.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ANTH 4 - Peoples and Cultures of Native North America

The course provides an introduction to the peoples and cultures of Native North America. A single indigenous group (nation) from different "culture areas" is highlighted to emphasize particular forms of economy, social organization, and spirituality. The course focuses on the more traditional American Indian cultures that existed before the establishment of Western domination, as well as on the more recent native culture history and modern-day economic, sociopolitical and cultural continuity, change, and revitalization. Open to all classes.

Cross-Listed as: NAIS 010

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 5 - Reconstructing the Past: Introduction to Archaeology

Instructor: McLeester

Anthropological archaeology makes a unique contribution to understanding the human past. This course introduces the key concepts, methods and techniques used by modern archaeologists to interpret the past. Students will become better acquainted with archaeological methods through small projects and the discussion of case studies.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

ANTH 6 - Introduction to Biological Anthropology

Instructor: DeSilva / Dominy

The major themes of biological anthropology will be introduced; these include the evolution of the primates, the

evolution of the human species, and the diversification and adaptation of modern human populations. Emphasis will be given to (1) the underlying evolutionary framework, and (2) the complex interaction between human biological and cultural existences and the environment.

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:SCI

ANTH 7 - First-Year Seminars in Anthropology

Instructor: TBD

Offered: Winter.

ANTH 8 - The Rise and Fall of Prehistoric Civilizations

One of the most intriguing questions in the study of human societies is the origins of cities and states or the transformation from small kinship-based societies to large societies that are internally differentiated on the basis of wealth, political power, and economic specialization. This course examines the explanations proposed by archaeologists for the development of the first cities and state societies through a comparative study of early civilizations in the Old World and the Americas.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ANTH 9 - Language and Culture

Instructor: Billings

This course introduces major themes and thinkers in the development of the study of language and culture in Anthropology and Linguistics. The course begins with theories of the linguistic sign and then explores how these have been applied to the study of sound and meaning. We ask questions about the connections between grammar and cognition, language diversity and cultural variation, and the role of language use in the production of social life and cultural worlds.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC; Lang:LRP

ANTH 11 - Ancient Native Americans

Instructor: McLeester

This course provides an introduction to the ancient societies of North America. The course examines the populating of the Americas and related controversies. We then concentrate on the subsequent development of diverse pre-Columbian societies that included hunter-gatherer bands in the Great Basin, the Arctic, and the sub-Arctic; Northwest Coast chiefdoms; farmers of the Southwest, such as Chaco Canyon and the desert Hohokam; and the mound-builders of the Eastern Woodlands.

Cross-Listed as: NAIS 011

Offered: Fall.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 12 - Anthro Gateway Courses

The courses under this rubric ANTH 12.XX will vary by subfield. As such, distributives may incorporate any of the following: INT, SCI, SOC, TLA, SLA, TMV.

ANTH 12.10 - Jews and Arabs: Entangled Histories

This course looks at the interaction between Jews and Arabs throughout history. We examine Jewish history, culture, and social life in Middle Eastern and Islamic lands from the advent of Islam to the emergence of modern nation-states in the Middle East. Along the way, we will make stops in medieval Islamic Egypt, Andalusia, the Ottoman Balkans, the Arabian Peninsula, and other places in which Jewish communities thrived and left records. We pay special attention to the influence of the broader forces that shaped Jewish history and social life throughout the Middle East, and the ways in which Jews and Arabs interacted at the social, cultural, economic, and political levels in diverse contexts and time periods.

Cross-Listed as: JWST 66.02

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 12.11 - Arctic Crossroads

Once considered a remote frontier with a shallow history and marginalized peoples, "the big thaw" is transforming the Arctic into an international melting pot with a surprisingly deep and complex history. This course presents the 40,000 year history of the circumpolar Arctic through the latest discoveries in environmental science, archaeology, ethnology, history, and art. We will also explore how Europeans 'discovered' the Arctic, beginning with the voyages of Pythias, the sagas of Norse Vikings, Frobisher's Northwest Passage quest, and Dezhnev's discovery of the Bering Strait. The third strand of our Arctic odyssey will be seen through the eyes, art, mythology, and beliefs of the northern peoples themselves.

Degree Requirement Attributes: Dist:INT; WCult:NW

ANTH 12.14 - African Popular Culture

This course introduces a global socio-historical framework within which to examine African popular cultures across the continent and as they circulate globally. Considering the historical contexts of contact between Africa, Europe, and--- the Americas, we will explore cultural, economic, and philosophic aspects of African expressive cultures. Focusing on Ghana, Nigeria, and South Africa, we will study music, film, dance, social media, theater, and literature, and consider how ideas of what it means to be African are produced and contested through these media. No prerequisites required.

Cross-Listed as: AAAS 87.09

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 12.15 - Religion And Imperialism

An examination of the impact of imperial expansion on the religious systems of the conquered. The course will focus primarily on the religious consequences of European expansion in North America and Africa but will also examine Jewish responses to Roman imperialism at the time of Jesus. We shall examine the attempts of traditional religious leaders to explain and control the imperial presence as well as the development of new religious movements that grew out of spiritual crises of conquest. This course will examine various types of prophetic movements and revitalization movements that developed in response to conquest as people sought to preserve their cultural identities in the face of their forced integration into imperial systems. Issues of conversion to religions associated with the conquerors as well as the challenges of secular culture will be discussed. Open to all.

Cross-Listed as: REL 067

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

ANTH 12.18 - Anthropology and the Forensic Sciences

Forensic anthropology is the application of the science of anthropology and its subfields, including Biological (physical) Anthropology, Cultural Anthropology (Ethnology), and Archaeology, in a legal setting. Traditionally the forensic anthropologist will assist law enforcement agencies in the retrieval and identification of unidentified human remains. This course will introduce the student to various anthropological sub-disciplines used in the fields of forensics, including: (1) search for clandestine burials; (2) excavation and retrieval of human remains; (3) identification of human remains (sex, age, race, cause of death, and pathology); (4) handling of evidence; (5) interaction with law enforcement agencies; (6) presentation of data, results and evidence; (7) review of forensic and anthropological case studies; and (8) guest lectures.

Degree Requirement Attributes: SCI

ANTH 12.19 - Crossing Over: Latino Roots and Transitions

This course focuses on the histories and experiences of Latinx transnational migrants—from Mexico, Central America, Puerto Rico, the Dominican Republic, and Cuba—living in the United States. You will study the historical, political, and economic processes that have led to these migrations, as well as the varying ways in which race/ethnicity, class, gender/sexuality, and citizenship affect Latinx migrant lived experience. Given our focus on "crossing," readings will foreground subjects that capture this theme, from the literal movement of people, to the constant back and forth that shapes Latinx lives, to the

adjustments Latinx people make given their language, their proximity to other immigrants and communities of color, and their varying acceptance within the United States.

Cross-Listed as: LATS 044 SOCY 043

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 12.23 - Introduction to African Studies

This course introduces a global socio-historical framework within which to examine Africa in relation to multiple African Diasporas and notions of mobility. Considering the historical contexts of contact between Africa, Europe, and the Americas, we examine cultural, economic, and philosophic aspects of Africa. We will examine how ideas of what it means to be African culturally, racially, and politically are continually produced and contested. The moment of independence of many African nation-states from European colonial rule in the mid 20th century operates as a centering point from which we will examine economics, race, politics, and artistic expressions. We will consider ideas of “tradition” and “modernity,” representations of Africa, more recent processes of commodification, as well as various cultural and political responses to them.

Cross-Listed as: AAAS 011

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 12.24 - Africa's Time? An Interdisciplinary Survey of Temporality and Power

Centered in Africa, this course explores the theme of temporality through attention to history, anthropology, philosophy, and popular theoretical physics. There will be no mathematical calculation required. However, we will consider difficult formulas of another type. Is time a constant across cultures and reference frames both physical and ontological? How do past, present, and future intersect? How has the perception of time influenced historical encounters on the African continent and within the African diaspora? How does time relate to ancestry and power?

Cross-Listed as: AAAS 87.12

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 12.26 - Environmental Justice

Instructor: Greenleaf

Around the world, people suffer because of environmental degradation, from sickening industrial pollution to unnatural disasters to disruptive climate change. This course examines how environmental harms are unequally experienced, as well as how communities organize to protect themselves. We will discuss the concept of “environmental justice” as it has developed through social movements in the United States and elsewhere. We will also explore it as an analytical category that (a) explains

how inequality manifests environmentally and (b) enables critical thinking about concepts like the “environment” and mainstream environmentalism and environmental policy. Drawing from Anthropology, Geography, History, Sociology, and other disciplines, we will focus on the lived experiences of environment justice and injustice around the world. Not open to students who have received credit for GEOG 068.

Cross-Listed as: GEOG 068 GEOG 39.01

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

ANTH 13 - Who Owns the Past?

Modern archaeology grew out of antiquarianism, imperialism, and the attempts of early collectors and scholars to look to the past for aesthetics, to construct identities, and to satisfy their curiosities. This course examines how these legacies influence contemporary archaeology, museum practices, and policies to manage cultural heritage. The central question will be explored utilizing the perspectives of the relevant actors: archaeologists, collectors, museums, developers, descendant communities, national and local governments, and the tourism industry.

Cross-Listed as: CLST 12.03

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 14 - Death and Dying

Instructor: Kan

Using anthropological and historical works, novels and films, the course explores the meaning of death in a variety of cultures. Particular attention is paid to understanding native ideas about the person, emotions, life cycle, and the afterlife, as well as the analysis of mortuary rituals and the experience of the dying and the survivors. The course also offers an anthropological perspective on the development of the modern American ways of dealing with death and dying.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC

ANTH 15 - Political Anthropology

The political anthropology of non-Western societies raises basic questions concerning the nature of authority, coercion, persuasion, and communication in both small-scale and complex societies. Classical approaches to problems of freedom and order are challenged through examples drawn from various societies. Topics including the ideologies and language of political domination, revolution, wealth, and the transition to post-modern societies are assessed, as are factions, knowledge and control, state secrecy, state and non-state violence, and religious fundamentalism.

Offered: Spring.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ANTH 17 - The Anthropology of Health and Illness

Instructor: Carpenter-Song

This introduction to medical anthropology focuses on the cross-cultural study of health and illness. Medical anthropology also speaks to issues of global health equity, human rights, and social suffering. This class examines the role of the healer/physician in a variety of societies, explores the boundaries between 'religion' and 'science' as they relate to healing, considers 'traditional medicine' and examines processes and practices of 'medical pluralism' by investigating how individuals and communities make health care-related decisions.

Offered: Spring.

Degree Requirement Attributes: Dist:INT or SOC

ANTH 18 - Research Methods in Cultural Anthropology

Instructor: Carpenter-Song / Novacich

This course will introduce students to the premier method of empirical research in cultural anthropology: participant observation, and associated informal dialogue and interviewing. We will study techniques for planning and carrying out such research, and for recording, checking validity and reliability, storing, coding, analyzing and writing up of ethnographic data. Students will undertake "mini" research projects, and become familiar with basic ethical issues, informed consent, writing of research proposals, formulating research contracts, and sharing results with cooperating individuals and groups.

Offered: Fall, Spring.

Degree Requirement Attributes: SOC

ANTH 19 - Ethnographic Discourse Analysis

This course approaches Discourse Analysis as a research method that allows the analyst to pay systematic attention to diverse elements of communication. While this method can be used across disciplines to address a wide variety of research questions, this course grounds investigations in an exploration of discourse in ethnographic contexts, to examine how language, culture and the social order are inter-related and co-constructed in communication. Our task involves attending to multiple scales, including the technical contours of spoken and written communication, the immediate interpersonal moment, as well as the broader sociopolitical context. We will learn to read and develop ethnographically-grounded transcriptions to make arguments and will consider how day-to-day language enables individuals and communities to navigate

contemporary issues of power, morality, cultural continuity, inequality, and more.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

ANTH 20 - Primate Evolution and Ecology

Instructor: Boucher

Humans are primates. The biology of our species cannot be fully understood outside of this context. This course offers a broad survey of living nonhuman primate diversity. The physical, behavioral, and ecological attributes of each of the major groups of primates will be discussed. Emphasis will be placed on traits relating to diet, locomotion, growth, mating, and social systems. Students will gain a comparative perspective on humankind.

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

ANTH 21 - The Aztecs

Mexico City once the capital of New Spain overlies the remains of Tenochtitlan, capital of the Aztec empire. This course examines the development of the Aztec empire, the organization of Aztec society and religion, and the Spanish conquest of the Aztec. It ends with an introduction to Nahua society in the first century after conquest. We will also consider the varied perspectives of Aztec history offered by Nahua texts, archaeology, history, and art history.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 22 - Olmecs, Maya, and Toltecs: Ancient Civilizations of Mesoamerica

The course begins by discussing how people first occupied Mesoamerica during the Ice Age and then examines the development of agriculture and early villages that laid the foundations for Mesoamerica's earliest complex societies, including the Olmecs. We then explore the Classic period civilizations of Teotihuacan, Monte Albán, and the Maya and the Postclassic city-states of the Toltecs, Mixtecs, and Maya and the Aztec empire at the time of the Spanish Conquest. (ARCH)

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ANTH 25 - Primate Biomechanics

This course is an introduction to the physical principles and musculoskeletal anatomies that underlie primate behavior, including especially primate locomotion and diet. We will study basic mechanics, bone biology, soft tissue and skeletal anatomy, primate behavioral diversity, and the primate fossil record in order to address why bones are shaped the way they are, and how scientists reconstruct behavior from fossils. Emphasis will be on primate

locomotion, including the origins and evolution of human bipedalism.

Degree Requirement Attributes: Dist:SCI

ANTH 26 - Gender and Global Health

This course will examine the intersection of gender and health. Readings will be from medicine, history, journalism, and the social sciences. We will interrogate the relationship between biology, science, and culture, focusing our attention on the cultural construction of healing and embodied experience of illness. We will examine how cultural institutions, ideologies, and practices contribute to health disparities along lines of race, class, and gender, paying attention to medicine's role in gendering the body.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 27 - Economic Anthropology in a Changing World

Instructor: Greenleaf

The idea of “the economy” is powerful. Government policies try to make it grow and politicians are voted out if it doesn't. Fortunes rise and fall with economic indicators and market values. But what *is* the economy? In this economic anthropology course, we will address this question differently than an Economics course would. Rather than approaching the economy as an abstraction that exists apart from human societies, we will critically explore how it is created and experienced through activities and relationships that are part of everyday life.

Our focus will be on how markets, commodities, labor, property, and money shape people's identities and relationships. We will pay particular attention to the ways that power works, often invisibly, through economic forms, and how this can make inequality and governmental power appear acceptable and even natural. Finally, we will examine relations between “the economy” and “the environment” in the context of climate change and environmental degradation. Through engagement with ethnographic and other scholarship, students will learn to critically understand key contemporary economic issues in the United States, as well as in countries like Brazil, Egypt, and Italy.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC

ANTH 28 - Ethnography of Violence

Violence is widely recognized as a problem in modern society, with policies and interventions to combat violence, or employ it, dominating local and global politics. Yet the meaning of violence is seldom analyzed. Using an ethnographic lens, this course explores violence as both an embodied experience and a culturally and politically mediated event. We examine spectacular and everyday

violence forms of violence in terms of manifestations of power, structures of inequality, perceptions of difference, and politics of representation. Ethnographic studies are drawn from, among others, Mozambique, Haiti, and Harlem. An introduction to the cultural anthropology of violence, this course raises key questions about violence in a globalized world and explores how to study it anthropologically. This course is not open to students who have received credit for ANTH 12.03.

Cross-Listed as: WGSS 42.05; AAAS 88.08

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ANTH 29 - Landscape Archaeology

Landscape archaeology seeks to better understand human history through the systematic exploration of large regions, documenting the age and distribution of ancient settlements and other features such as roads, canals, and field systems that are visible on the ground surface. As opposed to focusing on individual sites, landscape archaeology provides a regional perspective on the ancient world and is therefore uniquely capable of revealing past trends in population, the density and distribution of settlement over time, and the ways that ancient peoples interacted with and understood their environments.

Degree Requirement Attributes: Dist:SOC

ANTH 31 - Gender in Cross-Cultural Perspective

Instructor: Billings

Sex (biological differences between men and women) and gender (social constructions of those differences) are not straightforward or natural. Gender inequalities are also not straightforward and natural. This course thus pays close attention to issues of power and inequality, including the ways in which Western gender ideals have been imposed on people in other parts of the world. We will also engage with perceptions, images, stories, encounters, games, connections, disconnections, practice and resistance.

Offered: Fall.

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

ANTH 32 - Anthropology of Tibet and the Himalayas

This course introduces students to the peoples and cultures of Tibet and the greater Himalayan region (Nepal, northern India, Bhutan). We examine the cultural, ecological, political, religious, and economic interfaces that define life on the northern and southern slopes of Earth's greatest mountain range. In addition to learning about Himalayan and Tibetan lifeways, we will also learn about how these mountainous parts of Asia have figured into occidental imaginings, from the earliest adventurers to contemporary travelers.

Cross-Listed as: ASCL 55.01

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 33 - The Global Caribbean

Paradise or plantation? Cultural destination or economic periphery? Capitalist birthplace or IMF delinquent? From the Columbian conquest to contemporary tourism, the Caribbean has borne the burdens and opportunities of being an intercontinental crossroads. Colonial governments, enslaved Africans, indentured servants, and foreign settlers have all made the Caribbean an exemplar of modernity and globalization—for better or worse. Drawing on social scientific, literary, and policy texts, this course offers an historically deep and geographically broad anthropology of the Caribbean.

Cross-Listed as: AAAS 83.08 LACS 25.08

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 34 - Comparative Perspectives on the US-Mexican Borderlands

“U.S.-Mexico Borderlands” explores the histories, policies, economies, structures, and cultures of the southern divide from the early nineteenth century to the present day. The U.S.-Mexico border is often understood as a periphery, an edge to the nation, a marginal region of little importance. However, the border is also an interface; a region that facilitates connections, crossings, and junctures. Its importance, this class argues, cannot be overstated. Taking an interdisciplinary approach to borderlands studies will allow us to seek the “who,” “what,” “when,” “where,” “why,” and “how” the border comes into being. This class will emphasize the lived experiences of peoples and communities living along the border by engaging with secondary and primary sources. Further, this class will utilize art, poetry, music, podcasts, and performance as a way to understand how the border was and continues to be contested. While the class moniker identifies only two nations, the plight of indigenous nations’ claim to land, sovereignty, and resources is also studied. Further, by taking a relational ethnic studies approach, the histories of Asian & Asian American, Black, and other racialized peoples on the border are highlighted. Each of these histories is important to understand the origins of the southern divide and how these origins manifested forms of exclusionary nation-building and its shifts over time.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 35 - Maya Indians Under Mexican and Guatemalan Rule

This course explores the contemporary Maya cultures of Mexico and Guatemala against the backdrop of nearly five hundred years of conquest, colonialism, revolution, and nation-building. Given the contrasting, at times deeply antagonistic, cultures and identities that have resulted, this course focuses on issues of Maya ethnicity, inequality, and

nationalism in these two closely related yet historically distinct countries.

Prerequisite: One course in Anthropology or Latin American, Latino and Caribbean Studies.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 36 - Contemporary Africa: Exploring Myths, Engaging Realities

This course focuses on processes, relationships, and experiences that have shaped, and continue to shape, the lives of Africans in many different contexts. These include issues of ecology and food production, age, gender, ethnicity, exchange, colonialism, apartheid, and development. We will then embark on in depth readings of ethnographies that engage these issues and themes. In the processes we will move beyond prevailing stereotypes about Africa, to engage the full complexity of its contemporary realities.

Cross-Listed as: AAAS 44

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

ANTH 37 - Legacies of Conquest: Latin America

Despite nearly five hundred years of conquest, colonialism, and change, native peoples still survive in culturally distinct enclaves within the dominant Iberian traditions of Latin America. This course examines the roots as well as the endemic social inequalities and prejudices that resulted. Selected case studies will relate to such contemporary problems as international drug trafficking, deforestation of the Amazon basin, and ongoing political repression and revolution in Central America. The course draws on the insights of local ethnographic studies to shed light on global problems, while anthropologically situating native cultures of Latin America in their larger historical and geopolitical context.

Prerequisite: One course in Anthropology or Latin American and Caribbean Studies.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 38 - Human Behavioral Ecology

The human condition is characterized by immense biological and behavioral variation. The extent to which such variation is adaptive is topic a great importance and controversy. Current research in the field of human behavioral ecology reflects a growing interaction between the social and biological sciences. The objectives of this course are to critically examine the origin and development of this discipline and to survey the physiological and behavioral ways that humans interact with their environment.

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

ANTH 39 - Archaeology of the Middle East

This course provides an introduction to the civilizations of the ancient Middle East and to the history of archaeological research in this important region.

Encompassing the modern nations of Iraq, Iran, Syria, Turkey, Jordan, Lebanon and Israel/Palestine, the Near East saw the emergence of the world's first villages, cities, and empires, and is therefore central to our understanding of human history. Following an overview of its geography, this course offers a survey of Middle Eastern cultural development, art, and archaeology from the earliest evidence of human settlement around 13,000 BC to the conquest of the region by Alexander the Great. This course is not open to students who have received credit for ANTH 12.02 - Archaeology of the Ancient Near East

Cross-Listed as: MES 03.02

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ANTH 40 - Human Functional Anatomy

Instructor: Dominy

Anatomy is a science of nomenclature; it provides a universal language for understanding how and why form supports function. Such a biomechanical conceptual framework can inform our understanding of human biology. Yet the anatomical novelties that characterize modern humans are best appreciated when contextualized against living nonhuman primates and the hominin fossil record. Student grades will be based on a mastery of concepts from lectures and labs featuring cadavers, skeletal materials, models, and casts.

Degree Requirement Attributes: Dist:SLA

ANTH 41 - Human Evolution

The fossil record demonstrates that humans evolved from an extinct ape that lived in Africa more than 5 million years ago. Paleoanthropology is the branch of biological anthropology that seeks to document and explain the evolution of our lineage using paleontological and archaeological data. This course provides a survey of human evolution in light of current scientific debates. Emphasis will be placed on reconstructing the biology and behavior of prehistoric species.

Degree Requirement Attributes: Dist:SCI

ANTH 42 - Medical Gross Anatomy: Scars of Human Evolution

Human anatomy is important for medical professionals, artists, and anthropologists. This dissection-based course will explore the human body and its many imperfections. The deficiencies of our bodies—clumsy compromises in our teeth, feet, backs, bottoms, and birthings—are chronic

clinical concerns that reflect our evolutionary history. Taking a cue from Wilton Krogman's 1951 classic, *Scars of Human Evolution*, this course will demonstrate how and how far the human body fails by the standards of intelligent design.

Degree Requirement Attributes: Dist:SLA

ANTH 43 - Human Osteology

Human osteology is an important component of biological anthropology, with applications in archaeology, paleontology, forensics, and medicine. This course is designed to acquaint students with the normal anatomy of the human skeleton. Our focus is the identification of isolated and fragmentary skeletal remains. Students are introduced to principles of bone growth and remodeling, biomechanics, morphological variation within and between populations, pathology, ancient DNA, taphonomy, and forensics. Practical techniques are developed in regular laboratory sessions.

Prerequisite: ANTH 6 or permission of the instructor.

Degree Requirement Attributes: Dist:SLA

ANTH 44 - Language, Gender & Sexuality

Instructor: Billings

This course will introduce students to foundational and current thinking about the connections among language, gender, and sexuality, from readings in linguistics, sociolinguistics, linguistic anthropology, and feminist theory. A cross-cultural approach will characterize the class, and units will link language, gender and sexuality to themes such as power, (in)equality, and identity. Students will also be encouraged to consider the significance of gender and sexuality in the context of quotidian language use.

Cross-Listed as: WGSS 53.07

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

ANTH 45 - Asian Medical Systems

Instructor: Boke

This course investigates systems of healing practiced in, and derived from, Asia. We will focus primarily on three Asian medical systems: Ayurveda, Chinese medicine, and Tibetan medicine. We will strive to understand how these medical systems are based on coherent logics that are not only biologically but also culturally determined. We will also analyze the deployment of these medical systems in non-Asian contexts, and examine the relationship between Asian systems and "western" biomedicine.

Cross-Listed as: ASCL 63.01

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 48 - From the Sacred to Salvation: The Place of Religion in Human Societies

Instructor: Kan

This course examines religions as cultural systems that give shape and meaning to people's lives and provide them a means, in the form of rituals, to affect their worlds and themselves. The emphasis is on understanding non-Western religions, especially local traditions, through the interpretation of myth, ritual, and symbolism. The relationship of religion to political power and ideology is also explored.

Prerequisite: One course in Anthropology or Religion or permission of the instructor.

Offered: Spring.

Degree Requirement Attributes: Dist:INT or TMV; WCult:NW

ANTH 49 - Environment, Culture, and Sustainability

Environmental problems cannot be understood without reference to cultural values that shape the way people perceive and interact with their environment. In this course we will engage with cultural difference with special attention to how the American experience has shaped the ways in which Americans imagine and interact with the environment. We will pay close attention to issues of consumption and conservation and how they have impacted ecologies and human livelihoods around the world.

Degree Requirement Attributes: Dist:INT or SOC; WCult:W

ANTH 50.03 - Digital Archaeology

Instructor: Casana

This course will examine how digital technologies, particularly in the geospatial realm, are transforming the ways in which we discover, explore, and interpret the human past. Students will investigate archaeological questions while learning both the art and science of rapidly developing software, instruments, and techniques. The first unit of the course explores regional-scale archaeological problems and the use of aerial and satellite imaging, and GIS-based spatial analysis. We then turn to site-based investigations using archaeological geophysics, photogrammetry, and drones. The final weeks turn to 3D modeling, visualization, and immersive archaeological realities.

Degree Requirement Attributes: Dist:TAS

ANTH 50.04 - Digital Heritage: Global Politics and Practices

This course explores the idea of heritage as less of a “thing” and more of a cultural and social process—one that harnesses the act of remembering to create ways to

understand and engage with the world. In recent decades, fostered not least through international organizations such as UNESCO World Heritage or the World Monuments Fund, heritage preservation has become a global political movement. Following both a historical and a comparative approach, this course seeks to transcend the Euro-American understanding of heritage, which is still very much the standard in international advisory bodies and address the various unrepresented perspectives, value systems, and frameworks of memory that play a role in heritage as a global phenomenon. As such, this course is designed to be a tool to both study and question heritage preservation and conservation.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 50.05 - Environmental Archaeology

Instructor: Ward / McLeester

Archaeological sites preserve not just architectural and artifactual remains, but important clues to how people lived in and acted on their environment. In this course we will explore the types of data used to reconstruct ancient environments and examine theoretical approaches to human-environment relationships. Through case studies, we will confront contentious issues in environmental archaeology and learn how archaeologists integrate the archaeological record with data from history, biology, and geosciences.

Offered: Spring.

Degree Requirement Attributes: Dist:SLA

ANTH 50.17 - Rites of Passage: The Biology and Culture of Life's Transitions

This course explores the “rites of passage” concept across time and space, and with close attention to the ways that our bodies shape and are shaped by our social selves. A response to avid student desire to learn more about the intersections of biology and culture within the context of anthropology, this course promotes learning about human biology and the medical humanities.

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 50.18 - Anthropocene Imaginaries

The world warms, and global environmental imaginaries transform. Evolving representations of culture and environment have compelling implications for human rights and indigenous sovereignties over land, water and natural resources. Human security will be shaped not only by the unfolding impacts of climate change, but also by how we frame the understandings and ethical commitments we articulate in response to them. This course will explore the anthropology of climate change, and consider how visions and aesthetics of place in the twenty-first century are interconnected with transforming global discourses

about environmental security, governance and power. Blending environmental humanities and social science perspectives, we will also reflect upon critical approaches to political ecology and the idea of “the Anthropocene” itself.

ANTH 50.21 - Filmmaking and Visual Culture

This course is a course where we both learn to make films and examine theories of visual art, sound, film, and digital media. We will learn how to think about and make sounds and images in historically and ethnographically rich ways. In the process we examine notions of power, difference, history, culture, race, class, gender. Twentieth-century politics were intimately linked to the rapid development of radio, television, film, video, and digital media. These media have creatively engaged with local cultural practices around the world in reshaping the nature of artistic expression, national, gendered, and racial difference, and political power. We examine notions of visuality from the perspective of African and African diasporic political configurations and aesthetic responses. This course explores the politics and pragmatics of art, photography, and film in order to delineate visual, sonic, and embodied ways of presenting and experiencing the world particularly in relation to race and gender.

Cross-Listed as: AAAS 88.17

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 50.22 - Sovereignty, Race, and Rights

This course examines the colonial legacies of rights, race, gender, and difference and their significance for contemporary global politics and development. By taking an socio-historical approach to the idea of rights we will make connections between sovereignty, the rule of law, representational practices, economy, and citizenship. We will use a critical eye to explore the conditions of possibility that allow states, development organizations, donor agencies, and individuals to unwittingly reproduce centuries-old tropes of poverty, degradation, and helplessness of non-Western peoples. Examining various institutionally structured encounters between Europeans and non-Western peoples we unpack assumptions about the naturalness of power. In postcolonial societies the tensions between ideas of tradition and modernity structure many conflicts over rights, citizenship, and the role of the individual in society.

Cross-Listed as: AAAS 88.16

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ANTH 50.25 - Law, Power & Society

What is law? In this course, we will explore this seemingly simple question, and look at how scholars from anthropology and other disciplines have addressed it. We will look at law as a means of ordering societies, as an

exercise of power, and as a cultural phenomenon that helps us better understand the world around us. We will survey foundational and philosophical thought, delve into law’s role in the United States, and study its manifestations in colonial and postcolonial societies, such as South Africa and Brazil. We will explore the law as both a means of social control and of social change.

Cross-Listed as: GOVT 60.22

Degree Requirement Attributes: Dist:SOC

ANTH 50.28 - Racial Geographies: Race and the Politics of Place

This course will explore various themes surrounding the ways in which race shapes the way we understand ideas of place. With a focus on Africa and its diaspora, the course looks at the movement of people and ideas inherent in the concept of diaspora and reflects on how people also reshape social worlds that challenge the way we commonly understand the world to be divided (i.e. by political territories like “countries” or by physical geographies like “continents”). The goal of the course is to start with the concept of “Blackness” and unpack the complexity of various other racial and spatial categories like “Sub-Saharan Africa” “Arab North Africa” “the West” and “diaspora.” The three general themes of territory, flows, and space/futurisms, will be explored in relation to the way they are experienced by people in everyday life, therefore the readings will primarily be ethnographic, following African descendant communities in Africa, Europe and the Americas. However, we will tackle these issues through history and fiction writings as well. Not open to students who have received credit for GEOG 063.

Cross-Listed as: AAAS 60.50 GEOG 071

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 50.30 - Human and Comparative Gross Anatomy

Human and Comparative Gross Anatomy is a laboratory class that offers undergraduate students the rare opportunity to learn anatomy through anatomical dissection. Students will work in small teams to dissect human body donors, with various other vertebrate animals also available for dissection and study. Cadaver dissection is the best method by which to learn about the structures of the human body, their integration, and, most importantly, variation among humans. This is an intensive course, requiring hours of study both in the lab and from texts, but it rewards you for those hours with a strong understanding of anatomy.

Degree Requirement Attributes: Dist:SLA

ANTH 50.31 - Humanistic Medicine: Cultivating Compassion in Healers, Patients, and Cultures of Care

This course uses experiences of illness and efforts to heal as windows into what it means to be human. Grounded in an interdisciplinary, holistic approach, this course aims to build connections between humanistic inquiry, medicine, and diverse forms of care. The course is organized around three main themes: (1) Becoming a Doctor and the Culture of Biomedicine, (2) Exploring Disease and Illness, and (3) Building a Future of Compassionate Care. This course is relevant for students in a wide range of disciplines, including students pursuing clinical careers; students engaging with medicine and illness as writers or advocates; and students in the humanities and social sciences who are interested in exploring health, illness, and medicine.

ANTH 50.34 - Peoples of Oceania

The “Peoples of Oceania” course is an intentionally post-colonial and anti-racist approach to studying the vast and varied cultures of Oceania. We will focus on relationships between the religious, social, political, and economic systems in Oceania, rather than dividing weeks into the four geographic regions: Polynesia, Micronesia, Melanesia, and Australia, which have historically made up the foundation of many Pacific survey courses. Using the work of indigenous Tongan and Fijian scholar Epeli Hau’ofa (1939-2009) and his seminal text “We are the Ocean” as a guiding force, we will crisscross the atolls and islands that make up Oceania, creating a navigator’s chart of discussions and debates. Major themes discussed in class include: race/gender/class politics surrounding the ownership and control of cultural heritage, indigenous data sovereignty and intellectual property rights, and climate justice as social justice.

Cross-Listed as: NAIS 30.28

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ANTH 50.35 - The World Turned Upside Down: An Indigenous History of the Andes after the Spanish Invasion

This course will explore the tension between insiders and outsiders, colonizers and the colonized, Westerners and Natives. Students will examine not only what these tensions meant for the people of the Andes – in the countries of Peru, Bolivia, and Ecuador (and to a lesser extent Chile and Colombia) - but also in what ways similar phenomena occurred in North America and other parts of the world. Among other things, students will investigate differences between insider and outsider accounts, primary and secondary sources, history and archaeology, etc. - while acknowledging the strengths and limitations of these different sources and approaches.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 50.36 - Anthropology and Narrative: Life History, Oral History, and the Ethnographer’s Story

This seminar aims to expand students’ understanding of the power of storytelling in anthropology and to guide them in reading such stories with a critical eye. Students will have the opportunity to conduct their own life history projects as well as to produce a critical analysis of course readings or of texts of their own choosing.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 50.37 - Archaeologies of Religion

Most of humanity’s religious history is only accessible using archaeological evidence. Moreover, even where texts are available, they tend to reflect the perspective of elites. This course therefore explores how archaeological methods can help us better understand religious phenomena in past societies. Topics will include the religion (or lack thereof) of our hominid ancestors (e.g. Neanderthals), the state religions of ancient civilizations, and the complementary perspective that archaeology provides on the World Religions.

Cross-Listed as: REL 20.07

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ANTH 50.38 - Social Lives of Energy: Energy Systems and their Social Contexts

In this course, we will analyze the cultures of energy systems, focusing on clean energy sources. Using a global case study approach, we will examine how energy systems impact historical, cultural, and political dimensions of life. Overall, students will integrate how energy systems relate to social equity and climate change politics. One main theme in the course will be energy conflicts involving Indigenous peoples. Studying these conflicts allows us to investigate the multiple ways of being at stake in defining energy futures.

Degree Requirement Attributes: Dist:SOC

ANTH 50.39 - Alcohol in the Ancient World

Instructor: Wang

This lecture and discussion-based course provides an introduction to the production and consumption of beer, wine, and other fermented beverages across the ancient world. We will explore the full range of available source material – written evidence, physical remains, artistic representations, ethnographic accounts, and experimental archaeology – to develop an account of alcohol as a uniquely potent form of material culture that was embedded within complex webs of social, political, economic, and ritual activity.

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

ANTH 50.40 - Anthropology of Disaster

Disasters are often conceptualized as an event that disrupts the normalcy of the everyday. In contrast, anthropology of disaster has long analyzed disasters and their effects as amplifications of the normal functioning of a society. This course examines the temporal and spatial scales, categories and concepts, as well as modes of attention we deploy to understand and respond to disasters. By drawing on texts from anthropology, history, science and technology studies, and environmental justice, we will develop analytical tools to elucidate how social norms and power relations are reorganized and reproduced through disasters, often in unequal ways.

Degree Requirement Attributes: Dist:INT or SOC

ANTH 50.41 - Homelands and Diasporas: Russian Jews on Three Continents

Instructor: Kan

Drawing on a variety of disciplines, such as anthropology, history, sociology, political science, and cultural studies, and sources ranging from academic works to works of fiction and films, the course first explores the history and culture of Russian (pre-1917) and especially Soviet Jews (1917-1991)—a major and significant segment of the world Jewry—prior to the massive immigration of the 1970s-1990s. The rest of the course involves a comparison of the experience of Russian-speaking Jews in the three major countries they have immigrated to—Israel, US, and Germany—as well as those remaining in Russia today.

Cross-Listed as: COCO 033 EEER 38.15 JWST 05.01

Offered: Spring.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

ANTH 50.42 - Indigenous Responses to Colonialism: Maya and Maori

This course compares how Maori in New Zealand and Maya in Mexico and Guatemala survived European colonialism to become distinct peoples in a world of postcolonial nation states. Comparison addresses both the diversity of indigenous worlds and changes in European colonialism between the sixteenth and nineteenth centuries through the study of cultures as emergent interactions of meaning and power within and between groups, and of racism as the rationalization of institutionalized inequalities across human differences.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

ANTH 50.44 - Darwin and Human Evolution

This course explores what we have learned about human evolution, behavior, and biological diversity in the 150 years since Charles Darwin wrote *The Descent of Man*.

The course will coincide with a Winter symposium in which the contributing authors of *A Most Interesting Problem: What Darwin's Descent of Man Got Right and Wrong about Human Evolution* will visit campus, give talks, and engage with our students. ANTH 50.44 is designed for anthropology and biology majors.

Degree Requirement Attributes: Dist:SCI

ANTH 50.45 - Archaeology of Epidemics

In this course, we will study the effects of epidemics and pandemics on different cultures throughout history. Towards this end, we will examine how art and design have served to forge community bonds; how visual culture has changed in times of crisis; and how communities across the world, in different times and spaces, eventually find resilience in fundamentally altered worlds.

Degree Requirement Attributes: Dist:SOC

ANTH 50.46 - Macroevolution

Macroevolution focuses on the evolutionary process from the perspective of the species and through the lens of deep time. More specifically, it focuses on the issue of whether life is organized hierarchically, and if so, can selection occur at any/all of these other levels, in addition to the level of the organism. This course is especially well suited for discussion and question, as the definition of macroevolution, as well as its very existence, is under intense discussion by both microevolutionists and macroevolutionists alike. Topics covered include punctuated equilibrium, species-level selection, homology, and mass extinctions.

Cross-Listed as: BIOL 28, EARS 32

Degree Requirement Attributes: Dist:SCI

ANTH 50.47 - Archaeological Field Methods: Digging Dartmouth

Instructor: Casana

Through investigations on and around Dartmouth's campus, this class provides a hands-on introduction to archaeological field and lab methods, as well as to the archaeology of New England. Students will participate in survey and excavation of historic building sites on Dartmouth's campus, as well as on curation and analysis of artifacts.

Offered: Spring.

Degree Requirement Attributes: Dist:SLA

ANTH 50.48 - Energy Justice

Climate change and environmental degradation necessitate shifting energy systems away from fossil fuels. What issues of culture, power, and inequity are part of this energy "transition"? How can we make sure that it is socially just? These questions are the main focus of the

course. This course includes an Energy Justice Clinic, supported by Dartmouth's Irving Institute for Energy and Society, in which students will engage in community-driven service learning.

Cross-Listed as: GEOG 40.04

Degree Requirement Attributes: Dist:INT or SOC

ANTH 50.49 - Anthropology of Museums

This course offers a historical, theoretical, and critical perspective on the continuing vitality of museums as social institutions and the challenges they face today.

Degree Requirement Attributes: Dist:SOC

ANTH 50.50 - Archaeology of Food

Instructor: Wang

In this course, we will explore the theoretical and methodological approaches that archaeologists use to study food and eating in ancient societies from a global anthropological perspective. This course assumes no prior familiarity with archaeology; rather, it is designed to introduce you to the basic methods and theoretical structures employed to study the archaeological remains of food and drink.

Degree Requirement Attributes: Dist:INT or SCI

ANTH 50.51 - Aesthetics and Power

This course explores the relationship of aesthetics to power across artistic media, public spectacles, and in daily life. European modernity has tended to posit images, sounds, and performances as signs of a world "out there" that recreated in ritual contexts facilitate individual transcendence through an almost spiritual experience. We will examine how West African and African diasporic notions of modern aesthetics tend to offer a counterpoint by enacting theories of representation that are more explicitly performative and socially dialogic. In the 1950s and 1960s people across Africa and African peoples in the Americas and the Caribbean fought for political rights and sovereignty. Aesthetic forms were crucial to these projects. Political power was contested in economic and institutional ways, but people experienced it through their bodies and senses. The power to control political and economic order is enacted in the realms of signs, desires, and value. Moral dichotomies between beautiful or ugly, expensive or cheap, important or illegible, appear to be about aesthetics alone but are in fact ways that power is produced, naturalized, and contested. We examine art media as well as political and social forms as a way to understand how broad forms of power shape both everyday and spectacular experiences and how individuals and collectives use expression as a way to contest the terms of power. In political terms, we explore rituals of state as events through which power is produced and contested in embodied ways. Producing loyal citizens requires a nation-state to create rituals that

orient people to feel like they are part of a shared collective experience. This course will draw upon transdisciplinary approaches to understanding aesthetics including ethnographic, literary and theatre studies, political analysis, performance analysis, musicology.

Cross-Listed as: AAAS 90.12

Degree Requirement Attributes: DIST:INT, SOC; WCult:NWC

ANTH 50.52 - Anthropology of Innovations

Innovation – is everywhere. It is expected in our thinking, research, technologies, learning, and lifestyle. It is upheld as solutions to the world's big problems. But what exactly is innovation? Why is innovation so valued? What does this tell us about the society we live in and the futures we are creating? This course examines "innovation" as a social, historical, and political economic concept, discourse, and practice. We will draw from texts in anthropology, STS, disability studies, black studies, and performance studies to develop analytical tools to examine how social norms and power relations are challenged, reorganized, and reproduced through innovations, often in unequal ways.

Degree Requirement Attributes: DIST:SOC

ANTH 50.53 - The Ancient Silk Road: Art, Archaeology, and Cultural Transformation in Central Asia and Beyond

This course explores the cultural effects of globalization of the ancient through early Medieval Afro-Eurasian world through the lens of the Silk Road. Through seminar discussions and lectures, this course emphasizes the art, archaeology, and texts of Central Asia in long-distance interactions with the Near East, South Asia, and East Asia. The various ways in which cultural traditions were affected by the development of the Silk Road are a central theme.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ANTH 50.54 - Issues in Paleoanthropology

In this course we will examine current and historical issues in Paleoanthropology. Topics in the course will include biological variation, interpreting hominin behavior from fossilized evidence, ethics and bias, phylogenetic relationships in the hominin fossil record, and the quality and nature of evidence for hominin evolution.

Degree Requirement Attributes: Dist:SLA

ANTH 50.55 - Beyond the Binary: Sex, Gender and Biology

Instructor: Rivera

This course examines the biology of sexual dimorphism and variation in humans and its implications for health and social equity. This is a discussion-based

course recommended for upper level students with college level coursework in biology.

Degree Requirement Attributes: WCult:CI

ANTH 50.56 - Anthropology of Food

Instructor: Boke

In this course we engage with critical, scholarly, and public media that deepen our understanding of the role of food in human social, economic, political, and health worlds. We think about the local, national, and global dimensions of our current food systems. Relying primarily on cultural anthropology's lens, we examine how foodways shape, and are shaped by, economic, political, and cultural practices. We explore not just preparation, cultivation, and consumption of food, but also the symbolic processes through which foods, and our relationships with them, are made meaningful.

Degree Requirement Attributes: Dist:INT; WCult:CI

ANTH 50.57 - Cultural Diversity in the United States

Instructor: Novacich

Is the United States a melting pot or a salad? Is it an assimilation machine or a gestalt hodgepodge of culture that is, in other words, more than the sum of its distinct parts? Whether a melting pot, a salad, both or neither, most agree that the United States is a complex geopolitical space that brings together diverse cultural threads, each of which has a particular history. This course provides a critical introduction to American society in all of its diversity. We will explore historical and ethnographic materials revealing broad trends in the cultural and social trajectory of the United States. Through a comparative and critical review of a wide range of cases – ranging from the settling of European colonies in North America, to slavery and its abolition, to the institution of quotas on legal immigration – we will learn how the United States has been forged through histories of settlement and migration, displacement and slavery, and industrialization, inequality, and protest.

Offered: Winter.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 50.58 - Anthropology of Rural Places and People

Instructor: Sosin

This course examines the shifting social, political, and cultural landscapes of rural America. Drawing on case studies that illuminate key patterns and processes, we trace the global and local dynamics shaping experiences and understanding of rurality. We engage critically with social scientific, literary, and public media texts to explore cultural narratives and representations of rural places and people. Using the lens of cultural anthropology, we

examine the changing terrain of rural lives, with particular attention to healthcare, housing, economic development, and political engagement. The role of anthropology and ethnographic methods in understanding rural experiences will be explored as part of this course. This class includes engagement with a range of guests, study of historical and contemporary literature, art, music and public media drawn from a range of rural settings.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 50.59 - Architecture in the Field: Observing, Recording, Knowing

This course examines the observation and documentation of architecture, landscape, and urbanism, a practice that historians, architects, artists, anthropologists, and field scientists commonly refer to as “fieldwork.” Students will learn about fieldwork histories, methods, and sites in tandem with their own firsthand observations: each week, students will conduct fieldwork in the Hanover area and learn about the ethical and political dilemmas posed by different fieldwork methods such as photography, descriptive writing, drawing, mapping, and ethnography.

Cross-Listed as: ARTH 63.75

Degree Requirement Attributes: Dist:ART

ANTH 50.60 - The Archaeology of Native American Sports and Games

Sports and games intersect with many other aspects of our lives and can play critical roles in training for war, social hierarchies, food production, rituals, burial rites, and so much more. In this class, you will learn about the archaeology of Native American sports and games in North America. We will explore a wide array of them alongside the social roles they played. We will also play some modern versions. By the end of the class, you will understand the critical nature of sports and gaming in the past as well as the ways ancestral Native American sports and games persist today.

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 50.61 - Digital Methods in Paleoanthropology

This course is an introduction to the digital methods used in paleoanthropological research. It will combine principles of anthropology with digital technology to answer research questions about human, primate, and fossil hominid shape variation and evolution. Students will learn popular digital methods including 3D surface scanning, how to process computed tomographic (CT) scans, how to take digital measurements, and the statistical techniques used to analyse data. This course will then allow students to apply these digital methods to paleoanthropological

topics of their choice, and to conduct their own research projects.

Degree Requirement Attributes: Dist:TAS

ANTH 50.62 - The Archaeology of Work

Moving chronologically (roughly), students will learn about the diverse ways that people in the past organized themselves to meet basic needs, complete collective projects, and develop new technologies. We will also use the past to analyze some of the concepts that define modern life, including gendered divisions of labor, the relationship between class/caste/race and occupation, the separation of “work” and “home”, the predominance of wage labor, and alienation and burnout.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 50.63 - Stable Isotope Ecology

Atoms form all elements on Earth, which can be used to explore the ecology of species throughout time. We will learn the foundations in chemistry that dictate what a stable isotope is, and then we will explore traditional and non-traditional methods of stable isotope analysis, framed within examples of how these methods are applied in biological anthropology.

Degree Requirement Attributes: Dist:SCI

ANTH 51 - Colonialism and Its Legacies in Anthropological Perspective

Instructor: Thayer / Billings

Between the 16th and mid-20th centuries, European nations and Japan colonized much of the rest of the world. This course examines similarities and differences in the practices of these colonial powers in different regions at different times and the impact they had on indigenous peoples and societies. It traces the ways in which colonial processes and experiences have shaped the politics, economics, and identities of both developed and developing nations in the world today.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

ANTH 52 - Introduction to Maori Society

Instructor: Thayer / Craig

This course is an introduction to the study of traditional and contemporary Maori society and culture. Topics for study include pre-European Maori history, origin and migration traditions, land ownership and use, religion, leadership, meeting ground (marae) protocols, the colonial experience, struggles of resistance and of cultural recovery.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ANTH 52.01 - Perspectives of Hawai'i: Past, Present and Future

The course is an immersive, hands-on experience into the culture, history, and practices of Hawai'i through various field-based, “living classroom” experiences as well as supplemental readings/viewings.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 54 - Foreign Study in Anthropology

Instructor: Thayer / Craig

Credit for this course is awarded to students who have successfully completed the designated course in the department of Anthropology at the University of Auckland during the Dartmouth foreign study program in Anthropology and Linguistics and Cognitive Science.

Prerequisite: Two courses in Anthropology.

Offered: Winter.

Degree Requirement Attributes: SOC

ANTH 54.01 - Tradition and Sustainability: Learning from the past in Hawai'i

Generations of accumulated wisdom have been passed down about how to live sustainably on these islands. This generational wisdom (u02BBike) remains a critical part of the dialogue about how to live more sustainably in light of the contemporary challenges to island sustainability. This course is an exploration of the challenges and opportunities we as an island society face while charting a course towards a sustainable future.

Degree Requirement Attributes: Dist:SOC

ANTH 55 - Anthropology of Global Health

Instructor: Sosin

This course explores human responses to disease and illness from the perspective of medical anthropology, with a particular focus on international health. In this context, 'global health' not only refers to health care systems, medical practices, and ideas about illness and the body in cross-cultural contexts, but also encompasses issues of health development paradigms, culture and epidemiology, global health equity and human rights issues.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC

ANTH 57 - Origins of Inequality

What led human societies to accept social inequality? This question is as old as the earliest political writings and a

central theoretical issue in anthropology. With the collection of detailed archaeological data from multiple world regions, anthropologists have developed case studies for working out the emergence of social inequality. This course will explore the theoretical expectations of multiple approaches to inequality, and then focus on current archaeological evidence from multiple world regions.

Degree Requirement Attributes: Dist:INT or SOC

ANTH 58 - Sustainable Cities

Trends suggest that the human experience is increasingly an urban one, with urbanization transforming social and ecological worlds at a rapid pace. With these changes comes a growing urgency to enhance the sustainability of cities. In this course we compare past and present forms of urbanization, with an emphasis on understanding specific challenges and solutions to sustainability. In doing so, we think about how urbanization is embedded in broader socio-ecological processes that transform rural lands and livelihoods.

Degree Requirement Attributes: Dist:INT or SOC

ANTH 60 - Psychological Anthropology

Instructor: Carpenter-Song

This course examines key concepts and core debates within the field of psychological anthropology. The course draws on the historical roots of the field as well as contemporary theoretical developments in psychological anthropology. Central questions addressed in the course include: What is the relationship of the individual to culture? How do categories of the person, self, thought, and emotions vary cross-culturally? What do extraordinary psychological experiences reveal about fundamental human processes?

Degree Requirement Attributes: Dist:SOC; WCult:CI

ANTH 62 - Health and Disease in Evolutionary Perspective

Instructor: Rivera

This course explores how principles from biological anthropology can provide insight into human health and disease. This course also asks students to critically analyze prevailing medical concepts of 'normal' physiology and illness. We adopt a comparative approach to consider the evolutionary, physiological, and cultural bases of human health and disease by examining case studies in the following areas: i) human diet and nutrition, ii) demography, life history, and reproduction, and iii) pathogens, parasites, and immunity.

Degree Requirement Attributes: Dist:SCI

ANTH 64 - Evolution of Birth, Pregnancy, and Babies

This course examines human universals and cross-cultural variation in pregnancy, birth, and infant development. In

the first section, principles of life history theory and human reproductive ecology are introduced, and students will learn how assisted birth evolved in humans. In the second section, students will analyze expectations and systems of pregnancy, birth, and infant care in a cross-cultural context. Throughout the course, students will evaluate current controversies surrounding medical models of childbirth, breastfeeding, and co-sleeping.

Degree Requirement Attributes: INT or SCI

ANTH 65 - Conservation and Development

The terms 'conservation' and 'development' are ubiquitous, but there is little agreement on their meanings or their efficacy. We study how these processes impact 'traditional' cultures and how indigenous peoples have responded. Development and conservation have cultures of their own so we will examine their worldviews, discourses, and practices. We explore how anthropological methods can be used to analyze resource conflicts, understand the limits of dominant approaches, and think constructively about alternatives.

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

ANTH 66 - Human Biological Variation

How do human populations adapt to their local environments? What is more important for influencing human variation—genes or the environment? In this course you will learn about patterns of modern human biological variation as well as research methods employed by biological anthropologists to study these patterns. You will also learn important skills for all anthropologists, including hypothesis generation, study design, how to write a grant, and how to be an effective reviewer.

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

ANTH 70 - Experiencing Human Origins and Evolution

This course will examine current evidence for human origins and evolution, with a particular emphasis on South Africa. Students will learn and experience firsthand how fossils, archaeological sites, and living model systems are used collectively to reconstruct and interpret the path and circumstances by which we became human. A course extension in South Africa will be offered to enable direct experience with the sites, organisms, and challenges discussed in class.

Degree Requirement Attributes: SCI

ANTH 72 - Ethnicity and Nationalism

Instructor: Kan

Ethnic politics and nationalist movements dominated the 20th century and continue to play a major role in shaping the world today. This course explores these important subjects through an anthropological lens by examining such topics as the symbols, rituals and myths of ethnic and national identity; nationalism, ethnic minorities and the state; and homeland and diaspora nationalism. Ethnographic case studies range from indigenous nationalism to that of the newly independent states of Eastern and Central Europe.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

ANTH 73 - Main Currents in Anthropology

Instructor: Craig / Greenleaf

This course examines the theoretical concerns that define anthropology as a discipline. Readings by major theorists past and present address the nature and extent of human social and cultural variation, the relationship of institutional arrangements in society to systems of meaning, the material and moral determinants of human social life, the dynamics of change within and between cultures, and the place of power in maintaining and transforming meaningfully constituted human orders.

Offered: Spring.

Degree Requirement Attributes: SOC

ANTH 74 - The Human Spectrum

Instructor: Dominy

Contemporary foraging peoples are often viewed as ecological relicts and therefore instructive models for understanding the selective pressures that gave rise to the human condition. The objective of this course is to critically evaluate this enduring concept by examining the spectrum of human interactions with tropical habitats. We will also evaluate the basis of recent popular trends - the paleo diet, raw foodism, barefoot running, parent-child co-sleeping - that emphasize the advantages of a "natural" pre-agricultural lifestyle.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ANTH 75 - Ecology, Culture, and Environmental Change

Anthropology's interest in the interactions of humans and their environments has been long-standing, especially in archaeology. In this seminar we will consider changing conceptual frameworks for understanding human-environmental interactions and long-standing debates about nature vs. culture, materialist vs. symbolic approaches, the development of cultural ecology, and the new "ecologies." We will draw on the research of archaeologists, biological and cultural anthropologists, geographers, and historians.

Degree Requirement Attributes: SOC

ANTH 76 - The Evolution of Upright Walking

This is an advanced course designed to explore in-depth both the historical and current understandings of human bipedalism. This course is reading-intensive, with an average of 5 primary journal papers assigned per meeting. We will investigate hypotheses for why bipedalism evolved, the form of locomotion bipedalism evolved from, and the fossil evidence for early hominin bipedality in the arthropithecines and australopithecines.

Degree Requirement Attributes: Dist:SCI

ANTH 77 - Origins of Inequality

Instructor: Casana

How did human societies develop such broad patterns of inequality, and what let us to accept the systems that create and reproduce inequity? Was there a time in human history when inequality did not exist or is it essential to the human condition? These questions are date back to the earliest writings on politics, history, and philosophy and remain central theoretical issues in anthropology today. This course will explore the theoretical expectations of multiple approaches to the origins of inequality, employing a comparative approach to investigations of archaeological evidence from difference societies around the world, and throughout our history as a species. Not open to students who have received credit for ANTH 057.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC

ANTH 78 - Senior Seminar: Ethics in Biological Anthropology

This upper-level course dives into the ethical issues facing biological anthropology today. This course is reading and writing intensive, and centers around respectful conversations in the classroom. Five early-career scholars will also visit the class to engage in conversation around these issues. Overall, this course explores the historical roots of contemporary ethical challenges, their current impacts, and the field's evolving visions of ethical futures.

Offered: Fall.

ANTH 85 - Reading Course

Students who would like to pursue intensive, supervised study in some particular aspect of anthropology may do so with the agreement of an appropriate advisor. The student and advisor will work out together a suitable topic, procedure, and product of the study.

At the discretion of the instructor, a student may opt to do additional work over two terms. In this arrangement, the student receives a grade of "ON" (ongoing) at the end of the term. Students do not register for the subsequent term. A final grade will replace the "ON" for ANTH-085 at the

end of the subsequent term at which time the coursework must be completed. Students are awarded one course credit for successful completion of this course, even in cases where the work extended across two terms.

Prerequisite: Written permission of the department faculty member who will be advising the student.

Offered: Fall, Spring, Summer, Winter.

ANTH 87 - Research Course

Students with an interest in research in anthropology and a particular problem they would like to investigate may do so with the agreement of an appropriate advisor. The student and advisor will work out together a suitable topic, procedure, and product of the study.

Prerequisite: Written permission of the department faculty member who will be advising the student.

Offered: Fall, Spring, Summer, Winter.

ANTH 88 - Anthropology Honors

Open only to honors seniors by arrangement with the Chair. Admission to the honors program shall be by formal written proposal only. Consult with Chair concerning the details.

Students are awarded one course credit for successful completion of this course at the end of the second term of work. Students register for ANTH 088 and receive a grade of "ON" (ongoing) at the end of the term. Students do not register for the subsequent term. A final grade will replace the "ON" at the end of the subsequent term at which time the coursework must be completed.

Prerequisite: Written permission of the department faculty member who will be advising the student.

Offered: Fall, Spring, Summer, Winter.

Art History

Chair: Nicola (Nick) Camerlenghi

Professors: A. Cohen, M. K. Coffey, K. Hornstein;
Associate Professors: A. Hockley, N. M. Camerlenghi, S. L. Kim, C. Elias; Assistant Professors: E. A. Kassler-Taub, A. Teriba; Senior Lecturers: S. E. Kangas, K. O'Rourke;
Fellow: C. Gambetta,

Consult the Department Administrator for further information (art.history@dartmouth.edu)

To view Art History courses, click here.

Requirements for the Major

Twelve courses as follows:

Prerequisite: Two courses from ARTH 1, ARTH 2, ARTH 4 or ARTH 5

Requirements:

- One Studio Art course;
- Four Art History courses, each from a different area:
 - Pre-Modern (ancient and medieval art to 1400)
 - Early-Modern Europe (1400-1800)
 - Non-Western
 - Modern and Contemporary (1800 to the present);
- One advanced seminar in Art History (ARTH 80 through ARTH 83);
- Art History Culminating Experience (ARTH 89; fall term only);
- Three other Art History courses numbered 10 or higher except 89's, 91 or 92. (A Classical Studies course [CLST 20, CLST 21, CLST 22, CLST 24, CLST 25, or CLST 26] may be substituted for one of the three other Art History courses.)

N.B.: ARTH 1, ARTH 2, ARTH 4 and ARTH 5 may serve only as major prerequisite courses.

Students planning an Art History major must first complete a Major Worksheet (available outside the Department office or on our website), which needs to be completed and then signed by the Department Chair before it is submitted to the Department Administrator. Students formally elect the major by submitting a proposed plan of courses through DartWorks, which the Department Administrator will check against the submitted worksheet. The plan will be submitted to the Registrar once it is approved by the Department.

Requirements for the Modified Major

Students wishing to declare a modified major must submit a short description of the proposed modification and a completed Modified Major Worksheet (available outside the Department office) to the Chair. If the faculty approves the proposal, the worksheet, and rationale statement must be filed with the Department Administrator, and additionally you must email the rationale statement to the Registrar. The courses making up a modified major should constitute an intellectually coherent whole. The Department will consider proposals for modifying the Art History major only if they are presented before the end of the student's senior fall term. Students formally elect the modified major by submitting a proposed plan of courses through DartWorks, which the Department Administrator will check against the submitted worksheet. The plan will be submitted to the Registrar once it is approved by the Department.

Twelve courses as follows:

Prerequisite: Two courses from ARTH 1, ARTH 2, ARTH 4 or ARTH 5

Requirements:

- Three courses in three out of four categories:
 - Pre-Modern (ancient and medieval art to 1400)
 - Early-Modern Europe (1400-1800)
 - Non-Western
 - Modern and Contemporary (1800 to the present);
- One advanced seminar in Art History (ARTH 80 through ARTH 83);
- Art History Culminating Experience (ARTH 89; fall term only);
- One other Art History course numbered 10 or higher except 89's, 91 or 92.

N.B.: ARTH 1, ARTH 2, ARTH 4 and ARTH 5 may serve only as major prerequisite courses.

- Four courses, selected in consultation with the Art History advisor, will be taken in the secondary (modifying) department(s), with whatever prerequisites they require.

Another Major Modified with Art History

Prerequisite: One course: ARTH 1, ARTH 2, ARTH 4 or ARTH 5

Requirements: Four Art History courses selected in consultation with the advisor in the primary department.

Requirements for the Minor

Six courses as follows:

Prerequisite: One or two of ARTH 1, ARTH 2, ARTH 4 or ARTH 5

Requirements: Four courses, one in each of four categories:

- Pre-Modern (ancient and medieval art to 1400)
- Early-Modern Europe (1400-1800)
- Non-Western
- Modern and Contemporary (1800 to the present)

If only one prerequisite is taken, any additional Art History course may be taken as the sixth course. An Art History seminar (ARTH 80-ARTH 83) is not required, but is strongly encouraged. *N.B.: ARTH 1, ARTH 2, ARTH 4 and ARTH 5 may serve only as prerequisite courses.*

Students planning an Art History minor must complete a Minor Worksheet (available outside the Department office or on our website), which needs to be completed and then signed by the Chair and submitted to the Department Administrator. Students formally elect the minor by submitting a proposed plan of courses through DartWorks, which the Department Administrator will check against the submitted worksheet. The plan will be submitted to the Registrar once it is approved by the Department.

For more information about how to submit a plan through DartWorks, please consult the student guide located on the Registrar's website.

Minor track in East Asian Art History

This minor provides an introduction to the art, architecture, and visual cultures of East Asia.

Six courses as follows:

Requirements:

- One of the following pan-East Asian courses:
 - ARTH 38.01: Sacred Architecture of Asia
 - ARTH 38.03: East Meets West

Any five courses from the following list:

- ARTH 32.01: 2000 Years of Korean Painting
- ARTH 32.11: Korean Art
- ARTH 32.21: Sacred Art and Architecture of Japan
- ARTH 32.22: The Japanese Painting Tradition
- ARTH 38.02: Contemporary Art of Asia
- ARTH 62.20: Modern and Contemporary Korean Art
- ARTH 62.30: Japanese Prints
- ARTH 62.81: Women, Gender and Art in East Asia
- ARTH 82.01: Arts and Culture of Korea's Last Dynasty
- ARTH 82.02: The Camera in Nineteenth-Century Asia

Students are encouraged, but not required, to include one of two advanced seminars among the five courses they select to complete their minor:

- ARTH 82.01: Arts and Culture of Korea's Last Dynasty
- ARTH 82.02: The Camera in Nineteenth-Century Asia
- ARTH 82.03: Asian Art Herstory

Minor track in Architectural History and Urbanism

For students interested in the history and theory of architecture and urbanism across geographies and time periods.

Six courses as follows:

Requirements:

-
- Introductory survey
 - ARTH 4: Introduction to World Architecture
-
- Any five courses from the following list:
 - ARTH 17.01: Rome: The Eternal City
 - ARTH 17.02: Cities of the Biblical World, An Archaeological Approach
 - ARTH17.05: Castles, Cloisters, Cathedrals
 - ARTH 26.02: Foreign Study II
 - ARTH 27.01: The Ideal City
 - ARTH 28.09: Art on the Move: Renaissance Italy and the Islamic World
 - ARTH 38.01: Sacred Architecture of Asia
 - ARTH 47.02: Modern Architecture
 - ARTH 47.03: Contemporary Architecture
 - ARTH 47.04: Architecture and the Uncanny
 - ARTH 61.71: Italian Renaissance Architecture
 - ARTH 62.71: Islamic Architecture
 - ARTH 80.02: Advanced Seminar: Domes
- Students are encouraged, but not required, to take an advanced seminar focused on architecture such as: ARTH 80.02: Advanced Seminar: Domes
- Students are encouraged, but not required, to take SART 65: Architecture 1, though this course does not count toward the six courses for the ARTH minor.

Minor track in Global Modern Art History

This minor provides an introduction to the art, architecture, and visual cultures of global modernities in their historical, geographical, and theoretical dimensions.

Six courses as follows:

Requirements:

-
- One of the following survey courses:
 - ARTH 2: Introduction to the History of Art II
 - ARTH 5: Introduction to Contemporary Art
-

Four of the following courses, divided between at least three different geographic areas of focus (Europe, Americas, Asia):

- ARTH 28.05: Art & Society in the Age of the Rococo
- ARTH 28.06: European Art in the Age of Revolution (1750-1850)
- ARTH 31.02: Art and Industry: The Visual and Material Culture of South Asia, 1800 to present
- ARTH 40.01 American Art and Identity
- ARTH 40.02: The American Century: Modern Art in the United States
- ARTH 40.03: Twentieth Century Art from Latin America
- ARTH 40.04: Mexicanidad: Constructing and Dismantling Mexican National Identity
- ARTH 41.01: Modernism and Modernity: Art in late nineteenth-century France
- ARTH 41.02: Twentieth Century Art in Europe, 1900-1945
- ARTH 41.03: European Art 1750-1850
- ARTH 47.01: Building America: An Architectural and Social History
- ARTH 47.02: Modern Architecture
- ARTH 48.02: Histories of Photography
- ARTH 48.03: The Arts of War
- ARTH 48.04: Women in Art
- ARTH 48.05: Satire: Art, Politics & Critique
- ARTH 62.20: Modern and Contemporary Korean Art
- ARTH 62.30: Japanese Prints
- ARTH 62.81: Women, Gender and Art in East Asia
- ARTH 63.01: Mexican Muralism
- ARTH 63.12: When Media Were New
- ARTH 63.13: Bad Art!
- One advanced modern seminar in art history (in the range of ARTH 80 and higher) or ARTH 89 (Senior Seminar in Art Historical Theory and Method)

Students planning an Art History minor must complete the relevant Minor Worksheet (available outside the Department office or on our website), which needs to be completed and then signed by the Chair and submitted to the Department Administrator. Students formally elect the minor by submitting a proposed plan of courses through

DartWorks, which the Department Administrator will check against the submitted worksheet. The plan will be submitted to the Registrar once it is approved by the Department.

For more information about how to submit a plan through DartWorks, please consult the student guide located on the Registrar's website.

Advanced Placement

The Department does not award course credit to students who have taken the high school Advanced Placement course in Art History. However, an Art History major or minor who has achieved a grade of 5 in this course may substitute two appropriate mid-level Art History courses for the two introductory-level courses (ARTH 1, ARTH 2, ARTH 4 or ARTH 5) required as prerequisites for the major or minor. The substitute courses must be chosen in consultation with a faculty advisor.

Honors Program

To be eligible for the Honors Program, a student must have achieved by the end of the junior year a 3.2 general College average and a 3.4 average in all Art History courses. A candidate for admission to the Honors Program must, in either the spring preceding or in the fall of the senior year, consult with a potential faculty adviser and submit a written and in-person presentation to the whole Art History faculty of the proposed Honors project. Admission or non-admission to the Honors Program will subsequently be determined by a vote of the faculty. The Program will consist of an advanced project of study under ARTH 91-ARTH 92 (only one of which may be counted as part of the major, under "other"), taken during two consecutive terms in the senior year.

Students are strongly encouraged to initiate discussion with an appropriate faculty adviser as early as possible in the junior year.

The Art History Department oversees funds intended to underwrite research for honors projects in the Department. For information see the Department Administrator.

Foreign Study Program

In order that students may have an opportunity to study art history in direct contact with original works of art, the Department conducts a Foreign Study Program during the spring term of each academic year. Based in Rome, one of Europe's richest artistic centers, with a continuous evolution from antiquity to the present, the program examines the monuments of the city, their creators, their patrons, and their various audiences. This program is open to all students.

There are two prerequisites for the Art History FSP: Italian 1 (or its equivalent) and Art History 1. In addition, Art History 2 is highly recommended. While in Rome, students

are enrolled in ARTH 26.01 and ARTH 26.02 or ARTH 26.04 and ARTH 26.05 depending on the instructor (both of which may be counted toward the major and/or minor, but only one of which fulfills a departmental distributive), and ARTH 26.03, which is the equivalent of Italian 2. Interested students should contact Professors Hornstein or Camerlenghi as early as possible in their academic careers.

Transfer Credit

Transfer credits will be granted only to majors, modified majors, and minors in the Art History Department. Majors are limited to two transfer credits, only one of which can fulfill a departmental distributive requirement. Modified majors and minors are limited to one transfer credit, which cannot fulfill a departmental distributive requirement. The Art History Department does not grant transfer credit for courses on topics related to those we teach. Applications for transfer credits must meet all of the requirements stipulated by the Registrar. Before requesting transfer credit, students must submit a copy of the syllabus of the course they intend to take to the Chair of the Art History Department.

ARTH - Art History Courses

ARTH 1 - Bodies and Buildings: Introduction to the History of Art in the Ancient World and the Middle Ages

Instructor: Camerlenghi, Kangas

A study of basic problems and new directions in the understanding of architecture, sculpture, and painting in Europe and the Middle East from the earliest times to the end of the Middle Ages. The course introduces the student to the language of art criticism and method, as well as the relationships of the arts to each other and to their historical contexts. Special attention is given to the human body and visual narrative.

Offered: Fall.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 2 - Introduction to the History of Art II

A survey of art and architecture from 1500 to the present. The course introduces the student to the basic terminology of the arts, the language of stylistic criticism, and the relationship of the arts to each other and to their historical

background. ARTH 1 is not prerequisite to ARTH 2. Priority for enrollment is given to first- and second-year students.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 4 - Introduction to World Architecture

Instructor: Camerlenghi; Teriba

A comparative study of several architectural styles past and present, Western and Non-Western. Consideration will be given to a variety of building types ranging from the monumental to the residential.

Degree Requirement Attributes: ART

ARTH 5 - Introduction to Contemporary Art

Instructor: Coffey, Elias

This course introduces students to contemporary art practices from the late 1960s up to the present. It is focused thematically around key concepts such as: the body, identity, postmodernism, institutional critique, site-specificity, memory, ecology, and ethics, among others. Class periods will be organized around key-works/figures with attention paid to understanding not only different trends and currents in global contemporary art practice, but also the different kinds of scholarship we can use to unpack, situate, or contest its claims. Moving across a wide range of media and techniques/formats of display, this course will offer students critical tools for analyzing a range of visual media including: painting, video, film, photography, performance, and land art.

Offered: Winter.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 7 - Art History First Year Seminars

Instructor: Cohen, O'Rourke

Consult Special Listings

Offered: Spring, Winter.

ARTH 10.01 - The Art of Ancient Egypt and the Ancient Near East

Instructor: Kangas

A study of architecture, sculpture, and painting in the Near East and Egypt from prehistory through approximately the first millennium B.C.E. The course aims at a parallel treatment of the Egyptian and various Near Eastern civilizations, especially those that developed in or around modern Turkey, Israel, and Iraq. Special attention will be paid to the cultural contacts among different ancient centers at key moments in history, as conjured up by individual monuments.

May be taken in partial fulfillment of the major in Classical Archaeology and the major in Classical Studies.

Cross-Listed as: MES 16.41

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 10.02 - Art and Archaeology of Israel

This course will examine the archeology of Israel from prehistory through the early Roman period, with emphasis on cultural interactions and their material manifestations. Ancient Israel was a crossroads where many different cultures met. Home to Canaanites and Israelites, Israel successively experienced the cultural and artistic impact of Egyptians, Assyrians, Greeks, and Romans, who either invaded this region or came into contact with it through a variety of more peaceful processes.

Cross-Listed as: JWST 41

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 10.03 - Art in Egypt

Instructor: Kangas

Mummies, pyramids, curses and death, these are some of the images and associations that one conjures up with the mention of ancient Egypt today. Ancient Egyptian civilization is an endlessly fascinating field for intellectual inquiry and debate, the subject of spectacular museum displays, as well as a source of inspiration for various reenactments in literature and film. The modern attraction for Egypt has its origins in Napoleon's invasion of the country in 1798, and later, and more profoundly, in the 1922 discovery of the tomb of king Tutankhamen in the Valley of the Kings. However, already in the ancient world, the Greeks and Romans expressed fascination for the monuments and the civilization of Egypt, primarily as they experienced its material culture through travel and other cultural exchanges. In this course we will study key works of art and architecture in ancient Egypt as well as explore some important instances in the subsequent reception of Egyptian monuments, history, and mythology.

Cross-Listed as: MES 16.42

Offered: Winter.

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 11.01 - Art in Ancient Greece: Temples, Gods, Heroes

Instructor: Cohen

This course treats chronologically the history of Greek art from its beginnings in the Bronze Age to the end of the fifth century B.C.E. The principal monuments of architecture, sculpture, and painting will be examined in terms of style, theme, and context. We will explore how Greek art came to serve Greek society, while some attention will also be given to the ways in which the classical tradition has persistently served later cultures.

May be taken in partial fulfillment of the major in Classical Languages and Literatures, the major in Classical Archaeology, and the major in Classical Studies.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 11.02 - Alexander to Cleopatra: Art in an Unsettled World

Instructor: Cohen

This course examines the principal works of architecture, sculpture, and painting in the Greek world, from the fourth through the first centuries BCE., a period of significant political and art-historical change and innovation. In the reign of Alexander the Great, Greek culture expanded beyond its borders to encompass Egypt and Western Asia. Particular emphasis will be given to important discoveries associated with the court of Alexander, his father Philip II, and some of his best-known successors, including the last one: Cleopatra of Egypt.

v

Open to all classes.

May be taken in partial fulfillment of the major in Classical Languages and Literatures, the major in Classical Archaeology, and the major in Classical Studies.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 12.01 - Roman Art

Instructor: Kangas

This course explores key works of architecture, sculpture, painting, and decorative arts in the Roman world from the sixth century B.C.E. through the third century C.E. Such issues as the influence of the Etruscan and Greek traditions, stylistic change and its determinants, and the role of art in Roman society will be considered in relation to both the great public monuments of Republican and Imperial Rome and works made for private individuals.

Gothic Art and Architecture"

Offered: Winter.

ARTH 12.02 - Roman Architecture

Architecture played a central role in ancient Rome's ascent to imperial world power. Buildings like bathhouses, aqueducts and villas built around the Mediterranean basin helped spread Roman culture across both time and space; temples and shrines assured that Romans everywhere could pray to a common roster of gods; likewise, roads connected the cosmopolitan cities of the empire. In this class, we will look at the variety of built types, construction materials and building techniques that the Romans adopted from about 500 BC to 400 AD.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 13 - Early Christian Art

A study of painting, sculpture, architecture, and the minor arts in the Mediterranean from the third through seventh centuries. Emphasis will be placed on the role of art in late antique society, especially in the process of transformation from the classical to the medieval world.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 13.01 - Early Medieval Art

Though the 8th-11th centuries are often erroneously known as the "Dark Ages," this course will explore the vibrant life in the emerging northern Europe of Charlemagne and William the Conqueror. Evolving methods of societal organization and identity through religion, nationhood and the cult of personality will be examined through the art and architecture of the period.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 14 - Byzantine Art

A study of painting, sculpture, architecture, and the minor arts of Byzantium from the period of Iconoclasm to the fall of Constantinople. Emphasis will be placed on the use of art during this period to express the beliefs and goals of the church and the state to satisfy private devotional needs.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 15.01 - Gothic Art and Architecture

Characterized by rising urbanism, a growing middle class and developed political states, the Gothic period combines elements of medieval and early modern worlds. This course will explore the influence of new patrons and institutions on the era's art, the art's reflection of the period's religious and political reality, and the popularity of new, more secular subject matter. The works covered will encompass both massive public projects, such as Chartres Cathedral, and the personal, private taste found on ivory mirror backs.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 17.01 - Rome: The Eternal City

Instructor: Camerlenghi

No city in the world has an urban fabric so rich in historical layers as Rome. This course surveys the topography and urbanism of Rome from its origins to the present. While the immediate goal will be to study the city of Rome, the larger goal will be to provide a conceptual framework with which to consider the power and function of cities.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 17.02 - Cities of the Biblical World, An Archaeological Approach

The city has always been the center for social and economic activity in all complex societies, as well as a locus for innovation and change. This is no less true for the ancient cities of the biblical world, whose rich, multi-cultural environments not only shaped but also often transformed the identities of their inhabitants. The subject of this course will be the investigation of those key places where Jewish and later Christian identity was formulated and where their early history unfolded. We'll explore and pay special attention to those cosmopolitan centers where Jews interacted with other ancient peoples of the Middle East and eastern Mediterranean.

Cross-Listed as: JWST 41.03

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 17.05 - Castles, Cloisters, Cathedrals

Instructor: Camerlenghi

This course explores the origins and development of architecture during the Middle Ages (roughly from the fourth to the fifteenth century). While generally arranged chronologically, some classes will focus on themes such as the role of architects and patrons, the influence of pilgrims and monks as well as the cross-cultural impact of Islamic and Byzantine architecture on the buildings of medieval Western Europe. Not only will we explore the people and institutions that commissioned the great buildings of the Middle Ages, but also we will explore how these structures were built. Finally, as an instance of experiential learning, we will take some initial steps toward reconstructing a medieval building on the Dartmouth campus in order to understand the fundamental principles informing medieval buildings.

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 17.06 - The Arts of the Middle Ages

Instructor: Camerlenghi

This course explores the origins and development of medieval art and architecture across Western Europe. While arranged as a chronological survey, the lectures will focus on the role of artists, architects and patrons, the influence of pilgrimage and monasticism, and the cross-cultural impact of Islamic and Byzantine influences on the arts of medieval Europe.

Offered: Winter.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 18.01 - Ancient Art and Myth

Instructor: Cohen

Rich and suspenseful, ancient mythology holds a central place in our imagination. One thinks of myths as a series of definitive plots, but art reveals all sorts of interpretive disagreements. Ancient art did not just illustrate mythology but participated in its construction. This course considers the notions of myth and visual story-telling from a theoretical perspective; briefly explores mythological narrative in the ancient Near East and Egypt; and focuses on myth-making in Greece and Rome.

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 19.01 - Fragments of Medieval Art: The Dartmouth Rose Window

Instructor: Camerlenghi

This course capitalizes on the extraordinary presence of a medieval stone rose window at the Hood, which has been in storage since the 1970s. The course culminates in an exhibition about the rose window scheduled to open at the Hood during Winter 2025. Students will gain experience in the multi-faceted aspects of organizing an exhibition of architectural fragments, including object selection, research using primary and secondary sources, exhibition design, catalog writing, public-facing aspects like wall labels, and even hi-tech material analysis and digital scanning of the stone objects themselves. In terms of the rose window itself, students will learn about its meaning, materials, and its function in the Middle Ages, when many such features were added to buildings.

Degree Requirement Attributes: Dist:ART

ARTH 20.01 - Michelangelo

Michelangelo Buonarroti, called "Il Divino" in his own lifetime, was the dominant practitioner of painting, sculpture and architecture in sixteenth-century Italy. This course will focus on Michelangelo's most famous creations in the light of recent restorations and new scholarship. Finally, we will look at the intersection of his visual works with his biography: how these works relate to Michelangelo's creation of his own image, chiefly through the works of his biographers Vasari and Condivi.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 20.02 - Lifelikeness, and Artifice, the High Renaissance and Mannerism

A study of the major monuments of painting and sculpture in Italy during the sixteenth century. The course surveys the idealism of the High Renaissance (beginning with Leonardo da Vinci, Michelangelo, and Giorgione) and then traces the development of Mannerism and Maniera in the work of such artists as Pontormo, Bronzino, and Tintoretto. The art of the reformers at the end of the century is also considered, especially as it looks forward to the Baroque.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 20.03 - Southern Baroque Art

A survey of painting and sculpture from 1600 to 1700. This course focuses upon the art of Caravaggio and his followers in Italy and Spain; the Carracci and the development of seventeenth century classicism; Bernini and the High Baroque; and the art of French visitors to Italy. Special emphasis is given to the relation that the painting and sculpture of this time has to seventeenth century poetry, theatre, science and the aims of the reformed Catholic Church.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 20.04 - Faith and Empire: Art in the Early Modern World

When the Iberian mariner Ferdinand Magellan landed in the Philippines, he brought with him two Flemish sculptures. Presented to the recently converted governor of the island of Cebu, these sculptures both centered Christian worship in the South China Sea and staked a claim for Spanish colonization. This course examines the role of art and objects, like Magellan's gifts, that stand at the intersection of religion and colonial ambitions across the early modern world (ca. 1550-1750). Set against the social, political, and devotional contexts of the period, this course explores the transcultural development of the arts across media. In this discussion-based seminar, students will engage with readings that explore early modern art in Europe and its empires. Working directly with the collections of the Hood Museum and other campus resources, students will also learn object-based approaches to art history. Particular attention will be given to material culture, sculpture, decorative arts, and printmaking. Additionally, students will encounter theoretical discourses on exchange, hybridity, hierarchies, and collecting. This seminar will highlight the Dutch Republic, the Habsburg Empire, and their colonies in the Americas, Asia, and Africa. Each week of the seminar will examine themes including: the global circulation of images; the development of national identities; trade in materials; objects as agents of conversion; and conceptions of race. Finally, this course will examine the place of religion and imperialism in the development of collections and museums. As a final project, students will organize an exhibition at the Hood Museum of Art related to the course topic.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 21.01 - Northern Renaissance Art

A survey of the major monuments of painting, sculpture, and the graphic arts in the Low Countries, Germany, and France, from the late fourteenth century through the Reformation. Content as well as style is examined in the light of its relation to social transformation and the cultural evolution of the period. Emphasis is placed on the work of such significant personalities as the van Eycks, van der Weyden, Bosch, Bruegel, Grünewald, Dürer, and Holbein.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 21.02 - Northern Baroque Art

Painting in Flanders and Holland from 1600 to 1700. This course considers the naturalistic tradition from Caravaggio's northern followers to the Haarlem School of Hals; the art of Rembrandt; the classical genre of Vermeer and the Delft School; Rubens and the Flemish High Baroque. The growth of specialized genres of painting and the differing aesthetic aims of Dutch and Flemish painters are viewed against the background of the Protestant reformation and the rise of a mercantile society.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 21.03 - Rembrandt

Rembrandt van Rijn was Holland's preeminent artist in the seventeenth century. This course considers Rembrandt's extraordinary achievements as an etcher, focusing especially on the artist's highly imaginative and experimental use of the etching medium, the broad range of subjects and expressive power of the prints, as well as the functions the prints served in Rembrandt's time. All our classes will make use of the Hood Museum's superb collection of Rembrandt prints, thus allowing students to do first-hand study of the artist's original works.

ARTH 22.01 - Velazquez and the Spanish Baroque

Diego Velazquez, sometimes called the prince of painters, was Spain's preeminent artist in the seventeenth century. This course considers his achievements as a painter, his aspirations as a courtier and gentleman, and his remarkably privileged association with his patron, King Philip IV. The class will study in depth many of Velazquez's key works and examine how he challenged previous notions about the nature of representation, and simultaneously sought to demonstrate the "nobility" of painting.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 26.01 - FSP: The History of Art in Rome

Instructor: Hornstein

The History of Art in Rome. This course entails the on-site examination of mosaics, paintings and sculptures of particular art historical interest. The approach will be thematic, with emphasis falling on major issues within the History of Art. These may include narrative, iconography, social history, gender, perception, patronage, and formal analysis.

Offered: Spring.

Degree Requirement Attributes: Dist:ART

ARTH 26.02 - FSP: Early Modern Architecture in Rome

Instructor: Hornstein

Architecture and Urbanism in Rome. Rome offers a broad array of building types, architectural styles and urban spaces. This course introduces students to the principles of architectural analysis, while simultaneously plotting out a history of Roman architecture and urbanism. The course will begin with the study of ancient architecture. It will, however, focus on the evolution of architectural practices and forms during the late Middle Ages, Renaissance, and Baroque.

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 26.03 - FSP: The Language and Culture of Rome

Instructor: Hornstein

The Language and Culture of Rome. This course aims at expanding students' knowledge of Italian language and culture. It begins with a review of basic verb forms and moves on to explore new tenses and moods. Throughout, students engage in practical exercises geared to improve their oral and written expression, as well as enhance their vocabularies. All classes will be conducted in Italian. Note that this course may not be counted as part of the Art History major. Not open to students who have received credit for ITAL 002.

Offered: Spring.

Degree Requirement Attributes: Dist:ART

ARTH 26.04 - FSP: The Architecture and Urbanism of Rome

No site offers the same enduring importance for Western history and culture as the city of Rome. As a secular and spiritual capital, it bears evidence to three millennia of human ambitions and evolving patterns of social and political organization. Its topography is a vast archive, which we will engage through lectures, discussions, group projects, movies and by immersing ourselves into the city itself. This course surveys the topography and urbanism of Rome from its origins to the present. While the immediate goal will be to study the city, the larger goal will be to provide a conceptual framework with which to consider the power and function of cities—one of humanity's most important inventions. We will ponder such essential questions as: why and how did cities like Rome arise and change over centuries? What social, cultural, topographic forces push and pull at a city's built fabric? How were individual structures, public spaces, and neighborhoods built to respond to such forces?

ARTH 26.05 - FSP: Early Modern Art in Rome

This course examines the visual arts of Rome in the Early Modern period, a period marked by a revived interest in

naturalism. This revival was inspired by Classical Antiquity and had wide-ranging implications. We shall address the social and historical context of artworks in an exciting time that also saw the invention of printing, a change in the status of the artist, and a shift in perception on the part of the beholder. Among the related themes to be studied are materials and techniques; style and influence; religious and mythological iconography; and patronage and collecting.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 27.01 - The Ideal City

Instructor: Kassler-Taub

This course explores the Renaissance phenomenon of the "ideal city" – its origins, successes, and spectacular failures. During the fifteenth and sixteenth centuries, major artists and architects like Leonardo da Vinci participated in a radical experiment that transformed how urban spaces were designed, represented, and built. The Renaissance city was reinvented as a utopia, featuring straight processional avenues, a rigid street plan, and monumental sculptures inserted into public squares like props on a stage. We will consider a wide range of case studies, from fictional cities imagined in the pages of sketchbooks to new cities and towns that were built from the ground up. Throughout, we will question how architects exploited the basic infrastructure of daily life – roads, gates, walls, squares, and even sewage systems – to perfect their environments. How were those principles used to promote civic virtue and good governance or to reinforce social hierarchies and absolutist rule? We will make frequent visits to the Rauner Special Collections Library to work directly with rare books. The course requires no prior knowledge of art history, architecture, or the Renaissance.

Degree Requirement Attributes: Dist:ART

ARTH 27.02 - Living Stone: Sculpture in Early Modern Italy

Instructor: Kassler-Taub

Early modern sculptors like Michelangelo and Bernini pushed the boundaries of their craft, blurring the line between illusion and reality. Through bold experiments, marble was transformed into flesh, bronze into fluid fabric, and stucco into weightless clouds. The labor of chiseling, casting, modeling, and carving became a testing ground for larger debates in the arts. What is the relationship between the 'dirty work' of sculpture and artistic inspiration? Can an artist truly imitate a living, breathing body? This course will consider major changes in how sculpture was designed, experienced, and understood between the years 1400 and 1800. Our focus will be on artists and workshops in Italy with comparisons to other geographies. Topics to be considered include: originality and the sculptural copy; urban sculpture and fountains; the monumental and the

miniature; gender, sexuality, and the sculpted body; materials and materiality; and theories of enlivenment.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 27.03 - Building Boom: Architecture and Urbanism in Early Modern Italy

Instructor: Kassler-Taub

Across early modern Italy, architects and engineers broke ground on construction projects that transformed cities like Rome, Florence, Venice, and Naples into bustling urban centers. New building technologies and design innovations yielded monumental palaces, soaring devotional spaces, and vast streets and squares. This building boom was fueled by the consolidation of political and economic power in the hands of ambitious patrons for whom architecture was a vehicle of self-fashioning. This course explores Italian architecture and urbanism between the fifteenth through eighteenth centuries, with a focus on the socio-political and cultural dynamics that shaped the theory and practice of building. Subjects to be considered include treatises and the architectural book, building as propaganda, villa culture, and designs for the stage. The course will include frequent visits to the Hood Museum of Art and the Rauner Special Collections Library.

Offered: Fall.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 28.01 - The Global Renaissance

Instructor: Kassler-Taub

The movement to globalize the field of art history has dramatically changed how we understand the phenomenon traditionally called “the Renaissance.” This course gives students an opportunity to question how the European canon of Renaissance ‘masterworks’ was constructed, and what it overlooks. By expanding beyond the Italian centers of Florence, Rome, and Venice, we will take a global approach to the visual and architectural culture of the fifteenth and sixteenth centuries. Each week will consider a region typically marginalized in Renaissance studies – including the Americas, Africa, and Asia – to explore how trends in art making and architectural design evolved across distant geographies. How do the dominant narratives of exploration, discovery, and invention intersect with the histories of colonialism, slavery, and economic upheaval? How did diverse local practices, identities, and voices leave their mark on the period? Throughout, we will consider topics such as: the exchange of models, techniques, and materials between foreign workshops; theories of circulation and exchange; and the relationship between so-called artistic ‘centers’ and their peripheries.

Degree Requirement Attributes: Dist:INT or ART; WCult:W

ARTH 28.03 - Vision and Reality: The Art of Northern Europe in the Fifteenth Century

The fifteenth century in northern Europe is an amalgam of influences that form our idea of the modern. The concerns and styles of the Late Gothic are present, mixing with new forms of technology, such as printing or the perfection of oil painting techniques. The weakened grip of the Church contributes to the emerging emphasis on the individual that characterizes Early Modern art. The fifteenth century sees the rise of secular art, the concept of objective realism, the development of panel painting, the commercialization of prints, and the beginnings of independent portraiture. My goal is to give you the knowledge and skills that will enable you to understand and appreciate the nuances and complexity in fifteenth-century artworks wherever you encounter them. In addition to the mastery of scholarly materials, you will work on reading visual culture, practicing your writing skills and perfecting your oral communication. Our focus will be on reception, context and invention.

Degree Requirement Attributes: Dist:ART

ARTH 28.04 - Reform and Response in Sixteenth-century Northern Europe

In 1517 Martin Luther nailed the 95 Theses to the door of the castle chapel in Wittenberg. That act was the culmination of decades of frustration with an established Church that, to many believers, had lost its way. What followed was a European debate for the very souls of men. The Reformation brought into question the assumptions by which most Europeans had lived—that the Church’s teachings, personal good actions, and Christ’s sacrifice could insure their salvation. Using the printing press and artworks, both sides presented their positions in propagandistic language that could be both bombastic and subtle. We will look at this central event in the shaping of free will, and how it played out in the art created in Northern Europe at that time.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 28.05 - Art & Society in the Age of the Rococo

Instructor: O'Rourke

This course explores the transformative period in European art and culture between 1700 and 1800, when the playful decadence of the Rococo gave way to the morally purified art of Neoclassicism. We will study the “high arts” of painting, sculpture & architecture in the context of an expanded realm of visual culture, including interior design and decorative objects, clothing and fashion, hairstyles and luxury goods, the art market and the print trade. We will investigate the political and social uses of art at the time paying special attention to alternative discourses of power spoken through fashion, gesture and influence. We will examine court culture, the new public sphere, the growth of the middle class, the Grand Tour, the expanded

role of women in the 18th century as patrons and artists, and the socio-political changes leading up to the French Revolution. Artists include Hogarth, Watteau, Boucher, Kauffman, Reynolds, Adam, Greuze, among others.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 28.06 - European Art in the Age of Revolution (1750-1850)

Instructor: Hornstein

Visual arts were transformed in the second half of the eighteenth and first half of the nineteenth century by dramatic upheavals in social, political and cultural life. In addition to taking account of stylistic movements such as Rococo, Neo-classicism and Romanticism, we will devote our attention to relationships between artistic and social change, political and institutional pressures upon artists, changing ideas of art's purpose and audience, and artists' shift to direct engagement with modern life.

Offered: Fall.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 28.07 - Outsiders: Artists and Art in Text and Film

Instructor: O'Rourke

In our modern age, art and artists have been considered as different, outside of the mainstream, inspired by genius or madness. Was this always true and how did it come about? This course will explore writings and films on artists and the art world, looking at literature, biography, manifestos, criticism, and popular culture. We will study the genre of the exhibition (solo show and/or blockbuster) to identify how the museum or gallery is involved in this narrative of individual genius. From Pliny to Warhol and beyond, we will examine our continuing notions of what art is and has been and how art and artists have been written about for centuries.

Cross-Listed as: COLT 61.01

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 28.08 - Crisis and Invention: Early Modern Art in Italy

Instructor: Kassler-Taub

In workshops and studios across early modern Italy, artists confronted a rapidly changing world. With a focus on the years between 1400 and 1700, this introductory course explores the dynamics that gave the arts new urgency. Using a diversity of objects as a guide – from viral prints to colossal sculptures – we will consider the role of art in shaping and responding to political, cultural, and social crises. Throughout, we will question how figures like Leonardo da Vinci, Michelangelo, Titian, Caravaggio, and Bernini manipulated materials and theorized artistic

invention. The course includes frequent visits to the Hood Museum of Art.

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 28.09 - Mobility in the Early Modern Mediterranean

Instructor: Kassler-Taub

In early modernity, innovations in art and architecture moved freely between the Italian and Islamic worlds, creating a shared language that crossed cultural and geographical boundaries in the Mediterranean. This introductory course will focus on exchanges between urban centers such as Venice, Florence, and Pisa and the Mamluk Sultanate, the Safavid Empire, and the Ottoman Empire in the fifteenth and sixteenth centuries. We will consider a wide range of case studies, from traveling artists and architects in foreign courts to the appropriation of objects, monuments, and histories. Throughout, we will question how transcultural mobility developed against a backdrop of military strife, political rivalry, and religious tension. The course includes frequent visits to the Hood Museum of Art.

Cross-Listed as: MES 18.02

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 28.10 - Fashion in Art: Dress, Identity and Power

Instructor: O'Rourke

This course will examine clothing and fashion in art over the centuries to explore overt and hidden messages regarding power, gender, and status contained within costume over time and still today. We will study the external, clothed body as represented in high and popular art in relation to a performance of the self and the unconscious categorizations of gendered, sexed, and classed positions. We will investigate how clothing and ornament can reinforce or challenge gender norms, ideologies of power, and insider/outsider status. The course will focus on a broad time frame and explore different media and modes of image distribution.

Offered: Spring.

Degree Requirement Attributes: Dist:ART

ARTH 29.06 - Slow Looking Intensive in Paris Art Museums

Instructor: Hornstein

This innovative course immerses students in three weeks of "slow looking" at works of art in Paris museums, whose galleries of painting, sculpture, works on paper, and decorative arts will serve as our primary classrooms.

Offered: Fall.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 31.01 - Arts of South Asia

This course introduces 2000 years of the art of the Indian subcontinent, from the Indus Valley in the 2nd century BCE, and moves chronologically to the present day. Topics cover the sculpture and architecture of Buddhism and Hinduism, painting and architecture of Islamic courts, colonial and national period visual culture, and post-partition Indian and Pakistani modern and contemporary art. In this course, you will be taught to look at, think about, and engage in critical discussions of the visual arts of South Asia. Our class lectures and discussions will focus on the formal and material aspects of architecture, epigraphy, sculpture, painting, calligraphy, photography, and print, as well as the historical contexts in which these works were made and understood.

Cross-Listed as: ASCL 52.03

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 31.02 - Art and Industry: The Visual and Material Culture of South Asia, 1800 to present

This course examines the relationship between art and industry through the visual and material culture of South Asia from 1800 to the present. The first third of the course will focus on the colonial discourse of art and economy, and the fear that industrial production would destroy indigenous craft and design. This instigated a colonial system of education, and the creation of museums, that taught both the European 'fine arts' of painting and sculpture, and the Indian 'applied arts' of craft and design in practice and in objects. The second third of the course will attend to specific media as physical and intellectual conduits in the economy. We will discuss the explosive effect of the technologies of print and photography in colonial control and nationalist agitation. We will also examine the materiality of textiles, clay, wood, metal, plastic, paper, and food in their production, exhibition display, and cultural and political context. The last third of the course will focus on modern artists' considerations of art and craft, the formation of national museums, and the contemporary art market. In parallel to the attention to visual and material objects, we will read selections from primary sources on art and industry, such as George C. Birdwood's *Industrial Arts of India* (1880), *The Journal of Indian Art and Industry*, Mahatma Gandhi's *Hind Swaraj* (1909), and K. G. Subrahmanyam's *Eclecticism* (1992).

Degree Requirement Attributes: Dist:INT or ART; WCult:NW

ARTH 31.03 - Arts of Islam

This course is intended to introduce the arts of Islam during a period of dynamic cultural and political change in the Islamic world. It attempts to instill in the student a

broad awareness of the diversity and the main achievements of Islamic architecture from the beginnings of Islam to the present day. It begins with a basic outline of Islamic material culture in its early and 'Classical' periods, from ca. 650 through to the art of the nation-state in the twentieth century. This period saw the initial formation of an Arab empire stretching from the Atlantic to the Indian Ocean, a decline in centralized authority, and the rise to political prominence of various North African, Iberian, Iranian, Central Asian, and South Asian dynasties. These political developments are reflected in the increasingly diverse and dynamic nature of Islamic material culture over this period. The topics have been chosen to stress a dialectic between continuity with earlier artistic traditions and the dynamics of transformation and innovation that led to the creation of distinctive regional and transregional visual vocabularies.

Cross-Listed as: MES 18.04

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 31.04 - Collecting Islamic Art

Recent interest in the historiography of Islamic art has been on scholarship, museums, and collecting from the mid-nineteenth through the mid-twentieth century, the formative period for this field. Exploring a diverse range of collecting practices, this course aims to elaborate on key questions that inform our understanding of Islamic art and its peoples - How and why did these objects enter museums and private collections? What circumstances of this particular period engendered such an interest in Islamic art? What kind and quality of objects entered collections? Who were some of the individuals who played a role in the collecting, exhibiting, and framing Islamic art in the Western world? In short, what or who were these early tastemakers, and what taste did they mold? The approach to examining collections, collecting patterns, and special exhibitions will be comparative, drawing on collecting practices in both modern museums and precolonial collections in Europe and within the Muslim world.

Cross-Listed as: MES 18.05

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 31.05 - Art of the Book: Y1K-Y2K

This class is designed to introduce students to the book as an object and a technology. Some themes include the history of reading, the impact of printed books, increased literacy and censorship, encyclopedias, the transmission of books as fragments, collecting practices and libraries, and feminist book history. The class takes a comprehensive historical and global approach, exploring the artistic and cultural developments in Europe, the Americas, Africa, and Asia from the medieval period to the contemporary era. Throughout the course, you will examine religious and secular artifacts encompassing an extensive range of

imperial and market-produced manuscripts, intricately calligraphed and illustrated books, and other three-dimensional objects. Over the semester, you will have the advantage of working with many “real” examples of books, manuscript fragments, paintings, and objects from Dartmouth’s Rauner Special Collections Library. The course also consists of workshops on producing the book’s physical materials: paper making, quills, pigment and ink recipes, printing, and bookbinding. Studying the processes of book creation will provide you with a deeper understanding of how books have influenced culture and how cultural developments have shaped their evolution. Class meetings will be held in various formats, combining lectures and class discussions with hands-on workshops and studying rare books.

Degree Requirement Attributes: Dist:ART

ARTH 32.01 - Two Thousand Years of Korean Painting

Instructor: Kim

This course explores Korea’s long painting tradition from the earliest petroglyphs to the 21st century. We will look at Goguryeo mural paintings, Goryeo Buddhist Paintings, and Joseon landscapes, portraits, genre, and folk paintings, as well as Korea’s modern and contemporary art, including North Korean propaganda posters. We will ask questions like: How have Korean paintings reflected changes in religious beliefs, political ideology, and material culture? What quintessential aesthetic values (if any) are found in Korean painting? How much does contemporary “global” Korean painting contain the legacy of the Korean painting tradition?

No previous knowledge of Korean art is required.

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 32.11 - Introduction to Korean Art

Instructor: Kim

This course will introduce the arts and culture of Korea from the prehistoric period through the twentieth century. Significant examples of painting, ceramics, sculpture, and architecture will be closely examined in their political, social, and cultural contexts. We will explore how East Asian motifs were incorporated into traditional Korean art. We will see how Korea struggled to find its artistic identity within the international context during the 20th century.

Cross-Listed as: ASCL 62.07

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 32.21 - Sacred Art and Architecture of Japan

Instructor: Hockley

This course examines Shinto and Buddhist architectural, sculptural, painting and print traditions from the prehistoric to the modern era. The primary emphasis will be on the relationship of these arts to their doctrinal sources and the

ritual, social, and political contexts in which they were created and utilized.

Offered: Winter.

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 32.22 - The Japanese Painting Tradition

Instructor: Hockley

This course provides a comprehensive introduction to the Japanese painting tradition. Surveying a broad range of themes, formats, and styles and exploring the relationship between indigenous sensibilities and the traditions Japanese artists borrowed from continental Asia and the West, it defines the unique aesthetic experience offered by Japanese sacred and secular painting. Its focus on patronage and studio practice emphasizes the social, political, and cultural processes that underscored important developments in the painting tradition.

ARTH 33.01 - African Art (Survey)

This course is designed to introduce undergraduate students to African art in the twentieth century. It charts the development and dimensions of artistic expressions and cultural production in Africa from the colonial period to the contemporary. By looking at various case studies comparatively, the course explores the intersection of developments in artistic practice and identity, and cultural production, and sweeping changes in the political, social and economic spheres in Africa. It considers the effects of colonialism, postcolonial conditions, neocolonialism, economic liberalism, and globalization on cultural production and artistic practice. Following a chronological format, it will attempt to cover the different sub-regions of the continent but draws substantial amount of examples from sub-Saharan Africa.

ARTH 34.01 - Arts of Tibet: Sacred Abode of the Himalayas

This course surveys the art and culture of Tibet from the time of the introduction of Buddhism in the seventh century to the modern period. Traditionally understood as the divine abode of Avalokitesvara, the bodhisattva who embodies the compassion of all buddha in Buddhist cosmology, Tibet was also fantasized as the immortal realm of “Shangri-la” by western interpreters. In this course, we will begin by examining the imagination and representation of Tibet and its culture in modern western discourses, and then shift the focus to the development of artistic forms of Tibet in the context of Tibet’s history and religious movements, from ancient times to the present.

Cross-Listed as: ASCL 52.02

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 34.02 - Chinese Painting

This course surveys the Chinese painting tradition, from the second half of the first millennium BCE to the present. Following a dynastic timeline, the course covers important painting genres including funerary, religious, figures and portraiture, landscape, ink, bird-and-flower, and oil painting and considers them in the context of the shifting historical and cultural context of China. Key themes of the course include the relationship between the art of painting and religious beliefs, political ideology, self-expression, premodern painting theories and criticism, and encounters between the East and the West.

Cross-Listed as: ASCL 62.03

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 38.01 - Sacred Architecture of Asia

Instructor: Hockley

This course provides an introduction to the sacred architecture of Asia and the Middle East through a series of case studies that include Buddhist monasteries, Hindu temples, Mosques, Daoist and Confucian temples, Shinto shrines, funerary architecture, and the sacred dimensions of political authority as manifested in palaces, city plans, and mausolea. The pan-Asiatic nature and long historical development of Buddhism, Hinduism, and Islam affords opportunities to examine national and sectarian adaptations of architectural practices. This course has no prerequisites and assumes no prior experience with Asian religions or architectural studies.

Cross-Listed as: ASCL 70.01

Offered: Spring.

Degree Requirement Attributes: Dist:INT or ART;
WCult:NW

ARTH 38.02 - Contemporary Arts of Asia

This course examines the contemporary art of Asia from a variety of historical, cultural, and critical perspectives. Lectures, readings and discussions range across broad themes such as identity, globalization, trans-nationalism, and feminism and include examination of both traditional and new media. Case studies examine the work of both well-established and emerging young artists. This course is designed to equip students with the critical skills necessary to appreciate, discuss, and analyze contemporary Asian art.

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 38.03 - East Meets West

Instructor: Kim

This class explores the interaction between the cultures of East Asia and the West from as early as c. 200 BCE to the early 20th century. The course consists largely of four themes: the Silk Road and the Arts, the Pottery Stories, the

Jesuits and the Arts, and Asian Arts in Europe. The class starts with the Silk Road, the world's first great superhighway that from ancient times linked East Asia to the Mediterranean World across Central Asia, and examines how ideas, art, and religions traveled and were transformed through their journey. The second theme, the Porcelain stories, conveys how aesthetics, technology, designs and motifs were transmitted from East to West and vice versa. We will ask questions, such as: Why was porcelain so desirable? Where did porcelain rank in the hierarchy of art forms and materials in Asia and Europe? How much did a piece of porcelain cost at any moment in time? Why did Japan and Korea have "the Pottery War" and what was the significance of that war in East Asia (and Europe)? The third theme, the Jesuits and the Arts, looks at the hybrid blend of two or more traditions and the artistic productions that arose from those blends. We also will examine together the paintings of Asian and European artists, the paintings of European artists on Asian themes with a traditional Asian medium, and the work of Asian painters' on European subject matter with a European medium. The last theme, Asian art in Europe, scrutinizes the Western reception of Asian subjects, motifs, designs, and aesthetic values, and their appropriation for artistic productions. European interpretation (or imitation) of Chinese arts, so called *Chinoiserie*, and the Japanese influence on European art, known as *Japonism*, will be closely examined. Through lectures, readings, and films, we will explore the historical and artistic links between East and West and some selected art associated with those routes. This course requires no previous experience, but is intended for those who like interdisciplinary approaches to art and culture. No previous coursework is required.

Cross-Listed as: ASCL 70.02

Offered: Winter.

ARTH 38.04 - Food & Art: A Global History

Instructor: Camerlenghi

"This is a global history of food's relation to art. We will examine food and art across multiple geographies and times, and methodologies. Topics will include cookbooks and menus; utensils and ceramics; plastics and lunchboxes; migrations of plants, dishes, and cooks; religious fasts and feasts; gardens, still-lives, the appetite; Pop art of food; activist food art; food labels and ephemera; *terroir* and the taste of place."

Degree Requirement Attributes: Dist:INT or ART

ARTH 39.01 - Asian American Art and Architecture

Instructor: Eom

This course introduces students to the politics of Asian American identity and visual culture in the twentieth century. With an overview of social and legal contexts of

Asian America, from immigration policies and residential exclusion to Japanese American internment to struggles over citizenship rights, the course explores what it meant to be Asian American and how Asian American art and architecture have emerged at specific historical moments. By discussing case studies including Japanese American internment camps, Chinatowns, the Vietnam Veterans Memorial, and works of artists and architects such as David Hyun, Yong Soon Min, Maya Lin, Poy Gum Lee, Isamu Noguchi, Yun Gee, Yasuo Kuniyoshi, and Mine Okubo, students are expected to examine how Asian American and diasporic artists strove to define their identity and imagine their place in the material world.

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:CI

ARTH 40.01 - American Art and Identity

Instructor: Coffey

Where is America? What makes America distinct? How have images of America helped to define and challenge our ideas about who “we” are? In this course we study how paintings, photographs, monuments, and other forms of visual culture have shaped the America we know today. We will trace the emergence of U.S.-American art and identity from the point of Encounter, through Independence, and up to the Centennial Celebrations of Columbus’ “discovery of America” in 1893 through discreet comparisons with developments in Mexico, and Canada. The course is organized chronologically around a series of themes that foreground the intersection between class, race, gender, and nation-building. Students will learn how to identify and analyze the key genres and styles of 19th century American art, including portraiture, photography, ledger drawing, monuments, and landscape, history, and genre painting. They will consider how character and class are constructed through the portrait; how the claims of settler nationalism are naturalized through landscape; how anxieties about racial emancipation, immigration, and gender advancement are managed through images of the “people;” how war both consolidated and radically challenged prevailing conceptions of American identity; and how minoritized populations challenged the dominant construction of “America” throughout this period. There are no pre-requisites for this course. It has been designed as an introduction to the field of American art history as well as to the discipline of Art History more generally. First year students and non-majors are welcome.

Degree Requirement Attributes: Dist:ART; WCult:CI

ARTH 40.02 - The American Century: Modern Art in the United States

Instructor: Coffey

What made the 20th century the “American Century”? In this course we will examine how painting, sculpture, photography, public murals, and monuments contributed to the political and economic rise and cultural dominance of the United States in the 20th century. Find out: how artists from the US and Mexico contributed to the search for the “Americanness” of American art; how African-Americans, Native Americans, Latino/as, women, and queer Americans have contributed to and challenged the image of America they created; how artists participated in the Cold War; and in turn, how the Cultural Cold War spawned a radical counter-culture and a new “culture war” over identity in the 1990s. In this course, students will develop a basic understanding of the development of U.S. American art—the major figures, movements, and themes—over the course of the 20th century; learn how to visually analyze and write about works of art executed in different media and for different viewing contexts; learn how to locate a specific artist’s handling of a subject, theme, or motif within a particular socio-political context and be able to compare and contrast different artistic expressions of a subject, theme, or motif across time, develop a more nuanced understanding of social movements in the 20th century United States, develop a greater appreciation for the contributions of minoritized groups to American art, culture, and history; question received notions of “American” culture and identity; and engage in productive discussion about the strategic value, situated meaning, and intersectionality of nation, class, race, ethnicity, gender, sexuality, and identity. This course has no pre-requisites and requires no prior knowledge of Art History.

Degree Requirement Attributes: Dist:ART; WCult:CI

ARTH 40.03 - Art and Politics in Modern Latin America

Instructor: Coffey

This course offers beginning, intermediate, and advanced students an opportunity to explore works of art produced by artists living in Latin and Latin@ America during the 20th and 21st centuries. We will approach this topic through case studies of some of the major figures and movements in Argentina, Brazil, Chile, Colombia, Cuba, Ecuador, Mexico, Peru, Puerto Rico, Uruguay, and the U. S. We will examine how national identity, racial formation, class difference, gender inequality, political struggle, and state violence have been addressed by artists from the region and in diaspora. And we will consider the ways that identity and culture are informed by and intervene in the political and economic conditions of these countries. Some themes we will consider are: modernization and class politics, Indigenism and racialization/racism, development/underdevelopment, authoritarianism and state-violence, diaspora and migration, transnationalism and the politics of museum exhibitions, contemporary human rights and social justice movements. Students will have opportunities to develop their own areas of research

and to expand the course content in ways that speak to their interests and experiences. This course adheres to the principles of student-centered course design. We will therefore ground our study in the validation of personal experience, the emotional growth and ownership that comes from self-reflection, and the knowledge generated through peer-to-peer learning collectives. No prior knowledge is required for this course. Not open to students who have received credit for LACS 078

ARTH 40.04 - Mexicanidad: Race/Raza, (trans)Nation, and Mexican(o/a/x) Cultural Identity

Instructor: Coffey

Since the Mexican Revolution (1910-17), artists, intellectuals, and state-actors have endeavored to define and re-define Mexican national identity, or what is known as *Mexicanidad*. From the 1920s and 30s, when an emphasis was placed on Mexico's rural and indigenous populations to the 1940s and 50s, when greater attention was given to Mexican modernization, through the years after 1968, when artists and intellectuals endeavored to reveal the repressive nature of *Mexicanidad* and its role in propagandizing an authoritarian state and ruling party, to the 1990s when any consensus about the nation dissolved under the pressures of neoliberalism, state and narco-violence, free trade and labor migrations, and the rise of new social movements from Zapatismo, queer, feminist, and environmental activism. In this course we will place artists like Jose Clemente Orozco and Frida Kahlo within a broader visual cultural context that includes not only mural art and painting, but also sculpture, architecture, printmaking, photography, installation, film, and performance. We will cover art produced in Mexico and "Greater Mexico" from the turn of the 20th century through the "boom" years of the 1990s, with a focus on issues of race, class, gender, and sexuality throughout. The course is organized around themes that brings the past into conversation with contemporary events. Students will learn about the history of Mexican art and develop an understanding of how visual culture participates in the construction of national identity and racial formation as well as how art can critique and queer those constructions. Through weekly discussions, activities and group work, they will enhance skills in the visual analysis of modern and contemporary art and refine their ability to write effectively. This course has no pre-requisites and requires no prior knowledge of Art History or Mexican art and history. Not open to students who have received credit for LACS 30.09

Cross-Listed as: LACS 20.03

Degree Requirement Attributes: Dist:ART; WCult:CI

ARTH 40.05 - Print the Revolution: Latinx Art and Activism

Instructor: Coffey

This class offers beginning, intermediate, and advanced students an overview of activist print culture produced by Latinx artists from the mid-1960s to the present. We will focus on the political *and* aesthetic characteristics of Latinx print culture through object-based study of posters, zines, and prints associated with both community print collectives and fine art print ateliers. Class will meet frequently at the library and Hood Museum of Art to explore print materials in Dartmouth's collections and to take advantage of *Printing the Revolution! The Rise and Impact of Chicano Graphics, 1965 to Now*, an exhibition at the Hood Museum of Art. Students will engage in hands-on activities at the Book Arts Workshop to produce political posters and zines of their own. In addition to asking "what is Latinx art?" and critically exploring attempts to define, represent, and market the category, we will consider Mexican and Latin American Pop Art antecedents for the aesthetics of Chicano and Puerto Rican Graphic Arts of the 1970s, the role of Queer networks, feminist and punk zines, and prints made by print collectives, including Self-Help Graphics, the Dominican York Print Collective, Justseeds, and Dignidad Rebelde, among others. In addition to the communities and themes identified here, students will have opportunities to identify themes and/or Latinx communities/histories that they want to explore through their individual and group projects and to propose acquisitions of print materials to expand Dartmouth's collections accordingly. Finally, the class features scholarship by and opportunities to meet and learn from some of the leading Latinx scholars and artists working today. The course adheres to the principles of student-centered design. We will therefore ground our learning in the validation of personal experience, the emotional growth and ownership that comes from self-reflection, and the knowledge generated through peer-to-peer learning collectives. No prior knowledge is required for this course.

ARTH 41.01 - Modernism and Modernity: Art in late nineteenth-century France

Instructor: Hornstein

From 1848 to 1914, French art and the modern city of Paris dominated the international art scene. This course explores the radical visual culture of the period in painting, sculpture, prints and photography, from the realism of Courbet and Manet to the abstraction of Seurat and Cézanne. We will focus on how new technologies, political and social revolutions, and exhibition culture influenced

the work of Cassatt, Degas, Monet, Renoir, Van Gogh and Rodin, among others.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 41.02 - Twentieth Century Art in Europe, 1900-1945

Instructor: Hornstein

The rapid changes of the first half of the twentieth century inspired artistic avant-gardes in France, Germany, Italy and Russia. We will examine “avant-garde” artistic practice as a cultural phenomenon, studying individual artists and their associated movements (Cubism, Futurism, Constructivism, Dad, Surrealism) through themes such as artistic responses to mass culture; new forms of technology; representations of sexual, racial, and class identity; and the relationship between art, nationalism, war and revolution.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 41.03 - European Art 1750-1850

European culture was transformed during the period 1750-1850. The absolutist monarchy established by Louis XIV would end with the traumatic rupture of the French Revolution. Napoleon redrew the map of Europe. The aristocracies that had ruled the West for a millennium, withered as the bourgeoisie and working classes struggled for control. The optimism of the Enlightenment slowly soured into the brooding inwardness of Romantic melancholia. The rise of mass industrial production and consumption would be accompanied by waves of technological and social change that irrevocably altered daily life. European powers pursued global dominance through colonial expansion with renewed vigor and brutality. This course examines these epochal changes through the lens of European cultural production, covering key artistic movements such as the Rococo, Neoclassicism, Romanticism, and Realism. We will closely analyze major works of art and visual culture alongside primary, historical texts of the period. These will be supplemented with recent scholarship that will help situate the works under investigation within the rich and complex social and intellectual milieu in which they were produced.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 41.04 - European Art: 1850-1900

This course will survey the history of European art the second half of the nineteenth century in a variety of media: painting, sculpture, print media, architecture and design. This is a rich and fascinating period of art-making as well as cultural and technological transformation \u2015a period during which political instability, industrialization, colonialism, and the growth of popular culture had an

enormous impact on the production, style, and presentation of art. Old systems of patronage and institutional control over artists dissolved, leaving them to experiment with how to give form to “modernity,” and how to address a widening public audience for their art. Lectures and readings will shift between broad themes in 19th-century art coupled with in-depth examination of singular works, the goal being to strike a balance between close attention to art’s formal means and an account of what its chosen subject matter may have meant, to the artists themselves and to their public.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 42.01 - Unmaking History: Contemporary Art in the Middle East

Instructor: Elias

This course focuses primarily on the work of contemporary artists who make work in or about the so-called Middle East. It includes recent works by artists from nations as diverse as Algeria, Iran, Israel, Lebanon, Morocco, Syria, Turkey and the UAE. One of the main objectives of the course is to look at art practices that attempt to deepen our understanding of the varied cultures, ethnicities and societies that are found in this part of the world. The geographic focus of the course—mostly the Muslim nations of the Arabian peninsula and North Africa—is not meant to perpetuate the assumptions about this region as a monolithic geopolitical entity, nor to blindly label its production according to existing ethnic, religious or national categories. Against media stereotypes of the region, the artists studied in this course have made work that function as a critical platform for rethinking traditional identity formations and extending the space of cultural encounter across borders (territorial, political, linguistic). In many cases these artists may not be living and working in their country of birth but their ethnicity, religion or citizenship continues to inform both their own sense of identity and the terms of their art practice. Some of the topics to be discussed include: artistic responses to the Arab-Israeli conflict, representations of everyday life in times of war, the movement and obstruction of people, goods and information across borders, the rise of new art markets in the Middle East, the politics of gender and sexuality in the Arab world, and the use of archival documents to rethink the meaning of evidence, truth and testimony.

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 42.02 - Post-War Art from the Middle East: The Case of the Lebanese Civil War

What is the function of art after a long and devastating conflict like the Lebanese Civil War (1975-1990)? When cities are destroyed and people are displaced, radical ruptures occur at the physical level but also at the level of people’s understanding of their own history and identity. Much like Adorno’s questioning of the possibility of

poetry after Auschwitz, Lina Majdalani and Rabih Mroue have put in question what art could represent after the catastrophic event. These two artists investigate through their art the work of memory, the representation of the body, and the possibility of dialogue through image and performance.

Cross-Listed as: MES 12.16

Degree Requirement Attributes: Dist: ART, INT; WCult: NWC

ARTH 42.03 - Contemporary Design: Theory and Practice

Instructor: Elias

This course surveys theoretical frameworks, historical movements, and social currents that inform present-day design practices. Interdisciplinary in its approach, the class will examine case studies drawn from the visual arts, graphic design, architecture, industrial design, and fashion. Students will gain insights into the evolution of design principles that have guided design philosophy and practice since the late 19th century. At the same time, the course places emphasis on contemporary innovations in design that run parallel or counter to the dominant narratives that have shaped the field. While the course focuses on real world applications of design thinking it also looks to speculative and critical design methodologies that challenge the assumptions and preconceptions of the present. These methodologies look beyond a functional instrumentalism to consider design scenarios based on longer and shorter timescales than regular product lifecycles and geared toward “users” who may exist at the margins of the social order. Accordingly, the assigned readings will encompass a diverse array of disciplines, including design philosophy, futurology, political theory, the philosophy of technology, and science fiction. The course includes units on Modernism, Postmodernism, Deconstruction, Afrofuturism, Feminism, Biodesign and Social Justice.

Offered: Fall.

Degree Requirement Attributes: Dist:ART

ARTH 43.01 - Feminist and Queer Video Art: "I'm asking – does it exist? What is it? Whom is it for?"

John Perreault, the first openly gay art critic at the Village Voice, published the phrase “I’m asking – does it exist? What is it? Whom is it for?” as the subtitle of an article on "Gay Art" for Artforum in 1980. Expanding upon Perreault’s nuanced consideration of how art works accumulate identities and address particular audiences, this undergraduate course will explore feminist and queer moving image-making practices in the United States between the 1950s-1990s. While eschewing a strictly chronological approach, we will consider art practices in relation to specific historical thresholds, from the

intensification of nonviolent direct action in the 1950s and 1960s, to the Stonewall rebellions of 1969, to the emergence of AIDS activism in the late 1980s and 1990s. We will consider the term video expansively, inclusive of TV art, installation, and video’s dialogue with film, holography, and print publications. This course leaves open what feminist and queer art practices look like and perform, and what methodologies might be most useful in writing about them. However, the course aims to challenge the ways in which art historical narratives, including alternative ones, have eclipsed the role of artists of color. Students will be required to reflect upon video footage and on readings in a series of short papers and assignments. Shorter videos will be screened in class, but some weeks require an extra screening during the X-hour session.

ARTH 47.01 - Building America: An Architectural and Social History

This course draws upon recent scholarship in anthropology, archaeology, material culture, social history and architectural history in its review of five centuries of American architecture. Course lectures not only emphasize America's principal architects and their designs, but also summarize the social and cultural forces that shaped the country's built landscape.

Cross-Listed as: HIST 034

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 47.02 - Modern Architecture

Architectural historians disagree about the origins of the modern era. For many, “modern” suggests principally the built works of the twentieth century. Others find the great projects of the nineteenth-century industrial revolution a more suitable place to begin. Still others—as will we—push the beginnings of “modern” architectural thought and practice back to the late eighteenth century. In this way we place architectural transformation in the context of the great changes taking place in the political, artistic, social and intellectual life of the period. This course approaches architecture as a cultural product and investigates the relationship between buildings, the ideas embodied in buildings and the cultures that designed them. We will chart the history of modern design from the Age of Enlightenment to the present.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 47.03 - Contemporary Architecture

A survey of the history of architecture, around the world, from 1970 to the present. Lectures track architectural movements from the end of Late Modernism in the 1970s to the computer-driven designs currently under construction. We will pay close attention to the changing technologies and cultural values that have shaped the last thirty years of architectural design.

Degree Requirement Attributes: Dist:ART

ARTH 47.04 - Architecture and the Uncanny

Instructor: Teriba

Cities all over the world and in different eras have become participants and arenas in creating urban spectacles. Often such activities consist of processions involving masquerades, mobile floats, musicians decked in elaborate attire and playing instruments – commemorating the dead, the living, royalties and politicians; to name a few examples. This course will study how certain case-studies — ranging from New Orleans to Lagos in Southwest Nigeria — demonstrate how architectural facades, urban spaces as well as certain ceremonies activate an uncanny experience, which may even echo Karl Trahdorff’s theory of the Gesamtkunstwerk (“total work of art”).

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:CI

ARTH 47.05 - A Mirror Image: Self, Place & Home in Contemporary Architecture

Instructor: Teriba

One could imagine that in the 1970s, the architectural movement known as the International Style looked back at the twentieth century with glee, surveying its spoils. It was after all, a style of architecture that held the century in thrall for almost 50 years; determining the built forms for much of the world in steel, glass and concrete. Le Corbusier for instance, likened architecture to a machine with parts that could be erected and function anywhere. Yet voices arose to articulate local architectural responses to such a paradigm, where the interrelationship between self, place, identity and home needed to be articulated in built form. The phrase that became the rallying cry for such a movement was “Critical Regionalism” and this course analyzes how many architectural projects in Asia, Africa, Europe and the Americas embodied an approach to a more humane architecture.

Degree Requirement Attributes: Dist:ART

ARTH 47.06 - Modernity’s Global Story of Architecture

Instructor: Teriba

While many of the ideas that gave rise to Modernity originated in the Enlightenment, accounts of Modernity took an acute turn at the end of the nineteenth century, following the Industrial Revolution. Architects such as Adolf Loos and theorists like F.T Marinetti rejected historical architectural forms in favor of those that spoke of the new technological age. Antonio Gaudi and others created an ornate architecture known as Modernista. In other parts of the world, Modernity involved former slaves recasting Classical, Renaissance and Baroque architecture in their own form of modern architecture. This class

explores how Modernity assumes many guises throughout the world when narrated through the architecture different peoples created.

Degree Requirement Attributes: Dist:ART; WCult:CI

ARTH 48.02 - Histories of Photography

This course introduces students to the history of photography from its beginnings in the 1830s to the present day. In addition to studying key photographers and pivotal moments within the medium’s development as an art form, we also examine the ways that photography’s status as a seemingly transparent form of documentary knowledge has shaped our lived experience. Seminal theoretical texts will introduce students to the complex and rewarding task of visually analyzing photographs.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 48.03 - The Arts of War

Walt Whitman said of the American Civil War: “the real war will never get in the books.” This course will raise core questions about how war is remembered and represented through text, performance, and visual culture. Our questions will be anchored in concrete case studies but will also raise far-ranging philosophical, ethical, and historical questions that examine instances of war in relation to the aesthetics of war.

Cross-Listed as: THEA 10.24

Degree Requirement Attributes: Dist:INT or ART

ARTH 48.04 - Women in Art

This course will explore the complex and varied roles of women in the arts: as artists, patrons, “muses,” and cultural critics. We will examine the structural conditions of art making in the academy and the studio, the market and the exhibition. We will investigate gendered notions of genius, creativity and originality, including the status of women artists as “exceptional.” Looking also at the female nude in Western art and feminist art in post-modernism, we will analyze the roles that femininity and masculinity play in modernism. With a focus mostly on the 18th-20th c., major figures include Artemisia Gentileschi and Judith Leyster, Mme de Pompadour, Elisabeth Vigée-LeBrun, Mary Cassatt, Berthe Morisot, Frida Kahlo, Barbara Kruger and Cindy Sherman, among others.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 48.05 - Satire: Art, Politics & Critique

Instructor: O’Rourke

Satire has been used since antiquity as a powerful form of political, social and cultural critique. With humor, sarcasm, and often biting criticism, satire goes beyond pure comedy to speak with a moral voice. The targets of satire range from the world of fashion and the everyday to that of politics and high culture. We will examine case studies of

satirical production, from the 18th century through the late 20th century, from the darkly comic prints of Hogarth and Daumier, to the overtly humorous and/or subversive gestures of Duchamp and Dada, Warhol and Pop Art, to the satire of gender roles and modern capitalism in Postmodernism. We will pay particular attention to the role of satire in modern art as it employed irony, parody, ridicule and exaggeration to attack social mores, political figures and the art world status quo. We will also explore the use of satire in film and TV, from the darkly comic (Charlie Chaplin) to the ridiculous (Stephen Colbert). This course hopes to come to terms with the broad range and appeal of satire in the visual arts.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 48.06 - Borderlands Art & Theory

Instructor:

This seminar traces the developments of contemporary art practice in the U.S.-Mexico borderlands, and subsequently expands beyond this physical location to include artworks that reflect on living in between cultures, races, and languages. Students will develop a toolkit for analyzing the way borders shape culture and identity (race, gender, sexuality, class, religion, and ethnicity) in transnational points of contact. With an emphasis on printmaking, performance, photography, and film, the course will dwell on borders that respond to paradigms of fear and desire, contagion and containment, utopia and dystopia. Students will enhance their skills in visual analysis and writing, and refine their ability to conduct original research. No pre-requisites or prior knowledge of Art History and Latinx Studies is required for the course.

Degree Requirement Attributes: Dist:ART; WCult:CI

ARTH 48.07 - Michelangelo's Modernism

In 1837 Eugène Delacroix named Michelangelo Buonarroti the “father of modern art.” What led the great 19th century Romantic painter and critic to identify the Florentine sculptor, painter, architect, and poet as the origin of the modern school? Declared “divine,” during his lifetime, he has been celebrated as the *non plus ultra* of artistic genius, or vilified as the very epitome of artistic excess ever since. Enthusiasts and detractors alike have viewed Michelangelo as the model of the self-conscious artist. This course will trace ‘*il divino*’s’ role in the formation of the cult of the modern artist through examining artworks and texts ranging from the artist’s lifetime and afterlife in art, literature, and film. Beginning with the construction of Michelangelo’s persona by early biographers, we will consider why he came to embody the tension between the demands of tradition and innovation like no other artist. Each week we will closely investigate artworks in dialogue with primary sources in English translation. Secondary texts selected from the superb scholarly literature on Michelangelo and his afterlife will be used to supplement primary materials. Throughout the course we will consider

the *idea* of Michelangelo and the Michelangesque functioned through five centuries of cultural production.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 48.08 - The Photographic Medium

The invention of the photograph radically changed the way we experience the world. The selfie and Instagram are but two of the most recent ways in which photographic technology has become ubiquitous in our everyday lives. This course traces the evolution of the photograph from pre-photographic forms, such as the diorama to its current digital apotheosis. We will focus on how the medium evolved in concert with changing social conditions that shaped, and were shaped in turn, by its evolution. A wide range of practices will be considered, from documentary photographs to fine art. Major figures in photo history will be discussed alongside developments in photographic technology and their impact on photographic imagery in both fine art and visual culture more broadly (advertising, science, journalism). Throughout we will explore photography as a ‘thick’ medium, one inextricably bound up with social and theoretical concerns. Students will exit having a broad knowledge of the historical benchmarks and aesthetic theories of photography, as well as the ability to describe and analyze images in light of photographic technique.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 61.71 - Italian Renaissance Architecture

Instructor: Camerlenghi

This course focuses on buildings constructed in Italy between 1420 and 1580. During this time, the Italian peninsula was a hotbed of revolutionary ideas about how architecture could shape and be shaped by the human will. The Renaissance saw the emergence of a new type of architecture, which took its cue from the needs, activities, and aspirations of people who defined themselves as “modern.” The chronologically presented material is interspersed with classes dedicated to the broad themes of the course (humanism, the inspirational role of ancient and medieval buildings, living conditions and styles, the rising profession of the architect, etc.). Lectures and readings will focus on the major thinkers, designers, and patrons of the period as well as on the economic, political, and religious forces that were at play in the formation of such ambitious and beautiful buildings.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 62.20 - Modern and Contemporary Korean Art

Instructor: Kim

This course examines the art and culture of Korea from the late nineteenth century through the twentieth century. During this period Korea experienced the fall of its 500-year-long dynasty, annexation to Japan, the Korean war,

division into two Koreas, and internationalization/globalization. The class will explore how visual art, including paintings, photographs, posters, ceramics, and film, reflected and expressed the political, socio-economic, and cultural changes and concerns of each period, in both South and North Korea.

Cross-Listed as: ASCL 62.08

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 62.30 - Japanese Prints

Instructor: Hockley

A survey of the Japanese print tradition from its inception in the seventeenth century through modern prints in the early twentieth century, this course emphasizes the relationship between prints and the political, social, and cultural milieu in which they circulated. The curriculum includes applications of recent critiques and theoretical approaches from fields as diverse as sexuality and gender studies, mass culture and media studies, aesthetics of popular arts, and the sociology of consumption.

Cross-Listed as: ASCL 62.12

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 62.71 - Islamic Architecture

Instructor: Camerlenghi

This course examines the architecture of Islamic cultures from the seventh-century rise of the Umayyad dynasty to the modern centers of Dubai and Doha. By studying the historical contexts within which Islamic architecture developed, we will consider major themes, chronological developments and regional variations in both religious and secular architecture. Additionally, by examining instances of cross-cultural influence, we will explore pivotal interactions between Islamic and non-Islamic architectural traditions.

Cross-Listed as: MES 18.03

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 62.81 - Women, Gender, and Art in East Asia

Instructor: Kim

This course will focus on women as the subjects, the creators, and the patrons of art in China, Korea, and Japan from the 16th century to the present. It will be organized chronologically, culturally, and thematically. This will involve an exploration of powerful matrons of art and their aspirations, a historical survey of women artists and their artistic contributions, and an examination of the religious and secular images of women and its limitations. The course will also look at contemporary artists and investigate their artistic discourses, messages, and experimentations. Extensive attention will be given to the

creation, modification, and persistence of these images throughout history, due to various social, economical, psychological, and intellectual conditions. This course will develop students' thinking skills in the history of art and improve their ability to conduct research and communicate both orally and in writing within the discipline.

This course requires no previous coursework or experience, but is intended for those who like interdisciplinary approaches to art and culture.

Cross-Listed as: ASCL 62.13

Offered: Fall.

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 62.91 - Art, Business, and Soft Power in Asia

Instructor: Kim

This class examines the intersection of art, business, and soft power through two key areas of inquiries. First, we explore how Asian art acquires both symbolic and economic value across various institutional contexts, including art fairs, museums, and commercial galleries. Through an analysis of pricing, authentication, interpretation, and marketing strategies, we will investigate how artistic value is created, negotiated, and sustained in these spaces.

Second, we examine the role of corporate sponsorship in the Asian and Asian-American arts. This includes analyzing how corporate funding influences artistic production, curatorial decisions, and public accessibility to art. We will also explore how businesses and governments leverage the arts as tools of soft power—engaging in nation branding and cultural diplomacy to project national identity, shape global perceptions, and assert cultural influence. Additionally, we will critically assess the ethical and political implications of corporate involvement in the visual arts, considering how financial interests shape artistic trends and determine which artists, styles, and movements gain prominence.

The course includes guest speakers from diverse fields, such as artists, curators, museum and gallery directors, and corporate professionals. An optional two-day field trip to New York offers students the opportunity to visit auction houses and commercial galleries specializing in Asian art and attend lectures by art management experts. ASCL will cover accommodation and transportation for the trip.

Cross-Listed as: ASCL 70.31

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ARTH 63.01 - Mexican Muralism

Instructor: Coffey

This survey course introduces students to Mexican muralism. Students will learn about the fresco technique and how to visually analyze a mural. We will consider the following themes: cultural nationalism; art and class politics; the legacy of muralism in the US; the ethics of aesthetic indigenism; and the gender politics of public art. Student projects will concentrate on Jose Clemente Orozco's mural at Dartmouth College.

Cross-Listed as: LACS 20.04

Offered: Fall.

Degree Requirement Attributes: Dist:ART; WCult:CI

ARTH 63.02 - Why Are Museums...?

Instructor: Coffey

This course offers both beginning, intermediate, and advanced students the opportunity to explore their questions about museums of all kinds. If you love, fear, hate, or feel indifferent about museums, this course will allow you to reflect upon and determine why you feel that way. We will situate the modern museum within the historical circumstances of its emergence. We will critically interrogate its practices and norms. And we will exercise agency as critical visitors and practitioners by re-mixing collections, rewriting labels, and generating lessons for the next iteration of the course. Throughout the term we will use the Hood Museum of Art's collections and exhibitions to make concrete our discussions and to speak with staff about how they put into practice contemporary demands to democratize and decolonize the museum.

While the Hood Museum of Art will provide a home-base for our study, the course covers museums of all kinds from Natural History and Universal Survey Museums to Heritage Sites and Memorials. Some of the themes we will explore include: collecting and identity; memory and witnessing; repatriation, restitution, and repair; accessibility and care; "white walling" and protest; Empire and decolonization; and the ethics of display. This course adheres to the principles of student-centered course design. We will therefore ground our study in the validation of personal experience, the emotional growth and ownership that comes from self-reflection, and the knowledge generated through student-centered learning activities.

Degree Requirement Attributes: Dist:ART

ARTH 63.03 - Key Words for Art History: Race

Instructor: Coffey

In 1975, the literary critic Raymond Williams published *Keywords*, a cultural history of essential terms for the critical study of art and culture. That small book, as influential as it has been, did not include an entry for "race," a term that now seems unavoidable for any study of culture if it is to have contemporary resonance. Since then, all manner of "keywords" anthologies have been published, and nearly all of them have some discussion of

the term "race." However, when Robert S. Nelson and Richard Schiff compiled both editions (1996/2003) of *Critical Terms for Art History*, the keyword "race" was not included even though related terms like "primitivism," "ritual," "fetish," or "identity," were. In this class we will explore the term "race" as it is used in art history and visual cultural studies. We will consider not only how "race" has been constructed, naturalized, or challenged in and through visual culture, but also different ways of understanding how it has been operationalized or retheorized by contemporary scholars. We will not take for granted that we know what "race" is, how it appears in art historical practice, or when it is a relevant term. Rather, we will focus on the manifold ways that we "talk about race" in Art History even when the word or idea is not explicitly invoked. We will work collectively to produce a self-published "Keywords" anthology on *Race in Art History*. Each student will identify a term, write a critical genealogy of the term as it has been used in the writing of art history, and provide an example from the history of art that helps to concretize their argument. Additionally, students, working in teams, will draft an "Introduction" to our volume that helps to motivate the project and situate each entry for readers. Throughout the term, we will explore the genre of the "keywords" volume for insight and guidance. After the term, those students who are most dedicated to the project will be hired as editorial assistants to help me shepherd the draft through the final stages of publication. Not open to students who have received credit for ARTH 83.07.

Degree Requirement Attributes: Dist:ART

ARTH 63.12 - When Media Were New

Instructor: Hornstein

This survey of different forms of modern reproductive visual media provides a historical perspective on contemporary habits of media consumption. In addition to focusing visual technologies that emerged over the past two hundred years (lithography, photography, film and video) we will also consider earlier developments such as printing cultures in early modern Europe to historicize the relationship between reproducibility, visual culture, and society.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 63.13 - Bad Art!

Instructor: Hornstein

What are the criteria for judging art's merits? Who gets to decide? This course examines the problem of aesthetic hierarchies in terms of the histories of their making and unmaking. How do they get constructed, defended, and toppled? What are the stakes of categorizing some forms of art making as outside of "good taste"? What does "high" art really mean? This class will survey key moments in modern art history that reveal charged instances where particular forms of art were deemed

beyond the pale or simply not art. What are the value judgments that take place in order for art to be deemed “bad” or “good”? We will examine these questions through the historical lens of the eighteenth to twentieth centuries, since this was a period that witnessed the democratization of art as we know it today. At the end of the course, we will reflect on the situation of contemporary art in light of the historical and theoretical questions that we have posed over the course of the term.

Topics to be considered: the history of art criticism, the fledgling power of the abstract entity called “the public” in terms of art’s reception; modern art and anti-aesthetic tendencies, the mundane and ugly as terms that modern artists elevated in order to distance themselves from middlebrow, bourgeois taste, and the predicament of discerning art’s value today.

Offered: Summer.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 63.23 - Global Contemporary Art

Instructor: Elias

This course examines the geographic and cultural reach of contemporary art as a global phenomenon. The early 1990s saw the proliferation of biennials, large-scale art exhibitions that showcase the work of artists from disparate parts of the world. This trend has been heralded as a diversification of the art world beyond traditional centers in Europe and the United States. We will consider transnational and translocal currents in contemporary art in relation to larger processes associated with economic globalization (the formation of global labor markets, multilateral trade agreements, and financial operations) and cultural globalization (the largescale transmission of artifacts, images and ideas across national borders). Close attention will also be paid to the ways in which diverse artistic practices and identity formations are made legible but are also sometimes mistranslated as they enter into global art world institutions. This course will also consider how contemporary artists picture or allegorize the particular sense of disjuncture associated with globalization in the 21st century.

Degree Requirement Attributes: Dist:ART; WCult:CI

ARTH 63.71 - Art & Money

Instructor: Elias

This course will cast a critical eye on the commercial mechanisms of the contemporary art world encompassing auction houses, private galleries, museums, art schools, art fairs, biennales and magazines. How is commercial value produced in the art market, and what does it have to do with the critical or symbolic value assigned to artworks in the art world more generally? In addressing this question we will examine the changing function of artistic production within a knowledge or experience-based

economy. At the same time, this course will also offer students a critical framework for analyzing the display, marketing and consumption of artworks in a global economy.

Offered: Fall.

Degree Requirement Attributes: Dist:ART

ARTH 63.72 - Aesthetics of the Digital

Instructor: Elias

This course confronts one of the most urgent and elusive problems of our day: the relationship of aesthetics to the rise of digital media. Drawing on a range of critical texts and artistic practices, we will consider how fundamental aesthetic categories such as materiality and form are transformed through the radical shift from a work-oriented to a medium-oriented conception of art and reality. In broader terms, this module explores the rapidly mutable audio-visual environments/interfaces of the digital age and their impact on social relations and cultural production. We will also examine the tensions between intimacy and distance, distraction and attention, and passivity and participation that characterize image consumption within the routines of contemporary technological culture. Finally, this module offers a historical and political framework for understanding contemporary art’s seeming disavowal of the digital and the expanding non-stop processes of twenty-first-century capitalism that underpin it. At the same time, we will assess some of emancipatory possibilities opened by the accessibility and affordability of digital cameras, editing software and mobile devices. As well as making use of the interpretive methods of art history, this module will introduce students to tools drawn from social semiotics, media studies, anthropology, visual culture, cybernetics and design philosophy.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or ART

ARTH 63.73 - Art in the Age of Climate Change

Instructor: Elias

Since the advent of industrial capitalism, humans have released 555 petagrams of carbon dioxide into the atmosphere, increasing CO₂ concentrations to a level not seen for at least 800,000 years. The long-term consequences of these atmospheric changes remain unknown, but there is already strong evidence that the Earth is rapidly moving into a less biologically diverse, less forested, much warmer, and probably wetter and stormier state. Research on climate change points to a particular irony: human actions have unprecedented impact on the environment, but this produces effects that are increasingly out of human control. Inside that conundrum lies another. Scientists have certain strategies to address urgent environmental challenges, but what of the arts and the humanities? What can practitioners in these fields, in

dialogue with the sciences, offer in this moment of climatic disruption and political inaction? To what new modes of visualization does global warming give rise, and how do these aesthetic innovations allow us to live with and through environmental change? What ontological status can be assigned to various biological, geological, and meteorological 'actors' if human agency is no longer privileged?

In taking up these questions, this course recognizes that the manifold effects of climate change demand new structures of cross-disciplinary thinking and critical engagement. Accordingly, it draws on concepts and methods drawn from art history and critical theory as well as science and anthropology. As we will see, the field of contemporary art does not simply project forward to predicted catastrophic future scenarios. Rather, it foregrounds the unique capacities of humans to imagine scenarios or worlds that have not yet come into existence. What, in essence, can art help us imagine that science alone cannot? Through this line of enquiry, this course asks what it means to think through the possibilities and limits of our planet beyond a pessimistic orientation towards foreclosed futures.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 63.74 - Art and AI: Human Creativity in the Age of Machine Intelligence

Instructor: Elias

This course explores what it means to be human in the era of artificial intelligence. The theoretical framework of the course takes inspiration from the "uncanny valley," a concept in robotics and human-robot interaction that describes the sense of unease or discomfort people feel when they encounter an artificial entity that looks and acts almost, but not quite, human. Accordingly, we set out to examine how AI unsettles the boundaries between human and machinic models of intelligence. The course draws on critical debates in computer science, contemporary art, film, philosophy and technology studies. Some of the key questions that we will address include: How does AI reshape human models of cognition, creativity and intelligence? In what ways does the field of artistic production serve as a crucial Turing test for AI? As images become increasingly operational and less perceptible, how should human visual literacy evolve? Should we be taught to "read" operational images differently from traditional images? What might artist-led experiments with AI have to teach us about the epistemological and ethical challenges opened up by the rapid and unpredictable development of machine learning systems?

Degree Requirement Attributes: Dist:ART

ARTH 63.75 - Architecture in the Field: Observing, Recording, Knowing

Instructor: Gambetta

This course examines the observation and documentation of architecture, landscape, and urbanism, a practice that historians, architects, artists, anthropologists, and field scientists commonly refer to as "fieldwork." Students will learn about fieldwork histories, methods, and sites in tandem with their own firsthand observations: each week, students will conduct fieldwork in the Hanover area and learn about the ethical and political dilemmas posed by different fieldwork methods such as photography, descriptive writing, drawing, mapping, and ethnography.

Cross-Listed as: ANTH 50.59

Degree Requirement Attributes: Dist:ART

ARTH 80.01 - Ideals of Physical Beauty: Gender and the Body in Ancient Art

Instructor: Cohen

Since the foundation of Art History as a discipline, Greek art has been admired for its emphasis on physical beauty. Greek culture articulated criteria of beauty for both sexes and created mythological personas exemplifying those ideals. This seminar studies Greek views on beauty and ugliness, as well as the links between beauty and (im)morality. It focuses on how artists went about depicting physicality and explores the connection between perceived beauty and pictorial style, often in comparison with other Mediterranean cultures. Contemporary critical frameworks and theoretical approaches to gender and representation will guide class discussions.

Open to sophomores, juniors, and seniors with instructor's permission.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 80.02 - Advanced Seminar: Domes

Instructor: Camerlenghi

Domes have graced the skyline of human settlements for over three millennia. The seminar commences with a traditional typological survey of domes, progresses to explore the theoretical foundations that informed their construction, and concludes by examining the social, cultural, and religious factors favoring (or discouraging) their development and proliferation. We will focus especially, but not uniquely, on ancient and medieval domes. Historically, domes have covered a range of buildings: from kilns to tombs, from bell-towers to latrines; however, they most famously crowned places of worship, burial or power. We will ponder: What is a dome? Which qualities define their identities? How and why has the knowledge of dome construction been transferred across time and cultures? What are important methodological considerations to consider as we approach the study of domes?

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 81.02 - Advanced Seminar: History of Museums and Collecting

This course offers a close look at the history of museums and collecting from 16th century cabinets of curiosity to today's large public museums. Attention will be given to the early history of museums and their theoretical and philosophical foundations, the emergence and guiding principles of public, academic, and donor museums, and recent developments in the museum world and the world of collecting. The course will include visits to museums and collections in Boston and other locations in the New England area.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 81.03 - The Viral Image: Early Modern Prints

The technology of print transformed the early modern world. Distant places, people, and things were suddenly thrust into view, allowing the armchair traveler to hold the world in their hands. New ideas, made material in paper and ink, ricocheted across the globe. But print posed an existential problem: it called into question some of the most basic assumptions around images and image making that had long governed visual culture. How does reproducibility challenge authenticity? How are authorship and ownership defined? This advanced study interrogates the rise of printed images between 1500 and 1800 and its enduring impact on artistic and architectural culture. Special attention will be paid to major figures in the history of European printmaking, including Albrecht Durer, Rembrandt, and Giovanni Battista Piranesi.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 82.01 - Arts and Culture of Korea's Last Dynasty

Instructor: Kim

This course provides an introduction to the arts and culture of the Joseon dynasty (1392-1910), which was founded on Confucianism. We will examine Confucian philosophy and how Confucian ideas shaped the social hierarchy, gender roles, and aesthetic values through exploration of the architecture of royal palaces and aristocratic houses, paintings both sacred and secular, ceramics, textiles and other crafts. Use of colors, symbolic motifs, and stories in the arts and cultures will be investigated. Understanding Korea's final 500-year dynasty will deepen students' comprehension of contemporary Korean culture as it manifests the legacy of Joseon Korea.

Cross-Listed as: ASCL 80.03

Degree Requirement Attributes: Dist:INT or ART; WCult:NW

ARTH 82.02 - The Camera in Nineteenth-Century Asia

Instructor: Hockley

This course examines the use of photography by colonial governments, anthropologists, commercial photographers, and tourists in nineteenth-century Asia. It also takes into account indigenous uses of photography that both conform with and react against Western uses of the medium. Consideration is also given to the diffusion of photographic images into other media including news publications, government documents, academic studies, travelogues, guidebooks, and museum displays.

Offered: Winter.

ARTH 82.03 - Asian Art Herstory: Gender, Culture, and Politics

Instructor: Kim

This course looks closely at women as subjects and creators in the realm of art from the pre-modern period to contemporary times in Asia. The class will initially examine how Confucian ideology defined the social roles and values of women and how women and their activities were depicted visually and confined architecturally. Then, through study of the global women's rights and feminist art movements in the context of world economic and political history, the class will scrutinize the rise of Asian "New Women" and "Modern Girls" (the Asian counterparts of American "flappers" and French *garçonnnes*) in the 1920s and 1930s, and look at individual and groups of women artists who expressed their social and political agendas through their art. Extensive attention will be given to the creation, modification, and persistence of certain images throughout history, in relation to various social, political, psychological, and intellectual conditions. The class will also see how modern women artists have developed new and diverse media, including textiles, films and photography, installation and performance, and other hybrid materials, in reaction to a long patriarchy in fine art, male-gazed artistic rendering, and traditional cultural and social norms.

This course does not require prior knowledge or experience in Asian history or languages, but it is designed for students interested in interdisciplinary approaches to art and culture. As a senior advanced seminar, it involves extensive reading, class discussions, and research presentations. The course is primarily offered to ARTH majors, who are expected to have a strong foundation in art history, though no prior knowledge of Asian history is necessary. It is also available to ASCL majors, who are not required to have taken an ARTH course but should demonstrate some pan-Asian expertise.

Cross-Listed as: ASCL 80.10

Degree Requirement Attributes: Dist:ART; WCult:NW

ARTH 83.02 - Contemporary Art: Disaster, War and the Ethics of Witnessing

This seminar focuses on the relationship between lens-based media and moments of catastrophe in order to think creatively about how both operate pictorially. What constitutes the category of catastrophe—as opposed to crisis, war, etc.—and how does that category structure but also exceed photographic representation? We will look at photographs and films that bear witness to massacres, genocides and terrorist attacks. Some of the case studies include Auschwitz, Hiroshima, Apartheid South Africa, the Vietnam War, the Palestinian Nakba, the Cambodian Genocide and the Lebanese Civil War. We will also look at the role images play in documenting more recent events such as the Gulf War, the 9/11 terrorist attacks in New York, the 2011 earthquake in Fukushima, the Syrian Civil War and the European migrant crisis. Readings will take us through photographic history, critical theory, and art history. Our study will conclude in considering how artist themselves have theorized the place and purpose of photography and film in historical catastrophes. Underlying the arc of our study are three interrelated categories of questions. These concern: 1) the relationship of aesthetics to ethics and politics; 2) the relationship of those models of visibility and visibility to subaltern ways of understanding history 3) the ways in which art relates to questions of alterity and agency, which is to say how art might *speak to* without *speaking for* the victims of catastrophe.

Degree Requirement Attributes: Dist:ART

ARTH 83.03 - Modern Art, Spectacle, and Strategies of Resistance

Instructor: Hornstein

In this seminar, we will take a historical and theoretical approach to understanding the diverse sets of strategies that artists have employed to disrupt, contest, playfully oppose, and ironically challenge power, broadly construed. We will focus on nineteenth and twentieth-century (mostly European) artists who were committed to producing critical or counter-discursive art in moments of political tribulation.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 83.05 - Advanced Seminar: Art and the Law

This Advanced Seminar addresses legal issues that pertain to the sale, acquisition, display, ownership, and destruction of works of art. The topic is framed around two related questions: How does the special status of art, as a privileged sphere of creative expression, grant it different treatment under the law? What are some of the exemptions, protections, or obligations that are accorded to art that are not extended to other forms of personal property? The first part of the course will focus on case studies in which legal questions are entangled with ethical and political concerns:

illicit international trade in looted art, repatriation claims, high-profile forgeries, and new guidelines for authentication. The second half looks at the legal framework that governs artists' rights (including resale royalties, copyright, and freedom of expression) as well as the rules that structure transactions in the primary (e.g. artist-dealer contracts and handshake agreements) and secondary art markets. We will also analyze problems related to the representation of artists' estates, the acquisition and de-accessioning of artworks by museums, and the tax codes associated with charitable contributions of works of art. Finally, the class considers how artists strategically make use of the unique affordances of the law and test what it is that artworks can do outside the circumscribed domain of the art world.

Degree Requirement Attributes: Dist:ART

ARTH 83.06 - Art and Life! Avant-garde techniques, 1890-1970

Instructor: Hornstein

For many artists in the late nineteenth and early-twentieth centuries, the relationship between everyday lived experience and artistic practice required urgent rethinking and rearrangement. In addition to objecting to the modern systematization of life, work, and love, artists bristled against the notion that art had become just another thing to be admired, collected, bought and sold. This course examines the histories, interventions, and aspirations of this particular thread of avant-garde practice. We will pay special attention to the interventions and ideas of women artists and artist collectives as they sought to challenge standards of bourgeois respectability and the status of the hallowed singular art object. We will attend to the powerful critiques they offered against the standardization of life under capitalism and in the art world; we will consider the politics of avant-gardism, both in terms of its negativity, its occasional alignment with war and fascism, and some of its patriarchal and imperialist tendencies. We will also consider its positive utopian aspects, including its cultivation of liberatory politics and the clearing of space for new patterns of thought aligned with practices of equality, peace, and new possibilities for art. In addition to studying the techniques of historical avant-gardes in a classical academic/art historical sense, the course asks students to adopt and/or imagine what it would mean to stake out an avant-garde position relative to their own embodied experience as students in the space of Dartmouth's campus. Active learning activities will include the writing, printing, and distribution of manifestos, group derives, and other psychogeographic, surrealist and Fluxus-inspired collective experiments. The course will culminate with the "reinvention" of one of Allan Kaprow's happenings, *Fluids* (1967) (pending Leslie Center Humanities Lab funding) in order to allow students to test out some of the theories we studied in class and

perhaps make necessary adjustments for the needs to the present.

Degree Requirement Attributes: Dist:ART; WCult:W

ARTH 83.07 - Key Words for Art History: Race

Instructor: Coffey

In 1975, the literary critic Raymond Williams published *Keywords*, a cultural history of essential terms for the critical study of art and culture. That small book, as influential as it has been, did not include an entry for “race,” a term that now seems unavoidable for any study of culture if it is to have contemporary resonance. Since then, all manner of “keywords” anthologies have been published, and nearly all of them have some discussion of the term “race.” However, when Robert S. Nelson and Richard Schiff compiled both editions (1996/2003) of *Critical Terms for Art History*, the keyword “race” was not included even though related terms like “primitivism,” “ritual,” “fetish,” or “identity,” were. In this class we will explore the term “race” as it is used in art history and visual cultural studies. We will consider not only how “race” has been constructed, naturalized, or challenged in and through visual culture, but also different ways of understanding how it has been operationalized or retheorized by contemporary scholars. We will not take for granted that we know what “race” is, how it appears in art historical practice, or when it is a relevant term. Rather, we will focus on the manifold ways that we “talk about race” in Art History even when the word or idea is not explicitly invoked. We will work collectively to produce a self-published “Keywords” anthology on *Race in Art History*. Each student will identify a term, write a critical genealogy of the term as it has been used in the writing of art history, and provide an example from the history of art that helps to concretize their argument. Additionally, students, working in teams, will draft an “Introduction” to our volume that helps to motivate the project and situate each entry for readers. Throughout the term, we will explore the genre of the “keywords” volume for insight and guidance. After the term, those students who are most dedicated to the project will be hired as editorial assistants to help me shepherd the draft through the final stages of publication.

Degree Requirement Attributes: Dist:ART

ARTH 89 - Independent Study

Independent Study is intended for advanced students who have demonstrated their ability to do independent research in art history and who wish to study some topic in greater depth than is possible in a regularly scheduled course or seminar. The Independent Study project should be preceded by at least one Art History course in an area related to the topic under consideration, and may even develop out of that course. A student interested in undertaking Independent Study must first submit a proposal to the faculty member with whom he or she wishes to study. Assuming agreement by that faculty

member, the proposal will then be reviewed by the entire Art History faculty. Ordinarily, this must be done in the term immediately preceding the term in which the Independent Study course will be taken. The Independent Study course cannot be used to fulfill any of the requirements of the Art History major or minor.

Offered: Fall, Spring, Summer, Winter.

ARTH 89.01 - Senior Seminar in Art Historical Theory and Method

Instructor: Elias

This seminar, the Department of Art History’s “culminating experience,” helps students to locate contemporary theories and methods for the analysis of art and visual culture within a critical historiography of the discipline. Rather than concentrating on objects, a period, or a nation/region, we instead focus on how scholars have approached writing about art. The goal is not to be comprehensive, but rather to touch on key issues and problems that continue to animate the practice of art history.

Degree Requirement Attributes: Dist:ART

ARTH 89.02 - Senior Seminar in Art Historical Theory and Method

Instructor: Hornstein

This seminar, the Department of Art History’s “culminating experience,” helps students to locate contemporary theories and methods for the analysis of art and visual culture within a critical historiography of the discipline. Rather than concentrating on objects, a period, or a nation/region, we instead focus on how scholars have approached writing about art. The goal is not to be comprehensive, but rather to touch on key issues and problems that continue to animate the practice of art history.

ARTH 89.03 - Senior Seminar in Art Historical Theory and Method

Instructor: Coffey

This seminar, the Department of Art History’s “culminating experience,” helps students to locate contemporary theories and methods for the analysis of art and visual culture within a critical historiography of the discipline. Rather than concentrating on objects, a period, or a nation/region, we instead focus on how scholars have approached writing about art. The goal is not to be comprehensive, but rather to touch on key issues and problems that continue to animate the practice of art history.

Degree Requirement Attributes: Dist:ART

ARTH 89.04 - Senior Seminar in Art Historical Theory and Method

Instructor: Cohen

This seminar, the Department of Art History's "culminating experience," helps students to locate contemporary theories and methods for the analysis of art and visual culture within a critical historiography of the discipline. Rather than concentrating on objects, a period, or a nation/region, we instead focus on how scholars have approached writing about art. The goal is not to be comprehensive, but rather to touch on key issues and problems that continue to animate the practice of art history.

Degree Requirement Attributes: Dist:ART

ARTH 89.05 - Senior Seminar in Art Historical Theory and Method

Instructor: Kassler-Taub

This seminar, the Department of Art History's "culminating experience," helps students to locate contemporary theories and methods for the analysis of art and visual culture within a critical historiography of the discipline. Rather than concentrating on objects, a period, or a nation/region, we instead focus on how scholars have approached writing about art. The goal is not to be comprehensive, but rather to touch on key issues and problems that continue to animate the practice of art history.

Offered: Fall.

Degree Requirement Attributes: Dist:ART

ARTH 89.06 - Senior Seminar in Art Historical Theory and Method

Instructor: Teriba

This seminar, the Department of Art History's "culminating experience," helps students to locate contemporary theories and methods for the analysis of art and visual culture within a critical historiography of the discipline. Rather than concentrating on objects, a period, or a nation/region, we instead focus on how scholars have approached writing about art. The goal is not to be comprehensive, but rather to touch on key issues and problems that continue to animate the practice of art history.

ARTH 91 - Honors

Instructor: Camerlenghi

The first in a sequence of two courses devoted to independent research and the writing of a thesis or execution of a project under direction of a departmental adviser. Students admitted to and participating in the departmental honors program must take these courses in consecutive terms of the senior year.

\f

Students are awarded one course credit for successful completion of this course upon completion of ARTH-092. Students register for ARTH-091 and receive a grade of "ON" (ongoing) at the end of the term. Students then register for ARTH-092 the subsequent term to complete the coursework. A final grade will replace the "ON" in ARTH-091 upon completion of ARTH-092.

Prerequisite: Consult the statement of the Art History Honors Program. Only one of these courses may be counted as part of the major in Art History.

Offered: Fall, Winter.

ARTH 92 - Honors II

Instructor: Camerlenghi

The second in a sequence of two courses devoted to independent research and the writing of a thesis or execution of a project under direction of a departmental adviser. Students admitted to and participating in the departmental honors program must take these courses in consecutive terms of the senior year.

Students are awarded one course credit for successful completion of this course. Students who have registered for ARTH 091 register for ARTH 092 to complete the coursework. At the discretion of the instructor, a student may opt to do additional work over three terms. In this arrangement, students register for ARTH 092 and receive a grade of "ON" (ongoing) at the end of the second term. Students do not register for the subsequent term. A final grade will replace the "ON" for ARTH 091 and ARTH 092 at the end of the subsequent term at which time the coursework must be completed.

Offered: Spring, Winter.

Asian Societies, Cultures, and Languages

Chair: Edward Miller

Professors: S. R. Craig (Anthropology), R. Ohnuma (Religion), D. Washburn (ASCL, Film and Media Studies, and Comparative Literature); **Associate Professors:** J. Dorsey (ASCL), S. J. Ericson (History), L. Gibbs (ASCL), A. F. Hockley (Art History), S. L. Kim (ASCL and Art History), E. Miller (ASCL and History), G. Raz (Religion), S. Schmidt-Hori (ASCL), S. Suh (ASCL and History), A. Wang (ASCL), M. Xie (ASCL); **Assistant Professors:** S. Eom (ASCL), Y. Lu (History), S. Swenson (Religion), S. Upadhyay (Sociology); **Senior Lecturers:** M. Ishida (ASCL), A. Li (ASCL), I. W. Watanabe (ASCL), Lei Yan (ASCL); **Lecturers:** Q. Chen (ASCL), E. Hwang (ASCL), D. Rezvani (ASCL), S. Singh (ASCL), S. Zhang (ASCL)

To view Asian Societies, Cultures, and Languages Courses, scroll to bottom of this page.

See below for an explanation for ASCL's course number system.

- ASCL courses are numbered by category, not by their level of difficulty. Most of the courses in the 50s, 60s and 70s do not have prerequisites
- DS (*Discipline Specific*) courses for South and Southeast Asia are numbered in the 50s
- DS (*Discipline Specific*) courses for East Asia are numbered in the 60s
- IITD (*Interdisciplinary, Interregional, Transnational, Diaspora*) courses are numbered in the 70s
- ASCL 10.01 (p. 140), 10.02 (p. 140), 10.03 (p. 141), 10.04 (p. 141) and 11.04 (p. 141) may count as IITD courses
- *Advanced Seminars* are numbered in the 80s
- Courses related to independent study and the Senior Honors Program are numbered in the 90s

Asian Societies, Cultures, and Languages Requirements for Majors & Minors

Standard Major

- One introductory course chosen from *ASCL I: Thinking through Asia* offerings
- Two language courses beyond the first-year level (or the equivalent)
- Three *Interdisciplinary, Interregional, Transnational or Diaspora* courses
- Three *Discipline Specific* courses
- One *ASCL 80.XX: Advanced Seminar* (serves as the Culminating Experience)

Language Track Major

- One introductory course chosen from *ASCL I: Thinking through Asia* offerings
- Five language courses beyond the first-year level (or the equivalent)
- Three *Interdisciplinary, Interregional, Transnational or Diaspora* courses or *Discipline Specific* courses

- One *ASCL 80.XX: Advanced Seminar* (serves as the Culminating Experience)

Standard Minor

- One introductory course from among the *ASCL I: Thinking through Asia* offerings
- Two *Interdisciplinary, Interregional, Transnational or Diaspora* courses
- Three *Discipline Specific* (DS) courses

Language Minor

- Six language courses beyond the first-year level

Modified Major

ASCL Modified Majors require seven ASCL courses combined with four from another program or department. Students wishing to pursue a Modified Major must prepare a proposal that includes:

- Your list of the courses comprising your modified major. Your list must include
 - An *ASCL I: Thinking Through Asia* course
 - An *ASCL 80.XX: Advanced Seminar* (Culminating Experience)

A selection of five (5) ASCL courses that constitute a mix of DS (discipline specific) and IITD (interdisciplinary, interregional, transnational, and diaspora) courses. This selection of five courses may include one or two language courses beyond the first-year level.

- Four courses from the modifying department or program, accompanied by their ORC descriptions
- A rationale for the proposed major:

In keeping with the College's requirements for all modified majors, your rationale must show that the proposed major is "unified and coherent" by explaining the reasons for including the four modifying courses within your major plan of study. The reasons may be related to (1) particular geographic subfields of Asian Studies (i.e. China Studies, South Asian Studies); (2) particular academic disciplines (i.e. Literary Studies, Anthropology, History); and/or (3) specific topics or categories of study (i.e. development, political violence, borderlands, visual art). The rationale should argue for the unity and coherence of the major on intellectual grounds; it should not be based on your post-graduation career plans.

Students who are interested in proposing an ASCL modified major should contact the ASCL Vice Chair to discuss their plans and get feedback on their draft rationale. When the application is completed, the student should submit it to the ASCL Chair and Vice Chair for review and approval.

Honors Program

The ASCL Honors Program consists of a two-term, two-course sequence comprised of ASCL 90 (p. 162) and ASCL 91 (p. 163), during which the student completes an honors thesis. To qualify for the Honors Program the applicant must have a GPA of 3.0 overall and GPA of 3.4 in the major. Admission to the program is contingent upon acceptance of the applicant's thesis proposal. Students should develop a thesis proposal in consultation with a prospective advisor. The primary advisor for an honors thesis must be a faculty member appointed in ASCL or affiliated with ACSL. Secondary advisors drawn from ASCL or other departments and programs are encouraged when the student's project warrants additional expertise. Proposal guidelines can be found on the ASCL website.

As part of the Honors curriculum, ASCL 90 and 91 carry high expectations regarding student performance with regard to writing, deadlines, accountability, and critical reflection. The thesis advisor will assess the student's progress at the end of the first term of the Honors course sequence. If insufficient progress has been made on the thesis, students will be dropped from the program and given a grade for the work completed in the first term. The grade can count toward the ASCL major but not as a substitute for the ASCL Culminating Experience. A public presentation of the honors thesis at the end of the second term is a requirement of the Honors program. Completion of both ASCL 90 and 91 can be counted as the ASCL culminating experience. ASCL 91 is an addition to ASCL's ten-course major and cannot be counted toward the total number of courses needed to complete an ASCL major.

Students wishing to pursue a fall/winter thesis should submit their proposal to the ASCL Department Chair no later than the seventh week of their junior-year spring term. Proposals for winter/spring theses should be submitted to the chair no later than the seventh week of the applicant's senior year fall term.

Admission to the Honors Program is by vote of the ASCL Department faculty.

Study Abroad Programs

ASCL offers study abroad programs in China (LSA+), Japan (LSA+), a winterim program in Vietnam (Fall Term +), and exchange programs with Yonsei University (Seoul), Keio University (Tokyo), Kanda University (Chiba, Japan), and Waseda University (Tokyo). Information about these programs is available through the Frank J. Guarini Institute for International Education.

ASCL - Asian Societies, Cultures, and Languages

ASCL 1.01 - Urban Asia

Instructor: Eom

Asian cities, once considered to be recipients or followers of urban models imposed by Western cities, have become new models of urbanism themselves, thereby serving as the heart of the growing body of scholarship which focuses on such dynamic urban processes reshaping cities across the globe. For instance, over the last few decades, Singapore, Shanghai, and Seoul have distinguished themselves as points of reference for other aspiring cities in and beyond Asia. How have Asian cities transformed in an interconnected global economy? How does an interdisciplinary reading of Asian cities provide ways to think anew about Asia today?

With Asia at the center of our urban inquiries, this course proposes to read Asian cities from historical and comparative perspectives. The primary purpose of this course is to introduce students to multiple disciplinary approaches to Asia's urban environments and their dynamic relationships to other parts of the world. The course features instructors from several Dartmouth departments and programs presenting a diversity of theoretical perspectives and empirical studies drawn from cities across East, South, and Southeast Asia.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ASCL 1.02 - Asian Femininities

Instructor: Schmidt-Hori and Xie

What does it mean to be a woman, or be defined as a woman, in Asian cultures? How can we make sense of Asian women's lives and experiences in the past and the present within the cultural context of Asia instead of from a Western perspective? This course explores varied forms of Asian femininities through historical documents, religious texts, literary work, images and films, as well as scholarly sources. In the course, we will toggle back and forth between being impartial observers and imagining ourselves living in societies different from our own. Because gender/sex is a perspective everyone relies on to understand the world and navigate the complexities of human interaction, we believe a close look at "Asian

femininities” will be an excellent introduction to Asian studies!

Offered: Fall.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ASCL 7 - First-year Seminar in ASCL

Instructor: Gibbs

Topics vary. Consult special listings per term on the registrar's website.

Offered: Winter.

ASCL 9.01 - Urban Lives & Livelihoods in Contemporary China: Language, Culture and Narrative

Instructor: Li

This is the Director’s Course for the LSA program in Beijing. Having completed the prerequisites listed below, the program participants have established a foundational understanding of the language and culture of China.

In this course, students will learn about the lives of ordinary people in post-reform China. In keeping with the overall goals of this LSA program, we will be paying particular attention to “language”—a category that is broader than just the vocabulary and grammar which you will be learning in your Chinese language courses this summer. You will be learning how Chinese urban residents modulate their linguistic output (via accent, diction, or dialect) to navigate their world; you will also become familiar with common social discourses and narratives that people in China use to describe their experiences. In the course of conversations with people in Beijing and other cities, you will explore how “language” shapes everything from the names given to babies to decisions about studying a foreign language like English. In addition, you will discuss and contextualize the ways that book authors, filmmakers, poets, and everyday people use language to represent “lives in China,” whether their own or others’.

The final course project will involve conducting an interview with a local resident of Beijing. Early in the term, all students in the course will be placed into small teams, and each team will spend time with a local family that has volunteered to host our students a few times during the summer. Toward the end of the term, each team will arrange to interview one member of the family by asking them to respond to the essay the group composed and shared with the family member in advance (see the schedule for details).

Offered: Summer.

Degree Requirement Attributes: Lang:LRP; Dist:SOC;
WCult:NW

ASCL 9.31 - The Language-Culture Nexus in Contemporary Japan

Instructor: Schmidt-Hori

“The Language-Culture Nexus in Contemporary Japan” is the Director’s Course for the LSA in Japan. It has been developed to enhance your ten-week linguistic and cultural immersion in one of the major cities of Japan!

With the one-year of Japanese language training and ASCL 10.03 (Introduction to Japanese Culture) under your belt, you have already acquired so much knowledge about the language and culture of Japan. Now, you will be tasked to connect the dots between theory and practice as well as language and culture—*Do Japanese people speak like the textbook or anime? What’s the difference between a regional dialect and the “standard Japanese”? How do we sound kawaii or bro-ey in Japanese?* —You will find out the answers to these questions and more.

Unlike our regular Japan-related courses taught on campus, a significant amount of learning will depend on your own research, data collection, and analyses. Try to become an autonomous learner and actively engage with your locals. If you do so, you will be amazed at how much knowledge and experience you have absorbed at the end of the term.

Degree Requirement Attributes: Lang:LRP; Dist:SOC;
WCult:NW

ASCL 10.01 - Introduction to Chinese Culture

Instructor: A. Wang & Xie

The aim of this course is to provide students with a basic knowledge and appreciation of Chinese culture. We will examine the evolution of Chinese culture and identity from the earliest Chinese dynasties, dating back more than 3500 years, to the present day. Through readings of literary texts in translation, students will be introduced to topics in language, history, literature and art, philosophy and social and political institutions. The course is open to students of all classes. It is required for participation in the LSA and FSP, for the major, and the minor.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ASCL 10.02 - Introduction to Korean Culture

Instructor: Kim and Suh

This course provides an introduction to Korean culture and history, examining Korea's visual and textual expressions from the pre-modern age to the twentieth century. What are the origins of Korean national and cultural identities? How have Korean claims of cultural distinctiveness been manifested and modified over time? Tracing answers to these questions simultaneously helps us to consider how and why Korea has entered America's consciousness. As Korea matters to the US not simply as a fact but as a

project, this course avoids portraying Korea through any generalized statements or uncritical categories. Rather, students are encouraged to explore novel perspectives on Korea and thereby unravel their own prejudices and agendas. No prior acquaintance with the Korean language is required.

Cross-Listed as: HIST 05.04

Offered: Fall.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ASCL 10.03 - Introduction to Japanese Culture

Instructor: Washburn

Japanese cultural history through a broad survey of literature, art, social and political institutions, and popular culture. Modern conceptions of Japan and formations of Japanese identity have evolved under the pressures created by radical swings between periods of wholesale appropriation of foreign cultural forms and periods of extreme isolation. The course will trace the evolution of Japanese culture by examining the ways in which cultural archetypes are distinguished in Japan. Taught in English. Open to all classes. Required for the LSA , major and minor.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ASCL 10.04 - Introduction to Southeast Asia: Culture and Politics

Instructor: Singh

This course offers an introduction to the cultural and political diversity of Southeast Asia. Broadly focused on the nation-states that have emerged since the end of World War II (Brunei, Burma [Myanmar], Cambodia, Indonesia, East Timor, Laos, Malaysia, Philippines, Singapore, Thailand, and Vietnam), the course explores the potentials and limits to a regional perspective. The course explores the various cultures of the region and thematically situates them within and outside the confines of the modern nation state – encouraging students to appreciate both plurality and cohesiveness of the SEA region. The course challenges cultural essentialisms and ethnocentrisms towards the region – encouraging students to question the colonial cultural stereotypes that dominate mainstream knowledge of the region. In addition to exploring the extant forms of cultures (religion, language, ritual, literature) in Southeast Asia, this course will also explore how local identity in SEA is negotiated amidst sweeping cultural forces of globalization, imperialism, and modernization.

Offered: Fall.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ASCL 11.04 - Introduction to South Asia: Culture and Identity on the Indian Subcontinent

Instructor: Staff

This interdisciplinary course is an introduction to the cultures of South Asia—particularly the contemporary nations of India, Pakistan and Bangladesh—with a focus on the issue of identity. The course will examine the many identities of South Asia, including regional, religious, caste, national and gender identities and explore how these identities have been shaped in contexts of change from ancient times to the present. Topics covered will include the role of identity in food practices, Bollywood and sport as well as the role of identity in politics and the public sphere.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ASCL 51.01 - Hinduism

Instructor: Ohnuma

An introductory survey of the Hindu religious tradition of South Asia from 1500 B.C.E. down to the present day. Emphasis will be given to the historical development of elite, Sanskrit Hinduism and its constant interaction with popular and local traditions.

Cross-Listed as: REL 9

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 51.02 - Modern Hinduism

The names “Hinduism,” a religion, and “India,” a nation, come from the same word. What's at stake in mapping one onto the other? We will study the consolidation of Hindu traditions as a modern religion—how the “ism” got in the “Hinduism”—in historical context, examining the writings of thinkers like Gandhi, Radhakrishnan, and Vivekananda. One of the most compelling things about Hinduism's global image is its association with nonviolence. But a major focus will be the development of Hindutva ideology, which recasts the religion in a militant, masculinized mode. Who speaks—within the academy and outside it—for Hinduism?

Cross-Listed as: REL 19.06

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 51.03 - Indian Buddhism

Instructor: Ohnuma

An introductory survey of the Buddhism of South Asia from its beginnings in the 6th century B.C.E. to its eventual demise in the 12th century C.E. Emphasis will be given to the major beliefs, practices, and institutions characteristic of Indian Buddhism, the development of its different varieties (Hinayana, Mahayana, and Vajrayana), and its impact upon South Asian civilization at large. Open to all classes.

Cross-Listed as: REL 018

Offered: Winter.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 51.04 - Tibetan Buddhism

Instructor: Seton

An introductory survey of Buddhism in Tibet from its inception in the 8th century until the present day. Emphasis will be given to the central doctrines, practices, and institutions characteristic of Tibetan Buddhism, its development of various popular and elite religious ideals (householder, nun, monk, scholar, solitary hermit, crazy yogi, and female dakini), and its evolving identity in the West. Not open to students who have received credit for REL 19.21 or ASCL 61.02.

Cross-Listed as: REL 19.21 REL 41.05

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 51.05 - Religions of Southeast Asia

Instructor: Long

This introductory course surveys religion in Southeast Asian contexts. We begin by analyzing the terms “Religion” and “Southeast Asia” as products of global politics. Then, we examine contemporary case studies from seven Southeast Asian countries to explore how religions shape local communities and life experiences. Our course materials lead us to investigate how Spirit Religions, Buddhism, Daoism, Christianity, and Islam intersect and inform understandings of embodiment, health, power, nature, and death. Open to all.

Cross-Listed as: REL 02.01

Offered: Winter.

Degree Requirement Attributes: Dist:INT or TMV; WCult:NW

ASCL 51.06 - Buddhism, Sexuality, & Gender in Southeast Asia

Instructor: Swenson

This intermediate-level course explores how Buddhist concepts of embodiment affect daily life and society in Southeast Asian contexts. We will also consider how cultural understandings of gender and sexuality influence local religious practices in the Buddhist-majority countries of Thailand, Vietnam, Cambodia, and Myanmar. Our materials will lead us to analyze how religion, sexuality, and gender intersect with one another, as well as how these intersections impact broader understandings of authority, wisdom, beauty, death, and loyalty.

Cross-Listed as: REL 41.07

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 51.07 - Gods, Demons, and Monkeys: The Ramayana Epic of India

Instructor: Ohnuma

The ancient Indian epic known as the Ramayana is a stirring, martial tale of gods, demons, and monkeys. Beginning with the classical Sanskrit version composed as early as 200 B.C.E., India has produced hundreds of different versions of the Ramayana, in different languages and media, with different agendas and for different audiences. We will examine this epic tradition in all of its complexity, making ample use of different forms of media.

Cross-Listed as: REL 40.01

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 51.08 - Buddhist Philosophy

Instructor: Seton

Buddhists see philosophy not just as a study of reality or the meaning of life, but as a useful step in overcoming all forms of suffering and realizing the existential happiness of a buddha. This course will survey the four main Buddhist philosophical schools; highlight the differences in their phenomenology, onto-epistemology, and ethics; and explore their views on the nature of consciousness, identity, perception, wisdom, and happiness. It will also touch upon Buddhist dialectical reasoning and analytical meditations aimed at developing insight into the nature of mind and its lifeworld.

Cross-Listed as: PHIL 01.20 REL 41.08

Offered: Spring.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 51.10 - Mahayana Buddhist Texts

An in-depth, discussion-based exploration of the rich, imaginative world of Mahayana Buddhist literature, including both philosophical treatises and religious scriptures (including the Heart, Diamond, Lotus, and Vimalakirti Sutras). Open to all classes.

Cross-Listed as: REL 41.01

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 51.11 - Religions of Vietnam

Instructor: Swenson

Come learn about religious practices in Vietnam and among Vietnamese communities globally. Religions have gained visibility and influence since Vietnam’s 1986 policy reforms. Today, religions affect experiences of gender, sexuality, ethnicity, migration, class, and belonging, both in and beyond Vietnam’s socialist context. Our course investigates case studies from Buddhist, Christian, Confucian, Cao Dai, and spirit traditions to

examine how people build communities, find purpose, and claim power through religion.

Cross-Listed as: REL 02.02

Degree Requirement Attributes: Dist:INT or TMV; WCult:NW

ASCL 52.01 - Music and Dance of North India

This experimental interdisciplinary course explores traditional North Indian (Hindustani) music and dance as both an artistic practice and a cultural system. Course work combines regular group lessons on the tabla—the principal percussion instrument in the performance of Hindustani raga—with weekly reading, listening, and viewing assignments focusing on Indian music theory, history, and aesthetics. Visiting artists will demonstrate the central dance, instrumental, and vocal forms of Hindustani performing arts. No prior musical experience required.

Cross-Listed as: MUS 17.02

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 52.02 - Arts of Tibet: Sacred Abode of the Himalayas

This course surveys the art and culture of Tibet from the time of the introduction of Buddhism in the seventh century to the modern period. Traditionally understood as the divine abode of Avalokitesvara, the bodhisattva who embodies the compassion of all buddha in Buddhist cosmology, Tibet was also fantasized as the immortal realm of “Shangri-la” by western interpreters. In this course, we will begin by examining the imagination and representation of Tibet and its culture in modern western discourses, and then shift the focus to the development of artistic forms of Tibet in the context of Tibet’s history and religious movements, from ancient times to the present.

Cross-Listed as: ARTH 34.01

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 52.03 - Arts of South Asia

This course introduces 2000 years of the art of the Indian subcontinent, from the Indus Valley in the 2nd century BCE, and moves chronologically to the present day. Topics cover the sculpture and architecture of Buddhism and Hinduism, painting and architecture of Islamic courts, colonial and national period visual culture, and post-partition Indian and Pakistani modern and contemporary art. In this course, you will be taught to look at, think about, and engage in critical discussions of the visual arts of South Asia. Our class lectures and discussions will focus on the formal and material aspects of architecture, epigraphy, sculpture, painting, calligraphy, photography, and print, as well as the historical contexts in which these works were made and understood.

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 52.04 - From Bombay to Bollywood and Beyond: History of and through the Hindi Film

India’s film industry is one of its biggest “soft power” exports. Every year, “Bollywood” (as the Hindi film industry centered in Mumbai is known) produces more films than all of America, and Bollywood is just one of the many film industries located in the country. In this course, we will focus on two aspects. First, we will think about the history of films in the region—the antecedents of film through theatre and radio, the transition to sound and the emergence of *filmi* music, and the different genres of what makes a typical “masala” (potboiler) Bollywood film.

The second aspect of this course is about how films are consumed and circulated in—and beyond—South Asia. In examining what makes films appeal to diverse audiences, we think about how these films were influenced by, and in turn influenced, postcolonial India’s social, class relations, politics and religion at different points of time— from the optimism of the 1950s to the disillusionment of the 1970s and the neoliberal fantasies of early 21st century India.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 53.02 - Imagining Freedom: Literature and Cinema of Decolonization in South Asia

The twentieth century witnessed global struggles against Euro-American colonialism across Asia, Africa, and the Caribbean worlds. Decolonization, or the process through which previously colonised nations became free of their imperial rulers, was at once a political, social, cultural, and psychological phenomenon. Not only did anti-colonial struggles challenge colonial domination, they also envisioned heterogeneous imaginaries of “freedom” that would shape their futures for years to come. Freedom was never a static idea. In international conferences like those of the Afro-Asian Writers Association, previously colonised people vigorously debated the meanings and visions of freedom for postcolonial futures. Women, workers, and indigenous peoples drew attention to the fissures in national independence that prioritised certain hegemonic voices over others. Moreover, debates on what constituted “freedom” under decolonization were also shaped by the geopolitical and cultural politics of the global Cold War.

What became of these global imaginaries of hope and dissent, and what lessons do they offer us today? This course will look at how art, cinema, and literary writing shaped conceptions of freedom in the twentieth and twenty-first centuries. Taking the case of South Asia, the course will introduce students to literature and art from/about India, Pakistan, Sri Lanka, Afghanistan, and Bangladesh. We will consider the work of literary and cultural figures like Ismat Chughtai, Kamila Shamsie, Romesh Gunsekera, Meena Kandasamy, and R.K.

Narayan, avante-garde artists like M.F. Hussain and Akbar Padamsee, and filmmakers like Mani Ratnam and Syed Akbar Mirza. While learning about transnational literary and artistic movements from South Asia like the Progressive Writers' Association, the Dalit Panthers, the Bombay Progressive Artists Group, Parallel Cinema and Bollywood, students will take away an expansive and historically informed idea of what was decolonization and how its meanings have evolved in our current historical conjuncture.

ASCL 54.03 - The City in Modern South Asia

South Asian cities are currently undergoing massive demographic and spatial transformations. These cannot be understood without a consideration of both the specific history of South Asia and a broader account of urban change. This course examines these changes in historical perspective and situates urban South Asia within a global context. How did colonial rule transform cities such as Delhi, Lahore, and Bombay? How were the differing ideologies of India and Pakistan mapped onto new capitals such as Chandigarh and Islamabad? How are ethnic pasts and techno futures reconciled in booming cities such as Bangalore and Mumbai? How are slums produced and what are the experiences of people living in them? What are the connections between the urban environment and political mobilization? We consider a range of sources, including scholarly literature, films, and short stories.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 54.04 - Partition in South Asia

In the years leading to 1947, nationalist activism against the British and tensions between Hindus and Muslims escalated in the Indian subcontinent. This culminated in Partition and the emergence of the nations of India and Pakistan. Independence was marred, however, by the bloodshed accompanying the mass movements of Muslims into Pakistan and Hindus into India. What were the factors leading to this juxtaposition of triumphal Independence with shameful Partition? What were the implications of Partition for ordinary people? How have memories of Partition continued to affect powerfully politics and culture in the subcontinent? This seminar investigates such questions using a wide variety of materials including films, memoir, fiction, and scholarly works. This course follows recent scholarship in focusing on the long-term implications of Partition for the subcontinent. Hence, while we certainly will investigate the events leading up to Partition, our emphasis will be on understanding the effects of Partition on the lives of ordinary people during and after.

Cross-Listed as: HIST 92.04

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ASCL 54.07 - Colonialism, Development, and the Environment in Africa and Asia

This course examines the environmental history of Africa and Asia, focusing on the period of European colonialism and its aftermath. Topics include deforestation and desertification under colonial rule; imperialism and conservation; the consequences of environmental change for rural Africans and Asians; irrigation, big dams and transformations in water landscapes; the development of national parks and their impact on wildlife and humans; the environmentalism of the poor; urbanization and pollution; and global climate change in Africa and Asia. Open to all classes.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ASCL 54.09 - The Vietnam War

Instructor: Miller

This course examines the conflict which Americans call "The Vietnam War" as a major event in the 20th century histories of both the United States and Vietnam. In addition to exploring the key decisions made by U.S. and Vietnamese leaders, students will also learn about the experiences of ordinary soldiers and civilians. This course incorporates multiple American and Vietnamese sources and perspectives, and also investigates multiple explanations of the war's origins and outcome. Open to all classes.

Degree Requirement Attributes: Dist:INT or SOC; WCult:W

ASCL 54.10 - Global South Asia

Home to some of the world's richest people and biggest companies, South Asia has been the source of countless stories of success. Yet there's more to these stories than meets the eye. What makes South Asia important globally and what is the history behind South Asia's recent rise? Global South Asia answers these questions by looking at the ways the region has been connected to other parts of the world throughout history.

Cross-Listed as: HIST 90.09

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 54.11 - Gandhi, Twentieth Century India and the World

This course explores the history of modern India through the figure of Mahatma Gandhi. After exploring early developments in Gandhi's life and his philosophy of non-violence, we will examine the role of Gandhi and of his image in major political developments in India. We will also take up many key issues relating to Gandhian thought, including Hindu-Muslim relations, caste, gender and sexuality, and social equality. Finally, we will discuss Gandhi's legacy in India and globally.

Cross-Listed as: HIST 05.11

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ASCL 54.12 - State and Society in Early Modern India, 1500-1800

Instructor: Suri

This course surveys historical developments in what are now the modern nation states of India, Pakistan, and Bangladesh between the sixteenth and eighteenth centuries. Students will explore South Asian society, culture, and religion in the broader context of state-formation and empire-building. We will examine the makings of the Mughal Empire, one of the most influential states in the subcontinent's history, its predecessors, successors, and rivals, as well as its complex and contested legacy. The Taj Mahal stands as a powerful example of both Mughal imperial achievement and continuing controversy about early modern pasts. Moreover, this course will emphasize the makings of Islam in India, Persianate political and literary culture, as well as early modern commerce and politics.

Cross-Listed as: HIST 90.15

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 54.20 - The Cold War in Southeast Asia

Instructor: Singh

This course offers a Southeast Asian perspective to the study of the Cold War. It explores the ways in which the Cold War is documented, memorialized, imagined, and re-imagined in the Southeast Asian region. The Cold War was a key period of global history, which deeply affected the politics and culture of Southeast Asia, changing the everyday life of people as well as the function of the nation-state.

The course will move beyond the idea of the Cold War as a contestation between the USA and USSR, to explore the inter-play of superpower dynamic in Southeast Asian countries, given their "Global South" and "Third World" contexts. We will explore how many conflicts in various Southeast Asian polities were shaped by -- and in turn shaped -- the Cold War superpower dynamics. The course challenges the idea that there was a 'Cold War' per se and expands the understanding of the Cold War into actual conflicts, which caused significant casualties in the Southeast Asian region, and the Asia-Pacific more broadly. The course takes a thematic approach to thinking about the Cold War in Southeast Asia by introducing various ideas around the political dynamics and cultural dimensions of the conflict in the region, and demonstrates how local actors and their agency, be they politicians, novelists, filmmakers and others, all shaped how the Cold War in the region was experienced. We will also explore how the memory of the period continues to live on in various Asian diasporas, alongside the troubled legacies of conflict in relation to mass killing and political violence.

The course aims to destabilize notions that the Cold War was necessarily only about grand geopolitical moves (even as it explores them), but in fact, it inspired various local expressions of either ideological alignment, resistance or ambivalence. We will explore the conditions for postcolonial emergence and decolonization of the states in the region (Brunei, Burma [Myanmar], Cambodia, Indonesia, East Timor, Laos, Malaysia, Philippines, Singapore, Thailand, and Vietnam), and examine how the Cold War introduced neocolonial dimensions to these configurations. We will also explore how this speaks to broader conversations about development in the 'global south' as a legacy of the period, and the lasting impacts of war and devastation on the nations in the region.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ASCL 55.01 - Anthropology of Tibet and the Himalayas

Instructor: Craig

This course introduces students to the peoples and cultures of Tibet and the greater Himalayan region (Nepal, northern India, Bhutan). We examine the cultural, ecological, political, religious, and economic interfaces that define life on the northern and southern slopes of Earth's greatest mountain range. In addition to learning about Himalayan

and Tibetan lifeways, we will also learn about how these mountainous parts of Asia have figured into occidental imaginings, from the earliest adventurers to contemporary travelers.

Cross-Listed as: ANTH 32

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 55.02 - Religion in a Global South Asia

Instructor: Upadhyay

What are the social and political functions of religion? How does religion shape our everyday experiences and the way we make meaning of the world? What is the relationship between religion and structures of power? This course travels to South Asia to tackle these questions. South Asia is home to large populations of the world's major religions as well as many local and syncretic religious traditions, making the region an illuminating site for investigating religion from a sociological perspective. The semester will begin with the theoretical interventions from classical social theorists like Marx, Weber and Durkheim. We will then move to critical perspectives on the social functions of religion, which will be based on empirical material and analysis that is rooted in the context and experience of post-colonial societies in South Asia. Students will have the opportunity to develop critical perspectives on different facets of religion and their intersections with structures of power, including imperialism, colonialism, class, gender, and race.

Cross-Listed as: SOCY 041

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 55.03 - Insurgent South Asia

Instructor: Upadhyay

Within the short quarter century run of the 21st century, the world has witnessed a global upwelling of insurgency. Southern Asian sites, including but not limited to India, Sri Lanka, Bangladesh, and Nepal have been fertile grounds for tens of millions of insurgent publics protesting against austerity, rising living costs, student debt, corrupt governments, police brutality, and government neglect during the COVID-19 pandemic. Who are these Southern Asian insurgent publics? How does South Asia reflect – or depart from – global patterns of insurgency and other forms of social protest? Do we need to theorize southern insurgency differently from those occurring in other parts of the world?

Cross-Listed as: SOCY 052

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 59.04 - Intensive Foreign Study in Vietnam

Instructor: Miller

This interdisciplinary course is the second required component of the foreign study program “Developing Vietnam”, exploring the contemporary history, society and culture of Vietnam. This course, held during Dartmouth’s December “winterim” period, consists of three weeks of intensive and immersive learning in Ho Chi Minh City. Students live and study at a partner university in Vietnam and complete their group research project (begun during the fall term in ASCL 70.22) on some aspect of development in contemporary Vietnam.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 60.03 - Frontier in Traditional Chinese Thought: Beyond the Great Wall and the Becoming of China

Instructor: Xie

The conceptions of frontier, frontier-heartland relations, unity and territoriality are crucial to the formation of the Chinese cultural and spatial identity from the ancient time to today. At the moment, the frontier space beyond the Great Wall takes up more than half of the entire Chinese territory. The ways Chinese people deal with their ethnic minority regions, differentiate the northerners and the southerners, view their own culture and cultural others and imagine their regional and global roles can all be related to the spatial conceptions with regard to the frontier in pre-modern China. This course will trace the development of these conceptions through a variety of philosophical, cosmological, religious, historical, geographical, and literary texts and images. Classical Chinese texts however are not categorized by discipline but represent a body of interdisciplinary knowledge that reflects the culture’s thoughts and values. The course will deal with the materials in a way that relive their a-disciplinary nature while maintaining a critical perspective on them. When relevant, the course will also examine broader theoretical issues such as political morality, gender and sexuality, and border-crossing.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 60.04 - Modern Chinese Literature and Society

Instructor: Xie

What does it mean when literature is entrusted with the task of rescuing, rejuvenating, revolutionizing and modernizing the entire nation as China entered the age of modernization? What does it mean when literature subsequently played a seminal role in almost all social and political movements in modern and contemporary China, from socialist revolutions to contemporary #MeToo movements? How does such a literature speak for collective longings, individual differences, alternative

communities, and internal struggles among a vast and diverse population? And moving beyond the boundaries of the political state of People's Republic of China, how can we approach a body of literature written in Chinese and other languages from various Chinese-speaking communities across the globe?

This course will introduce participants to major works in modern Chinese literature and related media forms, as well as to critical discussions surrounding them. We will closely examine how each work engages with the historical development and contemporary dynamics of modern China and Chinese-speaking communities. From literary and cultural perspectives, this course addresses and problematizes some of the most difficult issues that modern China has been working hard to deal with, including colonial modernity, war memory, revolution and trauma, ethnic minorities, overseas Chinese, gender and sexuality, and so on.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 60.10 - Eco-Fiction: Stories of Ghosts and Other Beings from Premodern China

Instructor: Zheng

In this class, we will read a selection of Chinese literary texts (anecdotes, full-fledged tales, poetry) from the third to the nineteenth centuries that feature ghosts. We will consider these ghost stories as a means by which premodern Chinese literary authors explored the ecological connections between the natural and human worlds, and reflected on the relations among humans and between humans and other beings, both animate and inanimate. We will see that ghosts are not just metaphors in these stories. Interaction with ghosts enable human authors to contemplate and unlearn conditions of being and becoming human.

Because close reading is the key skill that students will learn and practice throughout the quarter, the class will also incorporate creative writing exercises and creative assignments to help students better understand techniques of storytelling. Towards this goal, we will read selected theoretical texts on ecocriticism and narratology and discuss how premodern Chinese literary texts can respond to questions and propositions raised by modern and contemporary theorists in creative ways.

Cross-Listed as: COLT 55.03

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 60.11 - Introduction to Chinese Poetry

Instructor: Wang

This course offers an extensive exploration of Chinese poetry spanning three millennia, from the Zhou Dynasty to the 21st century. Beginning with Confucian discussions on

the function of poetry, students will explore how poetry has served as a foundation for education, a tool for social engagement, a meditative practice, and an indispensable channel for self-expression. They will examine major poetic forms, influential poets, and the cultural contexts that have shaped Chinese poetry. Additionally, they will learn creative techniques developed by Chinese poets, including call-and-response, metaphorical riddles, and the integration of poetic lines into the visual arts.

Readings in English translations include essential works such as the *Book of Songs (Shijing)*, *Nineteen Ancient Poems*, *Music Bureau* ballads, the great Tang masters, Song lyrics, courtesan poetry, Chan Buddhist poetry, the modernist poetry movement of the 1980s, migrant worker poetry of the 2000s, and poems responding to the COVID-19 pandemic. The course also examines how modern Western poets like Ezra Pound, Eliot Weinberger, and Gary Snyder have drawn inspiration from the Chinese poetic tradition. To enhance their learning experiences, students will participate in workshops led by poet-translator Eleanor Goodman and the renowned Chinese poet Zang Di.

All readings are in English translation. No prior knowledge of the Chinese language or poetry is required.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 60.12 - The Natural Environment, Fantastic Worlds, and the Human Realm in Chinese Literature

Instructor: Wang

This course explores how Chinese writers have envisioned the relationship between humans, nature, and the supernatural throughout literary history. It examines the influence of Daoist, Buddhist, and Confucian traditions on depictions of both natural and fantastical realms, revealing them as spaces for meditation, transcendence, utopian ideals, and political reflection. Students will investigate how mountains, rivers, animal dens, immortal lands, and human-made spaces—such as shrines and gardens—serve not just as backdrops but as dynamic meeting points infused with cosmic energy and social tensions. Additionally, the course will analyze the ongoing dialogue between civilization and wilderness, the influence of the Chinese literary traditions on contemporary films and visual arts, and how imaginary worlds reflect cultural values and spiritual pursuits.

Readings include classical texts featuring sacred mountains and Daoist cosmology, medieval landscape poetry and essays, utopian visions such as the grotto heavens and the secluded villages, supernatural tales from *Journey to the West* and *Strange Tales from a Chinese Studio*, alongside works addressing shamanism, alchemy, folk religions, ghost stories, and narratives of pilgrimage, exile, and migration. In addition to literary and philosophical texts,

we will analyze how contemporary Chinese films such as *Still Life* (2006) and *Hello, Mr. Tree* (2011) respond to the significant environmental changes in 21st-century China and engage with migration, urbanization, and social conflicts. A special event will be led by the contemporary documentary filmmaker Wang Bo, who will engage with students in a discussion on how the people of his hometown, the "Mountain City" of Chongqing, draw upon the region's unique natural environment and deep-rooted cultural traditions to create various forms of performance and entertainment.

All readings are in English translation. No prior knowledge of Chinese language or literature is required.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 60.19 - Languages of China

Instructor: Pulju

In this course, we will survey both the history of language in China, and the current linguistic situation. Topics will include: geographical and genealogical classification of languages in China; the phonological and grammatical systems of representative languages; the reconstruction of Middle and Old Chinese; ways of writing both Sinitic and non-Sinitic languages; language as a marker of ethnic identity; and past and present language policies, both governmental and non-governmental.

Cross-Listed as: LING 11.02

Degree Requirement Attributes: Dist:SOC; WCult:NW; Lang:LRP

ASCL 60.20 - Languages and Scripts of Gender, Class, and Nation

Instructor: Schmidt-Hori

While language is commonly believed to be a great "tool" with which we describe our feelings and physical phenomena, it is also *the* portal through which we understand the world. In other words, language defines, constrains, and colors human experiences. With this premise as the basis, this course attempts to expand our horizons by examining the ways the spoken languages of Japan, Korea, and China convey concepts such as masculinity, femininity, affection, status, and solidarity. In the latter half of the term, we will also explore the layers of complexity embedded in the writing systems of these three nations. In so doing, we will shed light on each society's historical negotiation of its national identity, Sinophilia, and desire to become a first-class nation of the modern world. No previous knowledge of an Asian language is required.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or TMV; WCult:NW; Lang:LRP

ASCL 60.21 - Body Politics in Japan: Beauty, Disfigurement, Corporeality

Instructor: Schmidt-Hori

The body is a tangible, self-evident entity. Or is it? The premise of ASCL 60.21 is that the body is a political, ethical, sociocultural, and historical phenomenon deeply ingrained in our perceptions of self, other, and the world. This course is an endeavor to understand the politics of the body in premodern and modern Japan through a wide range of primary and secondary texts. In order to consider the multiple perspectives of the body across time, the readings are organized thematically, covering topics from physical beauty as virtue/vice, symbolic meanings of hair and clothing, aesthetics of the Tale of Genji, to disfigurement, disability, aging, race, among other things. This course is open to everyone and no knowledge of Japanese literature or language is required.

Degree Requirement Attributes: Dist:INT or TMV; WCult:NW

ASCL 60.22 - Gender, Sexuality, and Power in Premodern Japan

With a mythical transgendered Sun Goddess, amorous noblemen in pursuit of beautiful ladies, vengeful women wreaking revenge on unfaithful lovers, and Buddhist priests and samurai in same-sex love affairs, classical Japanese literature is populated by figures with a surprisingly diverse range of gender types. The course will cover, in chronological order, myths, courtly tales, poetry, martial epics, ghostly drama, and medieval short stories from the 8th to 16th centuries, and through these texts depicting the interrelationship of gender, sexuality, and power, students will come to an understanding of how historical, political, linguistic and cultural forces shape subjectivity. The course is open to all students; it is taught in English and there are no pre-requisites.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 60.23 - Critiquing Modern Japan through the Works of Murakami Haruki

Instructor: Schmidt-Hori

The students will read and discuss several works of Japan's best-known contemporary author, Murakami Haruki. Through focusing on the recurrent themes of violence, isolation, disconnection, materialism, apathy, and sexuality in Murakami's fictions, the students will consider the various societal issues of post-1970s Japan.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 60.24 - Image and Text in Modernizing Japan

Instructor: Dorsey

Images and text have been variously combined in the Japanese tradition, from the ancient picture scrolls to today's manga (comics). This course traces the evolution of such media in early modern Japan, with a focus on the late nineteenth century shift from the "communal reading" of visually-oriented texts to the silent, solitary reading of fiction. Some consideration will also be given to the re-emergence of the visual imagination in film, manga, and animation.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 60.25 - The Art of War: Stories, Paintings, Films, and Propaganda from Japan's Modern Wars

Instructor: Dorsey

In this course we will examine the relationship between a wide variety of cultural artifacts and modern Japan's experience of war, particularly WW II. Topics addressed within this context include: government censorship, literary subversion, popular culture versus high culture, visual versus written media, postwar cultural memory, the ideology of suicide squads, and the mentality of victimhood. No Japanese language is required for the course, but students with sufficient ability will be expected to make use of original sources.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 60.26 - Thinking of Contemporary Issues in Japan through Graphic Novels (Manga)

Instructor: Schmidt - Hori

This course aims to explore some of the critical and interconnected issues of contemporary Japan as they are represented in graphic novels (manga): gender roles (*Ooku*, *Little Miss P*, *The Way of Househusband*), same-sex intimacy (*My Brother's Husband*, *Whispered Words*), disabilities (*Real*, *Silent Voice*), body image (*In Clothes Called Fat*), and more. For the first week, students will learn the basic mechanics of manga, its history, and its significance both within Japan and on a global scale, which will help them better understand this medium vis-a-vis "comic books" in the United States. Beginning in Week 2, students will carefully read the assigned work (usually multiple volumes per day; one volume ranges from 200-250 pages) while taking detailed notes. Though it is important for students to enjoy and appreciate the form and content of the assigned primary texts, they are also expected to read the works introspectively—"What do I think about this trope/story/character and why? Is my evaluation valid?"—and comparatively.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 60.30 - Modern Korean Literature in a Global Context

Instructor: Xie

With our understanding of Korea and Korean literature increasingly reaching beyond the confines of the peninsula, this course explores modern Korean literatures both from the Korean peninsula and in diaspora. It will introduce participants to canonical works in modern Korean literature and well-known works from Korean diaspora communities in Japan, the US, and China, as well as to the critical discussions surrounding them. We will closely examine how each work, with its particular content and form, engages with the historical development and contemporary dynamics of modern Korea and Korean diaspora communities. From literary and cultural perspectives, this course addresses and problematizes some of the most difficult issues that modern Korea has been working hard to deal with, including colonial modernity, the US occupation and the division, democratic movement and trauma, overseas Koreans, gender and sexuality, and so on.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

ASCL 60.92 - Theory and Practice of Translation

Instructor: Dorsey

Every time we interpret a facial expression, cloud-filled sky, data set, blood test result, or sequence of musical notes, we are, in a sense, "translating." This course seeks to make us more aware of that process through an engagement with the theory and practice of translation as it has been practiced between English and Japanese, two utterly unrelated languages. We'll look at Japanese and English textbook translations, manga and young adult "translations" of classics like the *Tale of Genji*, Murakami Haruki's translation of Salinger and Rubin's translations of Murakami. We'll try our hand at translating poetry, jokes, songs, puns, prose and more, polishing our own translating skills while experimenting with different conceptual approaches and "workshopping" our attempts. Prerequisite: JAPN 31 or equivalent.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 60.93 - Countercultures of Japan's 1960s

Instructor: Dorsey

Like their American counterparts, Japanese youth in the 1960s occupied university administration buildings, protested war and imperialism, and denounced discrimination, exploitation, and the status quo. This course will explore their counterculture through the music, fiction, film, and comics (*manga*) of that decade. Topics include: ambivalent attitudes towards the U.S., generational discord, new conceptions of love and sex, the legacy of war and the relationship of culture to politics. Most of the course will be conducted in Japanese, but some theoretical and historical issues will be researched and discussed in English.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 61.01 - The Religions of China

Instructor: Raz

An introduction to China's three major religions—Confucianism, Daoism, and Buddhism—through the reading of classic texts. Also, a look at important elements in Chinese folk religion: ancestor worship, temples, heavens and hells, and forms of divination. Special attention will be paid to the importance of government in Chinese religious thought and to continuity and change in the history of Chinese religion. Open to all classes.

Cross-Listed as: REL 10

Offered: Fall.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 61.05 - Women and Religion in Japan

Instructor: Simpson

This course examines how Japanese religious traditions (such as Shinto, Buddhism, and others) have informed the lives of women in premodern and modern Japan, and the roles that women have played as nuns, patrons, lay practitioners, and religious specialists. We will examine both what religious traditions said about women and womanhood, and how women interacted with religious views and practices, many of which denigrated or limited women's participation.

Cross-Listed as: REL 19.29

Offered: Summer.

Degree Requirement Attributes: Dist:TMV

ASCL 61.06 - Religions of Japan

This course examines the historical development of the various religious traditions of Japan, from prehistoric to contemporary times. While prehistoric artifacts indicate what early Japanese religion may have looked like, the bulk of Japanese history features interactions between native, local Japanese practices and beliefs and the influence of continental traditions such as Buddhism, Confucianism, Daoism, and geomancy. Here, we will consider how the Japanese have adapted, combined, and redefined religious traditions over the centuries while interrogating what the word "religion" means within the context of each religion, sect or locality. Open to all.

Cross-Listed as: REL 19.31

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 61.07 - Shinto: Foundations, Festivals, and Fox Shrines

Shinto has been called the way of the gods, a nature religion, a native Japanese religion, a nationalist religion, to name but a few of its many descriptions. In this class, we will spend a great deal of time figuring out what Shinto

is and is not, debating the relative merits of these classifications. We will see that Shinto is, to say the least, a multifaceted tradition with a complex history and countless local variations. Open to all.

Cross-Listed as: REL 19.32

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 61.08 - Buddhism in Korea and Japan: From Tribute Missions to Temple Tourism

Buddhism has long been an established religious tradition and important aspect of cultural heritage in both Korea and Japan. However, there are key differences in how Buddhism developed and how the religion functions today. In South Korea, most people classify themselves as Buddhist or Christian; in Japan, the majority consider themselves non-religious, yet visit Buddhist temples and hold Buddhist funerals; in North Korea, roughly 10,000 Buddhists remain in spite of religious persecution by the state. Clerical marriage is widely accepted in Buddhist sects throughout Japan, whereas the practice has been the subject of heated debate in South Korea since the 1950s. How did these differences emerge, and what common ground remains?

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 61.10 - Japanese Martial Arts: History, Philosophy, Practice

Instructor: Dorsey

This course will apply noetic (intellectual) and somatic (bodily) approaches to an understanding of a pillar of Japanese history and culture: the martial arts. In the classroom we will read about the emergence of the warrior caste (the samurai), the codification of its tenets (bushido), and the evolution of these traditions through modern times; in the gym we will practice the martial art of aikido as a means of embodying that history. The course will also include an exploration of intersections between the martial arts and conflict resolution, gendered identities, cross-cultural communication, and globalization.

Offered: Summer.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 61.11 - Daoism: Transformations of Tradition

Instructor: Raz

In this course we will explore the historical developments and transformations of Daoism from its ancient roots to present-day practices. We will begin by looking at early traditions of immortality seekers and self-cultivation and at the religious and philosophical ideas in the ancient Chinese texts of the Laozi, Zhuangzi, and Guanzi. We will also examine recent archaeological findings, imperial religious practices, and the complex interaction of Daoism with

Buddhism. We will in addition look at contemporary Daoist practices in China and Taiwan. Along the way we will devote special attention to meditation and divination techniques; alchemy and sexual techniques for transcendence; the place of women and the feminine in Daoism. Open to all classes.

Cross-Listed as: REL 046

Offered: Fall.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 61.12 - Buddhism in China

Instructor: Raz

A study of the advent of Buddhism in China, its accommodating yet transforming response to Chinese traditions and values, the emergence of the authentically Chinese schools of T'ien-T'ai, Hua-yen, Ch'an, and Pure Land Buddhism, and the enduring Buddhist heritage of China. Open to all classes.

Offered: Winter.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 61.20 - The History of Jews in China

This course moves away from a Eurocentric lens of Chinese and Jewish history by uncovering a lost and global history of Chinese and Jewish encounters, from the early Sino-Middle Eastern-European interactions and through missionary and colonial endeavours in the late 19th and the first half of the 20th century, and then to China and Israel's relationship in the late 20th and 21st century. It situates China and the Jews in global and national historical narratives as imagined spaces and communities; ancient civilizations and cultures; as inspirations of European Enlightenment and as anti-images of European modernity; models of and space for nationalistic as well as revolutionary projects, as well as the Chinese and Jewish re-imaginings. Emphasising methodological issues and disciplinary dialogues, this course encourages students to reflect on the historical and political conditions of knowledge production while training students in innovative and boundary-crossing modes of inquiry.

ASCL 62.02 - Traditional Performance in China: Past and Present

Instructor: Gibbs

From folksong collection in Confucian times to current efforts at preserving Intangible Cultural Heritage, this course begins by introducing traditional ideas about the folk and folk culture in China, and how the relationship

between folk and elite has changed over time, with special emphasis on the twentieth and twenty-first centuries. Through the examination of local traditions of storytelling, epic singing, folksongs, ritual, and local drama from various time periods and geographical areas, students will gain a deeper, more nuanced understanding of the diversity of regional and ethnic expressive forms within China and how they continue to develop over time through the present day. During this course, you will also become familiar with important theories from folklore studies and learn to apply them in analyzing performances and texts—skills that can be fruitfully extended to both personal and professional areas of your life in the future.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 62.03 - Chinese Painting

This course surveys the Chinese painting tradition, from the second half of the first millennium BCE to the present. Following a dynastic timeline, the course covers important painting genres including funerary, religious, figures and portraiture, landscape, ink, bird-and-flower, and oil painting and considers them in the context of the shifting historical and cultural context of China. Key themes of the course include the relationship between the art of painting and religious beliefs, political ideology, self-expression, premodern painting theories and criticism, and encounters between the East and the West.

ASCL 62.06 - Exploring Korea Through Film

Instructor: Kim

This course explores cinematic representations of Korean history and the diverse interpretations of social, cultural, and political issues portrayed in modern and contemporary Korean films. The course is structured by thematic issues, including: Korean ideas about politics and monarchy, North Korea's self-identity, rapid industrialism, South Korea's democratic movement, and Korean's concept of love. The class will view Korean films, and also read novels depicting similar issues and compare and contrast the theatrical and literary representations.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 62.07 - Introduction to Korean Art

Instructor: Kim

This course will introduce the arts and culture of Korea from the prehistoric period through the twentieth century. Significant examples of painting, ceramics, sculpture, and architecture will be closely examined in their political, social, and cultural contexts. We will explore how East Asian motifs were incorporated into traditional Korean art. We will see how Korea struggled to find its artistic identity within the international context during the 20th century.

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 62.08 - Modern and Contemporary Korean Art

Instructor: Kim

This course examines the art and culture of Korea from the late nineteenth century through the twentieth century. During this period Korea experienced the fall of its 500-year-long dynasty, annexation to Japan, the Korean war, division into two Koreas, and internationalization/globalization. The class will explore how visual art, including paintings, photographs, posters, ceramics, and film, reflected and expressed the political, socio-economic, and cultural changes and concerns of each period, in both South and North Korea.

ASCL 62.10 - Sacred Art and Architecture of Japan

Instructor: Hockley

This course examines Shinto and Buddhist architectural, sculptural, painting and print traditions from the prehistoric to the modern era. The primary emphasis will be on the relationship of these arts to their doctrinal sources and the ritual, social, and political contexts in which they were created and utilized.

Cross-Listed as: ARTH 32.21

Offered: Winter.

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 62.11 - The Japanese Painting Tradition

Instructor: Hockley

This course provides a comprehensive introduction to the Japanese painting tradition. Surveying a broad range of themes, formats, and styles and exploring the relationship

between indigenous sensibilities and the traditions Japanese artists borrowed from continental Asia and the West, it defines the unique aesthetic experience offered by Japanese sacred and secular painting. Its focus on patronage and studio practice emphasizes the social, political, and cultural processes that underscored important developments in the painting tradition.

Cross-Listed as: ARTH 32.22

ASCL 62.13 - Women, Gender, and Art in East Asia

Instructor: Kim

This course will focus on women as the subjects, the creators, and the patrons of art in China, Korea, and Japan from the 16th century to the present. It will be organized chronologically, culturally, and thematically. This will involve an exploration of powerful matrons of art and their aspirations, a historical survey of women artists and their artistic contributions, and an examination of the religious and secular images of women and its limitations. The course will also look at contemporary artists and investigate their artistic discourses, messages, and experimentations. Extensive attention will be given to the creation, modification, and persistence of these images throughout history, due to various social, economical, psychological, and intellectual conditions. This course will develop students' thinking skills in the history of art and improve their ability to conduct research and communicate both orally and in writing within the discipline.

This course requires no previous coursework or experience, but is intended for those who like interdisciplinary approaches to art and culture.

Cross-Listed as: ARTH 62.81

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 63.01 - Asian Medical Systems

Instructor: Craig

This course investigates systems of healing practiced in, and derived from, Asia. We will focus primarily on three Asian medical systems: Ayurveda, Chinese medicine, and Tibetan medicine. We will strive to understand how these medical systems are based on coherent logics that are not only biologically but also culturally determined. We will also analyze the deployment of these medical systems in non-Asian contexts, and examine the relationship between Asian systems and "western" biomedicine.

Cross-Listed as: ANTH 045

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 64.01 - Cultural Struggles in Colonial Korea

Instructor: Kim

This course explores Korean history between 1876 and 1945, as Korea entered the modern period. First, we will examine how Japan, China, and Korea responded to Western imperialism in the 19th century, and then how China and Korea responded to Japanese imperialism early in the 20th century. The second half of the class will explore the Japanese colonial government's assimilation policy during the colonial period in Korea, and how Korea was affected by and reacted to various aspects of this policy. The establishment of historiography, formulation of aesthetic and cultural canons, and shaping of images of Koreans and their land will be explored by examining diverse media including literature, photographs, exhibition catalogues, and other primary sources. The class will conclude with the continuing legacy of the Japanese colonial period. All readings are in English. No prior knowledge of Korea or Korean language assumed.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 64.03 - North Korea: Origins and Transitions

Instructor: Suh

This course explores the history of the Democratic People's Republic of Korea (North Korea) from a global perspective. Topics include the Japanese colonial legacies; liberation, division, and foreign occupation between 1945 and 1950; the meanings of the Korean War; comparing Kim Il-Sung's North Korean revolution with Park Chung-hee's state building in the South; the reality of "Self-Reliance"; social control and everyday life; and issues around human rights.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 64.05 - The Two Koreas, 1948-Present

Instructor: Suh

This course explores the emergence of the two Koreas, from a global perspective. Beginning with the legacies of the Chosŏn Dynasty, we will examine the impact of Japanese colonialism on the divergence of the two nation-states: the Republic of Korea (South Korea) and the Democratic People's Republic of Korea (North Korea). Analyzing scholarly writings and primary sources, the course will focus on the domestic and international processes through which the two regimes clashed and competed in the context of the Cold War. We will primarily focus on drastic differences manifested between the two countries' ideologies, cultures, and political economies, but also pay attention to unexpected parallels experienced by Koreans across the hostile division. Students will pursue a final research project, in consultation with the instructor, on a comparison of their choice related to the themes of this course. No prior knowledge of the Koreas or the Korean language is expected.

Cross-Listed as: HIST 78.03

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 64.08 - The History of China since 1800

Instructor: Lu

This survey course traces China's social, political, and cultural development from the relative peace and prosperity of the high Qing period, through the devastating wars and imperialist incursions of the nineteenth century, to the efforts, both vain and fruitful, to build an independent and powerful new nation. Open to all classes.

Cross-Listed as: HIST 05.03

ASCL 64.13 - Intellectual History of East Asia

A comparative exploration of Chinese and Japanese thought, from the formation of Confucianism in the Warring States period to the confrontation between traditional thought and the imported ideologies of the twentieth centuries. In writing assignments, students may concentrate upon either Chinese or Japanese topics. Open to sophomores, juniors, and seniors.

Cross-Listed as: HIST 074

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 64.14 - Slaves and Rebels in Korea, 1392-1910

Instructor: Suh

This course explores the history of Choson Korea (1392-1910) through the experiences of outcasts and commoners. By examining the desires and despair of peasants, slaves, rebels, entertainers, and religious minorities, this course

assesses the foundation of the state and the operation of society as manifested at the margins of society. How did the religious and intellectual heritage of Korea legitimize hereditary status, slave ownership, gender division, and regional discrimination? In what ways did ordinary people conform to or struggle against elite governing? Does the longevity of the Choson dynasty testify to the successful control of the status system by those at the top? Or does the stability elucidate social mobility and dynamic interactions across the status divisions? Focusing on various status groups illuminates the mechanisms of domination, compliance, and resistance carried out at the micro level. The experiences of the underrepresented shed light on the transition to modern Korea and present the complicated process of constructing Korean identity over time. A background in Korean history is not required.

Cross-Listed as: HIST 78.04

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 64.15 - Nationalism and Revolution in China, 1890-Present

Instructor: Lu

This course examines the dynamics of China's revolutionary ideology in the context of the modern world through the lens of nationalism. By employing a range of discussions of China's nationalist discourse, we will encounter and construe the voices of various groups of people for whom the rhetoric and ideology of nationalism emerged as a question or dilemma, developed as a motivating force, and fermented as a problem. The course proceeds chronologically, beginning in the late nineteenth century and moving to the present. Each week's readings, including primary and secondary texts, also discuss particular aspects of nationalism and its connection to China's revolutionary agenda. Focusing on China and its Asian surroundings, this course will explore major historical themes, including reform versus revolution, intellectuals and society, center and locality, ethnicity and identity, violence and confrontation, foreign relations and national strategies, charisma and mass movements, and nation-building and propaganda. Not open to students who have received credit for HIST 90.16.

Cross-Listed as: HIST 72.03

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 64.16 - China to 1800

Instructor: Lu

This course explores China's history from its ancient origins to the end of the 18th century. It examines the profound economic, social, and cultural changes that have shaped China over time, including geography, dynastic rise and fall, relationships with nomadic societies, political

philosophy, gender and family dynamics, and global interactions. The course also investigates the contemporary use of China's pre-modern history in politics and popular culture. Through primary sources, field trips, and digital activities, students will develop historical analysis and argumentation skills. No prior knowledge of Chinese culture, history, or language is necessary.

Cross-Listed as: HIST 72.04

ASCL 67.03 - Conflict, Control, and Controversy in Chinese Politics

Instructor: Rezvani

This course introduces students to key concepts, actors, and events in Chinese politics. What is the nature of accountability and informal institutions within the Middle Kingdom? Does democracy or China's current system of rule have bigger advantages? What are the key sources of China's remarkable economic growth? What are China's strategies in light of its challenges in Taiwan, Hong Kong, Xinjiang, and the South China Sea? Students will confront these and a wide range of other pivotal economic, security, and global controversies. Students will debate and assess the merits of China's policies on issues such as the China model, economic growth, authoritarian resilience, decentralization, informal institutions, media censorship as well as the relations of China's government with domestic, regional and international actors.

Offered: Summer.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 67.10 - Cultures of Business, Labor, and Wealth in Contemporary China

Instructor: Gibbs

This course examines discourses of work, wealth, ethics, and status in contemporary Chinese society through the lenses of ethnography, film, and literature. Topics covered include the effects of market reform and neoliberal desires on conceptions of consumption, philanthropy, and "social quality" (*suzhi*), ways in which gendered identities are negotiated in different professions, the experiences of migrant workers in Chinese cities, and the intersection of entrepreneurship and the arts.

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 67.11 - Business History of Modern China

Instructor: Lu

This course explores China's transformation through business history, examining how enterprises have navigated the nation's blend of capitalism and single-party rule. It delves into cycles of prosperity and decline, from the Qing Dynasty to its current status as a global economic power. Using case studies, the course analyzes diverse actors — from family firms to foreign traders, ordinary workers to tech giants — to understand China's model of capitalism and socialism and its global impact.

Cross-Listed as: HIST 72.06

Offered: Fall.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ASCL 67.20 - The Commodification of Japan's (Self-) Image in the Global Marketplace

Instructor: Schmidt-Hori

The images of Japan comprise many dichotomies: infantile schoolgirl femininity and curmudgeon-samurai masculinity; voracious neophilia and stubborn neophobia; embracement of foreign tourists and rejection of immigrants; cool and weird; rude and polite; stoic and hedonistic; and more. Such paradoxical images of Japan, accurate or exaggerated, circulate around the globe, creating global discourses of Japanese-ness, a mirror for Japan to see itself. The massive network of images and narratives about Japanese-ness provides rich marketing cues for government agencies, private industries, and creators of cultural products and help them strategize the process of commodifying Japan's self-image in the global marketplace.

This course traces the evolution of Japan's self-image, especially since 1945, and analyzes how Japan's changing self-images have influenced the nation's economic strategies over time. We will pay particular attention to how the tangible and intangible products of geek culture (*otaku*) and girly aesthetics (*kawaii*), which were marginalized in the West until recently, came to be mainstreamed globally since the early 2000s.

This class is open to all students who are interested in Japanese culture, business, or both. Though there are no prerequisites, ASCL 10.03 is recommended.

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 69.04 - Chinese Religions in Taiwan

Instructor: Raz

This course examines Chinese religious traditions as practiced in Taiwan. Due to its particular history, Taiwan has preserved a tremendously rich, varied, and complex religious landscape. While most of these religious traditions had originated in China over the previous millennia, their current conditions in Taiwan present us with an almost unique laboratory of traditional religions within contemporary, modern settings.

The course surveys developments of traditional Chinese religions and their current practices in Taiwan. We will discuss the diversity and complexity of Chinese religions, the development of popular, Confucian, Daoist and Buddhist traditions and practices in China and their transmission to Taiwan.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 69.23 - Shogun and Samurai: Japan in the Age of the Warrior

This course explores the origins and development of the warrior class that dominated and redefined the political economy and high culture of Japan between the twelfth and nineteenth centuries. Through readings, discussions, lectures, and films, we will examine such topics as the rise of the samurai, the transition from imperial to warrior government, the evolution of samurai values and beliefs, and the legacy of warrior rule and culture for modern Japan.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 69.24 - Japan at the Margins: Place and Displacement in Postwar Film and Fiction

Instructor: Washburn

This course examines cinematic and literary representations of displaced people living on the margins of Japanese society and of the spaces they are forced to inhabit. Vagabonds, gangsters, sex workers, rogue cops, war widows, dispossessed lovers, abandoned children—these have all been recurring figures throughout Japanese cultural history, but they have a occupied place an especially important place in film and fiction from the late 1940s to the present day. Aesthetic representations of the plight of the displaced challenge the dominant postwar narrative of Japan as a successful liberal democracy and economic superpower.

Offered: Summer.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 70.01 - Sacred Architecture of Asia

Instructor: Hockley

This course provides an introduction to the sacred architecture of Asia through a series of case studies that include Buddhist monasteries, Hindu temples, Mosques, Daoist and Confucian temples, Shinto shrines, funerary architecture, and the sacred dimensions political authority as manifested in palaces, city plans, and mausolea. The pan-Asiatic nature and long historical development of Buddhism, Hinduism, and Islam affords opportunities to examine national and sectarian adaptations of architectural practices. Focusing on relationships between sacred architecture and religious doctrine, ritual practice, and the communities that use sacred sites this course introduces an array of analytical approaches to sacred architecture that students will learn to employ in class discussion and written assignments. This course has no prerequisites and assumes no prior experience with Asian religions or architectural studies.

Cross-Listed as: ARTH 38.01

Degree Requirement Attributes: Dist:INT or ART; WCult:NW

ASCL 70.02 - East Meets West

Instructor: Kim

This class explores the interaction between the cultures of East Asia and the West from as early as c. 200 BCE to the early 20th century. The course consists largely of four themes: the Silk Road and the Arts, the Pottery Stories, the Jesuits and the Arts, and Asian Arts in Europe. The class starts with the Silk Road, the world's first great superhighway that from ancient times linked East Asia to the Mediterranean World across Central Asia, and examines how ideas, art, and religions traveled and were transformed through their journey. The second theme, the Porcelain stories, conveys how aesthetics, technology, designs and motifs were transmitted from East to West and vice versa. We will ask questions, such as: Why was porcelain so desirable? Where did porcelain rank in the hierarchy of art forms and materials in Asia and Europe? How much did a piece of porcelain cost at any moment in time? Why did Japan and Korea have "the Pottery War" and what was the significance of that war in East Asia (and Europe)? The third theme, the Jesuits and the Arts, looks at the hybrid blend of two or more traditions and the artistic productions that arose from those blends. We also will examine together the paintings of Asian and European artists, the paintings of European artists on Asian themes with a traditional Asian medium, and the work of Asian painters' on European subject matter with a European medium. The last theme, Asian art in Europe, scrutinizes the Western reception of Asian subjects, motifs, designs,

and aesthetic values, and their appropriation for artistic productions. European interpretation (or imitation) of Chinese arts, so called *Chinoiseries*, and the Japanese influence on European art, known as *Japonism*, will be closely examined. Through lectures, readings, and films, we will explore the historical and artistic links between East and West and some selected art associated with those routes. This course requires no previous experience, but is intended for those who like interdisciplinary approaches to art and culture. No previous coursework is required.

Cross-Listed as: ARTH 38.03

Offered: Winter.

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 70.03 - Asian Animation as Socio-Political Artifact

Because animated films have traditionally been targeted at children, animators in Asia have often been able to sidestep much of the political control exercised by some of their more centralized governments to create sophisticated artistic works that speak as much to educated adults as they do to children. The course will feature the most interesting of these works from China, Japan, and Korea, and students will analyze them within a socio-political and cultural context. Particular attention will be paid to the development of both originality and argumentation in student papers and class participation.

Cross-Listed as: FILM 42.08

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 70.04 - Tokyo and Shanghai as Ideas: Urban Space/Imagined Modernity

Instructor: Washburn

Tokyo and Shanghai are not just major centers of political and economic activity. They are also ideas, functioning as imagined space that is backdrop for and symbol of the desires, aspirations, and dislocations characteristic of contemporary Asian societies. This course examines the hold Tokyo and Shanghai have had on East Asian writers, artists, and intellectuals, and the role these metropolises currently play in the globalization of modern culture.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

ASCL 70.05 - China in the Japanese Imagination: Translations of Identity

Instructor: Washburn

China has profoundly influenced every formative element of identity in Japan: language, legal and political institutions, religion, philosophy, and the visual and literary arts. This course surveys key historical moments -- the Taika Reforms of the seventh century, mid-Heian appropriations of Tang court society, Tokugawa

adaptations of Ming and Qing culture -- to examine how the process of translating Chinese cultural forms radically reshaped Japanese society and impacted the vexed modern relationship between the two nations.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

ASCL 70.06 - Magic and Supernaturalism in Asian Literature and Film

Instructor: Chin

This course examines magical and supernatural elements in literature and films from China, Japan, India and Southeast Asia. It studies artistic, psychological and political implications and interregional traditions of folklore and fiction. Literary texts include Pu Song Lin's *Strange Tales from a Studio*, Catherine Lim's *The Howling Silence*, Batin Long bin Hok's *Jah Hut Tales* and Tunku Halim's *Dark Demon Rising*. Films may include Akira Kurosawa's *Dreams*, Masaki Kobayashi's *Kwaidan* and contemporary works such as Chan Wook Park's *Thirst*.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

ASCL 70.07 - Asian Performance Traditions

Instructor: Chin

This course studies the performance traditions of Asia, focusing on China, Japan, Indonesia and India. Classical forms studied include Noh, Bunraku, Beijing opera, Sanskrit drama, Balinese dance and Javanese puppet theater. Attention is paid to social, religious and aesthetic influences on these traditions, theories on which they are based, the history behind the theatrical practices, and training and dramatic techniques. Students gain an appreciation of the rich variety and scope of theatrical conventions of Asia.

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 70.10 - Music from the Lands of the Silk Road

Instructor: Levin

The Silk Road, the trans-Eurasian network of trade routes that stretched from Europe to Japan, and from South Siberia to South Asia, was not only a conduit for trade in luxury goods, but also for technological innovation and cultural exchange, including in the domain of music. This course addresses selected musical styles, genres, and repertoires from the lands of the Silk Road and the way they have been shaped by contact and interaction with other cultures. Examples are drawn from contemporary and historical musical traditions of the Middle East, Central Asia, the Caucasus, India, Tuva and Mongolia, China, Korea, and Japan. Where possible, guest artists are invited

to offer live musical demonstrations. No prior musical experience is required.

Cross-Listed as: MUS 45.06

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 70.12 - Literatures and Cultures of Asian Borderlands

Instructor: Xie

Borderlands are where modern nation-states are geographically defined and where their orders are both challenged and reinforced. This course studies the formation of modern nations in Asia and its consequences in the twentieth century from a “borderland perspective.” The cases to be studied include Hokkaido in Japan, Manchuria in mainland China, the Partition of India and Pakistan, the division of the two Koreas, the Taiwan island, and the highlands connecting East and South Asia commonly referred to as Zomia. The long historical process from colonial expansion to post-war demarcation across Asia, along with the ordinary people’s experience of this process, is witnessed by writers and artists from the borderlands with distinctive creativity and criticism. The disciplinary perspectives involved in the course range from literature, film, and art to history, anthropology, and linguistics. Enrollment is open, and there are no prerequisites. You do not need to know any Asian language to take the course.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

ASCL 70.16 - Eat, Drink, Japan: An Interdisciplinary Approach

Instructor: Ericson

This course is an interdisciplinary survey of food and beverage in Japan from premodern times to the present. Through lectures, readings, discussions, and films, we will explore the subject from the multiple perspectives of history, culture, and contemporary politics and society. The topics covered will range from food production and consumption to religious and artistic representations and the construction of cultural identities in Japan’s past and present.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 70.17 - Women in Asian Cities

We live in a time of increasing urbanization and globalization, paralleled with prevailing poverty and uneven access to infrastructure. In this course, we will explore these issues through a focus on women across Asia. We will also examine how politics of race, class, caste, religion, and migration status shape urban experiences for these women. Major thematic areas for this course include migration, informal economies, mobility, culture, and urban nature. The class will draw on academic

scholarship, newspaper articles and popular culture to introduce gendered perspectives on cities across Asia including Istanbul, Tehran, Mumbai, Hong Kong, and Manila.

ASCL 70.18 - Social Revolutions East and West: Japan and the United States in the 1960s

Instructor: Dorsey

This course examines social movements in the United States and Japan during the turbulent 1960s. Activists and artists engaged with civil rights causes, anti-war movements, and campaigns to end discrimination of all sorts, blending these political agendas with the production of culture and the deployment of new technologies. As a result, new cognitive praxes came into place, and the patterns of knowledge production were forever changed. With a focus on the genres of music, comics/manga, and literature as they evolved in America and Japan in the 1960s, students in the course will learn to recognize how knowledge and worldviews are shaped by the systems of culture that generate them. There are no prerequisites for this course.

Cross-Listed as: COLT 57.10

Offered: Winter.

Degree Requirement Attributes: Dist:INT or LIT; WCult:CI

ASCL 70.20 - Buddhist Meditation Theory

Instructor: Seton

The Buddhist theory of meditation was first articulated 2,500 years ago and has since been adapted to numerous cultural contexts in Asia and the West. This course offers a survey of the three traditional religious frameworks for meditation practice, but also pays some attention to the secularized applications of mindfulness techniques in modern society and to the current status of scientific studies on the effects of those techniques. The course primarily concerns theoretical questions and controversies surrounding Buddhist meditation, but students will get the chance to experiment with secular mindfulness techniques outside of class and to attend a field trip to a local Buddhist temple. Optional secular meditation, normally MWF 8am-9am.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 70.22 - Developing Vietnam: History, Environment, and Culture

Instructor: Miller

This interdisciplinary course explores the history, society, and culture of Vietnam, with particular attention to the theme of *development* in Vietnam since the 1980s. It is part of a teaching and learning partnership between Dartmouth and Fulbright University Vietnam, a Vietnamese liberal arts university in Ho Chi Minh City. Throughout the term, Dartmouth and Fulbright students will interact and co-learn with each other via online discussions, collaborative assignments, and a small group research project.

Prerequisite: This course is only open to students who have been accepted for the winterim FSP in Vietnam.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 70.23 - Travel, Migration, and Diaspora in the Transpacific Asias

Instructor: Eom

This interdisciplinary course provides an overview of migration and diaspora studies in Asia and across the Pacific. The course places travelers and migrants at the heart of modern Asian history and culture while examining the social, cultural, political, and economic implications of the movement of people across geographic boundaries. The course deals with a series of case studies that include, but are not limited to, imperial travelers, missionaries, colonial settlers, labor migrants, American GIs, international adoptees, orphans and refugees, transnational domestic workers, return migrants, and Asian diasporas in the Americas. With a strong emphasis on transpacific migrants and their residential, commercial, religious, and social spaces, the course will engage in an interdisciplinary dialogue and utilize a range of activities and media—site visits, walking tours, interviews, autobiographies, literature, and film—to offer students fruitful methods for understanding multifaceted aspects of transnational connections and diasporic identities that migrants have cultivated between Asia and the world.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ASCL 70.24 - Asian American Art and Architecture

Instructor: Eom

This course introduces students to the politics of Asian American identity and visual culture in the twentieth century. With an overview of social and legal contexts of Asian America, from immigration policies and residential exclusion to Japanese American internment to struggles over citizenship rights, the course explores what it meant to be Asian American and how Asian American art and architecture have emerged at specific historical moments. By discussing case studies including Japanese American

internment camps, Chinatowns, the Vietnam Veterans Memorial, and works of artists and architects such as David Hyun, Yong Soon Min, Maya Lin, Poy Gum Lee, Isamu Noguchi, Yun Gee, Yasuo Kuniyoshi, and Mine Okubo, students are expected to examine how Asian American and diasporic artists strove to define their identity and imagine their place in the material world.

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:CI

ASCL 70.25 - Translating East Asian Languages: Theory and Practice

Instructor: Dorsey

Translation is an ancient practice tied intimately to interpretation, cross-cultural understanding, colonization, proselytization, and business. When it crosses vast cultural divides such as between Asia and the West, the challenges are amplified, the issues complicated, and the stakes raised. What are the practical, cultural, and philosophical issues involved? This course explores these questions by studying theories of translation and the history of it the East Asian context while also offering an experiential component in the form of various translation assignments ranging from technical manuals, fiction, and religious texts to poetry, song lyrics, and humor. The focus will be on Chinese, Korean, and Japanese; students hoping to work with other Asian languages should consult the instructor before enrolling.

Cross-Listed as: COLT 19.07

Offered: Spring.

ASCL 70.26 - Apocalyptic Thought

Instructor: Raz

In this class we will examine ideas about the cataclysmic end of the world, possible ways to survive such calamities, or to bring them forth appear in several religious traditions in East Asia. This course examines a variety of such eschatological and salvific ideas, beginning with Daoist and Buddhist scriptures in medieval China, proceeding through various religious rebel movements to modern cults such as Aum Shinrikyo in Japan and Falun Gong in China.

Cross-Listed as: REL 49.01

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 70.27 - Geographies and Ecologies of Warfare in Asia & the Pacific

This course surveys the ecological and historical impacts of U.S.-occupied military bases in Asia and the Pacific Islands, through the activism and scholarship of Asians and

Pacific Islanders. It brings together the fields of critical Asian studies, Asian American studies, geography, gender studies, and Indigenous studies to comparatively analyze the place-based forms that U.S. militarism, settler colonialism, and empire can take in U.S.-occupied American Samoa, Bikini Islands, Guåhan/Guam, Hawai'i, Korea, Okinawa, Vietnam, and the Philippines. Guided by the course instructor, students will engage Asian and Pacific Islander scholarship through course readings, films, podcasts, poems, and guest lectures featuring Asian and Pacific Islander demilitarization organizers. The course will culminate in a final Story Maps project that analyzes a social movement discussed in class and presents the group's findings about it in multimedia form.

Cross-Listed as: GEOG 40.06

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ASCL 70.28 - Crossing the Pacific: Empire, Labor, Migration

Instructor: J. Miller

This course explores how trans-Pacific interactions shaped both the United States and the Pacific region from nineteenth-century gold rushes to the U.S. war in Vietnam. In particular, it examines the relationship between migration, race, and empire, with a focus on how U.S. colonialism and imperialism depended on migration and labor of Asian and Pacific peoples. This discussion-based course uses a wide array of historical sources, including speeches, laws, photographs, oral histories, and maps.

Cross-Listed as: HIST 09.05

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

ASCL 70.30 - The Business of Development in Asia

Instructor: Upadhyay

From the economic miracles of the East Asian Tigers to the rise of the supersize economic powerhouses of China and India, the Asian continent has captured the world's attention as a dynamic site for economic growth and development. This course focuses on the diverse developmental experiences taking place on the Asian continent to offer students a critical examination of the theory and practice of economic development.

The course begins with the fundamental question – what is development? – and then delves into its fraught historical origins, first as a practice of colonialism and then as a mode of nation-building. We then cover some of the most influential paradigms of development theory, evaluating each with case studies from the Asian region. The course ends with a contemplation of some of the most critical

challenges to developmental pursuits today: what does it mean to develop in a world facing ecological devastation and where inequalities are growing at breakneck speed? Open to all classes.

Cross-Listed as: SOCY 022

Offered: Fall.

Degree Requirement Attributes: Dist:INT

ASCL 70.31 - Art, Business, and Soft Power in Asia

Instructor: Kim

This class examines the intersection of art, business, and soft power through two key areas of inquiries. First, we explore how Asian art acquires both symbolic and economic value across various institutional contexts, including art fairs, museums, and commercial galleries. Through an analysis of pricing, authentication, interpretation, and marketing strategies, we will investigate how artistic value is created, negotiated, and sustained in these spaces.

The course includes guest speakers from diverse fields, such as artists, curators, museum and gallery directors, and corporate professionals. An optional two-day field trip to New York offers students the opportunity to visit auction houses and commercial galleries specializing in Asian art and attend lectures by art management experts. ASCL will cover accommodation and transportation for the trip.

Cross-Listed as: ARTH 62.91

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:NW

ASCL 70.50 - Disputes, Power, and Diplomacy in Asia

Instructor: Rezvani

This course will focus on diplomatic relations, disputes, as well as key aspects of political, military, and economic power in Asia. The course will include research, writing, and debates on the relations between Asian powers and the status of sub-state zones of conflict. It will critically examine the interplay of Asian powers, including China, the US, India, Japan, and North and South Korea. It will also evaluate a number of key zones of sub-state conflict in territories such as Kashmir, Hong Kong, Myanmar, Taiwan, the South China Sea, and Mindanao.

Offered: Spring.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ASCL 80.01 - Colonial Photography

Instructor: Hockley

This course examines the uses of photography by colonial governments, anthropologists, commercial photographers, and tourists in nineteenth-century Asia and the Middle

East. It also addresses indigenous uses of photography that conform with and/or react against colonialist uses of the medium. The primary focus of the course is on photographs but consideration is also given to the diffusion of photographic images into other media including news publications, government documents, scientific studies, travelogues, fiction, textbooks, and museum displays.

Degree Requirement Attributes: Dist:INT or ART;
WCult:CI

ASCL 80.03 - Arts and Culture of Korea's Last Dynasty

Instructor: Kim

This course provides an introduction to the arts and culture of the Joseon dynasty (1392-1910), which was founded on Confucianism. We will examine Confucian philosophy and how Confucian ideas shaped the social hierarchy, gender roles, and aesthetic values through exploration of the architecture of royal palaces and aristocratic houses, paintings both sacred and secular, ceramics, textiles and other crafts. Use of color, symbolic motifs, and stories in the arts and culture will be investigated. Understanding Korea's final 500-year dynasty will deepen your comprehension of contemporary Korean culture as it manifests the legacy Joseon Korea.

Cross-Listed as: ARTH 82.01

Degree Requirement Attributes: Dist:INT or ART;
WCult:NW

ASCL 80.05 - Regional Identity in Modern Chinese Literature

Instructor: Gibbs

How does the concept of "region" in contemporary Chinese literature connect to discussions of gender, ethnicity, tradition/modernity, country/city, and north/south? In this course, we will examine ways in which contemporary writers have evoked place through literature, looking at how social discussions occur across/between spaces. Students will be encouraged to explore authors, places, and subtopics related to their own interests in the final papers. No knowledge of the Chinese language is required for this course, although students who can read Chinese are encouraged to make use of Chinese-language materials.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 80.07 - The History of Development in Asia

Instructor: Miller

For more than a century, development has been a central theme in the study of Asian politics, culture, and societies. But what is "development," exactly? This seminar explores the history of development in Asia by

treating development as a species of politics, rather than a socio-economic process. In the assigned readings and discussions, we will examine the complex interactions between development and empire in various places in Asia, in both colonial and postcolonial contexts. We will also compare recent efforts by scholars to develop new methodological approaches to the study of development ideas and practices in Asia. In addition to completing the assigned readings, each student will write an article-length paper about a particular topic or event in the history of development in Asia. This paper must be based on original research in primary sources.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ASCL 80.08 - Imperialism in Modern East Asia

Instructor: Ericson

An examination of Western and Japanese imperialism in East Asia from the Opium War to the Pacific War. Subjects to be treated include the imposition of unequal treaties, the "scramble for concessions" in China, the creation of Japan's formal and informal empires, and the rise and fall of the Greater East Asia Co-Prosperity Sphere. Open to all classes.

Cross-Listed as: HIST 77

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ASCL 80.09 - War and Peace in Korea, 1231-1876

Instructor: Suh

This seminar examines Korea's responses to the three foreign intrusions: The Mongol Invasions of 1231-1271, the East Asian War of (or the Japanese Invasions of) 1592-1598, and the Manchu Invasions of 1627-1636. When compared, the three moments of national crises elucidate interregional forces that shaped political, diplomatic, and cultural changes in the Korean peninsula. Korea's experiences of conflicts, negotiation, and endurance shed light on the meaning of being a neighbor to the rising and declining empires in East Asia.

Cross-Listed as: HIST 96.40

Offered: Fall.

Degree Requirement Attributes: DIST:SOC; WCult:NW

ASCL 80.10 - Asian Art Herstory: Gender, Culture, and Politics

Instructor: Kim

This course looks closely at women as subjects and creators in the realm of art from the pre-modern period to contemporary times in Asia. The class will initially examine how Confucian ideology defined the social roles and values of women and how women and their activities

were depicted visually and confined architecturally. Then, through study of the global women's rights and feminist art movements in the context of world economic and political history, the class will scrutinize the rise of Asian "New Women" and "Modern Girls" (the Asian counterparts of American "flappers" and French garconnes) in the 1920s and 1930s, and look at individual and groups of women artists who expressed their social and political agendas through their art. Extensive attention will be given to the creation, modification, and persistence of certain images throughout history, in relation to various social, political, psychological, and intellectual conditions. The class will also see how modern women artists have developed new and diverse media, including textiles, films and photography, installation and performance, and other hybrid materials, in reaction to a long patriarchy in fine art, male-gazed artistic rendering, and traditional cultural and social norms.

This course does not require prior knowledge or experience in Asian history or languages, but it is designed for students interested in interdisciplinary approaches to art and culture. As a senior advanced seminar, it involves extensive reading, class discussions, and research presentations. The course is primarily offered to ARTH majors, who are expected to have a strong foundation in art history, though no prior knowledge of Asian history is necessary. It is also available to ASCL majors, who are not required to have taken an ARTH course but should demonstrate some pan-Asian expertise.

Cross-Listed as: ARTH 82.03

Degree Requirement Attributes: Dist:ART; WCult:NW

ASCL 80.12 - Religions on the Silk Road

Instructor: Raz

For centuries, travelers, merchants, and missionaries of various religions crisscrossed Asia along the so-called Silk Road, trading silk, horses, and spices while exchanging ideas about gods, divine powers, and efficacious rituals for securing the living and the dead. This class explores a variety these religious traditions, including Buddhism, Daoism, Christianity, Islam, Manicheism, Zoroastrianism, and Judaism. These discussions will also explore how religions, languages, and ethnic identities were understood in traditional Asia.

Cross-Listed as: REL 80.12

Degree Requirement Attributes: Dist:TMV; WCult:NW

ASCL 80.20 - The Tale of Genji

Instructor: Washburn

The Tale of Genji is a defining work of Japanese culture. Expansive in form, sophisticated in its depiction of the inner lives of its characters, challenging in its representation of ethical concerns and aesthetic ideals,

Murasaki Shikibu's masterpiece occupies a central place in one of the world's most important literary traditions.

I have several objectives for this course. First, to cultivate the practice of slow, close reading as a way to develop critical self-awareness of our own cultural/historical position vis-à-vis the text we will be studying and critiquing. Second, to foster a deeper understanding of the culture and history not just of Japan, but of Asia more broadly. Third, to help you develop important elements of writing and analysis: formulating productive questions; using comparative strategies to develop a thesis and support analysis; producing your own unique analytical voice and writing style. Finally, to increase your understanding of the social and symbolic differences that make meaning in literary art possible.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ASCL 89 - Independent Research

Instructor: ASCL Faculty

Independent research under the direction of members of the staff. Students should consult with a member of the staff in the term preceding the term in which the independent work is to be done.

Offered: Fall, Spring, Summer, Winter.

ASCL 90 - Honors Thesis I

Instructor: ASCL Faculty

The ASCL Honors Program consists of a two-term, two-course sequence comprised of ASCL 90 and ASCL 91, during which the student completes an honors thesis. To qualify for the Honors Program the applicant must have a GPA of 3.0 overall and GPA of 3.4 in the major. Admission to the program is contingent upon acceptance of the applicant's thesis proposal. Students should develop a thesis proposal in consultation with a prospective advisor. The primary advisor for an honors thesis must be an ACSL affiliated faculty member. Secondary advisors drawn from ASCL or other departments and programs are encouraged when the student's project warrants additional expertise. Proposal guidelines can be found on the ASCL website.

As part of the Honors curriculum, ASCL 90 and 91 carry high expectations regarding student performance with regard to writing, deadlines, accountability, and critical reflection. The thesis advisor will assess the student's progress at the end of the first term of the Honors course sequence. If insufficient progress has been made on the thesis, students will be dropped from the program and given a grade for the work completed in the first term. The grade can count toward the ASCL major but not as a substitute for the ASCL Culminating Experience. A public presentation of the honors thesis at the end of the second term is a requirement of the Honors program. Completion of both ASCL 90 and 91 replace the ASCL culminating

experience. ASCL 91 is an addition to ASCL's ten-course major.

Students wishing to pursue a fall/winter thesis should submit their proposal to the Steering Committee no later than the fifth week of their junior-year spring term. Proposals for winter/spring theses should be submitted no later than the fifth week of the applicants senior-year fall term. Admission to the Honors Program is by vote of ASCL Steering Committee.

Students are awarded one course credit for successful completion of this course upon completion of ASCL-091. Students register for ASCL-090 and receive a grade of "ON" (ongoing) at the end of the term. Students then register for ASCL-091 the subsequent term to complete the coursework. A final grade will replace the "ON" in ASCL-90 upon completion of ASCL-091.

Offered: Fall, Spring, Summer, Winter.

ASCL 91 - Honors Thesis II

Instructor: ASCL Faculty

Students are awarded one course credit for successful completion of this course. Students who have registered for ASCL-090 register for ASCL-091 to complete the coursework. A final grade will replace the "ON" for ASCL-090 upon completion of this course for a total of 2 credits for ASCL-090 and ASCL-091.

Offered: Fall, Spring, Summer, Winter.

CHIN - Chinese

CHIN 1 - First-Year Courses in Chinese

Instructor: Chinese language faculty

An introduction to spoken and written Modern Standard Chinese. Conversational drill and comprehension exercises in classroom and laboratory provide practice in pronunciation and the use of the basic patterns of speech. Intensive reading is conducted for textbook lessons. Grammar is explained, and written exercises given. Traditional characters are learned in Chinese 1 and 2; simplified characters are introduced in Chinese 3. Classes are conducted increasingly in Chinese. Mandatory student-run drill sessions meet Monday to Thursday for fifty minutes each day for all beginning Chinese language classes. Students who plan to use these courses to fulfill the language requirement may not take it under the Non-Recording Option.

Satisfactory completion of Chinese 3 fulfills the language requirement.

Offered: Fall.

CHIN 2 - First-Year Courses in Chinese

Instructor: Chinese language faculty

An introduction to spoken and written Modern Standard Chinese. Conversational drill and comprehension exercises in classroom and laboratory provide practice in pronunciation and the use of the basic patterns of speech. Intensive reading is conducted for textbook lessons. Grammar is explained, and written exercises given. Traditional characters are learned in Chinese 1 and 2; simplified characters are introduced in Chinese 3. Classes are conducted increasingly in Chinese. Mandatory student-run drill sessions meet Monday to Thursday for fifty minutes each day for all beginning Chinese language classes.

Satisfactory completion of Chinese 3 fulfills the language requirement.

Prerequisite: CHIN 001 or placement via placement test

Offered: Winter.

CHIN 3 - First-Year Courses in Chinese

Instructor: Chinese language faculty

An introduction to spoken and written Modern Standard Chinese. Conversational drill and comprehension exercises in classroom and laboratory provide practice in pronunciation and the use of the basic patterns of speech. Intensive reading is conducted for textbook lessons. Grammar is explained, and written exercises given. Traditional characters are learned in Chinese 1 and 2; simplified characters are introduced in Chinese 3. Classes are conducted increasingly in Chinese. Mandatory student-run drill sessions meet Monday to Thursday for fifty minutes each day for all beginning Chinese language classes.

Satisfactory completion of Chinese 3 fulfills the language requirement.

Prerequisite: CHIN 002 or placement via placement test

Offered: Spring.

CHIN 4 - Advanced First-Year Chinese

Instructor: Chinese language faculty

This course is designed for students with varying, minimal levels of competence in speaking, listening, reading, and writing. Weekly class hours include four sixty-five minute sessions with the master teacher and up to four fifty-minute drill and/or conversation sessions. There are weekly exams, a midterm, and a final, as well as writing assignments, oral presentations, and supplementary work assigned as needed. This course seeks to achieve two goals: 1) to help students equalize their levels of the required speaking, listening, reading, and writing skills; 2) to allow them to raise these levels and thereby significantly increase their understanding of Modern Standard Chinese.

Chinese 4 is an accelerated first-year course. Satisfactory completion of Chinese 4 satisfies the Foreign Language Requirement and places the student into the 20-level series.

Students who plan to use this course to fulfill the language requirement may not take it under the Non-Recording Option.

Offered: Fall.

CHIN 22 - Intermediate Modern Chinese (Second-year level)

Instructor: Chinese language faculty. Offered on China LSA+ in summer and also on campus in winter.

CHIN 22 and CHIN 23 cover a full second-year level course, using the textbook *Integrated Chinese, Level Two* and a variety of other materials. The course is designed for students who have completed CHIN 4 or the equivalent. Students who have only completed CHIN 3 may be eligible for this course with permission of the instructor. Class hours include four sixty-five or five fifty-minute sessions with the master teacher and up to four fifty-minute drill and/or conversation sessions. There are weekly exams, a midterm, and a final, as well as writing assignments, oral presentations, and supplementary work assigned as needed. This series is intended to raise the student's levels in speaking, listening, reading, and writing skills and, thereby, significantly increase their understanding of Modern Standard Chinese.

Prerequisite: CHIN 003 or CHIN 004 or instructor permission.

Offered: Summer, Winter.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 23 - Intermediate Modern Chinese (Second-year level)

Instructor: Chinese language faculty. Offered on China LSA+ in summer and also on campus in spring.

CHIN 22 and CHIN 23 cover a full second-year level course, using the textbook *Integrated Chinese, Level Two* and a variety of other materials. The course is designed for students who have completed CHIN 4 or CHIN 21 or the equivalent. Students who have only completed CHIN 3 may be eligible for this course with permission of the instructor. Class hours include four sixty-five or five fifty-minute sessions with the master teacher and up to four fifty-minute drill and/or conversation sessions. There are weekly exams, a midterm, and a final, as well as writing assignments, oral presentations, and supplementary work assigned as needed. This series is intended to raise the student's levels in speaking, listening, reading, and writing skills and, thereby, significantly increase their understanding of Modern Standard Chinese.

Prerequisite: CHIN 22 or instructor permission

Offered: Spring, Summer.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 31 - Advanced Modern Chinese (Third-year level)

Instructor: Chinese language faculty. Offered on China LSA+ in summer and also on campus in fall.

This course is not repeatable. Under some circumstances and with the permission of the instructor, this series (31, 32 and 33) may be taken non-sequentially. Readings will be selected from literary, political, and historical publications. There will be regular exams, writing exercises, oral presentations, and supplementary work assigned as needed.

Prerequisite: CHIN 23 or permission of the instructor.

Offered: Fall, Summer.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 32 - Advanced Modern Chinese (Third-year level)

Instructor: Chinese language faculty. Offered on China LSA+ in summer and also on campus in winter.

This course is not repeatable. Under some circumstances and with the permission of the instructor, this series (31, 32 and 33) may be taken non-sequentially. Readings will be selected from literary, political, and historical publications. There will be regular exams, writing exercises, oral presentations, and supplementary work assigned as needed.

Prerequisite: CHIN 23 or permission of the instructor.

Offered: Summer, Winter.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 33 - Advanced Modern Chinese (Third-year level)

Instructor: Chinese language faculty.

This course is not repeatable. Under some circumstances and with the permission of the instructor, this series (31, 32 and 33) may be taken non-sequentially. Readings will be selected from literary, political, and historical publications. There will be regular exams, writing exercises, oral presentations, and supplementary work assigned as needed.

Prerequisite: CHIN 23 or permission of the instructor.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 40 - Advanced Chinese

Instructor: Chinese language faculty

040 courses are "topics courses" designed to develop mastery of the spoken and written language. Students who have completed at least two 30-level courses are

encouraged to continue their language study through 040 courses. Depending on the topic, readings are drawn from literary, cultural, political, business, and historical publications. Assigned work includes written and oral presentations.

CHIN 40.03 - Advanced Reading in Modern Chinese Short Stories (Fourth-year level)

Instructor: Chinese language faculty

This course aims to help students develop an ability to use Chinese at an advanced level – critical reading of original literary works, writing and speaking to express a broad range of topics, as well as literature appreciation, through reading selected modern Chinese short stories by well-known Chinese writers. Not open to students who have received credit for CHIN 043.

Prerequisite: Two third-year level Chinese courses or permission of the instructor.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 40.04 - Advanced Chinese for Commerce and Economics

Instructor: Chinese language faculty

This course will improve students' four communication skills (reading, writing, listening, and speaking), with a particular emphasis on speaking and writing, while also introducing students to an array of authentic and relevant economy-related topics and materials in Chinese. Course materials will include essays, dialogues, business cases and newspaper articles, as well as supplementary audio-visual materials. Students will learn about the general economic and business environment in China, and will use the case study method to gain insights into the business models of specific, influential Chinese companies and international firms that have successfully entered the Chinese market. The course will further develop students' Chinese proficiency at an advanced level. The combination of textbook and supplementary readings, and topic-based knowledge beyond "pure language" will achieve the goal of enhancing both students' language ability and their understanding of the world of Chinese business.

Prerequisite: Two third-year level Chinese courses or permission of the instructor.

Offered: Spring.

CHIN 41 - Advanced Chinese (Fourth-year level)

Instructor: Chinese language faculty

Advanced readings from literary, political, and historical publications.

Prerequisite: Two third-year level Chinese courses or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 42 - Advanced Chinese (Fourth-year level)

Instructor: Chinese language faculty

Advanced readings from literary, political, and historical publications.

Prerequisite: Two third-year level Chinese courses or permission of the instructor.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 45.01 - Introduction to Classical Chinese

Instructor: A. Wang

This course introduces students to the fundamentals and methods of reading Classical Chinese, also known as Literary Chinese. Readings include historical, philosophical, anecdotal, and poetic texts from the pre-imperial period to the medieval period. Class discussions will be conducted primarily in English.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 49 - Independent Advanced Study in Chinese Language and Literature

Instructor: ASCL Faculty

Available to students who wish to do advanced or independent study in Chinese. Chinese 49 may be considered a non-language course with approval of the advisor. The student must first submit a proposal to the Major/Minor advisor, and the section faculty, before obtaining permission from the faculty member with whom he or she wishes to work.

Offered: Fall, Spring, Winter.

Degree Requirement Attributes: Dist:LIT; WCult:NW

CHIN 50.01 - Advanced Chinese - Dream of the Red Chamber (5th-year level)

Instructor: BNU Exchange professor

In this Chinese language course, through selected readings of chapters from *Dream of the Red Chamber* and discussions on related topics, students will become familiar with the language of classical Chinese novels and enhance their ability to read Chinese classical literary works. Specifically, students will gain insights into the characteristics and common techniques of character depiction in Chinese novels, as well as learn the understanding and application of idioms and formal language. They will also analyze the differences between written and spoken language, further improving their Chinese writing skills and abilities in structured expression.

Dream of the Red Chamber was written in the 18th century and has long been celebrated as one of the great works of classical Chinese literature. The story revolves around the tragic love and marriage of Jia Baoyu, Lin Daiyu, and Xue Baochai, as well as the rise and fall of four prominent families: the Jia, Shi, Xue, and Wang. It features a multitude of vividly depicted characters. The language of the novel is mature, elegant, and vivid. There are numerous adaptations of *Dream of the Red Chamber* in the forms of poetry, opera, fiction, film, TV, painting, and more, translated into over 20 languages.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:NW

JAPN - Japanese

JAPN 1 - First-Year Courses in Japanese

Instructor: Japanese language faculty

An introduction to written and spoken modern Japanese. In addition to mastering the basics of grammar, emphasis is placed on active functional communication in the language, reading comprehension, and listening comprehension. Conversational drill and comprehensive exercises in classroom and laboratory provide practice in pronunciation and the use of the basic patterns of speech. Classes are conducted in Japanese. Reading in simple materials is extensive. Mandatory student-run drill sessions meet four times a week for fifty minutes for all beginning Japanese language classes.

Offered: Fall.

JAPN 2 - First-Year Courses in Japanese

Instructor: Japanese language faculty

An introduction to written and spoken modern Japanese. In addition to mastering the basics of grammar, emphasis is placed on active functional communication in the language, reading comprehension, and listening comprehension. Conversational drill and comprehensive exercises provide practice in pronunciation and the use of the basic patterns of speech. Classes are conducted in Japanese. Reading in simple materials is extensive. Mandatory student-run drill sessions meet four times a week for fifty minutes for all beginning Japanese language classes.

Prerequisite: JAPN 001 or placement via placement test

Offered: Winter.

JAPN 3 - First-Year Courses in Japanese

Instructor: Japanese language faculty

An introduction to written and spoken modern Japanese. In addition to mastering the basics of grammar, emphasis is placed on active functional communication in the language, reading comprehension, and listening

comprehension. Conversational drill and comprehensive exercises provide practice in pronunciation and the use of the basic patterns of speech. Classes are conducted in Japanese. Reading in simple materials is extensive. Mandatory student-run drill sessions meet four times a week for fifty minutes for all beginning Japanese language classes.

Never serves in partial satisfaction of Distributive or World Culture requirements

Prerequisite: JAPN 002 or placement via placement test

Offered: Spring.

JAPN 22 - Intermediate Modern Japanese

Instructor: only offered on Japan LSA+

A continuation of the fundamentals of grammar and further acquisition of spoken communication skills, aural comprehension, and proficiency in reading and writing. This is an intensive course that integrates homestays and the local environment into course materials. Students will be expected to master a wide variety of reading and video materials.

Offered: Summer.

Degree Requirement Attributes: WCult:NW

JAPN 23 - Intermediate Modern Japanese

Instructor: Only offered on Japan LSA+

A continuation of the fundamentals of grammar and further acquisition of spoken communication skills, aural comprehension, and proficiency in reading and writing. This is an intensive course that integrates homestays and the local environment into course materials. Students will be expected to master a wide variety of reading and video materials.

Offered: Summer.

Degree Requirement Attributes: WCult:NW

JAPN 31 - Advanced Japanese

Instructor: Japanese language faculty

A progression of materials from JAPN 23. Intensive review and continued study of modern Japanese at the advanced level. Conversation skills will continue to be an important aspect of this course, but more emphasis will be placed on reading and writing skills. Reading materials will be drawn from current newspapers, contemporary fiction, essays from journals, and excerpts from poetry. Short audiovisual selections will be used as well. Assigned work includes written compositions and oral presentations.

Prerequisite: JAPN 23 or permission of instructor.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:NW

JAPN 32 - Advanced Japanese

Instructor: Japanese language faculty

A progression of materials from JAPN 31. A variation of materials used in JAPN 31. Note: Although the materials used in this course differ from the materials used in JAPN 31, the general level of proficiency required to enroll in either JAPN 31 or JAPN 32 is roughly equivalent. Students may take JAPN 32 even if they have been unable to enroll in JAPN 31.

Prerequisite: JAPN 31 or permission of instructor.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:NW

JAPN 33 - Advanced Japanese

Instructor: Japanese language faculty

A continuation and progression of materials used in JAPN 31 and JAPN 32. Note: the level of proficiency required to enroll in JAPN 33 is higher than the proficiency required for either JAPN 31 or JAPN 32.

Prerequisite: JAPN 32 or permission of instructor.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:NW

JAPN 40 - Advanced Japanese

Instructor: Japanese language faculty

040 courses are "topics courses" designed to develop mastery of the spoken and written language. Students who have completed at least two 30-level courses are encouraged to continue their language study through 040 courses. Depending on the topic, readings are drawn from literary, cultural, political, business, and historical publications. Assigned work includes written and oral presentations.

JAPN 41 - Advanced Japanese

Instructor: Japanese language faculty

A variation of materials used in JAPN 33. Note: although the materials used in this course differ from the materials used in JAPN 33, the general level of proficiency required to enroll in either JAPN 33 or JAPN 41 is roughly equivalent. Students may take JAPN 41 even if they have been unable to enroll in JAPN 33.

Prerequisite: Two third-year level Japanese courses, or permission of the instructor.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:NW

JAPN 42 - Advanced Japanese

Instructor: Japanese language faculty

A progression of materials from JAPN 41. Designed to develop mastery of the spoken and written language. Assigned work includes written compositions and oral presentations.

Prerequisite: JAPN 41 or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:NW

JAPN 43 - Advanced Japanese

Instructor: Japanese language faculty

A progression of materials from JAPN 41 and JAPN 42. Designed to develop mastery of the spoken and written language. Assigned work includes written compositions and oral presentations.

Prerequisite: JAPN 41 or JAPN 42, or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:NW

JAPN 45.01 - Classical Japanese Grammar and Translation Workshop

Instructor: Schmidt-Hori

The students will first learn the basic grammar and vocabulary of classical Japanese through the textbook and workbook, rather than lectures given by the instructor. Class time is spent on comparing the students' answers to clarify specific difficulties and doing new exercises as a group. Once the basics are introduced and learned, the students will translate excerpts of classical literature, such as the *Tale of Genji* and *Hojoki*, as homework and compare their works in class.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:NW

JAPN 49 - Independent Advanced Study in Japanese Language and Literature

Instructor: ASCL Faculty

Available to students who wish to do advanced or independent study in Japanese. The student must first submit a proposal to the Major/Minor Advisor, and the section faculty, before obtaining permission from the faculty member with whom he or she wishes to work.

Offered: Fall, Spring, Winter.

Degree Requirement Attributes: Dist:LIT; WCult:NW

KOR - Korean**KOR 1 - First-year Course in Korean Language 1**

This course is an introductory course to Korean language and culture for students with little or no previous knowledge of Korean. In this course, students will learn how to engage in everyday conversations on familiar topics using key expressions, basic sentence structures, and

cultural knowledge by focusing on all four language skills: reading, listening, speaking, and writing. Topics include Hangeul (Korean alphabet), self-introduction, greetings, telling time and day, daily and weekly activities, and past experiences. Cultural topics will also be covered to develop intercultural competence.

KOR 2 - First-year Course in Korean Language 2

This course is a continuation of the first-year Korean language sequence with an emphasis on the further development of basic language skills. Topics include future plans, preferences, honorifics, making an apology, and making invitations.

KOR 3 - First-year Course in Korean Language 3

This course is a continuation of the first-year Korean language course sequence with an emphasis on the further development of basic language skills. Topics include talking about family, describing clothes and colors, making telephone calls, making a polite request, writing letters, shopping, ordering food, and describing feelings.

Biological Sciences - Undergraduate

Chair: Magdalena Bezanilla

Professors M. P. Ayres, M. Bezanilla, R. G. Calsbeek, K. L. Cottingham, M. L. Guerinot, T. P. Jack, W-L. Lee, M. A. McPeck, K. J. Peterson, G. E. Schaller, E. F. Smith, L. A. Witters; Associate Professors P. J. Dolph, B. He, R.A. Hill, M. B. Hoppa, C. D. Nadell, C. E. Hicks Pries, O. Zhaxybayeva; Assistant Professors A. A. Amodeo, E.L. Behrman, D. D. Ghosh, J. Mutz; Senior Lecturer N. M. Grotz; Lecturer W. Ryan, J. D. Warren; Professor Emeritus E. M. Berger, C. L. Folt, J. J. Gilbert, C.R. McClung, D. R. Peart, R.D. Sloboda; Research Professor and Professor Emeritus S.E. Bickel, R. T. Holmes; Associate Professor Emeritus S. J. Velez; Adjunct Professors D. Gilbert-Diamond, K. E. Griswold, D. A. Leib, L. R. Lynd, G. A. O'Toole, M. J. Turk, M. E. Zegans; Adjunct Associate Professor M. E. Romano; Adjunct Assistant Professors C. G. Howe; Research Professor C. Y. Chen; Research Associate Professor T. Punshon; Research Assistant Professor J. V. Trout-Haney, Principal Instructor C. D. Layne; Senior Instructors A. L. Socha, N. R. Sylvain; Instructor T. L. Tornig

Requirements for Majors in the Department of Biological Sciences

The biological sciences are a diverse collection of scientific disciplines that interact and intermingle in tremendously complex and interesting ways. To provide the maximum potential for students to explore this vast area of science, the Department of Biological Sciences offers a flexible major that allows students to select coursework to fit their individual interests and career aspirations. Before declaring an area of concentration, students develop their course plan in consultation with one or more faculty advisors.

Prerequisites: CHEM 5 or CHEM 11 and one quantitative course from among BIOL 29, COSC 1, ENGS 20, EARS 17, QSS 15, MATH 8 or above. MATH 10 (or equivalent) satisfies the quantitative requirement. Students who elect to include BIOL 29 in their area of concentration (see below) must fulfill this prerequisite with one of the other courses listed above. Although not required for the major, some upper-level Biology courses require CHEM 6, and 51-52 (or equivalent). In addition, because many graduate and professional schools require CHEM 51-52 for admission, we highly recommend that students consider taking these courses. Students must pass all prerequisite courses for the major in order to graduate.

Entering the Major:

BIOL 09 (Researching Cellular Mysteries) is one pathway for entering the Biology curriculum. BIOL 09 is a small enrollment course (about 20 students). The course is designed to give students a hands-on, discovery-based introduction to understanding and applying the scientific method to answer questions in biology. BIOL 09 counts toward the major if it is taken anytime during the first year (including after taking one or more Foundation courses) or as the first biology course.

BIOL 11 (The Science of Life) is another pathway for entering the Biology curriculum. BIOL 11 is a topics-based introductory Biology course. There are several offerings of BIOL 11 each year, each organized around a different topic that the instructors have chosen to introduce fundamental concepts and develop a perspective on the life sciences. BIOL 11 counts toward the major if it is taken anytime during the first year (including after taking one or more Foundation courses) or as the first biology course. Only one offering of BIOL 11 may be taken for credit.

Students may count both BIOL 09 and BIOL 11 for major/minor credit.

To help students determine if they are sufficiently prepared to enter a foundation course directly, the biology department has established an online self-assessment exam for students. Students who have any concerns about their

preparedness should take BIOL 09/BIOL 11 before enrolling in a foundation course.

Foundation Courses: A student must take three courses from among five foundation courses: BIOL 12/BIOL 19 (Cell Structure and Function); BIOL 13 (Gene Expression and Inheritance); BIOL 14 (Physiology); BIOL 15 (Genetic Variation and Evolution); BIOL 16 (Ecology). The foundation courses are not sequenced and may be taken in any order. Students interested in Bio FSP are encouraged to take BIOL 16 in fall or spring of their first year and BIOL 15 in their first or second year. In deciding which three courses to select from this list, students should discuss with their faculty advisors which foundation courses would be most appropriate for their area of concentration. Not all foundation courses need to be completed before the student moves on to courses in their area of concentration.

Area of Concentration: To complete the major, a student develops an area of concentration by taking seven additional courses, including at least two biology courses numbered 50 or above. Biology courses numbered 07 or below may not be counted towards the major. On our website, we list a number of possible areas of concentration that students may find useful in guiding their course selection. We offer these only as examples and not as an exhaustive list. The courses listed for each area are suggestions to help you get started. Students are not required to limit themselves to the courses listed under a single area. Students may also develop Areas of Concentration that are not listed. Any Biology faculty member may serve as your advisor even if they are not listed under a specific area of concentration (provided they feel comfortable advising you in that area). Our hope is that together with your advisor you will design a major that fulfills your unique interests and goals. Faculty members with interests in the listed areas are on our website; students interested in other areas should ask the Department Chair or the departmental Undergraduate Committee to suggest a faculty member who would be appropriate to advise the student in developing their course plan. In recognition of the interdisciplinary nature of the life sciences, up to two suitable advanced courses from other departments may be included in the Area of Concentration when appropriate to the student's objectives, or a modified major may be constructed (see below). One term of Independent Research (BIOL 95) or Honors Research (BIOL 97) may also be included among the seven courses.

Culminating Experience: To satisfy the culminating experience requirement, students must take a course numbered 50 or above, normally during their senior year. Any Biology course numbered 50 or above that is appropriate for the student's area of concentration will satisfy the culminating experience requirement. Each student will determine with their faculty advisor which course is suitable as a culminating experience for their area

of concentration and interests. These courses include the Biology foreign study program, independent research courses, courses that focus on the primary literature in a discipline, and courses with substantial laboratory components and/or individual projects. The culminating experience course should be taken in a student's senior year, although a course taken in the junior year may in exceptional circumstances satisfy the culminating experience and requires the approval of the Department Chair or the departmental Undergraduate Committee.

Independent Research and the Biology Honors Program

Biology majors are encouraged to undertake independent research in biology either as part of the Honors Program or separately. Participants in the Honors Program should apply to enroll in BIOL 97/98. The subject of the honors research project should be directly relevant to the student's area of concentration. Those who conduct research outside of the Honors Program should enroll in BIOL 95/96.

Work on an Honors thesis normally extends through three or more terms. Candidates for Honors must meet the minimum College requirements. *Application to enroll in BIOL 95/96 or BIOL 97/98 should be made at least one month prior to the beginning of the term in which the course is to be elected.* Plans for research should be made in the term before the project begins. Independent research conducted off campus during a leave/transfer term without the direct supervision of a faculty advisor from the Dartmouth College Department of Biological Sciences cannot be used to earn credit for BIOL 95, BIOL 96, BIOL 97 or BIOL 98.

BIOL 97 (or BIOL 95) may be counted only once among the seven courses for the area of concentration, but two terms of Independent Research may be taken for course credit towards graduation.

Each Honors candidate shall submit a thesis to a committee at least two weeks before the end of the last term. The committee will be composed of three faculty members, including the thesis supervisor. At least two members of this committee must be members of the Biological Sciences faculty. Each candidate's Honors Program concludes with the candidate making a public presentation of their work, followed by an oral examination conducted by the thesis committee, on the thesis work and related topics. The quality of the written thesis and the student's grasp of his or her research program as determined by their performance on the oral exam determine if the student's degree is awarded with honors.

Requirements for a Biology Modified Major

Students who wish to complement their interest in the life sciences with several courses in one or more disciplines may consider a modified major. For a modified major, the

prerequisite and foundation course requirements remain the same. The Area of Concentration consists of five advanced Biology courses (additional foundation courses and courses numbered 20 and above) and four suitable advanced courses from another department or combination of departments. At least two of the advanced Biology courses must be numbered 50 and above; one of these is the culminating experience, normally taken in the senior year. Courses outside the Biological Sciences Department may not be substituted for foundation courses or for the five advanced Biology courses in their area of concentration.

Biology Major Modified with Math

Mathematics is the “Language of Science”. Students who are more quantitatively oriented may want to consider modifying their Biology major with Mathematics. To facilitate this, the Biological Sciences and Mathematics Departments have agreed on the following structure for a Biology modified with Mathematics major. In addition to the biology courses in their area of concentration, students choosing this option will take four courses from among the offerings in Mathematics. Prerequisites and foundation course requirements for the Biology major remain the same. All students choosing this option must take MATH 22 (Linear Algebra with Applications) and MATH 23 (Differential Equations). The other two mathematics courses should be chosen in consultation with your Biology advisor depending on your area of concentration. Any two courses in the following list of Mathematics Department courses are appropriate:

Discrete Methods and Modeling: MATH 20 (Probability), MATH 36 (Mathematical Models in the Social Sciences), MATH 76 (Topics in Applied Mathematics)

Probability and Statistics: MATH 20 (Probability), MATH 28 (Introduction to Combinatorics), MATH 40 (Probability and Statistical Inference), MATH 50 (Introduction to Linear Models), MATH 70 (Elements of Multivariable Statistics and Statistical Learning)

Dynamics: MATH 46 (Introduction to Applied Mathematics), MATH 53 (Chaos!), MATH 76 (Topics in Applied Mathematics)

Requirements for the Biology Minor

The prerequisites for the Biology minor are CHEM 5 or CHEM 11 and one quantitative course from among BIOL 29, COSC 1, ENGS 20, EARS 17, QSS 15, MATH 8 or above. MATH 10 (or equivalent) satisfies the quantitative requirement. In addition, students will complete two foundation courses and four additional Biology courses (BIOL 09 or above). Students may choose to use BIOL 29 as a prerequisite or as one of the four additional Biology courses, but not both. Students who elect to count BIOL 29 as one of the four additional courses must fulfill the quantitative prerequisite with one of the other courses listed above. Students do not need to develop an area of

concentration for the minor but they may do so if they wish. Courses outside the Biological Sciences Department may not be substituted for foundation courses, or the four additional Biology courses.

Academic Standing

- Satisfactory completion of the Biology major or modified major requires obtaining a final grade point average of at least 2.00 in the ten courses that count toward the major.
- Post-matriculation transfer credits may not be used for BIOL 11 or the Foundation courses.
- No more than two transfer credits may be used for area of concentration courses. The one exception is that three courses may be transferred in from the Dartmouth exchange program at the Marine Biology Lab in Massachusetts.

Credit and Advanced Placement *The Department gives no credit for courses taken at another college or university prior to first year matriculation at Dartmouth.*

BIOL 3 - Mindful Physiology

Instructor: D. Gilbert-Diamond

As defined by the Zen Master Thich Naht Hanh, “Mindfulness is the awareness of what is happening inside and around us in the present moment.” This course introduces basic physiology to help students increase their understanding of and appreciation for the biological mechanisms occurring inside and around their bodies. This course also teaches basic research principles to enable students to critically evaluate research studies on the physiological effects of mindfulness. To deepen students’ understanding of mindfulness and the scientific research examined, enrolled students will engage in mindfulness practices throughout the term.

Prerequisite: No prerequisites

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 9 - Researching Cellular Mysteries

Instructor: Sylvain, Torng

Students in this course will apply the scientific method to answer questions in Biology through discovery-based laboratory experiences. Lecture topics will cover the structure and function of DNA, RNA, and proteins. Class meetings will occur in the laboratory, where students will perform and analyze experiments designed to address novel questions in Biology. These experiments will generate new, previously unobserved findings. Open to all students without prerequisite.

Prerequisite: No prerequisites

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 11.03 - Emerging Infectious Diseases: How Microbes Rule the World

Instructor: Guerinot

Emerging infectious diseases, which have shaped the course of humanity and caused untold suffering and death, will continue to challenge society as long as humans and microbes co-exist. This course will explore why infectious diseases emerge and re-emerge. The viruses, bacteria and eukaryotes that cause these diseases continually evolve in response to their hosts. Dynamic interactions between rapidly evolving infectious agents and changes in the environment and in host behavior provide such agents with favorable new ecological niches. In addition, dramatic increases in the worldwide movement of people and goods drive the globalization of disease.

Prerequisite: No prerequisites

Offered: Spring.

Degree Requirement Attributes: SCI

BIOL 11.06 - Why can't we all just get along? Cooperation and Conflict across the Biological Sciences

Instructor: R. Calsbeek

Cooperation and conflict are universal themes that arise when considering how entities at various levels of organization interact. This is particularly true in biology, from atoms interacting within a molecule, molecules interacting within a cell, or cells interacting within a multicellular organism, individuals interacting within groups, disease organisms interacting within their host, or nations interacting with one another. We will explore how the concepts of game theory apply at the biochemical, cellular and organismal levels to explore how groups of entities at these various levels interact, and how groups transition to individuals. All along the way we will discuss a lot of biology and see how biologists apply what they know to new problems.

Prerequisite: No prerequisites

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

BIOL 11.09 - Biology of the Brain

Instructor: Ghosh

This course seeks to introduce students to the wonders of the brain and how it works through its basic cellular unit: the neuron. Importantly, this course is intended for students *with no prior knowledge* interested in indulging their curiosity about basic biology and neuroscience. We will first establish some fundamental principles of the biology of the neuron. Next, we will examine how neurons connect with one another, change and learn, and control behavior. Finally, we will explore our current understanding of neurobiology in disease and neurotechnology. The class will consist of lectures with weekly quizzes and culminate with a cumulative final exam.

Prerequisite: No prerequisites

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

BIOL 12 - Cell Structure and Function

Instructor: Grotz, Ghosh, He

BIOL 12 will provide a foundation in the fundamental mechanisms that govern the structure and function of eukaryotic cells. Topics include membrane transport, energy conversion, signal transduction, protein targeting, cell motility and the cytoskeleton, and the cell cycle. Emphasis will be placed on discussion of the experimental basis for understanding cell function. The laboratory section will provide students with hands-on experience in modern laboratory techniques including microscopy, cell fractionation, and protein purification. Open to all students without prerequisite. Biology 19 is a foundation course equivalent of Biology 12. Note: BIOL 12, BIOL 13, BIOL 14, BIOL 15, BIOL 16 may be taken in any order.

Prerequisite: No prerequisites

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:SLA

BIOL 13 - Gene Expression and Inheritance

Instructor: Dolph, Amodeo, Behrman/Jack

This course provides a foundation in genetics and molecular biology. Topics covered include the flow of genetic information from DNA to RNA to protein, transmission of genetic information from one generation to the next and the molecular mechanisms that control gene expression in bacteria and eukaryotes. These concepts will be integrated into a discussion of contemporary problems and approaches in molecular genetics. Laboratories utilize basic molecular biology techniques to further investigate topics discussed in lecture. Open to all students without

prerequisite. Note: BIOL 12, BIOL 13, BIOL 14, BIOL 15, BIOL 16 may be taken in any order.

Prerequisite: No prerequisites

Offered: Summer, Winter.

Degree Requirement Attributes: Dist:SLA

BIOL 14 - Physiology

Instructor: Socha

This course introduces students to the complexity of organisms by studying how their different organ systems strive to maintain internal homeostasis in the face of different environmental demands. The adaptive responses of selected organisms (humans, different animals and plants) to a variety of environmental factors will be studied from the molecular, cell, tissue, organ, and systems level of organization. Some of the topics to be covered include biological control systems (hormones, neurons) and coordinated body functions (circulation, respiration, osmoregulation, digestion). All systems studied will be integrated by analyzing how different organisms adapt to living in extreme environments (deserts, high altitude) or facing changing environmental demand (navigation, exercise). Open to all students without prerequisite. Note: BIOL 12, BIOL 13, BIOL 14, BIOL 15, BIOL 16 may be taken in any order.

Prerequisite: No prerequisites

Offered: Summer, Winter.

Degree Requirement Attributes: Dist:SLA

BIOL 15 - Genetic Variation and Evolution

Instructor: McPeck

This course examines fundamental population-level processes and mechanisms that give rise to diversity of living organisms. The class will explore the interplay of evolutionary forces acting on genetic variation for both single-gene traits and complex traits determined by multiple genes and environmental conditions. Evolution of the human population will serve as the main study system. The class periods will include problem-solving sessions and hands-on activities on experimental evolution, observational data analyses and computer-based evolutionary inferences. Open to all students without prerequisite. Note: BIOL 12, BIOL 13, BIOL 14, BIOL 15, BIOL 16 may be taken in any order.

Prerequisite: No prerequisites

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

BIOL 16 - Ecology

Instructor: Hicks Pries, Ayres/Mutz

This course examines fundamental concepts in the rapidly developing areas of ecology. These topics include the factors that limit the distributions and abundances of organisms, the effects that organisms have on ecosystems, the integration of ecosystems around the globe, and the conservation of species diversity. The class will also explore how the behavior and physiology of individual organisms shape both local and global patterns of distribution and abundance. Laboratories focus on experimental and quantitative analyses of local ecosystems, with an emphasis on field studies. Open to all students without prerequisite. Note: BIOL 12, BIOL 13, BIOL 14, BIOL 15, BIOL 16 may be taken in any order.

Prerequisite: No prerequisites

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:SLA

BIOL 21 - Population Ecology

Instructor: McPeck

This course explores the description of populations, population growth, and the determination of abundance. Examples will be drawn from a diversity of plant and animal taxa to illustrate the broad scope of population ecology, including its role as a foundation for evolutionary ecology and community ecology, and its contributions to applied problems in conservation biology, pest management, human demography, and the management of harvested populations. Throughout, this course will emphasize the development of verbal, graphical, and mathematical models to describe populations, generate predictions, test hypotheses, and formalize theory. No student may receive course credit for both BIOL 21 and BIOL 51. Offered in alternate years.

Prerequisite: BIOL 15 or BIOL 16

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 22 - Methods in Ecology

Instructor: Cottingham

This course is an introduction to sampling and survey methodologies for populations and communities in both aquatic and terrestrial environments. The course will be divided into week-long modules, each focusing on a particular group of organisms in the environment. A great deal of emphasis will be placed on hypothesis generation, experimental design and statistical analysis. Participation in the laboratory/field component is both required and critical as one of the primary benefits of this course will be "on the ground" training in field methods.

Prerequisite: BIOL 16

Offered: Summer.

Degree Requirement Attributes: Dist:SLA

BIOL 24 - Vertebrate Zoology

Instructor: Calsbeek

This course will examine origins, diversity, structure and function within and among the vertebrate classes (including fish, amphibians, reptiles, birds and mammals). We will consider the evolution of the vertebrate body plan and innovations associated with common organ systems (e.g., skeletal, muscular, digestive, sensory, etc.) shared by different taxa. In addition, we will consider specialization of form and function to the diverse ecology of vertebrates as well as the manner in which very different taxa cope with similar habitats and environmental demands. In so doing, we will draw on evolutionary principles such as adaptation, convergent and parallel evolution and evolutionary constraints. The course will primarily consist of lecture and readings with examination of specimens and opportunities for off-campus field trips. Offered in alternate years.

Prerequisite: BIOL 15 or BIOL 16

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

BIOL 25 - Introductory Marine Biology and Ecology

Instructor: Chen

A course designed both for biology majors and other students interested in the interrelationships between marine organisms and their physical and biological environments. The course emphasizes the marine environment as an ecosystem with special focus on communities in coastal margin, open ocean, and deep sea habitats ranging from polar to tropical latitudes. Applied issues relevant to human impact and conservation in marine ecosystems will also be covered. Offered in alternate years.

Prerequisite: One from among BIOL 12/BIOL 19, BIOL 13, BIOL 14, BIOL 15, or BIOL 16

Degree Requirement Attributes: Dist:SCI

BIOL 26 - Global Change Biology

Instructor: Hicks Pries

We live in the Anthropocene era in which humans have an outsize effect on the environment. In this course, we will apply ecological concepts to understand the consequences of environmental changes for species and ecosystems. Through discussing scientific literature and exploring long term ecological datasets, we will investigate how humans have altered the environment and the repercussions for biogeochemical cycling and species distributions, phenology, and interactions. We will also evaluate solutions for mitigating these consequences.

Prerequisite: BIOL 16, ENV 2 or GEOG 3

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 27 - Animal Behavior

Instructor: Calsbeek

Behavioral sciences are extremely broad and the study of animal behavior requires an interdisciplinary approach that integrates psychology, ecology, evolutionary biology, neural science and the underpinnings of learning and memory science. We will draw on each of these fields as we explore topics ranging from signaling and cognition to mating behaviors and sexual selection to foraging and optimality theory. We will consider how proximate and ultimate causality structure behavior throughout the animal kingdom. Thus, the course will take an evolutionary approach to understand behavior in vertebrates and insects and other invertebrates; in fresh water and marine systems, and in terrestrial groups. Offered in alternate years.

Prerequisite: BIOL 15 or BIOL 16 or instructor permission

Degree Requirement Attributes: Dist:SCI

BIOL 28 - Macroevolution

Instructor: Peterson

Macroevolution focuses on the evolutionary process from the perspective of the species and through the lens of deep time. More specifically, it focuses on the issue of whether life is organized hierarchically, and if so, can selection occur at any/all of these other levels, in addition to the level of the organism. This course is especially well suited for discussion and question, as the definition of macroevolution, as well as its very existence, is under intense discussion by both microevolutionists and macroevolutionists alike. Topics covered include punctuated equilibrium, species-level selection, homology, and mass extinctions.

Prerequisite: One from BIOL 12/BIOL 19, BIOL 13, BIOL 14, BIOL 15, BIOL 16, or EARS 2; or instructor permission.

Cross-Listed as: EARS 032, ANTH 50.46

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

BIOL 29 - Biostatistics

Instructor: McPeck

The course will cover basic descriptive statistics, simple probability theory, the fundamentals of statistical inference, regression and correlation, t-tests, one-way analysis of variance, basic analyses of frequency data and non-parametric statistics, and the general philosophy of experimental design. We will explore these topics from the perspective of biological applications. Examples will be drawn from all sub-disciplines of biology (e.g. biochemical

kinetics, development, physiology, ecology, and evolution).

Prerequisite: Two courses in biology numbered 11 or higher.

Degree Requirement Attributes: Dist:QDS

BIOL 31 - Physiological Ecology

Instructor: Trout-Haney

What factors determine the distribution and abundance of organisms? What are the consequences of climate change for biological communities? This course is an exploration of environmental effects on fundamental physiological processes in plants and animals. Abiotic factors, such as temperature and water availability, interact with biotic forces, such as predation, herbivory, and competition, to constrain the ability of organisms to survive, grow, and reproduce. Physiological solutions that allow success in one environment may preclude it in another. This course seeks to build up from physiological principles to understand characteristics of populations, communities, and ecosystems. Laboratories will challenge students to generate and test their own hypotheses using contemporary theoretical frameworks and modern research apparatus. Offered in alternate years.

Prerequisite: One from among BIOL 12/BIOL 19, BIOL 13, BIOL 14, BIOL 15, or BIOL 16

Offered: Fall.

Degree Requirement Attributes: Dist:SLA

BIOL 35 - Cellular and Molecular Neuroscience

Instructor: Hoppa

This course focuses on cellular and molecular mechanisms that underlie the development and function of the nervous system. The course focuses on three phases of cellular neuroscience: 1) Developmental neuroscience including cell division, migration, and survival; 2) Neural communication including the function of ion channels and synaptic plasticity; and 3) Molecular mechanisms of neurological diseases and therapeutic approaches. Lectures are supplemented by in class discussion and exploration of techniques for studying cellular neuroscience including microscopy, electrophysiology, advanced genetic approaches, and animal models used to study the nervous system and neurological disorders.

Prerequisite: One from among BIOL 12/BIOL 19, BIOL 14, PSYC 6.

Cross-Listed as: PSYC 035

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

BIOL 37 - Endocrinology

Instructor: Witters

The molecular, biochemical, genetic and physiologic aspects of the endocrine system will be explored with an emphasis on human and mammalian biology. We will use examples of pathobiology arising from dysfunction of this system to draw attention to the normal modes of endocrine regulation. Topics will be drawn from seminal publications in the biomedical literature. The course will employ a hypothesis-based, problem-solving paradigm, involving, in part, the study of experimental techniques used in investigation.

Prerequisite: BIOL 12/BIOL 19. A prior course that emphasizes genetics is recommended. Otherwise permission of instructor.

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 40 - Biochemistry

Instructor: Lee, Schaller

This course studies molecular structure and function from a biochemical point of view, emphasizing the biochemistry of proteins, lipids, and carbohydrates. Topics include protein structure and function, enzymes and enzyme kinetics, lipids and membranes, and carbohydrates and cell walls. The participation of these biomolecules in metabolism is also discussed, and focuses on the metabolic pathways of glycolysis, gluconeogenesis, fatty acid oxidation, amino acid catabolism, the TCA cycle, and oxidative phosphorylation. The course concludes with a look at the integration of metabolism in mammals. Students with credit for CHEM 41 may not receive credit for BIOL 40.

Prerequisite: BIOL 12/BIOL 19 and CHEM 52 or CHEM 58 or permission of the instructor.

Offered: Fall, Winter.

Degree Requirement Attributes: Dist:SCI

BIOL 41 - Cells into Organs: Assembly, Function and Disease

Instructor: He

How do cells organize into the myriad forms of tissues and work together to perform specific physiological functions? In this course, we will use epithelial tissues as an example to explore these fundamental questions. Epithelia are among the most common types of tissue organization in animals. They line the cavities, ducts and surfaces of all the major organ systems and provide a variety of functions such as secretion, protection and sensing. During development, epithelial tissues also function in morphogenetic processes that guide the formation of body patterns. Defects in epithelial growth control and function play a major role in human diseases such as cystic fibrosis

and cancer. The goal of this course is to understand the form, dynamics and function of epithelial tissues, and how dysregulation of epithelia can lead to various human diseases.

Prerequisite: BIOL 12/BIOL 19 or instructor permission

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

BIOL 42 - Biology of the Immune Response

Instructor: Turk/Pioli/Obar/Rothstein

This course will consider immunoglobulin structure, antigen-antibody reactions, complement, hypersensitivity, immunogenetics, immunodeficiency, tumor immunology and therapy, and autoimmunity.

Prerequisite: BIOL 12/BIOL 19 or BIOL 13, or permission of the instructor.

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

BIOL 44 - Microbiology, without Laboratory

Instructor: Nadell

This course teaches the fundamentals of modern microbiology, the study of organisms smaller than the eye can see. These include a wide range of species across the tree of life, which carry great importance for elemental cycling in the wild, as well as in an enormous variety of contexts more directly connected to human health, including food production, water treatment, and pathogens that cause disease. Topics will range from the basics of bacterial cell structure and metabolism to the complex multi-species communities that make up part of the human microbiome. Identical to BIOL 46, but without the laboratory. No student may receive credit for both BIOL 44 and BIOL 46.

Prerequisite: One from among BIOL12/BIOL 19, BIOL 13, BIOL 14, BIOL15, BIOL 16

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 45 - Molecular Biology

Instructor: Grotz

This course will build upon the material presented in BIOL 13 with in depth analysis of the molecular mechanisms underlying fundamental processes including DNA replication, transcription and translation in bacteria and eukaryotes. Key regulatory events that influence gene expression will be discussed including the function of promoters and enhancers, chromatin structure and epigenetics, RNA mediated silencing and mRNA processing. Emphasis will be placed on understanding how molecular techniques are used to elucidate critical aspects

of these processes. Selected papers from the primary literature will be presented to illustrate current advances.

Prerequisite: BIOL 13

Offered: Summer.

Degree Requirement Attributes: Dist:SCI

BIOL 46 - Microbiology, with Lab

Instructor: Nadell

This course teaches the fundamentals of modern microbiology, the study of organisms smaller than the eye can see. These include a wide range of species for across the tree of life, which carry great importance for elemental cycling in the wild, as well as in an enormous variety of contexts more directly connected to human health, including food production, water treatment, and pathogens that cause disease. Topics will range from the basics of bacterial cell structure and metabolism to the complex multi-species communities that make up part of the human microbiome. Identical to BIOL 44, but with the laboratory. No student may receive credit for both BIOL 44 and BIOL 46.

Prerequisite: One from among BIOL12/BIOL 19, BIOL 13, BIOL 14, BIOL15, BIOL 16

Offered: Spring.

Degree Requirement Attributes: Dist:SLA

BIOL 47 - Genomics: From Data to Analysis

Instructor: Zhaxybayeva

Massive amounts of genomic data pervade 21st century life science. Physicians now assess the risk and susceptibility of their patients to disease by sequencing the patient's genome. Scientists design possible vaccines and treatments based on the genomic sequences of viruses and bacterial pathogens. Better-yielding crop plants are assessed by sequencing their transcriptomes. Moreover, we can more fully explore the roots of humanity by comparing our genomes to those of our close ancestors (e.g., Neanderthals, Denisovans). In this course, students will address real-world problems using the tools of modern genomic analyses. Each week students will address a problem using different types of genomic data, and use the latest analytical technologies to develop answers. Topics will include pairwise genome comparisons, evolutionary patterns, gene expression profiles, genome-wide associations for disease discovery, non-coding RNAs, natural selection at the molecular level, and metagenomic analyses.

Prerequisite: BIOL 13 OR BIOL 15

Degree Requirement Attributes: Dist:SCI

BIOL 50.02 - Ecology of Infectious Disease

Instructor: Cottingham

This advanced undergraduate seminar will explore the dynamics of infectious disease through the lens of ecological science while providing training in writing and reviewing research proposals. We will begin by carefully reading case studies from the literature to develop content mastery and strategies for identifying important research questions. Groups of students will then write research proposals, practice the art of constructive peer review, and participate in a mock grant review panel.

Prerequisite: BIOL 16 and one from among BIOL 21-31, BIOL 44, BIOL 46 or BIOL 48

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 51 - Advanced Population Ecology

Instructor: McPeck

This course explores theory and data regarding properties of biological populations. Topics of lectures and analytical exercises include: descriptions of abundance, dispersion, and demographic schedules; applying life tables and matrix models to understand population growth and age structure; life history theory; influence of endogenous feedbacks and exogenous forces on population dynamics; spatial patterns and processes; and contributions of population ecology to applied issues in conservation, pest management, human demography, and the management of harvested populations. No student may receive course credit for both BIOL 21 and BIOL 51. Offered in alternate years.

Prerequisite: BIOL 16 and one course from among BIOL 22 - BIOL 32

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 53 - Aquatic Ecology

Instructor: Ryan

The study of interactions between biological communities and their freshwater environment. Lecture and readings provide the scientific background necessary for understanding the physical, chemical and biological dynamics of freshwater habitats. Emphasis is placed on application of fundamental concepts to problems in conservation and management of aquatic ecosystems. The laboratory and fieldwork, including a weekend field trip during the first week of classes, will acquaint students with modern methodological approaches for studying aquatic ecosystems.

Prerequisite: BIOL 15 or BIOL 16 and one course from among BIOL 21, BIOL 22, BIOL 23, BIOL 24, BIOL 25, BIOL 27, BIOL 28, BIOL 29, BIOL 31, BIOL 46

Offered: Spring.

Degree Requirement Attributes: Dist:SLA

BIOL 54 - Advanced Methods in Ecological Research

Instructor: Ayres

Students will work in small groups to conduct original research projects addressing ecological questions that are developed by the students with inspiration from natural history observations, published research, and discourse within student working groups. Students will develop skills in exploring natural history, formulating interesting answerable research questions, deriving hypotheses from theory, developing research design, acquiring and analyzing data, making statistical and logical inferences, writing scientific papers, and presenting seminars.

Prerequisite: BIOL 16 and one from among BIOL 21- BIOL 32

Degree Requirement Attributes: Dist:SLA

BIOL 55 - Ecological Research in the Tropics I

Instructor: Trout-Haney

The Biology Foreign Studies Program (BIOL 55, BIOL 56, BIOL 57) exposes students, through intensive, full-immersion study, to Earth's most diverse biological communities. BIOL 56 is a continuation of BIOL 55; these courses comprise the first two-thirds of the FSP, and focus on land (tropical forests) and tropical freshwater ecosystems in Costa Rica. BIOL 57 focuses on coral reef ecosystems in the Caribbean. Students are challenged to know, understand and appreciate the diversity of form and function in organisms, and the interactions that generate the often-spectacular patterns they see in the field. Habitats in Costa Rica include lowland rain forest, cloud forest, dry forest, montane forest, alpine paramo, streams and wetlands. The schedule is full, including fieldwork, laboratories, lectures and discussions, with emphasis on original research, mostly in small groups of 2-3. Faculty and advanced graduate TAs share field accommodations with students, and are in continuous contact as mentors, day and evening, throughout the program. Students master field and analytical methods (including hypothesis testing, statistical and software skills) for observational and experimental research. We pursue a great variety of research topics, including plant-pollinator and plant-herbivore interactions, processes driving coral reef structure (and coral reef decline), determinants of species distributions, animal behavior, and conservation ecology. Students practice the classic scientific approach: making observations, asking testable questions, generating hypotheses, developing experimental protocols, collecting data, making statistical inferences, writing scientific papers, and presenting seminars. Research papers are published in an annual book. Accommodations are at field stations in Costa Rica, and at a marine laboratory in the Caribbean. Acceptance into Program is required. In addition, BIOL 15 & BIOL 29 are recommended.

Prerequisite: BIOL 16, one course from among BIOL 21 - BIOL 32; acceptance into program, BIOL 15 and BIOL 29 recommended

Offered: Winter.

Degree Requirement Attributes: Dist:SLA

BIOL 56 - Ecological Research in the Tropics II

Instructor: Ayres

A continuation of BIOL 55. See BIOL 55 for a description of the Biology Foreign Study Program.

Prerequisite: BIOL 55 (taken in same term)

Offered: Winter.

Degree Requirement Attributes: Dist:SLA

BIOL 57 - Ecological Research on Coral Reefs

Instructor: Chen

Field and laboratory investigations of marine organisms and coral reef communities. Lecture and research topics include studies of algae, aquatic plants, invertebrates, and fish, with emphasis on populations, species interactions, community structure and energetics, and reef conservation and management. The course is based at the Little Cayman Research Center, Little Cayman Island. Scuba diving is optional. See BIOL 55 for an overview of the Biology Foreign Study Program.

Prerequisite: BIOL 55 and BIOL 56 (taken in same term)

Offered: Winter.

Degree Requirement Attributes: Dist:SLA

BIOL 58 - Advanced Community Ecology

Instructor: McPeck

This course will examine the various mechanisms structuring ecological communities of plants and animals. The course will consist of regular lectures, readings from the primary literature, and individual projects. Topics to be covered include simple two-species interactions (e.g. predation, competition, parasitism, mutualisms), simultaneous multispecies interactions, food web structure, regulation of species diversity on ecological and evolutionary time scales, community succession, and biogeography. Emphasis will be placed on the development of mathematical models and their relationship to empirical studies. Offered in alternate years.

Prerequisite: BIOL 15 and BIOL 16 and one from among BIOL 21- BIOL 32

Degree Requirement Attributes: Dist:SCI

BIOL 59.01 - General Linear Models

Instructor: McPeck

This is an advanced course in general linear statistical models. Topics covered include simple linear regression, multiple regression, regression with qualitative and quantitative parameters, and one and two-way analysis of variance. Emphasis is on model building, experimental design, and diagnostic measures for linear models. Statistical analyses will be programmed in MATLAB using matrix algebra, though no prior programming experience is necessary.

Prerequisite: One from among BIOL 29, QSS 15, GOVT 10, ECON 10, SOCY 10, or PSYC 10

Offered: Fall.

Degree Requirement Attributes: Dist:QDS

BIOL 60.01 - Evolutionary Ecology

Instructor: Calsbeek

Theodosius Dobzhansky said "nothing in biology makes sense except in the light of evolution." Evolutionary ecology explores the fundamental and diverse role of evolutionary process in the natural world. We will explore the importance of natural and sexual selection acting in natural communities on land and in the water. Lecture topics will include the evolution of life history variation, competition, predation, behavior, physiology, migration and dispersal, and molecular evolution. Because the course covers a wide range of topics, students should have a solid foundation in basic ecology and evolution prior to taking BIOL 60.01.

Prerequisite: One from the following: BIOL 21 - BIOL 32, BIOL 47 or BIOL 48

Degree Requirement Attributes: Dist:SCI

BIOL 60.02 - Evolution of Sex

Instructor: Calsbeek

Despite the many benefits of asexual reproduction, the vast majority of eukaryotes reproduce sexually. How sex evolved, and how it persists despite its many associated costs, are major unanswered questions in evolutionary biology. We will explore the diversity of sexual reproduction and related evolutionary phenomena with a focus on critically evaluating current research and theory in this area.

Prerequisite: BIOL 15 and at least 1 from among BIOL 21, BIOL 23, BIOL 24, BIOL 27, BIOL 28, BIOL 32, BIOL 37, BIOL 47 or instructor permission

Degree Requirement Attributes: Dist:SCI

BIOL 61 - End of Winter: Winter Ecology

Instructor: Hicks Pries

Winter is changing faster than any other season. As we witness its demise, we must understand what ecological changes will be wrought by the end of winter. Warmer

winters change the cost/benefit ratio of species adaptations to cold temperatures, disrupt species interactions, and alter ecosystem functioning. This advanced class on winter ecology is a course-based undergraduate research experience in which the class will design and carry out a field experiment on or near campus.

Prerequisite: Biol 16 and one from among BIOL 21, 22, 23, 24, 25, 26, 27, 29, 31

Degree Requirement Attributes: Dist:SLA

BIOL 63 - RNA: The Real Secret of Life

Instructor: Peterson

Legend has it that after the discovery of the structure of DNA Francis Crick announced to the patrons of the Eagle Pub in Cambridge, England that they had discovered the secret of life. But what has been learned since this February day in 1953 is that although DNA is the bedrock of modern molecular biology, it is actually RNA that allowed for the emergence of life, and is *the* central molecule in life's Central Dogma. Indeed, with the application of new deep sequencing technologies we are discovering that much of the genome is transcribed into functional RNA that does not code for proteins, but instead is involved in gene regulation and genomic architecture, in addition to the maintenance of genome integrity and even possibly the evolution of morphological complexity. In fact, the very question of "what is a gene?" is even being reconsidered, as the fundamental unit of genomic organization appears not to be the classical DNA-based "gene" but instead is the RNA-based transcript. In this course we will explore these issues and more through lectures, literature discussions, student-led presentations, and student writing assignments.

Prerequisite: One from among BIOL 40, BIOL 41, BIOL 43, BIOL 45, BIOL 47 or CHEM 41

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 66 - Molecular Basis of Cancer

Instructor: Grotz

In this course we will explore how cancer develops on a cellular level. Using primary literature as a guide, we will examine the basic cellular processes malignant tumors exploit to promote their rapid, invasive growth and ultimately disease. Topics that will be considered include the genetic factors that initiate cancer cell formation, cell cycle regulation, programmed cell death, cell signaling, angiogenesis, cytoskeletal rearrangements as well as how current cancer therapies work on a cellular level.

Prerequisite: BIOL 12/BIOL 19 and BIOL 13 and one from among BIOL 40, BIOL 41, BIOL 43, BIOL 45 or CHEM 41

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

BIOL 69 - Cell Signaling

Instructor: Dolph

This course will focus on how signals are transmitted from the cell surface into changes in cellular function. Detailed analysis of specific membrane receptors, second-messenger systems, and protein kinases will be presented as well as how these components are integrated into larger "systems" such as apoptosis, metabolic signaling, synaptic transmission, and sensory transduction. Particular emphasis will be on the biochemical analysis of the pathways and their individual components as well as how these pathways are impaired in certain disease states. The course will consist of lectures and weekly discussions of recent primary literature.

Prerequisite: BIOL 12/BIOL 19 and BIOL 13 and at least one from among BIOL 37, BIOL 40, BIOL 41, BIOL 43, BIOL 45, CHEM 41

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 70 - Biologic Lessons of the Eye

Instructor: Zegans

The eye is unique. Unlike organs hidden deep within the body the transparent nature of the visual axis permits the direct observation of its living tissues without invasive surgery or imaging. Accordingly, the study of vision has yielded many far-reaching biologic insights which will be explored in this course. The course will conclude with a 10-14 day visit to Aravind Eye Hospital in Tamilnadu to present research and observe the delivery of eye care in India.

Prerequisite: BIOL 12/BIOL 19 and BIOL 13, one from BIOL 40, BIOL 41, BIOL 45, CHEM 41 and instructor permission.

Degree Requirement Attributes: Dist:SCI

BIOL 71.01 - Microtubule Dynamics and Motor Functions in Cell Biology

Instructor: Lee

This course will examine how cells use microtubules to establish cell shape, move organelles, and segregate chromosomes during cell division. We will also cover current techniques employed for studying microtubules, microtubule-associated proteins (MAPs), and microtubule-dependent motor proteins. Each topic listed will be introduced and explored via lectures, review articles, and discussion of landmark paper(s) or papers from current literature. The overriding goal will be to improve your ability to critically analyze and evaluate original research

data presented in the form of papers published in the scientific literature. Student participation during the course is critical to ensure that we have an active and productive discussion of the topics. The course will culminate in students working in small groups on the molecular basis of diseases linked to defects in MAPs or motor proteins.

Prerequisite: BIOL 12/BIOL 19 and BIOL 13 and one from among BIOL 40, BIOL 41, BIOL 43, BIOL 45, CHEM 41.

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 71.02 - Cell Biology Across Scales

Instructor: Amodeo

This course investigates the size relationships between cellular components using “back-of-the-envelope” techniques to develop intuitions about biological problems. The course consists of lectures, in-class exercises, and primary literature discussion. Content is organized by a central motivating question (ex. “How many mitochondria does a cell need?”). The goal is to improve biological numeracy and to consider cell biological questions quantitatively. Active participation will be essential. The course will culminate in small group presentations on scaling questions.

Prerequisite: BIOL 12/BIOL 19 and BIOL 13 and one from among BIOL 40, BIOL 41, BIOL 43, BIOL 45, CHEM 41

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

BIOL 72 - Foundations of Epidemiology I

Instructor: Howe, Gilbert-Diamond

Epidemiology is the science of studying and understanding the patterns of disease occurrence in human populations with the ultimate goal of preventing human disease. This course is the first in a two-part sequence that aims to build mastery of fundamental epidemiological theory and methods for research. Topics will include introductions to population characteristics and disease frequencies, epidemiological study designs, measures of excess risk associated with specific exposures, and inferring causality in exposure-disease relationships.

Prerequisite: BIOL 29

Offered: Fall, Summer.

Degree Requirement Attributes: Dist:SCI

BIOL 73 - Foundations of Epidemiology II

Instructor: Romano

Epidemiology is the science of studying and understanding the patterns of disease occurrence in human populations

with the ultimate goal of preventing human disease. This course is the second in a two-part sequence. Building off of concepts covered in Foundations of Epidemiology I, it aims to develop an in-depth understanding of population characteristics and disease frequencies, epidemiological study designs, measures of excess risk associated with specific exposures, and inferring causality in exposure-disease relationships.

Prerequisite: BIOL 72 and permission of instructor.

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

BIOL 74.01 - Development, Plasticity and Dysfunction of the Synapse

Instructor: Hoppa

Seminar class in neurobiology focusing on synaptic transmission and neurobiological diseases of development and aging. Papers will introduce class to details of methods including optogenetics, microscopy, genetic manipulations and electrophysiology. Major questions in the field of neurobiology will be introduced through recent high-impact papers and live lectures and interviews with off-campus research labs that authored the paper. We will focus on connecting basic research to neurological diseases such as Parkinson’s, ALS, Epilepsy and Autism.

Prerequisite: Two from among BIOL 12, BIOL 13, BIOL 14, BIOL 49, BIOL 35, PSYC 6, PSYC 35, PSYC 46, PSYC 65

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

BIOL 74.02 - Diseases of the Nervous System

Instructor: Hill

This course will investigate the cellular basis of several common neurodegenerative diseases including Alzheimer’s, demyelinating disorders and ALS. For each we will take a holistic approach to understand the: 1) cell types and pathways that are dysfunctional, 2) mechanisms of disease presentation, heterogeneity and patient prognosis and 3) current state of the scientific literature. Commonalities will be studied to understand how dysfunction in multicellular interactions results in a degenerative cascade of mind and body.

Prerequisite: Two from among: BIOL 12, BIOL 13, BIOL 14, BIOL 35, BIOL 49, PSYC 6, PSYC 35, PSYC 46, PSYC 65

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

BIOL 76 - Advanced Genetics

Instructor: Behrman

Methods and strategies for the analysis of gene structure, function and genetic interactions. The course will examine how the genetic manipulation of model organisms, including yeast, *Drosophila*, *C. elegans*, and mouse, is used to explore the mechanisms of fundamental biological processes such as cell division, development, and intercellular communication. Emphasis will be placed on the application of classical genetic methods, including mutant screens, recombination and complementation analysis, genetic mosaics, and the use of conditional mutations. Modern molecular-based approaches, including gene knockout, gene dosage and misexpression studies will also be included. Three hours of lecture and one hour of discussion per week.

Prerequisite: BIOL 12/BIOL 19 and BIOL 13 and one from among BIOL 40, BIOL 41, BIOL 43, BIOL 45, BIOL 47, CHEM 41 or instructor permission

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

BIOL 78 - Molecular Mysteries of Human Biology

Instructor: Witters

Knowledge of molecular mechanisms allows new approaches to understanding human biology and disease. This course will explore the normal and abnormal biology of several human conditions relying on biochemistry, molecular genetics, and physiology as tools of inquiry. Examples will be drawn from the histories of Mona Lisa, Michel-Eugène Chevreul, Otto Warburg, Hendrickje Stöffels, Steve Jobs, Paul Cézanne, Pearl Buck, Auguste D and Luigi Cornaro among others.

Prerequisite: BIOL 13 and BIOL 40 (or CHEM 41) or permission of instructor. A prior course on some aspect of mammalian physiology is recommended (e.g. BIOL 2, BIOL 14 or BIOL 37). Priority will be given to senior Biology majors.

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

BIOL 95 - Independent Research in Biology I

Original and independent investigation of a biological problem with associated study of primary literature sources under the supervision of a faculty member for one academic term. Open only to Dartmouth Biology majors and minors. Projects may include research in laboratory settings, field work, modeling, data mining, or development of new methodologies that will further understanding of a relevant basic or applied biological problem. May be taken as one course in the major by students not enrolled in the honors program. Students electing both BIOL 95 and BIOL 97 may count only one among the seven courses in the area of concentration. In no

case may a student elect more than two courses among BIOL 95, 96, 97, and 98.

Prerequisite: At least three Biology courses numbered 11 or above, a 2.67 average in previous biology courses, and permission of the Undergraduate Committee and the supervising instructor. The application and research proposal must be submitted at least one month prior to the beginning of the term in which the course is to be elected.

Offered: Fall, Spring, Summer, Winter.

BIOL 96 - Independent Research in Biology II

A second term of original and independent investigation of a biological problem under the supervision of a faculty member. Open only to Dartmouth Biology majors who have satisfied the requirements for BIOL 95 and who wish to continue their independent research for a second term. Does not count for credit in the major. In no case may a student elect more than two courses among BIOL 95, 96, 97, and 98.

Prerequisite: Satisfactory completion of BIOL 95 (including research paper) and permission of the Undergraduate Committee and the supervising instructor(s). The application and research proposal must be submitted at least one month prior to the beginning of the term in which the course is to be elected.

Offered: Fall, Spring, Summer, Winter.

BIOL 97 - Honors Research in Biology I

Original and independent investigation of a biological problem with associated study of primary literature sources under the supervision of a faculty member. Open only to Dartmouth Biology majors. Projects may include research in laboratory settings, field work, modeling, data mining, or development of new methodologies that will further understanding of a relevant basic or applied biological problem. Required of honors students as part of the major. Students taking BIOL 95 and BIOL 97 may count only one of these courses toward the elective courses for their major. In no case may a student elect more than two from courses among BIOL 95, 96, 97, and 98. Students who have completed or are taking BIOL 97 may enroll and receive college credit for BIOL 99 during spring term of their senior year.

Students are awarded one course credit for successful completion of this course at the end of the third term of study. Students subsequently register for BIOL 98 and continue with their coursework into a third term. Students do not register for a third term. A final grade will replace the "ON" for both BIOL 098 and this course upon completion of this course at the end of the third term of coursework.

Prerequisite: At least two Biology courses numbered 20 or above, a 3.0 average in previous Biology courses, and permission of the Undergraduate Committee and the

supervising instructor, obtained at least one month prior to the beginning of the term in which the course is to be elected.

Offered: Fall, Spring, Summer, Winter.

BIOL 98 - Honors Research in Biology II

Original and independent investigation of a biological problem with associated study of primary literature sources under the supervision of a faculty member. Open only to Dartmouth Biology majors. Projects may include research in laboratory settings, field work, modeling, data mining, or development of new methodologies that will further understanding of a relevant basic or applied biological problem. BIOL 98 does not count for credit in the major. In no case may a student elect more than two courses among BIOL 95, 96, 97, and 98. Students who have completed or are enrolled in BIOL 98 may enroll and receive college credit for BIOL 99 during spring term of their senior year.

Students are awarded one course credit for successful completion of this course. Students who have registered for BIOL 97 register for this course and continue with their coursework into a third term. Students do not register for a third term. A final grade will replace the "ON" for both BIOL 97 and this course upon completion of this course at the end of the third term of coursework.

Prerequisite: BIOL 97

Offered: Fall, Spring, Summer, Winter.

BIOL 99 - Senior Seminar in Biology

Instructor: Schaller

This course will focus on presentation techniques and critical evaluation of other students' research and presentations. Students who have conducted independent research will present background information related to their research projects, develop seminars based on their own findings, and receive feedback. All students taking BIOL 97 are encouraged to enroll in this course. The course does not count towards the major.

Prerequisite: Senior standing and previous or current enrollment in BIOL 97

Offered: Spring.

Chemistry - Undergraduate

Chair: Ekaterina V. Pletneva

Professors: I. Apahamian, D. S. Glueck, F. J. Kull, J. E. G. Lipson, D. F. Mierke, D. E. Wilcox, J. Wu; Associate Professor: K. A. Mirica, M. J. Ragusa; Assistant Professors: M.I. Gonzalez, X. Qi, P. J. Robustelli, M. Sneha, W. Zhang; Senior Lecturer: W. S. Epps, C. O. Welder; Research Professors: R. Ditchfield, G. W.

Gribble, R. P. Hughes, M. Pellegrini; Research Assistant Professors: C. R. Midgett

Requirements for the Chemistry Major

The Chemistry Department offers four major programs. All major programs require an average GPA of 2.0 in all courses counted toward the major, including prerequisites taken in Chemistry. Normally, all courses that would serve as prerequisites to, or count toward, a major in Chemistry, and that are presented at the time the student declares a major must individually have a GPA of 2.0 or higher. Three of the major programs are offered as majors in chemistry: Plan A, for those who wish a broad and thorough training in chemistry; Plan B, for those whose scientific interests are only partially based in chemistry; and a modified major, which is similar to Plan B, but also includes a second program involving another college department.

Plan A should be chosen by students who plan to do graduate work in chemistry or a closely allied science. Such students should normally take additional courses in chemistry, physics and mathematics to augment the plan's minimum requirements. Plan A is also a suitable choice for premedical students.

Plan B is less structured and is suitable for students planning to engage in chemically-related careers, such as medicine, environmental science, life science or industrial science, or professions for which the study of chemistry may prove desirable, such as teaching, law or business.

The third program is a major in biophysical chemistry. This major is designed for students who are interested in using physical chemistry to understand biological systems. This major is suitable for premedical students while also providing a strong biophysical background for students interested in pursuing a graduate education focused on using structural biology or spectroscopy to understand protein structure and function.

The fourth program is a major in biological chemistry. This major is designed for students interested in applications of chemistry to fundamental biological processes, similar to the biophysical chemistry option, but with less emphasis on the physical chemical underpinnings. In addition to being suitable for premedical students, it provides the framework for further graduate study in all areas of biological chemistry and biomedicine.

Dartmouth College requires that all majors must complete a substantial, graded culminating or integrating activity in

their major. Many chemistry majors will satisfy this requirement by participating in undergraduate research by registering for (p. 187)CHEM 80 (p. 187), Independent Study in Chemistry, or for one or two terms of CHEM 87 (p. 187), Undergraduate Investigation in Chemistry; such students will often be enrolled in the Chemistry Honors Program as well.

Other chemistry majors will satisfy the requirement for a culminating or integrating experience by including in their major programs one of the three-course groups listed below. The course groups, each of which provides an integrated presentation of an important area of modern chemical sciences, are: *Biophysical Chemistry* CHEM 75 (p. 186), CHEM 76 (p. 186) and CHEM 95.0x; *Biological Chemistry* CHEM 40 (p. 185), CHEM 41 (p. 185), and CHEM 42 (p. 185); *Physical Chemistry* CHEM 75 (p. 186), CHEM 76 (p. 186) and CHEM 96.0x; *Inorganic/Environmental Chemistry* CHEM 63 (p. 186), CHEM 64 (p. 186), and CHEM 91 (p. 187) or CHEM 92 (p. 187); *Synthetic Chemistry* CHEM 51 (p. 186), CHEM 52 (p. 186), and CHEM 93.0x; *Materials Chemistry* CHEM 51 (p. 186), CHEM 52 (p. 186), and CHEM 94.0x.

Students must indicate their preliminary plans for satisfying the requirement for the culminating or integrating experience when they declare a major in the sophomore year. Since a student may not enroll in CHEM 87 (p. 187) until they have been approved to do so (see later), the initial declaration of a major must show how the culminating experience requirement will be satisfied using one of the three-course groups mentioned above. Students must confirm their final plans for satisfying the culminating experience at the beginning of the fall term of the senior year. Modified majors with Chemistry as the primary department must define a culminating or integrating experience as part of the coherent and unified whole of their modified major, and must provide a statement to the Department's Undergraduate Advisory Committee at chemistry@dartmouth.edu and to the Registrar, explaining their rationale for the courses selected for the modified major. This is required as they submit their modified major plans in DartWorks.

1. Plan A Major

Prerequisite: CHEM 5 (p. 184) and CHEM 6 (p. 185) or CHEM 11 (p. 185); MATH 3 (p. 566), MATH 8 (p. 567), and MATH 13 (p. 568) (or equivalents); and (p. 663)PHYS 13 (p. 663) and PHYS 14 (p. 663) (p. 663)(*strongly recommended*) or (p. 663)PHYS 3 (p. 663) and PHYS 4 (p. 663) or (p. 663)PHYS 15 (p. 663) and PHYS 16 (p. 663)

Required Courses: CHEM 51 (p. 186), CHEM 52 (p. 186), CHEM 64 (p. 186), CHEM 75 (p. 186), CHEM 76 (p. 186) and CHEM 96.

Two additional courses selected from among CHEM 41 (p. 185), CHEM 42 (p. 185), CHEM 63 (p. 186), (p. 187)CHEM 80 (p. 187) or CHEM 87.01 (p. 187), (p. 187)CHEM 91 (p. 187), CHEM 92 (p. 187), CHEM 93.0x, CHEM 94.0x, CHEM 95.0x (two different offerings of CHEM 93.0x, CHEM 94.0x or CHEM 95.0x are acceptable) and another offering of CHEM 96.0x; graduate-level courses in Chemistry; (p. 174)BIOL 40 (p. 174); MATH 20 (p. 569), MATH 22 (p. 569) or MATH 24 (p. 569), MATH 23 (p. 569) and MATH 46 (p. 572); PHYS 19 (p. 664) and, with *prior written permission*, relevant major credit (or graduate-level) courses in other departments in the Division of the Sciences. BIOL 40 (p. 174) cannot be taken in conjunction with CHEM 41 (p. 185).

2. Plan B Major

Prerequisite: CHEM 5 (p. 184) and CHEM 6 (p. 185) or CHEM 11 (p. 185); MATH 3 (p. 566) and MATH 8 (p. 567) (or equivalent); and (p. 663)PHYS 13 (p. 663) and PHYS 14 (*strongly recommended*) or PHYS 3 (p. 663) and PHYS 4 or PHYS 15 (p. 663) and PHYS 16.

Required Courses: Of the eight courses, a minimum of six must be in chemistry to include a) CHEM 51 (p. 186) or CHEM 57, CHEM 75 (p. 186) and CHEM 76 (p. 186), and CHEM 64 (p. 186); b) two additional courses from the following group: CHEM 41 (p. 185), CHEM 42 (p. 185), CHEM 52 (p. 186), CHEM 63 (p. 186), (p. 187)CHEM 80 (p. 187) or (p. 187)CHEM 87.01 (p. 187), (p. 187)CHEM 91 (p. 187), CHEM 92 (p. 187), CHEM 93.0x, CHEM 94.0x, CHEM 95.0x, CHEM 96.0x (two different offerings of CHEM 93.0x, CHEM 94.0x, CHEM 95.0x or CHEM 96.0x are acceptable) and graduate-level courses in chemistry. Note that CHEM 76 (p. 186) is a prerequisite to some offerings of CHEM 96.0x.

The remaining two courses may be additional chemistry courses from group b) above or may be chosen from the following: BIOL 40 (p. 174); MATH 20 (p. 569), MATH 22 (p. 569) or MATH 24 (p. 569), MATH 23 (p. 569) and MATH 46 (p. 572); PHYS 19 (p. 664) and, with *prior written permission*, relevant major credit (or graduate-level) courses in other departments in the Division of the Sciences. BIOL 40 (p. 174) cannot be taken in conjunction with CHEM 41 (p. 185).

3. Modified Major

Modified Major with Chemistry as the primary department

Prerequisite: As required by courses elected.

Required Courses: Six in total, which must include CHEM 51 (p. 186), CHEM 64 (p. 186), and CHEM 75 (p. 186). The other three courses must be Chemistry Department courses.

Four additional courses from the secondary department selected with the approval of any member of the Undergraduate Advisory Committee (and under certain circumstances by the secondary department; see the Regulations under Department Major).

Modified Major with Chemistry as the secondary department

Prerequisite: As required by courses elected.

Required Courses: Four courses, which must be chemistry offerings, suitable (beyond prerequisites to the major) for completion of the Plan A or Plan B major.

4. Biological Chemistry Major

Prerequisite: CHEM 5 (p. 184) and CHEM 6 (p. 185) or CHEM 11 (p. 185); BIOL 12 (p. 171) or BIOL 19 (p. 171); MATH 3 (p. 566) and MATH 8 (p. 567) (or equivalent); (p. 663)PHYS 13 (p. 663) (p. 663) and PHYS 14 (p. 663)(*strongly recommended*) or (p. 663) (p. 663)PHYS 3 (p. 663) (p. 663) and (p. 663)PHYS 4 (p. 663) or (p. 663) (p. 663)PHYS 15 (p. 663) (p. 663) and PHYS 16 (p. 663). (p. 663)

Required Courses: CHEM 51 (p. 186), CHEM 52 (p. 186), CHEM 64 (p. 186), CHEM 40 (p. 185), CHEM 41 (p. 185) and CHEM 42 (p. 185).

Two additional courses selected from CHEM 63 (p. 186), (p. 187)CHEM 80 (p. 187) or CHEM 87.01 (p. 187), CHEM 91 (p. 187), CHEM 92 (p. 187), CHEM 93.0x, CHEM 94.0x, CHEM 95.0x, CHEM 96.0x (two different offerings of CHEM 93.0x, CHEM 94.0x, CHEM 95.0x or CHEM 96.0x are acceptable), graduate courses in chemistry, or *with prior written permission*, relevant major credit (or graduate level) courses in other departments in the Division of the Sciences. If CHEM 80 (p. 187) or CHEM 87.01 (p. 187) is selected as one of the two courses, the research project must have a biochemical focus.

There are many different ways to complete a major in Chemistry. To better inform your decision, the Department has prepared a document, *Planning for a Chemistry Major*, showing various paths that students can take through the major; not only does this emphasize that the major is more flexible than it might appear at first glance, but it also shows that there are several major plans that do not require taking two major courses in a term. This document along with additional information is available at <http://chemistry.dartmouth.edu/undergraduate/major>.

Students considering a Chemistry Department major are strongly encouraged to take CHEM 5 (p. 184) and CHEM 6 (p. 185) or CHEM 11 (p. 185) in their first year. Students with credit-on-entrance in a foreign language or in chemistry are urged to consider taking PHYS 13 (p. 663)-14 during the first year. This is also advisable for those students who delay completion of the language

requirement until sophomore year in Language Study Abroad. Students who plan to participate in Language Study Abroad should give early attention to the need for careful curriculum planning. In some cases it may be advisable to postpone the LSA term to the fall term of the junior year. If so, it is necessary to obtain (routine) approval from the Registrar for deferral of completion of the Language requirement.

All Chemistry majors have required courses, some of which must be taken in a particular order. While many sequences are possible, and the Department's Undergraduate Advisory Committee can give advice on this, it is essential to complete prerequisite courses before taking certain major courses. As a general guideline, it is recommended for majors that the physics and mathematics prerequisites for Physical Chemistry (CHEM 75 (p. 186) and CHEM 76 (p. 186), or CHEM 40 (p. 185)), as well as CHEM 51 (p. 186), be completed by the end of the sophomore spring term. Specifically, majors must complete PHYS 13 (p. 663) (or PHYS 15 (p. 663), or PHYS 3 (p. 663) and PHYS 4 (p. 663)) and MATH 8 (p. 567) before they take CHEM 75 (p. 186) or CHEM 40 (p. 185). *Any change of courses from those listed in the approved major must be discussed with a member of the Undergraduate Advising Committee before the course is taken for credit.*

Many Chemistry Department majors do research projects. This research is usually done during the senior (and sometimes junior) year and often for credit (see CHEM 80 (p. 187) and CHEM 87 (p. 187)), though occasionally a stipend is available to allow a student to do full-time research during a leave term. All majors are urged to investigate the numerous possible research projects offered by chemistry faculty members. A brochure describing faculty research interests and the CHEM 87 application form are available at <https://chemistry.dartmouth.edu/undergraduate/undergraduate-research-credit> and from the Department staff (102 Burke). The brochure enables a student to identify research areas of particular interest. A final choice of research project is made after consultation with the faculty member(s) concerned. The completed application form is submitted to the Chair for approval.

Requirements for the Chemistry Minor

The Chemistry Department offers a single minor program. All minor programs require an average GPA of at least 2.0 in all courses counted toward the minor, including prerequisites taken in Chemistry. Any student wishing to enroll in the minor program must obtain approval from a member of the Chemistry Department's Undergraduate Advisory Committee by no later than the *end of the first week of the last term in residence prior to graduation*.

Prerequisite: [CHEM 5](#) (p. 184) and [CHEM 6](#) (p. 185) or [CHEM 11](#) (p. 185) and [MATH 3](#) (p. 566).

Required Courses: [CHEM 51](#) (p. 186) and [CHEM 64](#) (p. 186).

Two additional courses selected from among [CHEM 40](#) (p. 185), [CHEM 41](#) (p. 185), [CHEM 42](#) (p. 185), [CHEM 52](#) (p. 186), [CHEM 63](#) (p. 186), [CHEM 75](#) (p. 186), [CHEM 76](#) (p. 186), [CHEM 80](#) (p. 187) or [CHEM 87.01](#) (p. 187), [CHEM 91](#) (p. 187), [CHEM 92](#) (p. 187), and [CHEM 93.0x](#); or graduate-level courses in chemistry. The NRO option is not allowed for any course taken to fulfill the chemistry minor. Students should note that many of the courses listed above have prerequisites in addition to [CHEM 6](#) (p. 185) and [MATH 3](#) (p. 566).

Requirements for the Materials Science Minor

The minor in Materials Science is sponsored by faculty in Chemistry, Physics and Engineering with an interest in interdisciplinary education and research in materials science.

Chemistry Department Honors Program

A student whose grades meet the minimum College requirement for honors work may apply to be admitted to the Honors Program. An honors major follows the basic pattern outlined in the requirements for the chemistry major but is very strongly urged to elect additional courses in chemistry and allied sciences.

An honors student carries out one of two individual projects. Usually an original experimental or theoretical investigation is undertaken in a well-defined area of interest under the guidance and supervision of a member of the faculty. A student with a strong interest in teaching may, however, formulate and carry out under the direction of a member of the faculty a program combining the development of instructional materials with actual experience in classroom or laboratory teaching. In either case, on completion of the work the student will write a thesis and take an oral examination.

A student electing an original experimental or theoretical investigation may conduct it by electing [CHEM 87](#) (p. 187) up to a maximum of two times (counting as two courses toward graduation, but only once toward the minimum group of major courses) or during a leave term of full-time effort. He or she may also request consideration of any appropriate combination of [CHEM 87](#) (p. 187) and noncredit research. A project concerned with the development of educational materials and experience in teaching will be similar in extent.

Ordinarily, the Honors Program will be undertaken by seniors, but juniors who have progressed sufficiently far in satisfying the normal requirements may be permitted to participate. A student who wishes to participate in the Honors Program must apply for admission to the Program by submitting a form, available at <http://chemistry.dartmouth.edu/undergraduate/undergraduate-research-credit>, or from the Department staff, *before* beginning work on an honors project, unless special permission has been obtained from the Chair. Before or at the time of application the student must arrange for the supervision of the work, normally by a member of the faculty of the Department. *The deadline for applications is the third day of the winter term of the senior year.* Additional information is available at chemistry@dartmouth.edu and from the Department administrative office.

Those students who satisfactorily complete the Honors Program with a 'B+' average or better in the grade(s) assigned to their honors work at the time of examination will earn Honors recognition in the major or, in appropriate cases, High Honors. High Honors will be granted only by vote of the Department on the basis of outstanding independent work and outstanding performance in the major. An interim evaluation of honors students will be made after one term and continuation will be recommended for those students whose work demonstrates the capacity for satisfactory (B+) work. Students who satisfactorily complete the Honors Program will have Honors in Chemistry or Biophysical Chemistry or Biological Chemistry, or, when appropriate, High Honors in Chemistry or Biophysical Chemistry or Biological Chemistry, entered on their permanent record.

CHEM - Chemistry - Undergraduate Courses

To view Chemistry Undergraduate requirements, click here. (p. 181)

To view Chemistry Graduate requirements, click here. (p. 832)

To view Chemistry Graduate courses, click here. (p. 834)

CHEM 5 - General Chemistry

CHEM 5 is the first course of a two-course sequence in general chemistry. This course introduces students to some fundamental principles of chemistry, including molecular and reaction stoichiometry, the properties of gases, solutions, chemical equilibria, acids and bases, an introduction to thermodynamic principles, and electrochemistry. This course also focuses on developing problem-solving skills. This course includes a required laboratory section that uses basic laboratory and experimental skills to illustrate fundamental chemical

concepts, considers how to properly design experiments, and demonstrates how to interpret experimental data to reach meaningful scientific conclusions.

An outline of topics for review of secondary school background in preparation for CHEM 5 is available on the Department of Chemistry website. In addition, an optional self-guided CHEM 5 preparatory course is available on Canvas which can be completed prior to the start of CHEM 5 to further aid students in their preparation for CHEM 5.

Students with a score of 4 or 5 on the AP Chemistry examination (or 6 or 7 on the IB exam, or A-level credit) are not eligible to enroll in CHEM 5 and are instead placed into CHEM 11.

Supplemental course fee required.

Prerequisite: Credit for MATH 3 (or MATH 8 or the equivalent)

Offered: Fall, Winter.

Degree Requirement Attributes: Dist:SLA

CHEM 6 - General Chemistry

The second term of a two-course sequence to introduce the fundamental principles of chemistry, including chemical stoichiometry; the properties of gases, liquids, and solids; solutions; chemical equilibria; atomic and molecular structure; an introduction to thermodynamics; reaction kinetics; and a discussion of the chemical properties of selected elements. The laboratory work emphasizes physical-chemical measurements, quantitative analysis, and synthesis. An outline of topics for review of secondary school background in preparation for college general chemistry is available from the Department of Chemistry. Students who are eligible to receive credit-on-entrance for CHEM 5-6 may not enroll in CHEM 5-6 or CHEM 10 for course credit without permission of the Department. Credit-on-entrance for CHEM 5-6 will be withdrawn for students who subsequently enroll in CHEM 5-6 or CHEM 10. Prerequisite for CHEM 5: MATH 3.

Prerequisite: Credit for MATH 3 (or MATH 8 or the equivalent) and CHEM 5

Offered: Spring, Winter.

Degree Requirement Attributes: Dist:SLA

CHEM 7 - First-Year Seminars in Chemistry

CHEM 11 - General Chemistry

CHEM 11 is a one-term general chemistry course for students with a background in chemistry and is designed to complement material emphasized in high school Advanced Placement courses. CHEM 11 focuses on topics including, thermodynamics, electrochemistry, reaction kinetics, quantum mechanics, and bonding at an introductory level. This course also includes a required laboratory section that

emphasizes physicochemical measurements and quantitative analysis.

Students with a score of 4 or 5 on the AP Chemistry examination (or 6 or 7 on the IB exam, or A-level credit) will be placed into CHEM 11; all other students interested in CHEM 11 will take a placement examination to determine whether they are placed into CHEM 11 or CHEM 5. Students who complete CHEM 11 will also be granted credit on entrance for Chemistry 5. CHEM 11 is not appropriate for students previously enrolled in CHEM 5, CHEM 6 or CHEM 10

Supplementary course fee required.

Prerequisite: Satisfactory performance on the chemistry placement examination (or a score of 4 or 5 on the Chemistry AP test, 6 or 7 on the IB exam, or A-level credit) and credit for MATH 3 (or MATH 8 or the equivalent).

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:SLA

CHEM 40 - Physical Chemistry of Biochemical Processes

Topics in physical chemistry of relevance to fundamental biochemical processes. These will include the thermodynamic and spectroscopic characterization of macromolecular systems, ligand binding and adsorption equilibria, intermolecular interactions and the hydrophobic effect, and transport properties such as diffusion. Laboratory exercises apply these concepts to important biophysical problems, using calorimetric, spectroscopic and computational techniques.

Prerequisite: CHEM 6 (or CHEM 10) and PHYS 13 (or PHYS 15, or PHYS 3 and PHYS 4) and MATH 8, or permission of the instructor. Students with credit for CHEM 75 are not eligible to receive credit for CHEM 40. Supplemental course fee required.

Offered: Winter.

Degree Requirement Attributes: Dist:SLA

CHEM 41 - Biological Chemistry I

This course is a one-term introduction to biochemistry presented from a chemical perspective. This course is intended for chemistry majors and uses specific examples to demonstrate and stress the role and integration of organic, inorganic and physical chemistry as applied to biochemical processes. This course also includes a required laboratory section that covers basic biochemical methods.

Not open to students who have received credit for BIOL 040.

Supplemental course fee required.

Prerequisite: CHEM 52 (or CHEM 58), or permission of the instructor.

Offered: Spring.

Degree Requirement Attributes: Dist:SLA

CHEM 42 - Biological Chemistry II

A one term advanced course with in-depth treatment of a number of important concepts in modern biological chemistry, including structural biology (both theoretical and experimental methods), protein folding, ligand binding, allostery, enzyme kinetics, and an introduction to molecular modeling and chemoinformatics. Laboratories will entail application of these methods/techniques.

Prerequisite: CHEM 40 (or CHEM 76), and CHEM 41, or permission of the instructor. Supplemental course fee required.

Offered: Fall.

Degree Requirement Attributes: Dist:SLA

CHEM 51 - Organic Chemistry

The first term of a two-term introduction to the chemistry of carbon compounds. The lectures deal with the preparation, properties, and reactions of most of the important classes of organic compounds. There is considerable emphasis upon reaction mechanisms and some attention is given to naturally occurring substances of biological importance. The laboratory work will introduce the student to experimental techniques and instrumental methods including several types of chromatography and spectroscopy, organic synthesis, and the systematic identification of organic compounds.

Prerequisite: CHEM 6 (or CHEM 10 or CHEM 11). Supplemental course fee required.

Offered: Fall, Spring, Winter.

Degree Requirement Attributes: Dist:SLA

CHEM 52 - Organic Chemistry

The second term of a two-term introduction to the chemistry of carbon compounds. The lectures deal with the preparation, properties, and reactions of most of the important classes of organic compounds. There is considerable emphasis upon reaction mechanisms and some attention is given to naturally occurring substances of biological importance. The laboratory work will introduce the student to experimental techniques and instrumental methods including several types of chromatography and spectroscopy, organic synthesis, and the systematic identification of organic compounds.

Prerequisite: CHEM 51 (or CHEM 57 with permission of instructor). Supplemental course fee required.

Offered: Spring, Summer, Winter.

Degree Requirement Attributes: Dist:SLA

CHEM 63 - Environmental Chemistry

A study of the chemistry of natural environmental processes and the impact of human activities on the atmosphere, hydrosphere and lithosphere. The course will consider the chemistry of topics such as air pollution in the troposphere and stratosphere, pesticides and herbicides, environmental and human health impact of toxic metals, acquisition and use of energy resources, chemicals and cancer, and climate change. The laboratory consists of a term-long, team-based experimental project using instrumental analysis of environmental samples to investigate an environmental chemistry issue or problem.

Prerequisite: CHEM 51 (or CHEM 57), or permission of the instructor. Supplemental course fee required.

Offered: Summer.

Degree Requirement Attributes: Dist:TLA

CHEM 64 - Basic Inorganic Chemistry

A study of bonding, structure, physical and chemical properties, and chemical reactions of inorganic compounds. Examples will be drawn from main group and transition metal compounds. The laboratory will involve preparations of inorganic compounds which illustrate appropriate experimental techniques for syntheses and manipulations, and instrumental methods for characterization of inorganic compounds.

Prerequisite: CHEM 51 (or CHEM 57), or permission of the instructor. Supplemental course fee required.

Offered: Winter.

Degree Requirement Attributes: Dist:SLA

CHEM 75 - Physical Chemistry I

An examination of the laws of classical thermodynamics, followed by applications to the properties of gases, liquids, and solids, as well as to solutions, phase, and chemical equilibria. Chemical reaction thermodynamics and the kinetic theory of gases at equilibrium. An introduction to statistical thermodynamics, phenomenological transport and electrochemical reactions are discussed. Laboratories cover physical chemistry techniques drawn from these areas.

Prerequisite: CHEM 6 (or CHEM 10 or CHEM 11) and PHYS 13 (or PHYS 15, or PHYS 3 and PHYS 4) and MATH 8, or permission of the instructor. Supplemental course fee required.

Offered: Winter.

Degree Requirement Attributes: Dist:SLA

CHEM 76 - Physical Chemistry II

Topics in chemical reaction dynamics and the application of quantum mechanics to chemical bonding and spectroscopy. The examination of the fundamental ideas of quantum mechanics and their application to simple model systems such as the linear harmonic oscillator and a confined particle, and to atomic and molecular structure. Application of quantum theory to electronic, vibrational, rotational, and magnetic resonance spectroscopies. Chemical reaction kinetics and dynamics with focus on photochemistry, electron and energy transfer kinetics. Laboratories cover physical chemistry techniques drawn from these areas.

Supplemental course fee required.

Prerequisite: CHEM 75 or permission of the instructor.
Supplemental course fee required.

Offered: Spring.

Degree Requirement Attributes: Dist:SLA

CHEM 80 - Independent Study in Chemistry

An original and individual investigation under the supervision of a member of the faculty or staff. The project may involve either research or pedagogical development, with associated literature study. Students who continue the project into subsequent terms will receive a grade of "ON" (ongoing). Upon completion of the project, students will write a report and take an oral examination, after which a final grade in Chem 80 will be assigned.

Prerequisite: Sufficient training in the area of chemistry to be investigated, and permission of the Chair.

CHEM 87 - Undergraduate Investigation in Chemistry

Instructor: Chair and staff of the Department

An original and individual investigation with associated literature study in one of the fields of chemistry under the supervision of a member of the staff. Students electing the course will carry out preliminary reading during the preceding term and normally participate in a weekly colloquium. Open to qualified majors and minors, normally seniors, with permission of the Chair. The course may be elected more than once, but may be counted only once in satisfying the minimum major requirements. It may be elected for the last term in residence only if elected previously, or if the student has been doing research outside of this course. Students electing the course write a report and take an oral examination at the end of the term in which they last elect the course.

Prerequisite: Sufficient training in the area of chemistry to be investigated, and permission of the Chair

CHEM 87.01 - Undergraduate Investigation in Chemistry

An original and individual investigation with associated literature study in one of the fields of chemistry under the supervision of a member of the faculty or staff. The course may be elected once more (Chem 87.02), but only Chem 87.01 may be counted in satisfying the minimum major requirements. It may be elected for the last term in residence only if the student has already been actively involved in the research project. Students electing the course but who do not continue in Chem 87.02 will write a report and take an oral examination at the end of the term, and receive a final grade. Students who continue in Chem 87.02 will receive a grade of "ON" (ongoing).

Prerequisite: Sufficient training in the area of chemistry to be investigated, and permission of the Chair.

CHEM 87.02 - Undergraduate Investigation in Chemistry

Normally, Chem 87.02 serves as a continuation of the investigation begun in Chem 87.01. Students electing the course receive a grade of "ON" (ongoing) at the end of the term. Upon completion of the research project (which may extend into subsequent terms), students will write a report and take an oral examination, after which final grades for Chem 87.01 and Chem 87.02 will be assigned.

Prerequisite: Sufficient training in the area of chemistry to be investigated, and permission of the Chair.

CHEM 91 - Advanced Inorganic Chemistry: Catalysis

Instructor: Glueck

The role of metals in homogeneous and heterogeneous catalysis, with an emphasis on mechanisms of catalytic reactions. Applications to industrial processes, organic synthesis, and asymmetric synthesis will be discussed.

Prerequisite: CHEM 64, and either CHEM 52 or CHEM 58, or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 92 - Inorganic Biochemistry

Instructor: Pletneva

The role of metal ions in biological systems. Topics include metal ion transport, storage, and interaction with proteins and nucleic acids; metalloproteins involved in oxygen transport and electron transfer; metalloenzymes involved in activation of oxygen and other substrates; and medicinal, toxicity, and carcinogenicity aspects of metals; as well as inorganic model chemistry of bioinorganic systems. Several physical methods are introduced, and their application to current research on the above topics is considered.

Prerequisite: CHEM 64, and CHEM 41 or BIOL 40, or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 93 - Physical Organic Chemistry

Instructor: Aprahamian

Modern theories of organic reaction mechanisms, particularly the use of physical-chemical principles to predict the effect of changing reaction variables, especially reactant structures, on reactivity. Structure/property analyses will be used in assessing the stability and reactivity of various organic species.

Prerequisite: CHEM 52 or CHEM 58, or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 93.01 - Physical Organic Chemistry

Modern theories of organic reaction mechanisms, particularly the use of physical-chemical principles to predict the effect of changing reaction variables, especially reactant structures, on reactivity. Structure/property analyses will be used in assessing the stability and reactivity of various organic species.

Prerequisite: CHEM 52 (or CHEM 58, or permission of the instructor).

Degree Requirement Attributes: Dist:SCI

CHEM 93.02 - Advanced Organic Synthesis and Mechanisms

Advanced topics in organic chemistry, including: FMO theory, conformational analysis, stereoelectronic effects, and their effect on the stereochemical outcome of reactions. Additional topics will include olefin addition reactions and various classes of pericyclic reactions. Reaction mechanism, applications in synthesis, and the use of three-dimensional drawings will be emphasized.

Prerequisite: CHEM 52 (or CHEM 58) or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 93.08 - Introduction to Supramolecular Chemistry

Supramolecular Chemistry is a term coined by the Nobel laureate Jean-Marie Lehn, which means “chemistry beyond the molecules”. In supramolecular chemistry, weak and reversible noncovalent interactions are used to construct complex molecular architectures that would otherwise be almost impossible to synthesize. These interactions include hydrogen-bonding, metal coordination, hydrophobic forces, van der Waals forces, pi-p interactions, and electrostatic effects. We will be learning about these interactions and how to use them to make functional materials, such as molecular machines and muscles, self-

healing polymers, diagnostics and sensing platforms, and even molecular memory devices!

Degree Requirement Attributes: Dist:SCI

CHEM 94.05 - Functional Nanomaterials: Synthesis and Applications

This course focuses on synthesis, structure, and properties of nanomaterials. It begins with the introduction to the fundamental principles for understanding the size-dependent properties of materials that emerge at the nanoscale. It surveys a number of experimental techniques that can be utilized for observing and analyzing nanostructures, including X-ray techniques, scanning probe microscopy, and electron microscopy. It further details how strategies for synthesis, surface chemistry, and self-assembly can be utilized to control and tailor structure and properties of nanomaterials. Finally, the course highlights the applications of nanomaterials in chemical sensing, disease diagnosis and treatment, energy conversion and storage, and information storage. The class features a Wikipedia editing project, and visiting lectures highlighting modern technological applications of nanomaterials from PhD-level guest speakers.

Degree Requirement Attributes: Dist:SCI

CHEM 94.06 - Polymer Synthesis

Polymer synthesis is a senior-level course for undergraduate and graduate students desiring training in polymer chemistry. This course covers a broad spectrum of polymer synthesis methods, reaction mechanisms, and characterization methods. Students will actively participate in the learning process, which involves oral presentation and retrosynthesis practice.

Prerequisite: CHEM 51 (or CHEM 57) or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 95.01 - Membrane Biophysics

Instructor: Cantor

The structure and function of cell membranes, with emphasis on the complex behavior of intrinsic membrane proteins and its relation to physical properties of the lipid bilayer.

Prerequisite: CHEM 41, and CHEM 42 (or CHEM 76), or permission of the instructor.

Degree Requirement Attributes: Dist:SCI

CHEM 95.02 - Biomolecular Simulations

Instructor: Mierke

An advanced treatment of modern computational approaches to the folding, structure, and dynamics of proteins and nucleic acids and their complexes. Topics include folding, searching algorithms, homology modeling,

energy landscape deformation, and multi-dimensional searching.

Prerequisite: CHEM 41, and CHEM 42 (or CHEM 76), or permission of the instructor.

CHEM 95.03 - Biomolecular NMR

Instructor: Mierke

The theoretical and practical aspects of the modern use of nuclear magnetic resonance in the study of biomolecules including peptides/proteins, synthetic and natural products, and nucleic acids will be developed.

Prerequisite: CHEM 41, and CHEM 42 (or CHEM 76), or permission of the instructor.

CHEM 95.05 - Protein Crystallography

Instructor: Ragusa

Theoretical aspects for the determination of protein structures using X-ray crystallography. Topics will include a detailed description of crystal symmetry, diffraction theory, data collection and processing, and methods for solving the crystallographic phase problem.

Prerequisite: CHEM 41, and CHEM 42 (or CHEM 76), or permission of the instructor.

Degree Requirement Attributes: Dist:SCI

CHEM 95.06 - Enzymes

Instructor: Wilcox

Properties of enzymes that accelerate biochemical reactions, kinetic measurements to quantify enzymatic catalysis, methods to determine the mechanism of an enzymatic reaction, control and regulation of enzymatic activity, overview of the classes of enzymes and the reactions they catalyze.

Prerequisite: CHEM 41, and CHEM 42 (or CHEM 76), or permission of the instructor.

Degree Requirement Attributes: Dist:SCI

CHEM 96 - Special Topics in Physical Chemistry

An in-depth exploration of a specific topic in physical chemistry. This course provides an introduction into the areas of current research in the field. The course is offered at least once each year, but the content changes according to the chosen topic.

CHEM 96.1 Quantum Chemistry

CHEM 96.2 Statistical Thermodynamics

CHEM 96.3 Molecular Spectroscopy

CHEM 96.4 Chemistry of Macromolecules

CHEM 96.7 Introduction to Materials Chemistry

CHEM 96.8 Chemical Kinetics

Degree Requirement Attributes: Dist:SCI

CHEM 96.01 - Quantum Chemistry

Instructor: Ditchfield

An introduction to the quantum mechanics of molecular systems. Approximate methods for calculating the electronic structure of molecules are discussed. Particular emphasis is placed on molecular orbital methods at various ab-initio levels. Methods which include the effects of electron correlation will also be presented. Evaluation of such methods for studies of molecular geometry, conformational problems, thermochemical data, and spectroscopic parameters is presented. Other topics considered may include the electronic structure of hydrogen bonded systems and of excited states.

Prerequisite: MATH 13 and CHEM 76 or equivalent, or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 96.02 - Statistical Thermodynamics

Instructor: Cantor

Elements of equilibrium statistical thermodynamics for classical and quantum mechanical systems, with applications to ideal gases, crystalline solids, imperfect gases and liquids.

Prerequisite: MATH 13 and CHEM 76 or equivalent or permission of instructor

CHEM 96.03 - Molecular Spectroscopy

Instructor: Winn

A study of optical spectroscopy including selected topics from amongst point group theory, vibrational spectra of polyatomic molecules, electronic and vibronic spectra of molecules and rotational spectra. May be offered on tutorial basis.

Prerequisite: CHEM 76 or equivalent, or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 96.04 - Chemistry of Macromolecules

Instructor: Lipson

Light scattering and other characterization techniques; thermodynamic and transport properties of macromolecular solutions. Structure-property correlations in amorphous and crystalline polymers.

Prerequisite: CHEM 75 or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 96.05 - Introduction to Statistical Thermodynamics and Molecular Simulations

Instructor: Zhang

An introduction to statistical mechanics and computer simulations of molecular liquids and solids. Discussions of fundamental concepts are complemented with demonstrations of computational and analytical methods for solving statistical mechanics problems.

Prerequisite: CHEM 75 or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 96.06 - Computational Methods in Chemistry and Biophysics

Instructor: Robustelli

A project-based introduction to computational methods in chemistry, molecular biophysics and structural biology. Projects will provide a practical introduction to data analysis and data visualization with python. Molecular dynamics simulations, Monte Carlo simulations and quantum calculations will be used to explore topics in protein dynamics, polymer dynamics, and the conformational analysis of small molecules. No prior coding experience is required.

Prerequisite: CHEM 76 or CHEM 42 or permission of the instructor

Degree Requirement Attributes: Dist:SCI

CHEM 96.07 - Introduction to Materials Chemistry

Instructor: BelBruno

This course begins with a review of fundamental concepts in material science, provides an introduction to some of the more advanced concepts, especially in regard to nanomaterials and, finally, focuses on the chemistry involved both in production of modern materials and their uses. The latter topics include the chemistry of thin films, self-assembled chemical systems, surface chemistry and cluster chemistry.

Prerequisite: Background in Chemistry equivalent to CHEM 76 or Physics equivalent to PHYS 24 or Engineering equivalent to ENGS 24 or permission of instructor

Degree Requirement Attributes: Dist:SCI

CHEM 96.08 - Chemical Kinetics

Instructor: BelBruno

Kinetics of chemical reactions in various media: reaction rate expressions, mechanisms, elementary processes. Elementary theories of rate processes: activated complex theory, elementary collision theory, unimolecular decomposition. Such topics as diffusion control of reactions, catalysis and photochemistry will be treated as time allows.

Prerequisite: MATH 13 and CHEM 76 or equivalent or permission of the instructor

Classics - Classical Studies; Greek; Latin

Classics - Classical Studies; Greek; Latin

Chair: P. Christesen

Professors P. Christesen, M. Graver, R. Stewart, L. Whaley; Associate Professor P. Glauthier, H. Tell; Assistant Professors: J. Hruby, A. Schultz; Language Program Director: J. Lynn; Lecturers: R. Dubit, M. Gaki, M. Kramer T. Ish-Shalom, B. Walker; Affiliated Faculty: A. Cohen, C. MacEvitt; T. Pulju; Professors Emeriti: E. Bradley, J. Rutter, W. Scott, J. Tatum, R. Ulrich, M. Williamson.

Additional information regarding the Classics Department can be found at classics.dartmouth.edu/

To view Classical Studies courses, click here.

To view Greek courses, click here.

To view Latin courses, click here.

The concentration in Classical Languages and Literatures combines contemporary methods in literary study with a broad range of ancient texts studied both in translation and in the original languages. Students may choose to gain competence in Latin, in Greek, or in both languages. In addition to such influential works as the *Iliad* and Vergil's *Aeneid*, courses are offered which explore less familiar but exciting options, from the political comedies of Aristophanes to the satire of Petronius and the medieval dramas of the abbess Hrosvitha. Students gain hands-on experience with the material remains of ancient literature, including medieval manuscripts in the Special Collections Library. The major may also be modified with Philosophy, Linguistics, Comparative Literature, or other subjects.

Beginning with the Class of 2019

Requirements for the Major in Classical Languages and Literature

- Any six courses in Greek and/or Latin numbered 10 or higher. These courses enhance students' knowledge of the corpus of ancient Greek and Latin texts, familiarize them with advanced methodologies of literary analysis, and build their research skills.
- Two courses distributed as follows:
 - One course selected from CLST 2-5, 10.x. This course helps establish a general knowledge of languages, literature, and systems of thought in ancient Greece and Rome and introduces students to the methodologies used in studying that subject matter.
 - One course selected from CLST 6, 11, 12, 14-26, 30, 31. This course helps establish a general

knowledge of ancient Greek and Roman history and material culture and introduces students to historical and archaeological methodologies.

- Two additional courses that can develop knowledge, skills and methodologies that are useful in the study of ancient texts, selected from: any CLST course numbered 2 or higher (excluding CLST 7); any course in Greek or Latin numbered 10 or higher; Art History 11.01, 11.02 and 12.01; courses in Comparative Literature numbered 10 or higher (when the content of the course focuses on Classical literature); Philosophy 11.
- Completion of Culminating Experience Requirement.

Requirements for the Modified Major in Classical Languages and Literatures

- Any five courses in Greek and/or Latin numbered 10 or higher. These courses enhance students' knowledge of the corpus of ancient Greek and Latin texts, familiarize them with advanced methodologies of literary analysis, and build their research skills.
- One course selected from CLST 2-5, 10.x; Philosophy 11. This course helps establish a general knowledge of languages, literature, and systems of thought in ancient Greece and Rome and introduces students to the methodologies used in studying that subject matter.
- Completion of Culminating Experience Requirement.

A modified major in Classical Languages and Literature consists of the courses listed above AND five additional courses taken in one or more other departments or programs. All modified majors must be planned as a coherent whole. Students must submit a written statement to the Classics Department explaining their rationale for the courses selected for the modified major, and that statement must be approved by the Department.

Requirements for the Minor in Classical Languages and Literatures

- Any four courses in Greek and/or Latin numbered 10 or higher. These courses enhance students' knowledge of the corpus of ancient Greek and Latin texts, familiarize them with advanced methodologies of literary analysis, and build their research skills. Greek 30, and Latin 22, 24, 26, 30 are topics courses that can be taken more than once when different subjects are offered.
- One course selected from: CLST 2-5, 10; any course in Greek or Latin numbered 10 or higher; Philosophy 11. This course helps establish a general knowledge of languages, literature, and systems of thought in ancient Greece and Rome and introduces students to the methodologies used in studying that subject matter.
- One course selected from CLST 6, 11, 12, 14-26, 30, 31. This course helps establish a general knowledge of ancient Greek and Roman history and material culture

and introduces students to historical and archaeological methodologies.

The concentration in Ancient History allows the student to focus on the process of continuity and change. Courses in Greek and Roman history provide a chronological overview while also introducing such topics as food security, women's experience and the cultural obsession with masculinity, personal prestige and political identity, power dynamics within slave societies, colonialism and cultural hegemony. Students work closely with a faculty member to develop their understanding of the methods of historical analysis, including hands-on experience with coins and inscriptions.

Requirements for the Major in Ancient History

- Two survey courses that establish a general knowledge of ancient Greek and Roman history: one selected from CLST 14-15 and one selected from CLST 17-18.
- Three additional ancient history courses selected from all remaining relevant offerings: CLST 11.x, 14-15, 17-18, 31. CLST 11 is a topics course that can be taken more than once when different subjects are offered. Students are encouraged to explore modes of historical analysis with varied foci, e.g., gender, slavery, law, sports, regional histories.
- CLST 19, to introduce students to advanced historical methodologies as well as to how research is designed and carried out.
- CLST 6, to provide an overview of the chronology and geography of the Classical world and to introduce students to the methodologies of archaeology.
- One course, to be chosen in consultation with the major advisor, that focuses on other methodologies employed by ancient historians. Such courses are offered by departments such as Anthropology, Classics, Comparative Literature, and History.
- Two Greek or Latin courses numbered 10 or higher (excluding Greek 11), to develop a working knowledge of one or both of the languages essential for research.
- Completion of Culminating Experience Requirement.

Requirements for the Modified Major in Ancient History

- Two survey courses that establish a general knowledge of ancient Greek and Roman history: one selected from CLST 14-15 and one selected from CLST 17-18.
- One additional ancient history course selected from all remaining relevant offerings: CLST 11.x, 14-15, 17-18, 31.
- CLST 19, to introduce students to advanced historical methodologies as well as to how research is designed and carried out.

- One course, to be chosen in consultation with the major advisor, that focuses on other methodologies employed by ancient historians. Such courses are offered by departments such as Anthropology, Classics, Comparative Literature, and History.
- One Greek or Latin course numbered 10 or higher.
- Completion of Culminating Experience Requirement.

A modified major in Ancient History consists of the courses listed above AND five additional courses taken in one or more other departments or programs. All modified majors must be planned as a coherent whole. Students must submit a written statement to the Classics Department explaining their rationale for the courses selected for the modified major, and that statement must be approved by the Department.

Requirements for the Minor in Ancient History

- Two survey courses that establish a general knowledge of ancient Greek and Roman history: one selected from CLST 14-15 and one selected from CLST 17-18.
- Two additional ancient history courses selected from all remaining relevant offerings: CLST 11.x, 14-15, 17-18, 31. CLST 11 is a topics course that can be taken more than once when different subjects are offered. Students are encouraged to explore modes of historical analysis with varied foci, e.g., gender, slavery, law, sports, regional histories.
- CLST 19, to introduce students to advanced historical methodologies as well as to how research is designed and carried out.
- CLST 6, to provide an overview of the chronology and geography of the Classical world and to introduce students to the methodologies of archaeology.
- One course, to be chosen in consultation with the major advisor, that focuses on other methodologies employed by ancient historians. Such courses are offered by departments such as Anthropology, Classics, Comparative Literature, and History.

The concentration in Classical Archaeology provides extensive experience of the material remains of Greek and Roman culture, including major sites and museums in Greece and/or Italy. Coursework supplies training in archaeological methods as well as a chronological overview of material culture from prehistoric Greece through the later Roman Empire. Hands-on work in Dartmouth's Hood Museum is a frequent component of these courses, as well as field trips to other museums in North America. Archaeology concentrators are also encouraged to apply for departmental support for participation in archaeological digs during their off terms.

Requirements for the Major in Classical Archaeology

Prerequisite: CLST 6, to provide an overview of the chronology and geography of the Classical world and to introduce students to the methodologies of archaeology.

Requirements:

- Three courses in Classical archaeology that establish a general knowledge of the material culture of the ancient Mediterranean world and/or explore contemporary issues and methodologies in the study of ancient artifacts (e.g. provenance and repatriation, imaging techniques), selected from CLST 12.x, 20-26. Students are encouraged to study the archaeology of both Greece and Rome. CLST 12 is a topics course that can be taken more than once when different subjects are offered.
- One course in ancient history, selected from CLST 11.x, 14, 15, 17, 18, 19. This course helps establish a general knowledge of ancient Greek and Roman history and introduces students to historical methodologies.
- Two courses from the Greece or Rome Foreign Study Programs (CLST 30, 31) enabling on-location study of sites and artifacts.
- Two courses in ancient Greek or Latin numbered 10 or higher to develop a working knowledge of one or both of the languages essential for research. Greek 30, and Latin 22, 24, 26, 30 are topics courses that can be taken more than once when different subjects are offered.
- Two additional courses, to be chosen in consultation with the major advisor, that can develop skills and methodologies employed by Classical archaeologists, selected from Classical Studies offerings numbered 2 or higher; courses in Greek or Latin numbered 10 or higher; Art History 10.01, 11.01, 11.02 and 12.01.

Requirements for the Modified Major in Classical Archaeology

Prerequisite: CLST 6, to provide an overview of the chronology and geography of the Classical world and to introduce students to the methodologies of archaeology.

Requirements:

- Three courses in Classical archaeology selected from CLST 12.x, 20-26, 30. Students are encouraged to study the archaeology of both Greece and Rome. CLST 12 is a topics course that can be taken more than once when different subjects are offered.
- One course in ancient history, selected from CLST 11.x, 14, 15, 17, 18, 19. This course helps establish a general knowledge of ancient Greek and Roman history and introduces students to historical methodologies.
- One course in ancient Greek or Latin numbered 10 or higher.
- Completion of Culminating Experience requirement.

A modified major in Classical archaeology consists of the courses listed above AND five additional courses taken in one or more other departments or programs. All modified majors must be planned as a coherent whole. Students must submit a written statement to the Classics Department explaining their rationale for the courses selected for the modified major, and that statement must be approved by the Department.

Requirements for the Minor in Classical Archaeology

Prerequisite: CLST 6, to provide an overview of the chronology and geography of the Classical world, and to introduce students to the methodologies of archaeology.

Requirements:

- Four courses in Classical archaeology selected from CLST 12.x, 20-26, 30. Students are encouraged to study the archaeology of both Greece and Rome. CLST 12 is a topics course that can be taken more than once when different subjects are offered.
- One course in ancient history, selected from CLST 11.x, 14, 15, 17, 18, 19. This course helps establish a general knowledge of ancient Greek and Roman history and introduces students to historical methodologies.

The concentration in Classical Studies is a less specialized liberal arts major that combines elements of language and literature, ancient history, classical archaeology, and other topics relating to Greek and Roman culture. Classical Studies concentrators are not required to include the study of Greek or Latin in their program, although such study is certainly encouraged. This concentration is also a good choice for combining with a major in another department and may easily be modified for a more individualized educational program.

Requirements for the Major in Classical Studies

Prerequisites: Two courses selected from CLST 1.x, 4, 6; Latin 3; Greek 3. These courses provide an introduction to ancient Greece and Rome and the methodologies scholars employ in studying these cultures.

Requirements:

- Two courses in ancient history selected from CLST 11.x, 14, 15, 17, 18, 19, 31. These courses establish a general knowledge of ancient Greek and Roman history and introduce students to historical methodologies. CLST 11 is a topics course that can be taken more than once when different subjects are offered.
- Two courses in Classical archaeology selected from CLST 20-26, 30. These courses establish a general knowledge of ancient Greek and Roman material culture and introduce students to archaeological methodologies. CLST 12 is a topics course that can be taken more than once when different subjects are offered.

- Two courses in Classical literature, philosophy, and religion (exclusive of the courses identified as prerequisites), selected from CLST 2-5, 10.x and courses in Greek or Latin numbered 10 or higher. These courses establish a general knowledge of languages, literature, and systems of thought in ancient Greece and Rome and introduce students to the methodologies used in studying that subject matter. CLST 10 is a topics course that can be taken more than once when different subjects are offered.
- Two additional courses that can extend the student's knowledge, skills and methodologies for the study of Greco-Roman antiquity, selected from all remaining Classical Studies offerings; courses in Greek or Latin numbered 10 or higher; Art History 10.01, 11.01, 11.02 and 12.02; courses in Comparative Literature numbered 10 or higher (when the content of the course focuses on Classical literature); Philosophy 11.
- Completion of Culminating Experience Requirement.

Requirements for the Modified Major in Classical Studies

Prerequisites: Two courses selected from CLST 1.x, 4, 6; Latin 3; Greek 3. These courses provide an introduction to ancient Greece and Rome and the methodologies scholars employ in studying these cultures.

Requirements:

- One course in ancient history selected from CLST 11.x, 14, 15, 17, 18, 19, 31. This course helps establish a general knowledge of ancient Greek and Roman history and introduces students to historical methodologies.
- One course in Classical archaeology selected from CLST 12.x, 20-26, 30. This course helps establish a general knowledge of ancient Greek and Roman material culture and introduces student to archaeological methodologies.
- One course in Classical literature, philosophy, or religion (exclusive of the courses identified as prerequisites), selected from CLST 2 - 5, 10 and courses in Greek or Latin numbered 10 or higher (excluding Greek 11). This course helps establish a general knowledge of languages, literature, and systems of thought in ancient Greece and Rome and introduces students to the methodologies used in studying that subject matter.
- One additional course selected from all remaining CLST offerings and courses in Greek or Latin numbered 10 or higher; Art History 10.01, 11.01, 11.02, and 12.01; courses in Comparative Literature numbered 10 or higher (when the content of the course focuses on Classical literature); Philosophy 11.
- Completion of the Culminating Experience Requirement.

A modified major in Classical Studies consists of the courses listed above AND five additional courses taken in one or more other departments or programs. All modified majors must be planned as a coherent whole. Students must submit a written statement to the Classics Department explaining their rationale for the courses selected for the modified major, and that statement must be approved by the Department.

Requirements for the Minor in Classical Studies

Prerequisite: One course selected from CLST 1.x, 4, 6; Latin 3; Greek 3. This course provides an introduction to ancient Greece and Rome and the methodologies scholars employ in studying these cultures.

Requirements:

- Two courses in ancient history selected from CLST 11.x, 14, 15, 17, 18, 19, 31. These courses establish a general knowledge of ancient Greek and Roman history and introduce students to historical methodologies. CLST 11 is a topics course that can be taken more than once when different subjects are offered.
- Two courses in Classical archaeology selected from CLST 12.x, 20-26, 30. These courses establish a general knowledge of ancient Greek and Roman material culture and introduce students to archaeological methodologies. CLST 12 is a topics course that can be taken more than once when different subjects are offered.
- Two courses in Classical literature, philosophy, and religion (exclusive of the course identified as the prerequisite), selected from CLST 2-5, 10.x; courses in Greek or Latin numbered 10 or higher; Philosophy 11. These courses establish a general knowledge of languages, literature, and systems of thought in ancient Greece and Rome and introduce students to the methodologies used in studying that subject matter. CLST 10.x is a topics course that can be taken more than once when different subjects are offered.

Culminating Experience Requirement

Students majoring in the Department of Classics may fulfill their Culminating Experience requirement in one of four ways:

1. Complete an Honors Project (requires prior approval from the Classics Department);
2. Complete two different Classics Foreign Study Programs;
3. Complete a relevant internship (for example, at the Hood Museum) during their junior or senior year AND enroll in an independent study class approved by the

Classics Department that includes but is not limited to the work undertaken as part of the internship;

4. Complete during their junior or senior year an additional course from among the offerings designated by the Department of Classics as appropriate for Culminating Experiences. If the course designated as a Culminating Experience does not normally require a substantial paper (c. 20-25 pages in length) or an equivalent project, the student will make arrangements with the faculty member teaching the course to produce such a paper or project as an addition to the standard requirements for the course. Such arrangements should be made no later than the end of the first week of the semester in which the Culminating Experience course is taken. If the course designated as a Culminating Experience normally requires a shorter paper or smaller project, the larger paper or project required to fulfill the Culminating Experience may, at the discretion of the instructor, replace that shorter paper or smaller project. All students must confirm their choice of culminating course with their advisor (or the Chair) not later than May 1 of their junior year; their selection is subject to final approval by the Department.

Requirements for All Modified Major Programs

Students wishing to design a Modified Major in Ancient History, Classical Archaeology, Classical Languages and Literatures, or Classical Studies must submit a written rationale demonstrating the intellectual coherence of their proposed program. The complete proposal must be formally approved by the Department of Classics. The program must include at least five courses offered by other departments and programs in addition to the prerequisites and major courses in Classics. One of these courses in other departments may be identified as prerequisite.

If a student wishes to modify a major in another department with any of the majors offered by the Department of Classics (Ancient History, Classical Archaeology, Classical Languages and Literature, Classical Studies) and wishes the name of that major to be entered on his or her permanent record, the modified major program must be approved by the Department of Classics, as well as by the primary department. The modifying component, which should have demonstrable coherence with the primary major, must consist of at least five courses offered by the Department of Classics.

Study Programs Abroad

The Department of Classics sponsors an Off-Campus Program every year that provides an opportunity for on-site study of the cultures of Ancient Greece and/or Rome. In addition to study and travel within the modern countries of Greece and/or Italy, these programs may include travel to other locations within the wide regions influenced by Greek and/or Roman culture. Programs are designed and led by faculty members in the Department of Classics.

Because specifics of the curriculum and itinerary alternate from year to year, it is possible for a student to participate more than once.

The curriculum embraces architecture, the visual arts, history, religion, literature, and the basic techniques of archaeological analysis. Students engage in a systematic investigation of sites, landscapes, artifacts, and historical and literary sources. Students learn to see and understand the ancient world in its own context through informal lectures and discussion on site, under the open sky. Structured comparisons (Greek vs Roman culture, major cities vs provinces, early Mediterranean cultures vs the cosmopolitan cultures of late antiquity) enable students to develop skills in analytical thinking and writing.

The academic requirements consist of weekly papers, blog posts, oral reports, and in some cases an independent study project.

Students must apply and be admitted to the program via the Guarini Institute's website; the deadline is usually March 1. Registration during the study abroad term is for CLST 30.01, CLST 30.02, and CLST 31, each of which may be taken twice if a student participates in two successive years.

Prerequisites for participation described on the Guarini Institute website; typically, they include two or more of the following:

- A course in classical archaeology: CLST 6, CLST 12.x, or any from CLST 20-26
- A course in ancient history: CLST 11.x or any from CLST 13-19
- Listening and speaking ability in Italian or Modern Greek, or reading ability in Greek or Latin as demonstrated by completion of GRK 3 or above or LAT 3 or above.

Senior Honors Program

Students eligible for the honors program in Ancient History, Classical Archaeology, Classical Languages and Literatures, or Classical Studies are those who (a) have at least a 3.5 average in Classics courses and an overall GPA of 3.3 or better; (b) have demonstrated their capacity to do independent work in their previous writing and/or research; and (c) have an adequate command of the requisite skills and/or methodologies, including language skills.

The Senior Honors Project is a year-long project which in most cases carries two course credits (CLST/GRK/LAT 87 and CLST 88), normally in Fall and Winter of the senior year. Several options are available for students to design an honors project that matches their particular interests and abilities. In many cases, the honors project consists of a thesis or creative project, but it is also possible to design a program of readings leading to a comprehensive

examination, or a combination of a research paper and a written examination.

Those desiring admission to the Senior Honors program should submit a formal project proposal to the chair of the department by May 1st of their junior year, identifying an appropriate faculty advisor with whom they have discussed their intentions in advance. The Department will assign a second reader to each honors student.

Additional information regarding the Honors program in Classics can be found at <https://classics.dartmouth.edu/research/senior-honors-projects>.

Only those students who have made satisfactory progress in the judgment of their advisor in the first term of the project (CLST/GRK/LAT 87) will be allowed to register for CLST 88. Only those students who satisfactorily complete an honors program with a grade of B+ or better will earn Honors in their major or, in appropriate cases, High Honors. High Honors will be granted only by vote of the Department on the basis of outstanding independent work.

Transfer Credit for Majors

Transfer credit in Classical Studies, Greek and Latin is granted by prior arrangement to majors in the Department of Classics. Exceptions to this policy can be made only by petition to the Department.

CLST - Classical Studies Courses

To view Classics requirements, click here (p. 190).

CLST 1 - Introductory Topics in Classical Studies

Which ancient faces and personalities come alive for us when we look back at Greek and Roman antiquity? How does the world of the ancient Mediterranean intrigue, repel, awe, amuse, or disturb us? Designed for students who have not previously taken courses in this area, this special-topics course introduces the different areas and disciplines that contribute to Classical Studies in the twenty-first century. Open to all classes.

Degree Requirement Attributes: WCult:CI

CLST 1.01 - From Jupiter to Jesus: Christianity and the Transformation of the Roman World

Through an introduction of major works of western literature and art from the Classical and Early Christian world students will be able to consider modern Western heritage as an enduring product of Greco-Roman civilization. Inquiry will include an exploration of how humans' understanding of themselves and their role in the

cosmos evolved over the period of the Roman Empire. Students will develop skills in analyzing written texts and works of art. They will be introduced to the intellectual tools used to investigate the transformation of societies impacted by exposure to new ideas and practices.

Cross-Listed as: COCO 027

Degree Requirement Attributes: WCult:W

CLST 1.02 - Foodstuffs and Culinary Culture

One thing all humans share is a relationship with food, but what that food is, who prepares it, how they prepare it, who consumes it, and when and how they consume it, all vary between cultures and within them. This course examines how ancient Greeks and Romans used food to differentiate between themselves and others, and how they used food to differentiate among themselves.

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 1.03 - Antiquity Today

The Romans had the Colosseum, the Greeks had the dramatic stage. What does the different ways they staged violence tell us about the Romans and the Greeks? Can this help us understand staged violence in the modern world, such as that in video games? These are the sort of questions that we explore in CLST 1.03. Topics we cover include Greek and Roman attitudes toward violence, their approaches to classifying and evaluating sexual behaviors, their religious beliefs, and the ways they governed their societies. In all cases we will use what we learn about the Greek and Roman ways of doing things to help think about our own practices and predilections.

Degree Requirement Attributes: Dist:INT or LIT; WCult:CI

CLST 2 - The Tragedy and Comedy of Greece and Rome

The course studies in translation selected works of Aeschylus, Sophocles, Euripides, Seneca (tragedy), Aristophanes and Plautus (comedy), and some of their central themes and questions: law, community, revenge, passion, and justice. We will approach them both as texts and as scripts/librettos, considering their relationship to other types of performance (ritual, rhetoric, music, dance) and genres (history, philosophy) as well as to theatrical space. There will be practical workshop opportunities for those interested. Open to all classes.

Cross-Listed as: THEA 12

Degree Requirement Attributes: Dist:ART; WCult:W

CLST 3 - Reason and the Good Life: Socrates to Epictetus

An introduction to philosophical thought in antiquity, especially that of Socrates, Epicurus, and the Stoics. We will concentrate especially on ethical questions; e.g. what

kind of life is best for humans to pursue, how thoughtful persons should weigh the potentially competing claims of reason, pleasure, and emotion; and on how intellectual activity was perceived at Athens and at Rome. Open to all classes.

Offered: Fall.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 4 - Classical Mythology

An introduction to Greek myths and the way in which their use in literature developed, from the use of myths as religious story to the utilization of myth in drama and its exploitation in poetry. Open to all classes.

Degree Requirement Attributes: Dist:TMV; WCult:CI

CLST 5 - Epics of Greece and Rome

Epic poetry was central to the creation of Greek and Roman identity—it was the genre through which these cultures transmitted their most important stories and their most sacred values. In this discussion-based course, we will learn about the defining elements of epic as a genre. We will explore how the tradition of the oral performance created the Homeric epics (*Iliad*, *Odyssey*) and how oral performance is mimicked and adapted in the highly literary epics of Vergil (*Aeneid*) and Apollonius (*Argonautica*). We will end the term by considering the influence this genre has had on the literature and storytelling traditions of today, in such authors such as Anne Carson, C.S. Lewis, Toni Morrison, Vikram Seth, and Simone Weil.

Degree Requirement Attributes: Dist:LIT; WCult:W

CLST 6 - Introduction to Classical Archaeology

This course addresses the basic methods and principles of Classical archaeology through a survey of the sites and artifacts of Greco-Roman antiquity. Approaches useful for the interpretation of material evidence and the problems inherent in such interpretation will be explored. Through the study of major sites in chronological sequence, students will survey the development of material culture in the Mediterranean world from prehistory to the collapse of the Roman Empire. The course thus serves as an introduction both to Greek and Roman civilization and to the goals of the discipline of archaeology. Open to all classes.

Offered: Fall.

Degree Requirement Attributes: Dist:INT or ART; WCult:W

CLST 7 - First-Year Seminars in Classical Studies

Offered: Spring.

CLST 10 - Topics in Greek and Roman Literature, Philosophy, and Religion

Courses offered under this rubric explore specific facets of the literature, philosophy, and religion of ancient Greece and Rome.

CLST 10.01 - Rethinking the Divine

While the stories of mythology were the heritage of all Greeks and Romans, some found that the myths of the gods did not express their conception of a divine being. Philosophers as early as the 6th century B.C.E. offered their own explanations for religious thought and their own alternative accounts of the divine nature: some skeptical, some idealistic, some merely peculiar. The class will read and discuss accounts by Plato, Epicurus, Cicero, Plutarch, and others

Cross-Listed as: REL 19.03

Degree Requirement Attributes: TMV

CLST 10.02 - Seing Nature: Aristotle and Darwin

In this class, we will explore how Aristotle (the father of science) and Darwin (the father of modern biology) developed their ideas about the organization of nature and human society. We will analyze the assumptions they made, what facts and knowledge were available to them, and the dominant social views of their time. In addition, we will consider how our own understanding of the world is shaped by the same forces - with its constraints and possibilities

Cross-Listed as: COCO, BIOL 10.01

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 10.03 - Mind, Heart, Brain

Considers some of the earliest recorded theories of human and animal psychology worked out in Greco-Roman antiquity. What physical substances and/or bodily organs give rise to the characteristic functions of living things, such as sense-perception, self-movement, and self-awareness? How is it that human beings are capable of concept-formation, reasoning, memory, and emotion, and to what extent are these capacities also present in non-human animals? Is the mind-stuff radically distinct from the body and its afflictions, or intimately bound to it? Students work collaboratively to develop their own analyses of these and related issues in a range of philosophical, scientific, and medical texts from both Greece and Rome.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 10.04 - The Ancient Book: An Introduction to Paleography, Papyrology, Codicology, and Textual Criticism

Paleography is the study of ancient scripts, papyrology the study of scrolls, and codicology the study of ancient books.

You'll get a hands-on introduction by making actual scrolls and codices. You'll also publish blog posts about your experiences and findings. Textual criticism is the art of trying to reconstruct the original text of ancient literary works. As a final project, students will use the skills of textual criticism to reconstruct a lost archetype.

Degree Requirement Attributes: Dist:LIT; WCult:W

CLST 10.05 - Fictions of Sappho

Goddess of poetry, sexual predator, exotic holiday destination, lovelorn suicide, schoolmistress, parchment scrap: these are among the associations clustering around Sappho. From antiquity to the twenty-first century her poems and the legends about her life and loves have fascinated writers, artists and musicians as different as Queen Victoria, Willa Cather, Boccaccio, Jeanette Winterson, Ezra Pound, Gounod, and Ovid. We sample some of the twists and turns in this seemingly endless stream of fantasy and creative reappropriation.

Cross-Listed as: WGSS 21.02; COLT 67.06

Degree Requirement Attributes: Dist:LIT; WCult:CI

CLST 10.06 - The Concept of Love in Roman Literature

This course explores the importance of love as a concept in the ancient Roman literary imagination. Vergil's famous phrase "love conquers all" (*omnia vincit amor*, *Eclogues* 10.69) encapsulates the centrality of *amor* to the poetic genre of elegy. But the notion of love as a conquering force also hints at its ability to overwhelm, subdue, and destroy. The idea of love, broadly conceived, is embedded in the literature, philosophy, scientific thought, religion, and art and archaeology of the Romans. We will explore love in its various forms – devotion, lust, physical sexuality, friendship, and familial bonds – by looking at the central authors and genres of the Latin literary tradition (in English translation). Our discussion of these core texts will be further enriched by an examination of additional ancient sources, including Greek and Roman visual art, monuments and architecture, coins, and inscriptions.

Degree Requirement Attributes: Dist:LIT; WCult:W

CLST 10.07 - Ancient Magic and Religion

Bindings and curses, love charms and healing potions, amulets and talismans – from simple spells to complex group rituals, ancient societies made use of both magic and religion to try to influence the world around them. In this course, we shall examine the roles of magic and religion in the ancient Greek and Roman worlds, paying special attention to their local contexts and to the myths and actual techniques ancient practitioners used to serve their clientele.

In this class, we examine descriptions of religious and magical practices in the multicultural contexts of ancient

Greece and Rome. Our sources include literary accounts, legal documents, and material objects, such as inscriptions, amulets, tablets, magical images, and papyri.

Cross-Listed as: REL 19.24

Degree Requirement Attributes: Dist:INT or TMV; WCult:CI

CLST 10.08 - Laughter and Humor in the Ancient World

What made ancient Greeks and Romans laugh? Do we still get their jokes? What was the function of humor in antiquity, and how does this compare to the role of humor in modern societies? In this course we will investigate these questions by reading ancient Greek and Roman jokes, comedies, and satire alongside modern analyses of humor from psychology, sociology, and cognitive theory. Special themes to be discussed will include laughter and power, irony and satire in philosophy, visual humor, gallows humor, humor and horror, and laughing at others in terms of gender, ethnicity, race, and social class.

Degree Requirement Attributes: Dist:SOC; WCult:CI

CLST 10.09 - Quantitative Literary Criticism

Digitization of vast numbers of texts and rapid advances in computational methods are enabling new forms of criticism in all areas of literary study. Classics was an early adopter of digital technologies, and computation is now pervasive throughout the field, as illustrated by flagship projects such as the Perseus Digital Library. Beyond the familiar examples of digitized texts and simple word searches, scholars and students also benefit from an ever-growing array of sophisticated quantitative tools, and from increasing engagement with diverse technical disciplines – natural language processing, data science, even bioinformatics. Through a survey of recent research at the intersection of Latin literature and the digital humanities, this course will introduce you to the state of the art in quantitative literary criticism. To ground our methodological investigations, we will explore a diverse selection of Latin poetry, including epic (Vergil, Lucan, and Catullus), elegy (Catullus), and comedy (Plautus), and sample some less famous later authors, such as Paul the Deacon and Vitalis of Blois, who were influenced by classical antecedents. At each turn, we will examine the interplay between traditional (close reading, philology, theory) and data-driven analyses of Latin literature and consider how quantitative methods can support humanistic inquiry. Along the way, you will gain hands-on experience with powerful computational tools and be introduced to now ubiquitous critical approaches, such as intertextuality and reception studies. Assigned readings will be in English translation using bilingual Latin-English editions; in addition to reading all of the English, students with Latin will be responsible for understanding and translating “micro samples” of the original texts. The course assumes no prior computational background.

Cross-Listed as: QSS 30.12

Degree Requirement Attributes: Dist:TAS

CLST 10.10 - Ancient Medicine

This course will explore the Greek and Roman origins of medicine in the West. We will analyze how disease came to be understood as a natural phenomenon, and we will examine the different procedures, philosophies, and social roles of doctors in the ancient world. In this investigation, we will encounter many questions with which we are still grappling today, such as: What constitutes scientific thinking? How do science and cultural context determine and reflect one another? What is human nature? Is a disease a moral failing? How do we understand gender and sex in medical terms? All readings will be in translation, and no prior knowledge of medicine or Greco-Roman antiquity is necessary.

Offered: Winter.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 10.11 - Plato's Protagoras

We will read one of Plato's most celebrated dialogues, in which Socrates meets the most famous intellectuals of the day. The dialogue is rich in philosophical content as it focuses on the question of what excellence is, whether it can be taught, and the role of education in a young person's life. Students do not need to know ancient Greek or have any previous knowledge of Plato to take this course.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 10.12 - The End of the World: Jewish and Christian Apocalyptic Literature in the Hellenistic Era

The Hellenistic era was a period of remarkable theological and literary creativity within the Jewish and Christian communities, including the development of a unique genre, apocalyptic literature. Apocalyptic texts, which portend a catastrophic end to the world, are notoriously difficult to interpret due to their use of fantastical imagery and often cryptic symbolism. In this class we will explore several texts in depth, including portions of *Daniel* from the Hebrew scriptures, the *Book of Enoch* from the Maccabean period, the *Apocalypse of John* (Revelation) from the Christian scriptures, and the 2nd century Christian text *Apocalypse of Peter*. In addition to learning how to read apocalyptic literature, we will examine the socio-historical context of these texts, their relationship to communities under duress and how they have been reimagined by later generations.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 10.13 - New Testament

Studies the collection of Christian texts now called the “New Testament” for the insights they provide into the

complex cultural interactions in the first-century Mediterranean world. Three primary texts, the *Gospel of Mark*, Paul's letter to the *Colossians*, and Paul's letter to *James*, will be examined in light of their original Jewish context and their embeddedness in Greek thought and Roman socio-political structures. This small-enrollment class is taught conjointly with GRK 29, but with assignments and assessment appropriate for students reading entirely in English

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 10.14 - Plato's Symposium

A small-enrollment seminar offering an introduction to Plato's thought and to a rich vein of material illustrating Greek attitudes and assumptions on erotic love for both sexes. The primary text is Plato's *Symposium*, which we will study in translation while learning the Greek alphabet and a few key vocabulary items in Greek. As time allows during the term, we will explore some of the rich body of evidence that exists in Greek poetry, oratory, and the visual arts either confirming or contradicting the impression given by Plato.

Offered: Spring.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 10.15 - Magic and the Occult in the Ancient World

From simple spells designed to meet the needs of the poor and the desperate to the complex theurgies of the philosophers, the people of the Greco-Roman world employed magic to try to influence the world around them. We will study the ancient practitioners of magic, the techniques through which they served their clientele, the bodies of occult knowledge upon which they drew, and the cultural contexts in which they operated or were thought to operate.

Offered: Spring.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 10.16 - Gender and Sexuality in the Ancient Greek World

How did the ancient Greeks think about sex, gender, and sexuality? Which behaviors and relationships were considered socially acceptable, and why? And what does it mean to seek out ancient Greek models for contemporary (queer) identities? This course examines the construction of gender and sexuality in ancient Greece, as well as its modern reception, through the study of written texts, material culture, and feminist and queer theory.

Cross-Listed as: WGSS 66.37

Degree Requirement Attributes: Dist:LIT; WCult:CI

CLST 10.17 - Stolen Histories

The course offers a model for ethically engaged inquiry in the humanities. Guided by a working archaeologist (Julie Hruby) and by a literary historian (Alexandra Schultz), you will take up a series of highly specific cases in which typical methods of investigation and analysis raise questions of proprietary interests, cultural bias, or personal autonomy. At what point do considerations of justice require us to forgo study and analysis? Are there approaches to scholarship that work to counteract the wrongs done by earlier generations of scholars? How can empathy, creativity, and passion give voice to silences in the record and bridge gaps of understanding between communities?

Cross-Listed as: HUM 03.09

Degree Requirement Attributes: Dist:TMV

CLST 11 - Topics in Greek and Roman History

Courses offered under this rubric explore specific facets of the history of ancient Greece and Rome

Degree Requirement Attributes: WCult:W

CLST 11.02 - Rediscovering Sparta: Ancient Remains and Modern Technology

This course gives students the opportunity to learn about the history of Sparta while becoming familiar with technology that is rapidly becoming indispensable in studying ancient Greece. We will use newly available archaeological information, ancient Greek texts, excavation reports and maps from the early 20th century, and GIS software to construct visualizations of the ancient city of Sparta. No prior knowledge of the relevant software or prior coursework in the ancient world is required or expected.

Degree Requirement Attributes: Dist:TAS; WCult:W

CLST 11.03 - Early Sparta and Corinth: A Comparative Approach to the Archaeology of Two Major Greek City-State

This course centers on Sparta and Corinth, two city-states that, despite close geographic proximity, followed notably different developmental trajectories during the Archaic period. Sparta conquered much of the southern Peloponnese and became a militarized society with an economy based almost entirely on agriculture. Corinth's territory was, compared to that of Sparta, minuscule, but it became a powerful and wealthy community through the foundation of numerous colonies and commerce. Sparta was famed for its army, Corinth for its navy. Spartans were known for the simplicity of their lifestyle and the architectural simplicity of their city, whereas Corinthians overtly enjoyed luxuries and erected some of the Greeks' earliest large-scale stone temples. By comparing and

contrasting Sparta and Corinth, we can develop a good sense of the Greek world during the Archaic period.

Cross-Listed as: COCO 019

Degree Requirement Attributes: Dist:ART; WCult:W

CLST 11.04 - Sport and Democratization

(Identical to Sociology 49.19). The relationship between democratization in society and in sports forms the subject matter of this course. We will begin to explore that relationship by looking at the various ways in which democratization in society and in sports influence each other in the modern world. Then we will turn our attention to the past and examine the relationship between democratization in society and in sports in sixth- and fifth-century BCE Greece, in nineteenth-century CE Britain, and in twentieth-century CE America. The course will end with a consideration of the lessons we have learned about democratization in society and in sports for public policy in the United States and elsewhere.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:W

CLST 11.06 - Sex, Celibacy, and the Problem of Purity: Asceticism and the Human Body in Late Antiquity

Late Antiquity (c. 300-500 C.E.) was a time when Christians struggled to understand how gender, family life, and religion could intermesh. Did virgins get to heaven faster than those who marry? Can a chaste man and woman live together without succumbing to lust? Were men holier than women? What about women who behaved like men? This course examines the changing understanding of the body, marriage, sexuality, and gender within Christianity through reading saints' lives, letters, polemical essays, and legal texts. Open to all classes

Cross-Listed as: REL 31; WGSS 43.02

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 11.07 - Slave Societies Ancient and Modern: Imperial Rome and Brazil

Although slavery has existed in virtually all cultures, scholars of comparative world slavery have identified only five societies in all of human history as "slave societies": two were in the ancient world (classical Athens, Rome) and three were in the New World (the American South, the Caribbean, Brazil). This course examines slave systems in the ancient and modern worlds comparatively, focusing on Rome and Brazil. In Rome, the emergence of the state, including the development of the concept of the citizen, coincided with the development of the slave society. African slavery in Brazil was introduced soon after the establishment of the colonial government and drew heavily from classical legal definitions. In this course we compare the social and political structures of these two slave

systems (high art, popular culture, institutions). We examine how each slave society was legitimated, perpetuated and ultimately challenged. Specific topics include: the construction of the slave and the emergence of racializing discourse, the slave trade and the commodification of the body, trickster narratives, modern theories of power and domination, resistance and rebellion, and the problem of freedom for previously dominated peoples. Through comparison, students will not only become aware of the similarities between these two slave societies, but will also be better equipped to evaluate their unique qualities and particular achievements.

Degree Requirement Attributes: Dist:INT or LIT;
WCult:NW

CLST 11.11 - War Stories

What is a "true" war story? This course surveys stories of deployment and return from antiquity to the present, to think about the genre of the war story, and especially to think about the self-fashioning narratives of individuals who have witnessed the realities of war and return home. Through close reading we examine the interactions of the returning soldier with his community, and the kinds of stories that soldiers will and will not tell. The historical, cross-cultural study of war stories allows the problem of homecoming to emerge more clearly as problems of the human condition across cultures and political or social organizations, the problem of homecoming emerges as a product of war. Texts may include Homer, *Odyssey*; Remarque, *The Road Back*; S. Ooka, *Fires on the Plain*; Tim O'Brien, *The Things They Carried*; Bao Ninh, *The Sorrow of War: A Novel of North Vietnam*; D. Finkel, *Thank You for Your Service*; P. Klay, *Redeployment*; B. Turner, *Here, Bullet*.

Cross-Listed as: COLT 64.03

Degree Requirement Attributes: Dist:INT or LIT;
WCult:CI

CLST 11.12 - Slaves, Wives, & Concubines: Did Roman Women Have a History?

This course is about the heterogeneous lived experience of women (slaves, freed slaves, lawful wives, daughters, prostitutes) during the Roman Republic and Empire. Roman women built and immortalized themselves and their families in funerary and civic monuments, endowing institutions like schools, and sometimes had coins bearing their portraits. We explore the larger institutional frameworks that gave meaning to their lives, and within this framework we investigate their life choices over time.

Cross-Listed as: WGSS 21.01, HIST 94.13

Degree Requirement Attributes: Dist:SOC; WCult:CI

CLST 11.13 - Democracy: Ancient to Modern

This course comprises four parts. In the first, we will familiarize ourselves with the concept of democracy, as well as the historical context in which democracy first emerged. In part two, we will explore the history of democracy at ancient Athens, with an emphasis on the development and functioning of democratic institutions, democratic ideology, and the exploitation by democracies of women, slaves, and foreigners. In part three, we will consider democracies outside Athens, as well as non-democratic regime types, such as oligarchy, tyranny, and the “Lycurgan” constitution at Sparta. In part four, we will turn our attention to the modern era. More specifically, we will compare Greek democracies to subsequent institutions that have been described as democratic (e.g., New England town hall meetings, the United States of America, and the Democratic Republic of the Congo); examine the impact of Greek democracy on the development of modern political thought.

Cross-Listed as: HIST 90.08

Degree Requirement Attributes: Dist:INT or SOC; WCult:W

CLST 11.14 - Gender and Sexuality in Ancient Greece

In this course we will analyze artifacts (e.g. frescoes and vase paintings, statuary, house interiors) and texts (e.g. love poetry, court cases, philosophical treatises, medical texts, tragedy and comedy) from Greece and its surrounding islands between about 3000 and 300 BCE. In addition to thinking critically about this primary material, allowing us to formulate our own opinions about it, we will read modern scholarly and popular texts focusing on gender and sexuality in prehistoric and ancient Greece.

Cross-Listed as: WGSS 21.03

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 11.15 - Herodotus and Thucydides

The course studies the two Greek writers who invented historical writing. Herodotus and Thucydides both engaged in an intricate intellectual dialogue with earlier Greek poetry and thought and with new, often radical political, religious, and scientific ideas; yet in doing so, they developed diametrically opposite modes of historical thinking. We will examine and compare their groundbreaking works in the context of Greek literary and intellectual history. Attention will also be paid to the later reception, from Plutarch through Marx.

Offered: Spring.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 11.16 - Ancient Medicine

This course will explore the Greek and Roman origins of medicine in the West. We will analyze how disease came

to be understood as a natural phenomenon, and we will examine the different procedures, philosophies, and social roles of doctors in the ancient world. In this investigation, we will encounter many questions with which we are still grappling today, such as: What constitutes scientific thinking? How do science and cultural context determine and reflect one another? What is human nature? Is a disease a moral failing? How do we understand gender and sex in medical terms? All readings will be in translation, and no prior knowledge of medicine or Greco-Roman antiquity is necessary.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 11.17 - Ancient Greek Athletics

Athletics played a pivotal role in the ancient Greek world, and the history of athletics offers insight some of the basic forces shaping ancient Greek society. The topics we will cover include the origins of Greek athletics; the ancient Olympics; the reasons why the Greeks chose to compete in the nude; the connections between athletics and war, athletics and sex, and athletics and art; and the participation of women in athletics.

Offered: Winter.

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 11.19 - Before Billboards and Twitter: Ancient Coins as Text

Instructor: Stewart

This hands-on course focuses on ancient coinage, the development and use of money in the ancient Mediterranean, the logistics of coin production, and the methods for studying coinage to write Roman history. Students learn numismatic methodology by handling and studying coins from the collection in Dartmouth’s Hood Museum of Art and prepare material for an installation focusing on the Roman war against Cleopatra and Mark Antony. A final unit treats the ethics of coin-collecting and the role of the modern museum.

Cross-Listed as: HIST 94.16

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 11.20 - Slaves' History of Rome

Instructor: Stewart

This course examines the slave system of ancient Rome from the slaves’ perspective. Topics include the historiography of slavery; the economic roles of slaves and their structural relation to other classes of free and unfree labor; the historical context and political motives for the development of slave societies; slaves’ evolving political, social, and legal roles; the cultural processes that made and un-made the legal definition of the slave as a thing without status or identity.

Cross-Listed as: HIST 94.17

Degree Requirement Attributes: Dist:SOC; WCult:CI

CLST 12 - Topics in Classical Archaeology

Courses offered under this rubric explore specific facets of ancient Greek and Roman material culture, of the methodologies employed by classical archaeologists, and of the preservation and reception of Greek and Roman material culture.

CLST 12.02 - Greek and Roman Engineering and Technology

This special topics course offers an introduction to the most important machines and processes of Greek and Roman technology. Emphasis will be on the practical implications and applications of ancient technologies and engineering. Within the broad range of technologies surveyed, students will focus on specific case studies to provide deeper analysis and understanding of individual topics. Reading will be based on a textbook and selected chapters and articles from secondary sources. Greek and Roman writers will also be read in translation. Open to all students.

Offered: Spring.

Degree Requirement Attributes: Dist:TAS; WCult:W

CLST 12.03 - Who Owns the Past?

Modern archaeology grew out of antiquarianism, imperialism, and the attempts of early collectors and scholars to look to the past for aesthetics, to construct identities, and to satisfy their curiosities. This course examines how these legacies influence contemporary archaeology, museum practices, and policies to manage cultural heritage. The central question will be explored utilizing the perspectives of the relevant actors: archaeologists, collectors, museums, developers, descendant communities, national and local governments, and the tourism industry.

Cross-Listed as: ANTH 13

Degree Requirement Attributes: Dist:SOC; WCult:CI

CLST 12.04 - Mapping Ancient Greece: Pausanias, Digital Humanities, and GIS

Experience the history and archaeology of ancient Greece by following in the footsteps of Pausanias. Pausanias was a scholar from the 2nd century CE who traveled the length and breadth of Roman Greece recording all that was “worth seeing.” We will map Pausanias's itinerary in a Google Earth environment and create archaeological and historical tours that incorporate modern research and multimedia about the history, monuments, and artifacts of these places.

Degree Requirement Attributes: Dist:TAS; WCult:W

CLST 14 - Greek History: Archaic and Classical Greece

Instructor: Christesen

This course is designed to survey the major events in the history of ancient Greece from c.1600 B.C. (the emergence of palatial culture in the Mycenaean World) to 404 B.C. (the end of the Peloponnesian War). During this period, the Greeks formed individual communities and developed unique political structures, spread their culture, language, and religion throughout the Mediterranean, invented democracy (at Athens) and enshrined these values in their art and literature. This course will cover the physical setting of and the archaic legacy to the classical city-state, its economy, its civic and religious institutions, the waging of war between cities, the occurrence and ancient analysis of conflict within the city, and the public and private lives of its citizens and less well-known classes, such as women, children, slaves, etc.

Cross-Listed as: HIST 94.03

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 15 - Alexander the Great and the Macedonian Kings

This course has two aims: (1) to establish a basic understanding of the history of Alexander the Great and of Greek-speaking peoples in the eastern Mediterranean during the fourth through first centuries BCE and (2) to explore the cultural, military, political, and economic innovations of what was a singular age of experimentation.

Cross-Listed as: HIST 94.04

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC; WCult:W

CLST 17 - Roman History: The Republic

This course surveys the history of the Roman people from 753 (traditional date of the founding of Rome) to 44 B.C. (the assassination of Julius Caesar). Topics include the development of Roman law, the conquest of all lands bordering on the Mediterranean, and the civil wars that destroyed Republican government. Particular emphasis is placed on the Roman political community: the political, religious and social factors that influenced the definition of the Roman aristocracy in the fourth century, the institutions that maintained the ascendancy of the elite, the military and political values inherent in the citizenship, the social and political mechanisms that militated against civil dissent, and the role of political values in the eventual destruction of Republican government from within.

Cross-Listed as: HIST 94.05

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 18 - History of the Roman Empire: Roman Principate to Christian Empire

This course is designed to survey the major events in the history of Rome from 31 B.C. (Octavian/Augustus' success at the battle of Actium) through the accession and rule of Septimius Severus. During this period, the Roman empire (signifying the territorial extent conquered by Roman armies and administered by Roman officials) became a political community extending throughout the Mediterranean and northwards into Europe as far as Scotland. This course considers the logic of the Roman system: the mechanisms promoting the political identity of diverse peoples as Roman, and the endurance of local traditions within the Roman world; the reasoning whereby the overarching leadership of a single individual was conceived as necessary and good, and the evolving relationship between the princeps and the Roman senatorial aristocracy with a tradition of competitive participation and self identity in politics at Rome; the definition of the Roman frontiers and the role of the army in the assimilation of non-Roman peoples.

Cross-Listed as: HIST 94.06

Degree Requirement Attributes: Dist:INT or SOC;
WCult:W

CLST 19 - Methods and Theory in Ancient History: Roman Britain

This course is designed to introduce the student to the various types of documentary evidence available to the ancient historian and to the various perspectives for framing and answering historical questions. We consider the interpretive methodologies for each type of document (coin, inscription, papyrus) as well as the particular historical context in which these documents were produced. Topics include the function of coinage and economic thinking in the ancient world and the political significance of the publication of law. The final weeks of the term allow for in-depth consideration of a specific problem in ancient history.

Cross-Listed as: HIST 94.07

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 20 - Greek Archaeology: First Hominins to Mycenaean Palaces

This course traces the cultural evolution of humanity in the Aegean basin from the era of hunting and gathering (Palaeolithic-Mesolithic) through the early village farming stage (Neolithic) and the formative period of Aegean civilization (Early Bronze Age) into the age of the great palatial cultures of Minoan Crete and Mycenaean Greece. The emphasis in the early part of the course will be on the different economic bases of early life in the Aegean and on regional variation within it. In the latter half of the course, study of the palaces, fortified citadels, and royal tombs at

such sites as Knossos, Mycenae, Tiryns, and Troy will lead to discussions of the Greek myths about Atlantis, King Minos' sea empire, and the Trojan War, and their basis in historical fact. May be taken in partial fulfillment of the major in Art History.

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 21 - Greek Archaeology: Early Iron Age and Archaic

Instructor: Hruby

This course examines in detail through archaeology the cultural process whereby Greece evolved from a scattered group of isolated and backward villages in the Dark Ages (ca. 1100-750 B.C.) to a series of independent, often cosmopolitan city-states united against the threat of Xerxes' invasion of Greece in 480 B.C. Where did the Greeks acquire the concept of monumental temple architecture and why did they choose to build temples in only two or three different architectural styles? Where did the Greeks learn to write in an alphabetic script and what did they first write down? Who taught the Greeks the art of sculpture and why did they begin by carving what they did? When and why did the Greeks begin to portray their myths in art? May be taken in partial fulfillment of the major in Art History.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 24 - The Birth of Rome

Why did the Rome emerge as the most powerful city of the Western world? How did later Romans remember and heroize the events that led to their supremacy? We will trace this remarkable transformation through both science and literature: the physical evidence recovered through archaeology, and literary accounts in Greeks' and Romans' prose and poetry that tell stories of Rome's foundation and struggle for survival. Readings include passages from Virgil's *Aeneid* and Livy's *History of Rome*, as well as excerpts from ancient writers that include Dionysius, Strabo, Plutarch, Cicero and Ovid.

Degree Requirement Attributes: Dist:SOC; WCult:W

CLST 25 - Early Roman Imperial Archaeology: The First Emperors

Through archaeological sites and related artifacts, this course examines the Roman empire as it was transformed under the rule of the emperors. This course begins with a close look at the first emperor, Augustus, then continues with an examination of the reigns of the Julio-Claudians, Flavians, and Trajan. Discussion focuses on how ancient Italic traditions were transformed to suit the needs of the Imperial government (for example, the adaptation of the Republican, Hellenized Domus to the Imperial Palatia). The most dramatic change in religious practice is the

development of the Imperial cult. Site analysis will stress the need for an imperial idiom, the accommodation of urban masses and the promotion of a sense of a shared cultural experience. The course will also examine the technological developments that led to Rome's "architectural revolution." May be taken in partial fulfillment of the major in Art History.

Offered: Winter.

Degree Requirement Attributes: Dist:ART; WCult:W

CLST 26 - Later Roman Imperial Archaeology: The Golden Age and Beyond

This course surveys Roman archaeology from Hadrian to Constantine. Emphasis is placed upon the Antonine and Severan emperors, then shifts rapidly over most of the mid-third century to focus on Diocletian and the tetrarchy, Constantine and the move of the capital to Constantinople. The course ends with a look at the great church of Hagia Sophia, and consideration of the debt of early Christianity to pagan religious traditions. A major component of the course is the study of the Romanization of the provinces, and, more specifically, the complex process of cultural hybridization (imported Roman traditions melding with local practices). Such sites as Baalbek, Petra, Dura-Europos, Palmyra, Roman Egypt, Tripolitania, Tunisia and Algeria, Constantinian Jerusalem, Trier, Spalato, etc., may be included. May be taken in partial fulfillment of the major in Art History.

Degree Requirement Attributes: Dist:ART; WCult:W

CLST 29 - Independent Study Project

The independent study project to be completed by a student while a member of the Dartmouth Foreign Study Program in Greece or Italy. Prerequisite membership in the Foreign Study Program.

Under normal circumstances, students participating in the Classics Department's Foreign Study Programs in either Greece or Rome will be enrolled in CLST 30.01, CLST 30.02, and CLST 31.

CLST 30.01 - Classical Art and Archaeology: Study Abroad I

Credit for this course is awarded to students who have successfully completed the work of the Dartmouth Foreign Study Program in Greece or Italy. May be taken in partial fulfillment of the major in Art History.

Prerequisite: membership in the Foreign Study Program.

Offered: Fall.

Degree Requirement Attributes: Dist:TAS; WCult:W

CLST 30.02 - Classical Art and Archaeology: Study Abroad II

Credit for this course is awarded to students who have successfully completed the work of the Dartmouth Foreign Study Program in Greece or Italy. May be taken in partial fulfillment of the major in Art History.

Prerequisite: membership in the Foreign Study Program.

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

CLST 31 - Ancient Literature and History: Study Abroad

Credit for this course is awarded to students who have successfully completed the work of the Dartmouth Foreign Study Program in Greece or Italy.

Prerequisite: membership in the Foreign Study Program

Offered: Fall.

Degree Requirement Attributes: Dist:TMV; WCult:W

CLST 40 - Translation: Theory and Practice

Translation is both a basic and highly complicated aspect of our engagement with literature. We often take it for granted; yet the idea of meanings "lost in translation" is commonplace. In this course we work intensively on the craft of translation while exploring its practical, cultural and philosophical implications through readings in theoretical and literary texts. All students complete a variety of translation exercises, and a substantial final project, in their chosen language. Students who wish to use the course for CLST 40 credit must work from Greek or Latin, and should normally have completed at least 2 courses in Greek or Latin above the level of 10, or equivalent.

Prerequisite: Good reading knowledge of a foreign language (usually equivalent to fulfilling the Dartmouth language requirement). Students unsure of their linguistic preparation should consult the instructor.

Cross-Listed as: COLT 19.01

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

CLST 85 - Independent Reading and Research

Instructor: Department Chair

CLST 87 - Thesis I

Instructor: Department Chair

Independent research and writing under supervision of a member of the Classics faculty. Open to honors students in their senior year and to other qualified students by consent of the Department.

Students are awarded one course credit for successful completion of this course at the end of the third term of study. Students subsequently register for CLST 88, and continue with their coursework into a third term. Students do not register for a third term. A final grade will replace the "ON" for both this course and CLST 88 upon completion of CLST 88 at the end of the third term of coursework.

Prerequisite: permission of the instructor.

CLST 88 - Thesis II

Instructor: Department Chair

Independent research and writing under supervision of a member of the Classics faculty. Open to honors students in their senior year and to other qualified students by consent of the Department.

Students who have completed one term of work on an honors thesis or equivalent project with registration for CLST 87, GRK 87, or LAT 87, and who have been recommended by their research advisor to continue, are issued permission to register for CLST 88. At the end of this course, a grade of "ON" is assigned pending final revisions, an oral presentation to the full department, and submission of the final version, all of which normally happens during the spring term. The "ON" is then changed to a final grade.\f

The full honors sequence consists of CLST/LAT/GRK 87 plus CLST 88 and carries two credits. Although work on the project may continue during the spring term, students do not register for a third course.

\f

GRK - Greek Courses

To view Classics requirements, [click here](#) (p. 190).

GRK 1 - Introductory Greek

Study of Greek grammar, syntax, and vocabulary accompanied by reading of simple Greek prose selections. Never serves in partial satisfaction of the Distributive or World Culture Requirement.

Offered: Winter.

GRK 1.02-3.02 - Intensive Greek

This course will introduce students to the fundamentals of Greek grammar in an intensive mode. Students are required to enroll for both time sequences. Through intensive drills and graded readings, the basic features of Greek grammar will be presented rapidly. Completion of this double course will allow a student to enroll in Greek 10 or to read simple Greek prose independently. The

course satisfies the college language requirement. *Never serves in partial satisfaction of the Distributive Requirement.*

Offered: Spring.

GRK 2 - Greek 2

This course picks up where Greek 1 left off in introducing students to Classical Attic Greek, the dialect of ancient Greek spoken in Athens and the surrounding region of Attica during the fifth and fourth centuries BCE. Having previously learned the foundations of the language, students will progress to more complex grammar and vocabulary in this course.

GRK 3 - Intermediate Greek

Continued study of Greek grammar and syntax. Readings in Greek prose authors. Completion of Greek 3 satisfies the College language requirement. Never serves in partial satisfaction of the Distributive or World Culture Requirement.

Prerequisite: GRK 1, or equivalent

Offered: Spring.

GRK 10 - Readings in Greek Prose and Poetry

Readings in Greek prose and poetry at the intermediate level, typically including selections from Plato and/or Euripides.

Prerequisite: GRK 3, or equivalent.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 10.13 - New Testament

Studies the collection of Christian texts now called the "New Testament" for the insights they provide into the complex cultural interactions in the first-century Mediterranean world. Three primary texts, the *Gospel of Mark*, Paul's letter to the *Colossians*, and Paul's letter to *James*, will be examined in light of their original Jewish context and their embeddedness in Greek thought and Roman socio-political structures. This small-enrollment class is taught conjointly with GRK 29, but with assignments and assessment appropriate for students reading entirely in English

Degree Requirement Attributes: Dist:TMV; WCult:W

GRK 11 - Modern Greek I

An introduction to Modern Greek as a spoken and written language. The work includes regular practice in class and scheduled drill-sessions. No previous knowledge of Greek is assumed. Never serves in partial satisfaction of the Distributive or World Culture Requirement.

GRK 20 - Homer's Iliad

In this class, we will read three to four books of the *Iliad* in Greek and the remaining books in translation. We will focus on learning how to read Homeric Greek with accuracy and speed, and we will also learn how to scan hexameter. In addition, we will explore some of the larger interpretive issues surrounding the poem and its composition, and in so doing we will read key contributions of contemporary scholarship. In class, students will practice close readings and literary analysis, especially when considering the *Iliad's* character, style, and narrative structure.

Prerequisite: GRK 10, or equivalent.

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 21 - Homer's Odyssey

In this class, we will read four to five books of the *Odyssey* in Greek and the remaining books in translation. We will focus on learning how to read Homeric Greek with accuracy and speed, and we will also learn how to scan hexameter. In addition, we will explore some of the larger interpretive issues surrounding the poem and its composition, and in so doing we will read key contributions of contemporary scholarship. In class, students will practice close readings and literary analysis, especially when considering the *Odyssey's* character, style, and narrative structure.

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 24 - Theatre

A study of the tragedy and comedy of Classical Greece through detailed reading of at least one play of Aeschylus, Euripides, Sophocles, or Aristophanes.

Prerequisite: GRK 10, or equivalent.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 25 - Aristophanes' Frogs

In this class, we will read Aristophanes' *Frogs*. The play was performed in 405 BCE, a few months before Athens' defeat at the hands of Sparta and eventual surrender in the Peloponnesian War. Euripides and Sophocles had recently died, and Aeschylus had been dead for fifty years. There was an impending sense of doom in the air at the time of the production – both culturally (the end of tragedy) and historically (the end of the Athenian empire).

The *Frogs* displays a bewildering mix of themes, ranging from bowel humor, literary criticism, education, to notions about salvation and the afterlife. We will explore all of those topics in this class. We will also pay attention to comedy as a genre and the stylistic conventions it employs.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 26 - Intellectual Enquiry in Classical Athens

This course centers on the period of intellectual ferment and enquiry in fifth- and fourth-century Athens, when traditional beliefs came under scrutiny and many different figures laid claim to truth telling, from orators and sophists to poets and the practitioners of philosophy and history. Texts studied will be taken from the following: philosophy (the sophists, the early dialogues of Plato); history (Herodotus and/or Thucydides); the medical writers; dramatists (Euripides, Aristophanes); orators.

Prerequisite: GRK 10 or equivalent.

Degree Requirement Attributes: Dist:TMV; WCult:W

GRK 28 - Philosophy

Our goals are to learn to read Plato's Greek with accuracy and comprehension, and to become engaged with Plato's thought through a close study of one of his dialogues. We will have occasion to consult other Platonic texts in translation and in Greek.

Degree Requirement Attributes: Dist:TMV; WCult:W

GRK 29 - New Testament

A brief introduction to the language, vocabulary, and idiom of New Testament Greek, followed by readings in the Gospels and the Epistles of St. Paul.

Prerequisite: GRK 10, or equivalent.

Degree Requirement Attributes: Dist:TMV; WCult:W

GRK 30 - Special Topics in Greek

Course offerings under this rubric vary from year to year. Emphasis is placed on writing and research skills as well as the development of reading ability in Greek.

GRK 30.04 - Ancient Fiction: The Greek and Roman Novels

Kidnapped lovers, marauding pirates, powerful witches, and the occasional werewolf—this is the world of the ancient novel. In this class, students will focus on one text in the original language and read more broadly in translation. We will pay particular attention to narrative, genre, intertextuality and literary history, cultural context, and reception.

Offered: Summer.

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 30.05 - Roman Fiction: The Greek and Roman Novels

Kidnapped lovers, marauding pirates, powerful witches, and the occasional werewolf—this is the world of the ancient novel. In this class, students will focus on one text in the original language and read more broadly in translation. We will pay particular attention to narrative, genre, intertextuality and literary history, cultural context, and reception.

Cross-Listed as: LAT 30.04

Degree Requirement Attributes: Dist:LIT; WCult:CI

GRK 30.06 - Thinking Big: Heroes in Aristophanes and Plautus

In this class we read comic texts produced in Classical Athens and Republican Rome, to consider the literary features of the comic genre and the political significance of comedy in performance. We focus on the comic hero who defies all obstacles to win desirable social goods (food, wine, sex; peace, freedom).

Cross-Listed as: LAT 30.06

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 30.07 - The End of the World: Jewish and Christian Apocalyptic Literature in the Hellenistic Era

The Hellenistic era was a period of remarkable theological and literary creativity within the Jewish and Christian communities, including the development of a unique genre, apocalyptic literature. Apocalyptic texts, which portend a catastrophic end to the world, are notoriously difficult to interpret due to their use of fantastical imagery and often cryptic symbolism. In this class we will explore several texts in depth, including portions of *Daniel* from the Hebrew scriptures, the *Book of Enoch* from the Maccabean period, the *Apocalypse of John* (Revelation) from the Christian scriptures, and the 2nd century Christian text *Apocalypse of Peter*. In addition to learning how to read apocalyptic literature, we will examine the socio-historical context of these texts, their relationship to communities under duress and how they have been reimagined by later generations.

Offered: Spring.

Degree Requirement Attributes: Dist:TMV; WCult:W

GRK 30.08 - History and Structure of the Greek Language

This course focuses on the grammar, pronunciation, and writing of ancient Greek, starting from its origin in Proto-Indo-European (c. 4000 BC), proceeding through Homer to classical Attic (1st millennium BC), and ending with the post-classical era. Through analysis of language data and reading of selected ancient texts, students will gain a

greater mastery of synchronic language patterns, and also will understand the diachronic origins of those patterns.

Cross-Listed as: LING 11.15

Degree Requirement Attributes: Dist:QDS; WCult:W; Lang:LRP

GRK 30.09 - Demosthenes' On the Crown

In this class, we will read one of the most celebrated speeches of all time: Demosthenes' *On the Crown*. In it, Demosthenes is forced to defend his entire public career – a time during which he saw Athens lose its autonomy and cultural status to the growing power of Macedon under the leadership of Philip II and his son Alexander the Great.

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 30.10 - Alcibiades

We will explore the transgressive culture icon Alcibiades through the lens of Plato's dialogue named after him. In it, Socrates approaches the young Alcibiades for the first time and offers to help him achieve his unbridled political ambitions, if he is only willing to spend time with him.

We will pay particular attention to Alcibiades' relationship with Socrates and his role in Platonic philosophy, but we will also focus on his portrayal in a range of ancient authors, such as Aristophanes, Thucydides, Xenophon, and Plutarch.

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 30.18 - Lover, Victim, Goddess, Whore: Helen in Ancient Greek Literature

Celebrated as a lover, pitied as a victim, worshipped as a goddess, reviled as a whore—Helen of Troy has captivated people's imaginations from classical antiquity to today. This advanced reading course offers students the opportunity to read select texts in ancient Greek by authors including Homer, Sappho, Herodotus, Euripides, and Plutarch, and learn about one of the most elusive and enchanting figures of Greek antiquity.

Degree Requirement Attributes: Dist:LIT; WCult:W

GRK 85 - Independent Reading and Research

Instructor: Department Chair

GRK 87 - Thesis I

Instructor: Department Chair

Independent research and writing under supervision of a member of the Classics faculty. Open to honors students in their senior year and to other qualified students by consent of the Department. Students register for GRK 87, rather than CLST 87, when their intended thesis or equivalent honors project involves substantial amounts of reading in ancient Greek.

Students pursue the research program laid out in their thesis proposal. By the end of this first term of honors work, they have they will have begun substantive work on a thesis or equivalent project; e.g., a first chapter. Upon the recommendation of the research advisor, the department may, at the end of the first term, give permission for the student to register for CLST 88.

A grade of "ON" is assigned pending completion of the thesis or equivalent project later in the year, at which point the "ON" will be replaced by a final grade. If the advisor does not recommend continuation to CLST 88, the "ON" will be replaced with a letter grade upon completion of a shorter independent paper or project approved by the research advisor, at which point the student may petition the Classics Department for Culminating Experience credit to be assigned.

Prerequisite: permission of the instructor.

LAT - Latin Courses

To view Classics requirements, [click here](#) (p. 190).

LAT 1 - Latin 1

Introduction to Latin grammar, vocabulary, and syntax through prose readings of gradually increasing difficulty. Never serves in partial satisfaction of the Distributive or World Culture Requirement.

Offered: Fall, Winter.

LAT 2 - Latin 2

Continues the study of Latin language and Roman culture begun in Latin 1. The structures of the language are introduced through readings of gradually increasing complexity. The narrative content of the course brings in historical persons and events from the last quarter of the first century A.D, both in the province of Britannia and in the city of Rome. The class will also spend some time studying real inscriptions, curse tablets, and coins, as well as composing in Latin as a means to increasing reading fluency. This course is primarily designed for students who have taken Latin 1 at Dartmouth, but will also be a good fit for those who have had one or more years of high school Latin and want to reinforce their skills before moving on to reading unadapted Latin in Latin 3.

Offered: Spring, Winter.

LAT 3 - Latin 3

Continued study of Latin grammar, vocabulary, and syntax with reading of selected literary texts. Completion of Latin 3 satisfies the College language requirement. Never serves in partial satisfaction of the Distributive or World Culture Requirement.

Prerequisite: LAT 1, or equivalent.

Offered: Fall, Spring.

LAT 10 - Topics in Latin Texts

Latin 10 comprises a series of courses appropriate for students who have completed one year of college study or equivalent coursework in high school. All courses in this series provide review of grammar and syntax as well as practice in reading unadapted passages from Roman authors.

Degree Requirement Attributes: WCult:W

LAT 10.01 - Topics in Latin: The Landscape of Latin Literature

Designed to introduce students to varied aspects of Latin literary culture. Beginning with some physical evidence of literacy and writing materials, we will proceed to study the physical history of ancient books and publication methods, then analyze a series of short works illustrating how the Romans themselves thought about literary production, the functions texts can serve, and the nature of meaning and authorship. Readings are a mixture of poetry and prose taken from a variety of authors including Catullus, Cicero, Tibullus, Ovid, Pliny, Martial, and Juvenal, as well as Tom Stoppard's play *The Invention of Love*, which gives a fresh perspective on the history of classical scholarship at the beginning of the 20th century. Not open to students who have received credit for LAT 015.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 10.02 - Topics in Latin Texts: Clodia Metelli

An introduction to scholarly resources with a study of our original sources for the life of Clodia, wife of Metellus, one of the most interesting female figures of ancient Rome. In addition to reading selections referring to Clodia (or "Lesbia") from the letters and speeches of Cicero and the poems of Catullus, we will consider the ways that these generically different sources were consumed in the first century B.C.E. and how, later, they were (sometimes quite precariously) preserved through the medieval period in the manuscript tradition. This course is designed for students who have completed at least the Latin 1, 2, and 3 sequence at Dartmouth, or who have previously studied all the basics of Latin grammar but are looking for a systematic review of grammar and poetic meter and an introduction to the tools scholars use when reading texts closely. Not open to students who have received credit for LAT 010 without decimal suffix.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 10.03 - Topics in Latin Texts: Petronius's Satyricon and Neronian Rome

An introduction to continuous readings of unadapted Latin prose via the hilariously bizarre novel *Satyricon*, written by a certain Petronius during the reign of Nero. Petronius's work will be supplemented with excerpts from Petronius'

contemporaries or near-contemporaries (Seneca, Lucan, Tacitus) to paint a picture of the carnivalesque madness that was Neronian Rome. The course includes a comprehensive review of Latin grammar and the opportunity to discuss questions of language and interpretation.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 10.04 - Latin Manuscripts and Palaeography

This course is an introduction to the basic skills of Latin paleography, from the scripts of Late Antiquity to the Humanist scripts of the Renaissance. Working closely with manuscriptis in the Dartmouth Collections, supplemented with digital images of the of manuscripts held in other libraries around the world, students will learn to transcribe and translate manuscripts, and to understand them both as transmitters of texts and as material objects that tell their own stories.

Degree Requirement Attributes: Dist:ART; WCult:W

LAT 15 - Literature and the Romans

This course introduces some new ways of thinking about reading and writing in the Roman world. Beginning with the physical history of ancient books and publication methods, we will proceed to examine typical tricks and strategies of Roman writers to inform, move, or amuse their readers. Readings are a mixture of poetry (e.g. Catullus, Vergil's *Eclogues*, short poems of Martial) and prose (e.g. Cicero's personal letters, biographical notices), supported by a structured vocabulary program and review of key grammatical concepts.

Prerequisite: LAT 3 or LAT 10, or equivalent preparation in secondary school.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 18 - Intermediate Topics in Latin

Meets conjointly with an upper-division course and shares much of its content, but with different requirements and assessments. Typically students taking the course at the intermediate level have shorter reading assignments in the original language and a greater emphasis on language development. For instance, they may take a language test instead of writing the research paper at the end of the term.

LAT 18.01 - Intermediate Topics in Latin: Mortality and Immortality in Roman Philosophy

Meets conjointly with LAT 27 (Roman Philosophy) and shares much of its content, but with shorter Latin reading assignments and a greater emphasis on language development.

Degree Requirement Attributes: Dist:TMV; WCult:W

LAT 18.02 - Catullus

The poems of Catullus have been delighting, moving, and frequently shocking readers since he wrote them in the final years of the Roman republic. We will read extensively from this fascinating body of work, paying close attention to language and style. Significant themes will include love, friendship, obscenity, invective, gender, sexuality, poetics, and programmatics. In addition, we will study the literary culture of the late Republic and explore recent critical approaches to Catullus.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 18.03 - Intermediate Topics in Latin: The Italian Countryside

The environmental concerns of our own time find a counterpart in the Roman fascination with the beauty and fragility of the rural landscape and natural world. Readings may come from pastoral poetry, represented especially by Vergil's *Eclogues*; the literature of farming and agriculture, including Vergil's *Georgics*; and related themes in works by Varro, Horace, Tibullus, and others. This course is taught conjointly with LAT 31 The Italian Countryside, but with assignments adjusted for the needs of less-experienced Latinists. Students may not take both LAT 18.03 and LAT 031 for credit.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 20 - Epic Poetry

The summit of achievement for a Roman poet was the epic, written in hexameter verse and combining storytelling with expressions of deeply held cultural values. This class will read portions of one or more Latin epics, such as Vergil's *Aeneid*, Ovid's *Metamorphoses*, Lucan's *Civil War*, and Statius' *Thebaid*. Potential areas of emphasis include the representation of imperial power, gender and sexuality, intertextuality, genre, and reception.

Degree Requirement Attributes: Dist:LIT

LAT 21 - Love Poetry

An exploration of the rich tradition of amatory verse at Rome. Readings may come from the love-elegists Tibullus, Propertius, and Ovid, and/or other poets, including Catullus and Horace. Topics to be considered include the art of persuasion in erotic literature; Roman attitudes towards gender, sexuality, and desire; and the emergence and development of Augustan culture.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 23 - Roman Drama

Reading ancient drama allows us to consider the function of artistic production to engage with challenging political and social questions. The class will read from the comedies of Plautus and Terence and/or the tragedies of Seneca, and will explore features of the comic and/or tragic genre.

Latin readings may be combined with one or more Greek plays read in translation.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 25 - Roman Historical Writing

Readings drawn from the rich tradition of Roman historical writing. Selected readings from the works of Caesar, Sallust, Livy, and/or Tacitus will enable the class to think about the character of Latin prose writing in different periods and about the strategies of historians for offering critique and/or affirmation of those in power.

Degree Requirement Attributes: Dist:SOC; WCult:W

LAT 27 - Roman Philosophy

Educated Romans studied Greek philosophy with enthusiasm and found their own ways to express philosophical ideas in writing. Readings selected from the works of Cicero, Lucretius, Seneca, and others will illustrate how Greek thought was augmented and transformed in the Roman period. Not open to students who have previously received credit for LAT-18.01.

LAT 28 - Literature of the Later Empire and the Middle Ages

Readings from the late Empire to the high Middle Ages that may include selections from the Vulgate, St. Augustine's *Confessions*, the *Passion of Saints Perpetua and Felicity*, Hrotsvitha's *Dulcinius*, and the *Carmina Burana*.

Prerequisite: LAT 10 or equivalent.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 29 - Cicero and Roman Legal Argument

In this class we will read the text of Cicero's speech for Aulus Cluentius (*Pro Cluentio*) as an example of Roman legal argument. In 66 BCE Cicero defended Aulus Cluentius on a charge of murdering his stepfather Statius Albius Oppianicus (*de sicariis et veneficiis*). Both men—as well as many others involved in the case—came from local towns in Roman Italy. The stakes for conviction: loss of civic status, essentially a social death. Cicero's defense of his client provides a masterly example of courtroom defense strategies (the mustering of evidence, witness testimony, manipulation of legal procedures) and the courtroom story-telling that created presumptive realities of “wrong” and “truth,” of “innocence” or “guilt.” The speech thus affords insight into questions of Roman courtroom procedure and judicial integrity, of the assimilation of Italians within the Roman social and political community and access to Roman law, and of the social expectations

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 30 - Topics in Latin Literature

Representative texts and topics that highlight the complex relationship between Greek and Latin literature. Offerings vary from year to year to allow opportunities to study subject matter such as the ancient novels and Roman reinterpretations of Greek myth. Emphasis is placed on writing and research skills as well as the development of reading ability in Latin.

LAT 30.03 - Ancient Fiction: The Greek and Roman Novels

Close reading of Greek and Roman novels in the original in addition to wider-reading in translation, with particular attention to narrative, genre, and literary and cultural context.

Cross-Listed as: GRK 30.04

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 30.04 - Roman Fiction: The Greek and Roman Novels

Kidnapped lovers, marauding pirates, powerful witches, and the occasional werewolf—this is the world of the ancient novel. In this class, students will focus on one text in the original language and read more broadly in translation. We will pay particular attention to narrative, genre, intertextuality and literary history, cultural context, and reception.

Cross-Listed as: GRK 30.05

Degree Requirement Attributes: Dist:LIT; WCult:CI

LAT 30.06 - Thinking Big: Heroes in Aristophanes and Plautus

In this class we read comic texts produced in Classical Athens and Republican Rome, to consider the literary features of the comic genre and the political significance of comedy in performance. We focus on the comic hero who defies all obstacles to win desirable social goods (food, wine, sex; peace, freedom).

Cross-Listed as: GRK 30.06

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 30.07 - Roman Perspectives on Friendship

Studies the ideology and practice of friendship at Rome through personal letters, short poems, and philosophical discussions. In particular, we consider how the relationship called *amicitia* fit into the social hierarchy, whether that relationship entailed personal affection, and how Romans dealt with the ethical problems that sometimes arise in the context of friendship. Readings in Latin include personal and political letters of Cicero, short poems of Catullus to both friends and enemies, and Cicero's essay *De amicitia*.

Offered: Fall.

Degree Requirement Attributes: Dist:TMV; WCult:W

LAT 30.08 - History and Structure of the Latin Language

Instructor: Pulju

This course focuses on the grammar, pronunciation, and writing of Latin, starting from its origin in Proto-Indo-European (c. 4000 BC), proceeding through early Latin into the classical period (1st cent. BC to 1st cent. AD), and ending with the post-classical era. Through analysis of language data and reading of selected ancient texts, students will gain a greater mastery of synchronic language patterns, and also will understand the diachronic origins of those patterns.

Cross-Listed as: LING 11.14

Offered: Fall.

Degree Requirement Attributes: Dist:QDS; WCult:W; Lang:LRP

LAT 30.09 - Listening to Voices from Slavery

Instructor: Stewart

This course surveys Latin texts that represent or embed slaves' voices. We read inscriptions (including slave testimonies) and excerpts from literary texts (including publicly performed drama, historical narratives, courtroom speech, poetry, novel, and martyr narratives) alongside contemporary theoretical work, in order to explore the voices and the representations of slave experience. Students develop analytical tools to identify and evaluate fragmentary testimonies of slavery, and they gain a sense of the archive--and the particular value of literary sources--for studying the relationships of slavery.

Degree Requirement Attributes: Dist:LIT; WCult:CI

LAT 31 - The Italian Countryside

The environmental concerns of our own time find a counterpart in the Roman fascination with the beauty and fragility of the rural landscape and natural world. Readings may come from pastoral poetry, represented especially by Vergil's *Eclogues*; the literature of farming and agriculture, including Vergil's *Georgics*; and related themes in works by Varro, Horace, Tibullus, and others.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 32 - The Poetry Book

Studies the development of the carefully crafted and deliberately arranged book of poetry at Rome, including one complete *libellus* in Latin with the possibility of additional examples in translation. Authors that may be read include Vergil, Horace, Propertius, Ovid, Statius, and Martial. As time allows, the class will also explore later

examples of book design and artistry, drawing on Dartmouth's collection of rare books.

LAT 33 - The Literature of Science

The ancient Greeks and Romans studied natural phenomena passionately and considered the pursuit of scientific knowledge a mind-transforming experience that was sublime and potentially even sacred. This class will study one or more key texts in the Roman scientific tradition. Readings will be drawn from poets, such as Lucretius and Manilius, and/or prose authors, like Seneca and the Elder Pliny. Potential topics include ancient physics, astronomy, meteorology, and natural history.

Degree Requirement Attributes: Dist:TMV; WCult:W

LAT 34 - Letter-writing in the Roman World

The Romans considered letter-writing an important skill and adapted the letter form to many purposes: maintaining friendship, promoting political ends, consolation, education, artistry, and sheer entertainment. Readings will come from the prose letters of Cicero, Seneca, or Pliny; personal notes and letters recovered from archaeological sites; and/or the verse epistles of Ovid or Horace.

Offered: Spring.

LAT 35 - Satire and Humor

Basically a humorous monologue on contemporary topics, verse satire is the one kind of writing the Romans claimed as entirely their own. The class will read some of the best-known examples by Horace and Juvenal and may also explore other examples of Roman humor: epigrams by Catullus or Martial, Seneca's *Pumpkinification*, Petronius's *Satyricon*.

Degree Requirement Attributes: Dist:LIT; WCult:W

LAT 85 - Independent Reading and Research

Instructor: Graver

LAT 87 - Thesis

Instructor: Graver

Independent research and writing under the supervision of a member of the Classics faculty. Open to honors students in their senior year and to other qualified students by consent of the Department.

Prerequisite: permission of the instructor.

Cognitive Science Program

Chair: David Kraemer (Psychological & Brain Sciences; Education)

Professors: Devin Balkcom (Computer Science), John Kulvicki (PHIL), Thalia Wheatley (PBS); Associate Professors: Valentina Apresyan (Cognitive Science), Luke Chang (Psychological & Brain Sciences), David Kraemer

(PBS; Education); Assistant Professors: Souyoung Jin (Computer Science), Steven Frankland (Cognitive Science), Jonathan Phillips (Cognitive Science); Lecturer: Megan Hillis (Cognitive Science), Dae Houlihan (Cognitive Science), Caleb Kendrick (Cognitive Science), Samantha Wray (Linguistics).

To view Cognitive Science courses, [click here](#). (p. 212)

Cognitive Science Program

Cognitive Science is the study of cognition from an interdisciplinary perspective and is largely informed by models of information processing. Contributing disciplines include cognitive psychology, computer science, neuroscience, philosophy, linguistics, as well as other fields, such as anthropology and sociology. Topics of focus include perception, memory, reasoning and language.

Dartmouth's cognitive science program is issues-oriented and relies on methods drawn from a number of disciplines. Students pursuing a major should become familiar with the basic approaches to cognition of psychology, philosophy, computer science and linguistics. This breadth is complemented by the depth provided by the focus area, elective courses chosen under the guidance of an advisor, which allows students to gain specialized knowledge in a particular topical area of cognitive science.

Cognitive Science Major

1. PREREQUISITES:

- COGS 1: Introduction to Cognitive Science
- One approved course in statistics or quantitative analysis (e.g., PSYC 10). *For a list of currently approved statistics courses, [click here](#).*

2. REQUIREMENTS: Eleven additional courses, including:

- LING 1: Introductory Linguistics
- COSC 1: Introduction to Programming and Computation, or a higher-level course in Computer Science
- COGS 25: Philosophy of Cognitive Science, or one of the following (all courses have prereq of one course in PHIL):
 - PHIL 27 (Phil of Science)
 - PHIL 34 (Lang and Thought)
 - PHIL 35 (Mind and Psychology)
- COGS 02: Cognitive Psychology, or a higher level PSYC course (check courses for a prereq: PSYC 1, COGS 1 etc.)

- One approved course in experimental methodology (e.g., PSYC 11). *For a list of approved methods courses, [click here](#).*
- COGS 80: Senior Seminar in Cognitive Science
- One Culminating Experience: either:
 - a) Senior Honors Thesis (COGS 86, 87)
 - b) 1 or 2 term independent study with advanced term paper (COGS 85)
 - c) COGS 81: (This is a *second* term of the COGS 80 with an advanced term paper)
- Four courses in an approved Focus Area. For currently approved focus areas and associated courses, [click here](#). Examples of focus areas include:
 - Decision Making
 - Language and Thought
 - Learning and Development
 - Consciousness
 - Cognitive Science of Design
 - Social Interaction Networks
 - Intelligence
 - Moral Reasoning

Students who wish to design their own focus area not listed here should contact the chair for further discussion.

Honors Program

The Honors Program in Cognitive Science offers qualified students the opportunity to undertake independent research under the direction of a faculty member. It is important to consult with a prospective advisor as early as possible, preferably during the junior year or earlier.

Applications to the Honors Program may be submitted to the Chair either during the spring of the junior year or the fall of the senior year. The project itself normally lasts two terms. Students will take COGS 86 the first term and COGS 87 the second. The completed thesis is to be submitted during the winter or spring term, and an oral presentation will be given at a special seminar of students and faculty.

COGS - Cognitive Science

To view Cognitive Science Requirements, [click here](#) (p. 211).

COGS 1 - Introduction to Cognitive Science

Instructor: Phillips and Frankland

Cognitive Science aims to understand how the mind works by using tools and insights from a variety of fields including experimental psychology, computer science,

linguistics, vision science, philosophy, anthropology, behavioral economics, and neuroscience. This course will introduce you to many of the major tools and theories from these areas as they relate to the study of the mind. We will tour mental processes such as perception, reasoning, memory, attention, imagery, language, intelligence, decision-making, and morality, and discover many strange and amazing properties of mind.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

COGS 2 - Cognitive Psychology

Instructor: Bharucha

This course provides a comprehensive overview of cognitive psychology, the scientific study of mental processes: how people acquire, store, transform, use, and communicate information. Topics may include perception, attention, language, memory, reasoning, problem solving, decision-making, and creativity.

Prerequisite: PSYC 1 or PSYC 6 or COGS 01

Cross-Listed as: PSYC 028

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

COGS 11.04 - Face Perception

Instructor: Gobbini

Faces are one of the richest sources of information for non-verbal communication. Through faces we recognize identity and infer the emotional and mental states of others, as well as where they are directing their attention. This course will focus on the neural mechanisms for face perception and how these mechanisms facilitate rapid extraction of cues that facilitate social interaction. Particular relevance will be put on the neural systems for representation of person knowledge. In addition to weekly readings, students will have a written exam at the end of the course.

Cross-Listed as: PSYC 51.02

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

COGS 21 - Introduction to Computational Neuroscience

Instructor: Granger

Your brain is composed of low-precision, slow, sparsely-connected computing elements, yet it outperforms any extant computer on tasks ranging from perception to planning. Computational Neuroscience has as its twin goals the scientific understanding of how brains compute thought, and the engineering capability to reconstruct the identified computations. Topics in the class included

anatomical circuit design, physiological operating rules, evolutionary derivation, mathematical analyses, and emergent behavior, as well as development of applications from robotics to medicine.

Cross-Listed as: PSYC 40; COSC 16

Offered: Fall.

Degree Requirement Attributes: SCI

COGS 25 - Philosophy of Cognitive Science

Instructor: Kendrick

What is the mind and how can we model it? Cognitive science offers a distinctive approach to some of the great philosophical questions about the mind. But what does it tell us? This course will cover the classical foundations of cognitive science, and some of the more recent developments in the field. We will study the computational theory of the mind and its implications, connectionism, theories of embodiment, dynamical systems, and recent statistical approaches to cognition. (Not open to students who received credit for PHIL 010/COGS 11.01.)

Prerequisite: One Philosophy course, or permission of the instructor.

Cross-Listed as: PHIL 025

Offered: Winter.

Degree Requirement Attributes: Dist:TAS

COGS 26 - Philosophy and Computers

Instructor: Dominicucci

The accomplishments of artificial intelligence research and the widespread use of computers in our society confront us with many interesting philosophical questions. What are the limits of artificial intelligence? Could computers ever think or feel? Is the Turing test a good test? Are we really computers? Are there decisions computers should never make? Do computers threaten our privacy in special ways? This course will consider such issues in order to explore the philosophical implications of computing. Open to all classes.

Prerequisite: One Philosophy course, one Cognitive Science course, one Computer Science course, or permission of the instructor.

Cross-Listed as: PHIL 026

Offered: Spring.

Degree Requirement Attributes: Dist:TAS

COGS 32 - STEM Learning and Education

Instructor: Kraemer

How do we learn, understand, and teach science, technology, engineering, and math (the STEM disciplines)? In this class, we will explore the nature and

development of the scientific mind; how we formulate theories, design experiments, and understand scientific, technological, and mathematical concepts; and how we learn and teach related skills in the classroom, addressing the debate about the effectiveness of direct instruction and hands-on approaches. Open to all classes.

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

COGS 34 - Development in the Exceptional Child

Instructor: Coch

What is an "exceptional" child? How might an exceptional child think about and experience the world? What is happening inside the brain of an exceptional child? We will learn about specific types of exceptionality likely to be encountered in the classroom, including attention deficit/hyperactivity disorder, autism spectrum disorders, depression, dyscalculia, specific language impairment, dyslexia, and dysgraphia. In exploring exceptionality, we will focus on behaviors that define the exceptional child; different approaches to learning, viewing the world, and interacting with others that characterize exceptional children; the brain bases of atypical or exceptional development; and how scientific knowledge affects educational practice. Open to all classes.

Cross-Listed as: EDUC 064

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

COGS 44 - Artificial Intelligence

Instructor: Vosoughi

An introduction to the field of Artificial Intelligence. Topics include games, robotics, motion planning, knowledge representation, logic and theorem proving, probabilistic reasoning over time, understanding of natural languages, and discussions of human intelligence.

Prerequisite: COSC 10. COSC 30 is recommended.

Cross-Listed as: COSC 76

Offered: Fall.

Degree Requirement Attributes: TAS

COGS 45 - Computational Cognitive Science

Instructor: Frankland

Human cognition is characterized by remarkable intellectual feats, but also frustrating failures. What general principles determine what minds can and can't achieve? In this course, we treat cognition as computation and construct artificial systems to model cognitive strengths and weaknesses. Part of each class will be spent in lecture and part will be spent working directly with computational

models in active learning exercises that use neural networks for hands-on exploration.

Offered: Spring.

Degree Requirement Attributes: Dist:TAS

COGS 50.03 - Introduction into Cognitive Linguistics

Instructor: Apresyan

This course provides an introduction to cognitive linguistics, a field that investigates the relationship between language and human cognition. Cognitive linguistics emphasizes the role of our bodies and brains in shaping our understanding and use of language. The course explores how our physical experiences and cognitive abilities affect language structure and use. For instance, our attentional biases add nuances to our word choices in spatial and temporal constructions, and our physical experiences influence our expression of mental and emotional concepts. Throughout the course, we will cover major cognitive linguistic concepts, including metaphor, categorization, frame semantics, goal bias, and prototype theory. Additionally, we will examine how these and other cognitive linguistic concepts can be applied to a variety of real-world phenomena, such as online media, humor, second language learning, and even gesticulation. The course format incorporates lectures, reading discussions, practical exercises, creative assignments, and a research project. Students will employ diverse research methods, including behavioral experiments, linguistic corpora analysis, and interviews.

Offered: Fall.

Degree Requirement Attributes: Dist:TAS

COGS 50.04 - Theories of Consciousness

Instructor: Kendrick

Conscious experience is at once both completely familiar and utterly mysterious: how is it that electrical activity in a lump of grey matter – the brain – gives rise to the Technicolor phenomenology of our conscious experience? If human beings are just biological machines, then how is possible that we have a subjective point of view on the world? Why are we not just mindless robots, that produce behavior in light of stimulations from the environment, but lack any inner awareness or consciousness? In this class we will read, and bring together in conversation, cutting edge work from philosophy, psychology, and the neurosciences on the nature of consciousness.

Prerequisite: One Philosophy course, one Cognitive Science course, or permission of the instructor

Cross-Listed as: PHIL 35.01

Offered: Fall.

Degree Requirement Attributes: Dist:TMV

COGS 50.08 - Modeling Mind and Behavior

Instructor: Hillis

You will actively engage in the scientific process of hypothesis testing that combines the disciplines of neuroscience, behavioral science, statistics/machine learning to understand the mechanisms of mind and behavior. The course will review computational approaches to modeling the mind by walking through the steps of hypothesis formation, experimental design, statistical analysis and theory development requiring skills in research methods, programming and scientific writing.

Offered: Fall.

Degree Requirement Attributes: Dist:TAS

COGS 50.09 - Computational Models of Social Cognition

Instructor: Houlihan

This course explores ways of thinking about models in cognitive science. The course will follow three themes, with the goal of developing your ability to analyze what different modeling approaches reflect about our views of the mind and of the world. The content-theme of the course will be computational models of social cognition, which will involve other topics in cognitive science to build the foundations. The theoretical-theme will be framing models as epistemological expressions, which will emphasize thinking deeply about the philosophy and practice of modeling. The methodological-theme will be probabilistic programming, which will give you a skillset for building cognitive models.

Offered: Winter.

Degree Requirement Attributes: Dist:QDS

COGS 50.10 - Information Theory in Cognitive Science

Instructor: Frankland

Cognitive scientists treat thinking as a form of information-processing, regardless of whether that thinking is carried out in biological or artificial systems. But what, exactly, is information? How do we quantify it? And what does it have to do with thinking? In this course, we study the basics of formal information-theory and learn about how these concepts have been utilized to understand cognition in Psychology, Neuroscience, Computer Science, AI, Linguistics, Philosophy, and Design. In doing so, we consider whether information theory offers a general way to understand minds, where it excels, and where it might be lacking.

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

COGS 50.11 - Learnability and Semantic Universals

Instructor: Kendrick

Languages universally do not lexicalize certain concepts—no natural language contains a color term meaning "red or green", an operation which expresses logic "NAND" (i.e., a binary operation which returns false when both inputs are true), or a quantifier meaning "between 2 and 7". In recent years, work in developmental psychology, psycholinguistics, and computational linguistics has converged on the hypothesis that languages only lexicalize the expressions which are the easiest to learn. In this course, we will explore this hypothesis, focusing in particular on quantifiers.

Offered: Spring.

COGS 80 - Major Seminar in Cognitive Science

Instructor: Phillips, Kraemer

This seminar is required for majors. Each week a member of Dartmouth's faculty working in diverse areas of cognitive science will present current work in a lunchtime seminar. Prior to the lecture you will work through related papers as a group in preparation, and the day following the lecture you will meet with the professor to discuss the material further. This seminar will prepare you for independent research in Cognitive Science.

Offered: Fall, Spring.

COGS 81 - Major Seminar in Cognitive Science II

Instructor: Phillips, Kraemer

This is the second term of COGS 80. Each week a member of Dartmouth's faculty working in diverse areas of cognitive science will present current work in a lunchtime seminar. Prior to the lecture you will work through related papers as a group in preparation, and the day following the lecture you will meet with the professor to discuss the material further. This seminar will prepare you for independent research in Cognitive Science.

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:SOC

COGS 85 - Independent Study and Research

Instructor: Kraemer

This course offers qualified students of cognitive science the opportunity to pursue work on a topic of special interest through an individually designed program. Requires permission of the instructor and the Chair.

Offered: Fall, Spring, Winter.

COGS 86 - Honors Research

Instructor: Kraemer

COGS 86 and COGS 87 consist of independent research and writing on a selected topic under the supervision of a Program member who acts as advisor. Open to honors

majors in Cognitive Science. Permission of the thesis advisor and the Chair required.

Students are awarded one course credit for successful completion of this course upon completion of COGS-087. Students register for COGS-086 and receive a grade of "ON" (ongoing) at the end of the term. Students then register for COGS-087 the subsequent term to complete the coursework. A final grade will replace the "ON" in COGS-086 upon completion of COGS-087.

Offered: Fall, Spring, Winter.

COGS 87 - Honors Thesis

Instructor: Kraemer

COGS 86 and COGS 87 consist of independent research and writing on a selected topic under the supervision of a Program member who acts as advisor. Open to honors majors in Cognitive Science. Permission of the thesis advisor and the Chair required.

Students are awarded one course credit for successful completion of this course. Students who have registered for COGS-086 register for COGS-087 to complete the coursework. A final grade will replace the "ON" for COGS-086 upon completion of this course for a total of 2 credits for COGS-086 and COGS-087.

Offered: Fall, Spring, Winter.

College Courses

College Courses, introduced in 1968-1969, are interdisciplinary in nature and are intended to appeal to students of widely differing backgrounds and interests.

To view College Courses courses, click here (p. 216).

COCO - College Courses

To view College Courses information, click here (p. 216).

COCO 21 - What's in Your Shoebox? Unpacking Your Study Abroad Experience

Cultural anthropologist Bruce La Brack uses the term "shoeboxing" to describe what is often done with study abroad experiences: the entire experience is put in a mental "shoebox," tucked away in the closet of the mind, taken out only rarely for periodic show-and-tell reminiscing. When we want to share stories about the time away or how we've changed, it can be hard to find folk who really want to listen. *What's in Your Shoebox?* aims to rectify this. The class has two primary goals; 1) to provide you with the opportunity to revisit, unpack, and deeply reflect upon your recent study abroad experience, and 2) to identify

creative, practical, and meaningful ways to apply this new knowledge and awareness.

Prerequisite: Study abroad 2017/18

Degree Requirement Attributes: Dist:SOC; WCult:CI

COCO 23 - The Language-Music Connection

Instructor: Levin, McPherson, Diabate

Language and music are universal components of human experience, so integral that they are often considered part of what defines us as humans. While we treat them as distinct phenomena, the overlap between the two is immense, structurally, neurologically, and culturally. Such connections have long been recognized, but recent research from diverse fields like linguistics, (ethno)musicology, cognitive psychology, anthropology, and neuroscience continues to reveal just how intertwined the two faculties are. Drawing on this body of research and our respective specialties, we explore the language-music connection from the basic ingredients (pitch, timbre, rhythm, syntax), to cultural expression, to evolution and origins. Running through the course is a hands-on case study of a West African xylophone tradition where language and music are so intimately related that they cannot be separated. Students will be taught by a master of the tradition, Mamadou Diabaté, to feel for themselves what it means to speak through an instrument.

Cross-Listed as: LING 11.13 MUS 17.06

Degree Requirement Attributes: Dist:INT or ART; WCult:NW

COCO 26 - So, You Want to Save the Planet, Be a Global Citizen? What's in Your Toolbox?

Traveling can be transformative. But transformative travel does not happen simply by virtue of hopping on a plane and appearing in another culture someplace on the globe. It happens through reflection and a critical awareness of self and other in the context of place, culture, and systems of power. The Toolbox will prepare you for mindful, ethical travel by equipping you with the research and reflection tools you'll need to maximize your global travel experiences.

Degree Requirement Attributes: Dist:SOC; WCult:CI

COCO 30 - Democracy - A Challenged Concept

Three decades after the end of the cold war resurgent ultra-nationalism, parochial populism, white supremacy, anti-immigrant fervor, xenophobia, anti-Semitism and rabid misogyny undermine the stability and indefeasibility of European and American democracies. Commentators and scholars identify rampant capitalism, neoliberalism, globalization, and the untamed proliferation of new media as causes for the vulnerability democracies. While some consider the establishment of right-wing movements and politicians as expressions of a temporary populist phase or

even the advent of a post-democratic age, others refer to white-supremacist attacks or the recurrence of KKK and neo-Nazi groups worldwide as harbingers of a new fascism. This course will discuss the central terms and concepts such as (illiberal) democracy, republicanism, neoliberalism, populism, or fascism, as well as (counter-) movements on both side such as the Tea Party, Alt-Right, the Brexit, as well as #MeToo, Occupy Wall Street, and Black Lives Matter through a variety of artifacts, documentaries, movies, speeches, literary texts, news articles and theoretical debates.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:W

COCO 32 - The Art of Adaptation and Storytelling

This theoretical and practice-based course is a study of the conversion of oral, historical and fictional narratives into stage drama, cinema and literary texts. Special attention will be given to the cultural and political implications of cross-generic transformation, formulaic conventions and concepts of “genre,” “crossover appeal” and “adaptation.” Throughout the term, the intersections of race, culture and economics will be regularly questioned. Black cultural storytelling in various mediums and genres will be examined to serve as a point of entry into discussion of cultural worldview and storytelling in order to aid and encourage students to explore the theories, concepts and practice of adaptation from multiple, diverse vantage points and areas of interest. Building upon the adaptations they created in the first half of the quarter, students begin translating their stories visually in the “production” phase of the course. They assess how emotional information is translated in the original form and invent new ways of translating this content in their new visual format. Final projects can be interactive stage pieces, video installations or films.

Cross-Listed as: FILM 44.08

Degree Requirement Attributes: Dist:ART; WCult:CI

COCO 33 - Homelands and Diasporas: Russian Jews on Three Continents

Drawing on a variety of disciplines, such as anthropology, history, sociology, political science, and cultural studies, and sources ranging from academic works to works of fiction and films, the course first explores the history and culture of Russian (pre-1917) and especially Soviet Jews (1917-1991)—a major and significant segment of the world Jewry—prior to the massive immigration of the 1970s-1990s. The rest of the course involves a comparison of the experience of Russian-speaking Jews in the three major countries they have immigrated to—Israel, US, and Germany—as well as those remaining in Russia today.

Cross-Listed as: ANTH 50.41 EEER 38.15 JWST 05.01

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

COCO 34 - Psychoanalysis and Philosophy

This class will stage an encounter between psychoanalysis and philosophy, introducing students to both fields by placing them side by side. Drawing on the complementary expertises of the two-person teaching team, weekly readings will pair at least two texts, including one from each primary field, to illuminate similarities and differences between psychoanalytic theory on the one hand and philosophical concepts on the other, noting where appropriate the mutual influence of the two fields. Because psychoanalysis is also a clinical practice, this interdisciplinary encounter raises the question of the practical dimension of philosophical thought, and we will ask about philosophy’s potential impact on lived experience, as well as whether the practice of psychoanalysis remains a valuable mode of treatment or an aid to everyday living. To help organize the broad questions at the intersections of psychoanalysis and philosophy, we will divide the class loosely into four thematic units, the unconscious, Oedipus, interpretation, and transference. Class will proceed mostly through guided discussion; assignments will include reading responses plus midterm and final papers, with opportunities for additional credit so that students might pursue their own interests within the course subject matters.

Cross-Listed as: ENGL 54.17

Degree Requirement Attributes: Dist:TMV; WCult:W

COCO 36 - Alaska: American Dreams and Native Realities

Since the time United States "purchased" Alaska from Russia, this land has been seen by many as the "last frontier" - a place where tough and adventurous Euro-Americans could strike it rich or get away from the negative consequences of civilized living. Using anthropological and historical works as well as fiction, film and other media, the seminar explores the mythology surrounding the "land of the midnight sun." This myth of the "last frontier" - in its development-driven as well as conservationist versions -- is also contrasted with the ways Native Alaskans' have viewed and lived on their land.

Degree Requirement Attributes: Dist:SOC; WCult:CI

COCO 38 - Transforming the Energy System: Keeping the Lights on While Saving the Planet

This course will explore how transitioning to renewable energy systems is a necessary leverage point for addressing human-caused climate change, with a specific focus on how energy for electricity and heat is generated and used in New England. Through the collaboration of instructors from the Environmental Studies Program, the Irving Institute for Energy and Society, the Department of Earth Sciences and the Sustainability Office, students will gain an interdisciplinary perspective on New England energy systems and human-caused climate change, including 1)

the economic, policy, and regulatory management and distribution of energy, 2) the environmental and societal benefits and impacts of these systems on people and the environment, 3) a scientific understanding of fossil fuel resource formation, extraction, refining and use, and 4) climate change attribution and predictions of future human-caused climate change. The course will culminate in a discussion of Dartmouth's own energy transition as well as regional- and national scale solutions for resolving the urgency of climate action with the current political, economic, and technological constraints governing the renewable energy transition.

Cross-Listed as: EARS 021 ENVS 021

Degree Requirement Attributes: Dist:TLA

COCO 39 - Red Terror: History and Culture of the Stalin Labor Camps

The destruction of human beings in the Soviet labor camps (GULAG) is one of the most tragic chapters in the history of the twentieth century. Between the early 1920s and the early 1950s, some 25 million people were arrested and sent to the so-called "correction-labor" camps to perform back breaking work under the most inhumane conditions. The focus of this course is on the history and culture of the Stalin labor camps. Beginning with the violence inflicted by the young Bolshevik regime on the Russian people, we will examine the creation of a network of camps during the "great terror" of 1937-1938 and the economic, political, and cultural features of the camps, through such topics as work, food, camp administration and guards, the relationship between the "political prisoners" and the common criminals, the special plight of women, the hardening of conditions in the camps during and after World War II and the zenith of the GULAG in the early 1950s. Finally, the course will examine the GULAG's demise and the experience of dissidents in the camps of the 1960s-1980s; the way modern-day Russia deals with the memory of the camps; and GULAG-style camps in several socialist countries.

Cross-Listed as: GOVT 40.31

Degree Requirement Attributes: Dist:SOC; WCult:W

COCO 40 - The American University Athlete in the 21st Century

Sports permeates virtually every aspect of life in the United States, including Dartmouth, where approximately 80% of undergraduates are involved in college-sponsored athletics at the varsity or club sports level. Yet the very nature of athletics, with its emphasis on intense physical effort aimed at achieving a specific goal, does not encourage reflection on larger questions about the long-term impact of sports on individuals and communities. The overarching goal of this course is to equip students with information, concepts, and theories that will help them comprehend how playing sports affects university athletes.

The course material will be divided into four modules, each taught by a different instructor: Physiology (Doug van Citters), Cognition (Sian Beilock), Identity (Paul Christesen), and Economics (Michael Harry).

Computer Science - Undergraduate

Chair: Devin Balkcom

Professors D. Balkcom, S. L. Bratus, A. Breuer, A. T. Campbell, M. Casey, A. Chakrabarti, D. Chakrabarty, H. Chang, C. Hauser, W. Jarosz, P. Jayanti, S. Jayanti, S. Jin, K. Kim, D. F. Kotz, A. Introductory Courses

Students wishing to devote one course to the study of Computer Science may choose COSC 1 or COSC 2, depending on their background and interests. Students wishing to devote two or more courses to the study of Computer Science should begin with COSC 1 and COSC 10. Students wishing to take courses in Digital Arts should start by taking COSC 1 or COSC 2. ENGS 20 may substitute for COSC 1 in any program of study.

Undergraduate Courses

Computer Science undergraduate courses are numbered as follows:

- 1–19: Introductory and non-major courses.
- 20–29: Courses in Digital Arts.
- 30–49: Courses in theory and algorithms.
- 50–69: Courses in systems and hardware.
- 70–89: Courses in applied computer science.

90–99: Reading course and culminating experience courses.

Wherever COSC 1 is listed as a prerequisite, it may be replaced by ENGS 20, or placed out of through either the Computer Science Advanced Placement examination or a local placement examination.

Elective Courses

Many of the majors and minors involving Computer Science allow for one or more elective courses. In all cases, an elective course is any Computer Science course numbered from 30 to 89 that is not used to fulfill another requirement. Any lecture-based graduate course (as determined by the Department Undergraduate Advisor) in Computer Science (courses numbered above 100) may substitute for an elective course, as long as the graduate course is not cross-listed as an undergraduate course that is used to fulfill another requirement.

Computer Science Culminating Experience

Students must choose from one of three options:

Option 1) two consecutive terms of COSC 98.
 Option 2) two consecutive terms of COSC 99 (Thesis Research). A written thesis is required for thesis research, the Honors program, or the High Honors program.
 Option 3) two additional advanced topics courses. Eligible courses include courses in the ranges 49.01 through 49.99, 69.01 through 69.99, and 89.01 through 89.99. Each such course will include components in the faculty member's area of research expertise, and will give the opportunity to students to engage with current research. These two courses will be taken in the senior year, unless an exception is approved by the departmental major advisor. These two courses are in addition to the courses used to satisfy the other requirements of the major, and cannot be used to satisfy any other major requirements.

Major in Computer Science

The major in Computer Science is intended for those students who plan careers in Computer Science or in fields that make use of computing, for those who plan graduate study in Computer Science, and also for those who simply find Computer Science interesting. Undergraduates majoring in Computer Science will have opportunities to participate with faculty in activities outside formal coursework. These activities include assisting in courses, writing a thesis or doing a project under the guidance of a

faculty member, and assisting a faculty member in research or in a programming project.

To fulfill the major in Computer Science, a student must complete the courses prerequisite to the major and satisfy the requirements of the major. For additional requirements for the Honors Program see the section 'The Honors Program in Computer Science' below.

Requirements for the Computer Science Major

Prerequisite courses: COSC 1 or ENGS 20; COSC 10.

Requirements: A student who wishes to major in Computer Science must obtain approval of her or his program of study from the Departmental Undergraduate Advisor. To complete the major, it is necessary to pass at least eleven courses in addition to passing the two prerequisite courses. Among these eleven courses must be the following:

1. Two Computer Science courses numbered 30 to 49;
2. Two Computer Science courses numbered 50 to 69;
3. Two Computer Science courses numbered 70 to 89;
4. Three additional courses, of which two are electives (see 'Elective Courses' above) and the third is an elective, or COSC 94, or a Mathematics course numbered 20 or greater that is not a prerequisite to the Mathematics major and is not a seminar or a reading course.
5. Computer Science culminating experience, as described above.

Minors in Computer Science

The Computer Science minor is available to all students who are not majoring in Computer Science and who do not have a modified major with Computer Science. The Digital Arts minor is available to all students, including those majoring in Computer Science. For each minor, the prerequisites and required courses are listed below. Approval of a minor in Computer Science can be obtained through the Departmental Undergraduate Advisor. Approval of a minor in Digital Arts can be obtained through the Director of the Digital Arts Minor.

I. Computer Science

Prerequisites: COSC 1 or ENGS 20; COSC 10.

Courses: Any five elective courses (see 'Elective Courses' above) drawn from at least two of the following three sets of courses: COSC 30 to COSC 49; COSC 50 to COSC 69; COSC 70 to COSC 89.

II. Digital Arts

Prerequisites: COSC 1, COSC 2, or ENGS 20.

Courses: Any three courses between COSC 20 and COSC 29. Consultation with the DA Advisor is recommended for choosing three courses that build on each other.

Two other courses, at most one of which is COSC, from the following list of approved additional courses for the

Digital Arts Minor: FILM 30, FILM 31, FILM 32, FILM 35, FILM 36, FILM 38, FILM 39, FILM 51, MUS 14, MUS 34, SART 15, SART 16, SART 20, SART 21, SART 22, SART 23, SART 25, SART 29, SART 30, SART 31, SART 65, SART 66, ENGS 12, ENGS 75, THEA 26, THEA 27, THEA 30, THEA 31, THEA 34, THEA 42, THEA 43, THEA 44, THEA 45, COSC 20, COSC 22, COSC 23.01, COSC 24, COSC 25.01, COSC 25.02, COSC 29, COSC 77, COSC 83.

If students aren't counting them as one of the courses in Section 2 above, students can take COSC 23.01 or COSC 24 as one of the courses meeting this requirement.

Use of other courses towards the Digital Arts Minor requires the approval of the Director of the Digital Arts Minor.

The Honors Program in Computer Science

To be eligible for departmental Honors or High Honors, a student must:

1. Be either a Computer Science Major or a Modified Major with Computer Science as the primary part;
2. Have a GPA of at least 3.33 overall and in the major, at the time of graduation;
3. Have an average grade of at least B+ in COSC 98 or 99;
4. Complete a written thesis; and
5. Meet College requirements for Honors, presented in the Regulations section of this catalog.

The GPA in the major is determined as follows: course prerequisites to the major are not counted, COSC 98, 99 are not counted, but all other courses used as part of the major (which might include courses in other departments) are counted, as are all courses titled Computer Science or cross-listed with Computer Science.

The written thesis is typically completed as part of the requirements for COSC 99 (Thesis Research), but at the recommendation of the instructor for COSC 98, students doing work in COSC 98 with a substantial independent component may also complete a written thesis based on that work. The subject of the thesis is often motivated by the content of an advanced course of the student's major, though a variety of activities can lead to a thesis. Student suggestions for theses are welcome. A student interested in pursuing thesis research should consult with his or her prospective adviser and get their approval for the thesis advising arrangement, along with the approval of the Departmental Undergraduate Advisor before enrolling in COSC 99. Honors are awarded only if the work is of high quality and was done substantially independently. High Honors additionally requires presentation to a thesis committee of three Computer Science faculty members and the work should be deemed publishable or, if it is a project, useful. The recommendation of the thesis adviser to award

Honors or High Honors must be ratified by a departmental vote.

Modified Majors

Many students have created modified majors with Computer Science as either the primary or the secondary part. Particularly common modified majors are with engineering, mathematics, or economics, but modified majors with philosophy, music, film studies, psychology, physics, geography, studio art, and many other subjects have been approved.

Modified Major with Computer Science as the Primary Part

A modified major with Computer Science as the primary part must satisfy the following requirements, and it must be approved by the Departmental Undergraduate Advisor to ensure a coherent major.

Prerequisites: COSC 1 or ENGS 20; COSC 10.

Requirements: Along with at least four modifying courses, as approved by the Departmental Undergraduate Advisor, the requirements are as follows:

1. Two Computer Science course numbered 30 to 49;
2. Two Computer Science course numbered 50 to 69;
3. Two Computer Science course numbered 70 to 89;
4. Computer Science culminating experience, as described above.

Modified Major with Computer Science as the Secondary Part

Prerequisites: COSC 1 or ENGS 20; COSC 10.

Requirements: Four electives (see 'Elective Courses' above) that complement the primary part of the modified major, subject to the approval of the Departmental Undergraduate Advisor.

Modified Major with Digital Arts as the Secondary Part

Prerequisites: COSC 1 or COSC 2, or ENGS 20.

Requirements:

Courses: Any three courses between COSC 20 and COSC 29. Consultation with the DA Advisor is recommended for choosing three courses that build on each other.

Two other courses, at most one of which is COSC, from the following list of approved additional courses for the Digital Arts Minor: FILM 30, FILM 31, FILM 32, FILM 35, FILM 36, FILM 38, FILM 39, FILM 51, MUS 14, MUS 34, SART 15, SART 16, SART 20, SART 21, SART 22, SART 23, SART 25, SART 29, SART 30, SART 31, SART 65, SART 66, ENGS 12, ENGS 75, THEA 26, THEA 27, THEA 30, THEA 31, THEA 34, THEA 42, THEA 43, THEA 44, THEA 45, COSC 20, COSC 22,

COSC 23.01, COSC 24, COSC 25.01, COSC 25.02, COSC 29, COSC 77, COSC 83.

If students aren't counting them as one of the courses in Section 2 above, students can take COSC 23.01 or COSC 24 as one of the courses meeting this requirement.

Use of other courses towards the Digital Arts Minor requires the approval of the Director of the Digital Arts Minor.

The Computer Science Major Modified with Engineering Sciences

Prerequisites are COSC 1 or ENGS 20; COSC 10; MATH 3, MATH 8, MATH 13; and PHYS 13, PHYS 14.

Requirements:

1. One Computer Science course numbered 30 to 49;
2. One Computer Science course numbered 50 to 69, but not including COSC 56, which is identical to ENGS 31;
3. One Computer Science course numbered 70 to 89;
4. Three elective courses (see 'Elective Courses' above), not including COSC 56;
5. ENGS 22;
6. ENGS 31;
7. ENGS 62;
8. ENGS 26, ENGS 32, ENGS 61, or ENGS 91;
9. Computer Science culminating experience, as described above.

The Computer Science Major Modified with Digital Arts

Prerequisites: COSC 1 or ENGS 20, and COSC 10.

Requirements:

CS Portion:

1. Two Computer Science courses, either both from the range COSC 30 to 49 or both from the range COSC 50 to 69;
2. COSC 70;
3. Computer Science Breadth: Two additional computer science courses, one from the range COSC 30 to 69, and one from the range COSC 71 to 89;
4. Visual computing courses: Two from COSC 73, 77, 87, 89.18, 89.19, 89.22. With the approval of the Director of the Digital Arts Minor, other courses from COSC 70-89 related to visual computing may substitute;
5. Computer Science culminating experience, as described above.

Digital Arts Portion:

1. Any three courses between COSC 20 and 29

2. Digital Arts elective: One Digital Arts elective outside the Computer Science department, listed above as additional courses under the description of the Digital Arts Minor

COSC - Computer Science - Undergraduate Courses

To view the Computer Science Graduate requirements, (p. 918)click here.

To view the Computer Science Graduate courses, click here. (p. 221)

COSC 1 - Introduction to Programming and Computation

This course introduces computational concepts that are fundamental to computer science and are useful for the sciences, social sciences, engineering, and digital arts. Students will write their own interactive programs to analyze data, process text, draw graphics, manipulate images, and simulate physical systems. Problem decomposition, program efficiency, and good programming style are emphasized throughout the course. No prior programming experience is assumed.

Degree Requirement Attributes: Dist:TLA

COSC 2 - Programming for Interactive Audio-Visual Arts

This course presents topics related to interactive visual art generated on a computer. Although it briefly covers computer-generated media art, the course focuses on the programming skills required for creating interactive works. Rather than using commercial software, students write their own programs, using the Processing language, to create interactive visuals and compositions. The course introduces fundamental concepts of how to represent and manipulate color, two-dimensional shapes, images, motion, and video. Coursework includes short programming assignments to practice the concepts introduced during lectures and projects to explore visual compositions. The course assumes no prior knowledge of programming. This course is not open to students who have passed COSC 1 or ENGS 20 or who have received credit for one of these courses via the Advanced Placement exam or the local placement exam.

Cross-Listed as: MUS 008

Degree Requirement Attributes: Dist:TLA

COSC 10 - Problem Solving via Object-Oriented Programming

Motivated by problems that arise in a variety of disciplines, this course examines concepts and develops skills in solving computational problems. Topics covered include abstraction (how to hide details), modularity (how to decompose problems), data structures (how to efficiently organize data), and algorithms (procedures for solving problems). Laboratory assignments are implemented using object-oriented programming techniques.

Prerequisite: COSC 1 or ENGS 20 or placement through AP or local placement.

Degree Requirement Attributes: Dist:TLA

COSC 16 - Introduction to Computational Neuroscience

Your brain is composed of low-precision, slow, sparsely-connected computing elements, yet it outperforms any extant computer on tasks ranging from perception to planning. Computational Neuroscience has as its twin goals the scientific understanding of how brains compute thought, and the engineering capability to reconstruct the identified computations. Topics in the class included anatomical circuit design, physiological operating rules, evolutionary derivation, mathematical analyses, and emergent behavior, as well as development of applications from robotics to medicine.

Prerequisite: One of PSYC 1, PSYC 6, COSC 1, or ENGS 20.

Cross-Listed as: COGS 021 PSYC 040

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

COSC 19.01 - Writing about Technology

This course serves as an introduction to both the theory and practice of writing effectively about technology. Designed specifically for students with a technical background, the course will mix readings and discussion, drawing from a wide variety of canonical examples of this type of prose, with writing assignments oriented toward improving the students' craft.

Prerequisite: COSC 1

COSC 19.02 - Security Engineering

This course covers cybersecurity systems engineering principles of design. Students will learn the foundational and timeless principles of cybersecurity design and engineering. They will learn why theories of security come from theories of insecurity, the important role of failure and reliability in security, the fundamentals of cybersecurity risk assessment, the building blocks of cybersecurity, intrusion detection design, and advanced

topics like cybersecurity situational understanding and command and control. The course develops the student's ability to understand the nature and source of risk to a system, prioritize those risks, and then develop a security architecture that addresses those risks in a holistic manner, effectively employing the building blocks of cybersecurity systems—prevention, detection, reaction, and attack-tolerance. The student will learn to think like a cyberattacker so that they can better design and operate cybersecurity systems. Students will attain the skill of systematically approaching cybersecurity from the top down and the bottom up and have confidence that their system designs will be effective at addressing the full spectrum of the cyberattack space. The course also addresses how the cybersecurity attack and defense landscape will evolve so that the student is not simply ready to address today's problems, but can quickly adapt and prepare for tomorrow's. The course is important at any stage in a student's curriculum: whether at the beginning to enable the student to grok the big picture before diving into the details, at the end as a capstone, or in the middle to help integrate the skills learned so far.

Prerequisite: COSC 1

Degree Requirement Attributes: Dist:TAS

COSC 20 - Motion Study: Using Motion Analysis for Science, Art and Medicine

Motion Capture is the process of recording movement in physical space and transforming that information into a digital form that can be analyzed and adapted. Recent technological advances have increased the use of motion capture in movies, cartoon animation, and scientific applications. In this class, students will learn the foundations of this new field from basic anatomical principles of motion to how motions express a variety of human qualities (e.g., status, emotion). Students will work with a motion capture system to record and analyze their own movement to gain a hands-on understanding of how motion capture can enhance art and science.

Degree Requirement Attributes: Dist:TAS

COSC 29.07 - Digital Game Studio

This projects-based lab course teaches the foundational principles of digital game design and development. If you're interested in learning how to design and build game prototypes from scratch this class is for you. In this class you will work in Unity 3D to develop an array of original video games, starting with a simple 2.5D platformer/side-scroller, a 3D puzzle/strategy game, 3D environment escape-room type of game and a final project of your choosing. Students will learn all main aspects of game design and development. Work is evaluated on both artistic and technical merit. There will be five major assignments and in-class sprints.

Degree Requirement Attributes: Dist:ART

COSC 30 - Discrete Mathematics in Computer Science

This course develops the mathematical foundations of computer science that are not calculus-based. It covers basic set theory, logic, mathematical proof techniques, and a selection of discrete mathematics topics such as combinatorics (counting), discrete probability, number theory, and graph theory. The mathematics is frequently motivated using computer science applications.

Prerequisite: Math 3 and COSC 10; or Math 3, Instructor Permission, and either COSC 1 or ENGS 20.

Cross-Listed as: ENGS 066

Degree Requirement Attributes: Dist:QDS

COSC 31 - Algorithms

A survey of fundamental algorithms and algorithmic techniques, including divide-and-conquer algorithms, dynamic programming, randomized algorithms, greedy algorithms, and graph algorithms. Presentation, implementation and formal analysis, including space/time complexity and proofs of correctness, are all emphasized.

Prerequisite: COSC 10 and COSC 30. Students who have not taken COSC 30 but have a strong mathematical background may take COSC 31 with the instructor's permission.

Degree Requirement Attributes: Dist:QDS

COSC 32 - Advanced Algorithms

This course follows up on our basic undergraduate-level algorithms course, covering a number of advanced topics and ideas in algorithm design and analysis. You will learn about the use of advanced data structures, amortized analysis, randomization, linear programming, and approximation. The focus will be on methodology and broadly-applicable fundamental principles, rather than specific problem domains.

Prerequisite: An undergraduate-level course in Algorithms (such as COSC 31) and strong mathematics background.

Degree Requirement Attributes: Dist:QDS

COSC 34 - Randomized Algorithms

Randomness is one of the key resources in algorithm design. Many problems have faster algorithms if randomization is allowed, and indeed, for certain problems randomness is essential. The course will introduce the probability basics, the fundamental tools, and provide multiple applications in machine learning, big data, optimization, etc. Not open to students who have received credit for COSC 49.10.

Prerequisite: COSC 31, COSC 30.

Degree Requirement Attributes: Dist:QDS

COSC 35 - Data Stream Algorithms

This course studies algorithms that process massive amounts of data; so massive that they will not fit in a computer's storage. The course will cover a wide variety of techniques for summarizing such large amounts of data into succinct "sketches" that nevertheless retain important and useful information. The course starts from the basics, assuming only a basic knowledge of algorithms, and builds up to advanced techniques from recent research. The necessary mathematical tools are developed within the course.

Prerequisite: COSC 31 or permission of the instructor.

COSC 36 - Approximation Algorithms

Many problems arising in computer science are NP-hard and therefore we do not expect efficient algorithms for solving them exactly. This has led to the study of approximation algorithms where algorithms are supposed to run fast but can return approximate solutions. This course provides a broad overview of the main techniques involved in designing and analyzing such algorithms. It also explores connections between algorithms and mathematical fields such as algebra, geometry, and probability.

Prerequisite: A first course on algorithms and mathematical maturity to read and write proofs will be assumed. Prerequisite Courses: COSC 31, COSC 30.

Degree Requirement Attributes: Dist:QDS

COSC 37 - Information Theory in Computer Science

This course introduces students to information theory, a mathematical formalism for quantifying and reasoning about communication. While traditionally a part of electrical engineering, it has found several powerful applications in the theory of algorithms and complexity and adjacent fields such as combinatorics and game theory. The first third of the course will teach students the basics of information theory (Shannon entropy, mutual information, Kullback-Liebler divergence). The rest of the course will sample topics from error correcting codes, communication complexity, data structures, and optimization, in each case highlighting applications of information theory.

Prerequisite: COSC 31 or COSC 30 plus permission of the instructor (based on strong mathematical background)

Degree Requirement Attributes: Dist:QDS

COSC 39 - Theory of Computation

This course serves as an introduction to formal models of languages and computation. Topics covered include finite automata, regular languages, context-free languages, pushdown automata, Turing machines, computability, and NP-completeness.

Prerequisite: COSC 30 and/or COSC 31. Students who have not taken COSC 30 and/or 31, but have a strong mathematical background, may take COSC 39 with the instructor's permission.

Degree Requirement Attributes: Dist:QDS

COSC 40 - Computational Complexity

This course covers the basics of computational complexity, whose broad goal is to classify computational problems into classes based on their inherent resource requirements. Five key computational resources are studied: time, space, nondeterminism, randomness, and interaction. Key concepts studied include reductions, the polynomial hierarchy, Boolean circuits, pseudorandomness and one-way functions, probabilistic proof systems, and hardness of approximation.

Prerequisite: COSC 39 or equivalent. Students need to be familiar with the formalism of the Turing Machine and with the notion of NP-completeness.

COSC 49 - Topics in Algorithms and Complexity

This course studies an advanced topic in algorithms and complexity that is not covered in the regular curriculum. Students may take courses under this rubric multiple times, subject to the restriction that the topics are distinct. The subject material under this rubric differs from course to course depending on the instructor. Please refer to individual courses for detailed instruction.

Prerequisite: Vary according to the topic. Consult with the instructor.

Degree Requirement Attributes: Dist:QDS

COSC 49.04 - Concurrent Algorithms

We consider problems where multiple processes have to coordinate their activities to accomplish a task. For an example, suppose that there are many sensing agents on an aircraft and each agent, based on its reading of the environment, has a recommendation on whether the aircraft should keep straight, turn left, or turn right. Since different agents can have different recommendations, we would want a protocol by which they can arrive at an "agreement" on whether the plane should go left, right, or straight. How hard is it to design such a protocol? It turns out that if you want the protocol to be fault-tolerant, i.e., the protocol works correctly even if one of the agents stops communicating, it is impossible to design a correct protocol (under certain reasonable assumptions about the system).

In the course, we will look at several fascinating coordination problems and solve them for several models of distributed computing: shared-memory versus message passing, synchronous versus asynchronous, fault-free versus fault-tolerant. We design algorithms, and prove lower bounds or even impossibility results.

There will be weekly homework and a final exam.

Prerequisite: COSC 31 (Undergraduate Algorithms) or equivalent, and an interest in algorithms/theory.

Prerequisite: COSC 31 (Undergraduate Algorithms) or equivalent, and an interest in algorithms/theory.

Degree Requirement Attributes: Dist:TAS

COSC 49.06 - Approximation Algorithms

Many problems arising in computer science are NP-hard and therefore we do not expect polynomial time algorithms solving them exactly. This has led to the study of approximation algorithms where one relaxes the goal to return approximate solutions. Over the past three decades, a beautiful theory of approximation algorithms has emerged. This course will provide a broad overview of the main techniques and will often deep dive into the state-of-the-art.

Prerequisite: COSC 31

Degree Requirement Attributes: Dist:QDS

COSC 49.07 - 21st Century Algorithms

The new century has brought us a new class of computational problems and paradigms, and to tackle them a suite of new algorithmic ideas have emerged. In this course, we will look at a collection of such ideas which are fundamental and yet not covered in a first course in undergraduate algorithms. (For instance, in fact, almost all algorithms covered in CS 31 are from last century). A rough set of problems and ideas are: random sampling algorithms, sketching algorithms, streaming algorithms, clustering algorithms, learning algorithms, etc, etc.

Degree Requirement Attributes: Dist:TAS

COSC 49.08 - Information Theory in Computer Science

This course introduces students to information theory, a mathematical formalism for quantifying and reasoning about communication. While traditionally a part of electrical engineering, it has found several powerful applications in the theory of algorithms and complexity and adjacent fields such as combinatorics and game theory. The first third of the course will teach students the basics of information theory (Shannon entropy, mutual information, Kullback-Liebler divergence). The rest of the course will sample topics from error correcting codes, communication complexity, data structures, and optimization, in each case highlighting applications of information theory.

Prerequisite: COSC 31 or COSC 30 plus permission of the instructor (based on strong mathematical background)

COSC 49.09 - Introduction to Computational Topology

Topology is the art of studying shapes without precise measurements. It is not surprising then that topology has found many applications in computer science, both in theoretical and applied research including algorithms and complexity theory, data analysis, robotics, computer graphics, etc., where often the input data is geometrically constrained, or noisy due to measurement errors. The course serves as an introduction to the rapidly growing area(s) of computational topology.

Prerequisite: CS30 and CS31 and (MATH22 or MATH24 or Instructor Permission)

Degree Requirement Attributes: Dist:QDS

COSC 49.10 - Randomized Algorithms

Randomness is one of the key resources in algorithm design. Many problems have faster algorithms if randomization is allowed, and indeed, for certain problems randomness is essential. The course will introduce the probability basics, the fundamental tools, and provide multiple applications in machine learning, big data, optimization, etc.

Prerequisite: A first course on algorithms and mathematical maturity to read and write proofs will be assumed. Prerequisite Courses: COSC 31, COSC 30.

Degree Requirement Attributes: Dist:TAS

COSC 49.11 - Metric Embedding and Sketching

In data analysis we can often assume the input is drawn from a metric space associated with some well-behaved distance function. In such scenario one can hope to find an alternative representation — an embedding — of the input data without sacrificing the distance information too much. To our surprise, not only this is possible, but often times one can also perform a sketching to reduce the size and amount of the data required. This seminar-style course is aimed to introduce the various ways to encode metric spaces in a succinct fashion with minimal distortion, suitable for their algorithmic purposes. Naturally, due to the vast amount of work and literature in the area, the topics covered in this class will be biased towards the interest and expertise of the instructor.

Prerequisite: COSC 30, COSC 31, and at least one course in probability (i.e. Math 20 or COSC 49.10). COSC 36 is recommended.

Degree Requirement Attributes: Dist:QDS

COSC 49.12 - Topics in Computational Topology

Planar graphs are among the most well-studied graph classes since the beginning of graph theory and algorithm design. Planar graphs can manifest in computational problems as networks, meshes, or terrains that are geometric and low-dimension in nature, which

unsurprisingly find many applications in computer graphics, visualization, vehicle routing, and shape analysis. This graduate-level seminar-style course is aimed to introduce a vast array of tools for planar graphs, ranging from combinatorial to geometric to spectral to algorithmic and beyond. Naturally, due to the sheer amount of work and literature in the area, the topics covered in this class will be biased towards the interest and expertise of the instructor.

Prerequisite: COSC 30 or Math 38 and Math 22, Math 24 or COSC 70 or Instructor Permission. Knowledge in algorithms (COSC 31) is strongly recommended.

Degree Requirement Attributes: Dist:QDS

COSC 49.13 - Distributed Computing: Algorithms and Verification

Distributed systems are everywhere—from the shared-memory multiprocessors in our phones and laptops to cloud computing data centers and the internet itself. These systems need to safely and efficiently compute while overcoming the myriad challenges posed by asynchrony, non-determinism, and faulty or adversarial peers.

In this course, we study algorithms for distributed systems and understand how to mathematically reason about these algorithms. We will learn how to formally model distributed systems and distributed problems, how to design distributed and multiprocessor algorithms, and how to formally verify the correctness of such algorithms. We will also learn how to show that certain problems cannot be solved efficiently or are even impossible to solve. Topics include: distributed algorithms, shared-memory algorithms, fault-tolerance, and verification.

Prerequisite: COSC 31, COSC 30, and COSC 50 (or equivalents).

Degree Requirement Attributes: Dist:QDS

COSC 50 - Software Design and Implementation

Techniques for building large, reliable, maintainable, and understandable software systems. Topics include UNIX tools and filters, programming in C, software testing, debugging, and teamwork in software development. Concepts are reinforced through a small number of medium-scale programs and one team programming project.

Prerequisite: COSC 10

Cross-Listed as: ENGS 050

Degree Requirement Attributes: Dist:TLA

COSC 51 - Computer Architecture

The architecture and organization of a simple computer system is studied. Topics covered include how information is represented in memory, machine-language instructions and how they can be implemented at the digital logic level

and microcode level, assembly language programming, and input/output operations. Speedup techniques, such as pipelining and caching, are also covered.

Prerequisite: COSC 1, ENGS 20, or placement through the Advanced Placement exam or the local placement exam.

Degree Requirement Attributes: Dist:TAS

COSC 52 - Full-Stack Web Development

The Web is a powerful delivery tool for complex real-time applications. This is an introduction to full stack Web application development — the approach of integrating numerous techniques and technologies to build modern Web applications. Topics include: static pages, Internet protocols, layout, markup, event-driven asynchronous programming, deployment, security, scalability, and user experience. Projects include building real-time Web applications with front-end UIs and server-side APIs.

Prerequisite: COSC 10

Degree Requirement Attributes: Dist:TAS

COSC 55 - Security and Privacy

The migration of important social processes to distributed, electronic systems raises critical security and privacy issues. Precisely defining security and privacy is difficult; designing and deploying systems that provide these properties is even harder. This course examines what security and privacy mean in these settings, the techniques that might help, and how to use these techniques effectively. Our intention is to equip computer professionals with the breadth of knowledge necessary to navigate this emerging area.

Prerequisite: COSC 50 or instructor permission. COSC 51 and COSC 30 are recommended.

Degree Requirement Attributes: Dist:TAS

COSC 55.02 - Security Engineering

This course explores the foundational principles of cybersecurity systems engineering, equipping students with timeless design concepts essential for building secure systems. Students will examine how security theory arises from understanding insecurity, the interplay between failure, reliability, and security, and the fundamentals of cybersecurity risk assessment. Core topics include the building blocks of cybersecurity—prevention, detection, reaction, and attack tolerance—as well as intrusion detection architecture, situational awareness, and command and control. Through a structured top-down and bottom-up approach, students will develop the ability to identify and prioritize system risks, and design holistic architectures that effectively address the full spectrum of cyber threats. By learning to think like attackers, students will enhance their capacity to anticipate and defend against evolving threats with agility and foresight. This course prepares students not only to address today's cybersecurity

challenges, but to adapt quickly to future landscapes. Not open to students who have received credit for COSC 19.02.

Prerequisite: COSC 50

Degree Requirement Attributes: Dist:TAS

COSC 56 - Digital Electronics

This course teaches classical switching theory including Boolean algebra, logic minimization, algorithmic state machine abstractions, and synchronous system design. This theory is then applied to digital electronic design. Techniques of logic implementation, from Small Scale Integration (SSI) through Application-Specific Integrated Circuits (ASICs), are encountered. There are weekly laboratory exercises for the first part of the course followed by a digital design project in which the student designs and builds a large system of his or her choice. In the process, Computer-Aided Design (CAD) and construction techniques for digital systems are learned.

Prerequisite: ENGS 20 or COSC 1 and COSC 10

Cross-Listed as: ENGS 031

Degree Requirement Attributes: Dist:TLA

COSC 57 - Compilers

Techniques for automatic translation of programming languages are discussed. The course includes a brief survey of various techniques and formalisms that can be used for describing the syntax and semantics of programming languages, for describing abstract and concrete machine architectures, and for describing program translation and transformation. This course includes a project to construct a compiler that will translate a program written in a high-level language into machine code for a conventional-architecture machine.

Prerequisite: COSC 50. COSC 51 is recommended.

Degree Requirement Attributes: Dist:TAS

COSC 58 - Operating Systems

This course studies how computer operating systems allocate resources and create virtual machines for the execution of user jobs. Topics covered include storage management, scheduling, concurrent processing, shared access to files, synchronization, and data protection. Both abstract models and actual examples of operating systems will be studied.

Prerequisite: COSC 50 and COSC 51

Degree Requirement Attributes: Dist:TAS

COSC 59 - Principles of Programming Languages

This course provides a study of the principles of programming languages. The course will focus on the similarities and differences among imperative, functional, logical, and object-oriented programming languages.

Topics include formal definitions of languages and tools for automatic program translation, control structures, parameter passing, scoping, types, and functions as first-class objects. For each language category, implementation issues will be discussed, and program development strategies illustrated through programming exercises.

Prerequisite: COSC 10, COSC 30 and COSC 51 are recommended.

Degree Requirement Attributes: Dist:TAS

COSC 60 - Computer Networks

This course focuses on the communications protocols used in computer networks: their functionality, specification, verification, implementation, and performance; and how protocols work together to provide more complex services. Aspects of network architectures are also considered. Laboratory projects are an integral part of the course in which networking concepts are explored in depth.

Prerequisite: COSC 30 and COSC 50; COSC 51 is recommended

Degree Requirement Attributes: Dist:TAS

COSC 61 - Database Systems

This course studies the management of large bodies of data or information. This includes schemes for the representation, manipulation, and storage of complex information structures as well as algorithms for processing these structures efficiently and for retrieving the information they contain. This course will teach the student techniques for storage allocation and deallocation, retrieval (query formulation), and manipulation of large amounts of heterogeneous data. Students are expected to program and become involved in a project in which they study important aspects of a database system: ways to organize a distributed database shared by several computers; transactions that are processed locally and globally; robustness guarantees of the stored data against failure; security and data integrity guarantees from unauthorized access; privacy; object-oriented schemes for multimedia data; indexing, hashing, concurrency control, data mining, data warehousing, mobile databases and storage file structures.

Prerequisite: COSC 50 or equivalent, as approved by instructor.

Degree Requirement Attributes: Dist:TAS

COSC 62 - Applied Cryptography

Cryptography is the fundamental building block for establishing and maintaining trustworthy connections and communications in the Internet; it's the first line of defense for keeping adversaries from spying on credit card numbers being sent to Amazon or on whistleblower reports sent to journalists. This course will examine what's in this toolkit: symmetric ciphers, public-key cryptography, hash

functions, pseudorandomness. To enable the well-cultured computer scientist to understand how these tools are used in the real world, this course will cover these topics from multiple perspectives: theoretical foundations, use in practical computing, implementation and management challenges, weaknesses and attacks, censorship circumvention, public policy questions, and prospects for the future.

Prerequisite: COSC 30, COSC 50. COSC 51 and COSC 55 are recommended.

Degree Requirement Attributes: Dist:TAS

COSC 63 - Programming Parallel Systems

Multi-core processors are now ubiquitous in most personal computers. These are the fundamental computer-engineering building blocks for high-performance servers, blade farms, and cloud computing. In order to utilize these devices in large systems they must be interconnected through networking and collectively programmed. This hands-on system-engineering course offers students the opportunity to explore problem-solving techniques on a high-performance multi-computer containing quad-core processors. The course involves weekly programming laboratories that teach POSIX thread, UDP and TCP network, and MPI style programming techniques. These techniques are explored in the context of scalable problem solving methods applied to typical problems in science and engineering ranging from client-server sensing and data repositories, to numerical methods, gaming and decision support. All laboratories will be conducted in the C programming language and proficiency in C is required. Enrollment is limited to 30 students.

Prerequisite: ENGS 20 or COSC 50.

Cross-Listed as: ENGS 067

Degree Requirement Attributes: Dist:TLA

COSC 63.01 - Augmented and Virtual Reality Development

This hands-on projects-based course is for developers who have completed COSC 10. It covers the technical, aesthetic, and societal issues surrounding the emerging frontiers of digitally mediated realities. Students learn the fundamentals of augmented and virtual reality development, while working in small interdisciplinary teams with digital arts students who are concurrently enrolled in COSC 23.01. COSC 63.01 and COSC 23.01 have class together and work together on teams. Developers in this course build interactive digital tools, games, and visualizations, while designers create assets and the interface. This course will also address the sociological implications of the technology. This course is not open to students who have received credit for COSC 29.22 or COSC 89.22.

Prerequisite: COSC 10

Degree Requirement Attributes: Dist:TAS

COSC 65 - Smartphone Programming

This course teaches students how to design, implement, test, debug and publish smartphone applications. Topics include development environment, phone emulator, key programming paradigms, UI design including views and activities, data persistence, messaging and networking, embedded sensors, location based services (e.g., Google Maps), cloud programming, and publishing applications. Concepts are reinforced through a set of weekly programming assignments and group projects.

Prerequisite: COSC 10

Cross-Listed as: ENGS 069

Degree Requirement Attributes: Dist:TAS

COSC 66 - Game Development Principles Applied In Educational/Serious Games

Digital games are a growing platform for education, entertainment, and visualization with a myriad of technological and theoretical challenges. This course explores the concepts and techniques involved in developing real-time 2D and 3D games, as well as the opportunities and constraints when applied to the field of serious games in areas such as education, healthcare, scientific visualization, emergency planning and response, government, and engineering. Topics include: 2d and 3d game engines, game ai, procedural generation, real-time rendering pipelines, game physics, shaders, game programming patterns, networked games, state synchronization, and game mechanics. Projects include building games from scratch such as an online multiplayer game with a server-side component.

Prerequisite: COSC 10 or permission of the Instructor

Degree Requirement Attributes: Dist:TAS

COSC 67 - Introduction to Human-Computer Interaction

This course provides the fundamentals of human-computer interaction, including human factors, usability, user-centered design, prototyping, and usability evaluation. Students will learn the skills and knowledge to identify users' needs and limitations through observations and interviews. They will experience rapid prototyping and will learn common HCI evaluation techniques, such as qualitative and quantitative methods, to evaluate their designs and implementations. Additionally, students will be exposed to the state-of-the-art research within HCI.

Prerequisite: COSC 10

Degree Requirement Attributes: Dist:TAS

COSC 68 - Advanced Operating Systems

This course covers advanced topics in operating systems, including issues such as the hardware/software interface, operating-system structure, CPU scheduling, concurrency, virtual memory, interprocess communication, file systems, protection, security, fault tolerance, and transaction processing. The course also considers many of these topics in the context of distributed systems.

Prerequisite: A grade of B+ or better in COSC 58/258, or passing an examination administered by the department to demonstrate competency in the material of COSC 58/258.

Degree Requirement Attributes: Dist:TAS

COSC 69 - Topics in Computer Systems

This course studies an advanced topic in computer systems that is not covered in the regular curriculum. Students may take courses under this rubric multiple times, subject to the restriction that the topics are distinct. The subject material under this rubric differs from course to course depending on the instructor. Please refer to individual courses for detailed instruction.

Prerequisite: Vary according to the topic. Consult with the instructor.

Cross-Listed as: COSC 169

COSC 69.08 - All Things Wireless

This is a topics course about use and development of wireless devices.

Prerequisite: COSC 60.

Degree Requirement Attributes: Dist:TAS

COSC 69.11 - Mobile X

Instructor:

Mobile X is an upper-level course on mobile computing and ubiquitous systems, covering a broad range of advanced and interdisciplinary topics in mobile systems, networking, and applications. All these topics focus on tackling unique challenges faced on bringing computation, networking, and applications to the mobile computing platform -- a platform that is constrained in form factor, energy, and computation power. Example topics include mobile communication and networking, mobile human-to-computer interaction (HCI), mobile learning/AI, mobile health, and mobile security.

Degree Requirement Attributes: Dist:TAS

COSC 69.13 - Multirobot Systems

Multirobot Systems is a seminar-course that will explore why multirobot systems are important, the extra challenges that need to be addressed, and the current state of the art in deploying multiple robots.

Students will learn the computational aspects of multiagent and multirobot systems, including sensing, coordination, and communication, and will have the opportunity to develop and evaluate a behavior on a real multirobot system.

Degree Requirement Attributes: Dist:TAS

COSC 69.14 - Functional Programming in Haskell

This course teaches a different approach to programming. In functional programming, we treat programs like values. The type of that value tells you what the program might do and restricts the possible buggy programs that don't do what you want them to do. In Haskell, you direct the type system to help improve your productivity, and your code's maintainability, by ensuring that certain bugs yield uncompileable code. Haskell programming is a recommended skill, regardless of whether you have a direct need for it. Programming in Haskell is not difficult, but has a steep learning curve when attempting to learn it on your own. Hence this course won't be easy, but it will help you through the difficult part. We use the latest GHC compiler, which is the most commonly used Haskell compiler in industry.

Prerequisite: COSC 10. COSC 30 is recommended.

COSC 69.15 - Robotics Perception Systems

This seminar course focuses on the issues and approaches to process and fuse data from robotics perception systems to enable robot autonomy, e.g., self-driving cars. The course will be very hands-on: some preliminary assignments will immerse you in the robotics world and how to process the sensor data for situational awareness. Through selected papers taken from the literature, students will learn different aspects of robotics perception systems, including computer vision, simultaneous localization and mapping, and machine learning. In addition, students will learn how to critically analyze a paper and how to effectively communicate a research work, by writing a summary on each paper, and presenting and discussing papers in class. Towards the end, students will work in a team on a final project that involves the use of a mobile robot with an RGBD camera and LIDAR. The professor will draw from his experiences in robotic research to enrich the material with aspects of active research problems, such as robot exploration for search and rescue and environmental coral reef monitoring using underwater robots.

Prerequisite: COSC 70/70.01 (formerly COSC 11). COSC 50 is recommended.

COSC 69.16 - Basics of Reverse Engineering

Frequently, the source code for an important operating system component, malware, or piece of commercial software is not available. This course explores the art and science of reverse engineering such systems to discover how they work, how they connect to other systems, and

how they may be controlled. In this course, you will develop an understanding of how systems and development tool chains are built "under the hood". You will learn to read compiled binaries without available source code, to recover program logic, and to modify (de)compiled binaries. We will seek to understand the challenges of reverse engineering larger programs, and of automating reverse engineering.

COSC 69.17 - Software Security

While software forms the backbone of modern computer systems, it is a prime target for cyberattacks. Cybercriminals are constantly exploring their vulnerabilities and deploying illegitimate code to accomplish their malicious goals. This course is designed to provide students with the comprehensive understanding of software security, both fundamental principles and low-level details of real-world offense and defense within software systems. Topics span vulnerability detection, exploitation mitigation, malware analysis, reverse engineering, and more.

Prerequisite: COSC 50, 51, familiarity with C language and system programming (e.g., system calls), and linux-based operating systems and programming environment is recommended.

Degree Requirement Attributes: Dist:TAS

COSC 69.18 - HackLab: Binary Program Analysis for Software Attacks and Defenses

Modern software keeps expanding in terms of size, application domains, users, and quantity of processed information. As a result of this, the attack surface and range of vulnerabilities targeted by attackers increases on a constant basis. Simultaneously, while humans reason about programs at the source-code level, a set of abstractions designed by humans for humans, computers execute machine code: a translation of source code into low-level instructions. This course sheds light on the discrepancies between source code and what computers actually execute, and examines some of the root causes and inner-workings of several common classes of software vulnerability, how these can be exploited to take control of remote systems, how those can be addressed and how to scale their detection and mitigation by leveraging automated program analysis techniques. Students will learn the practice and theory of ethical hacking through hands-on program analysis problems, Capture-The-Flag (CTF) competition challenges, exploitation and defense techniques as well as state-of-the-art research models. By studying the attack surface of modern software, students will learn how to build stronger, more sophisticated and more adequate defense strategies.

Prerequisite: Students must complete COSC 50 or obtain instructor permission before taking this course.

Degree Requirement Attributes: Dist:TAS

COSC 69.19 - Basics of Exploitation

Understanding the nature of unintended, unexpected computation emergent in today's most popular computing environments. Exposing the students to state-of-the-art cyber-attack and exploit analysis techniques. Exposing the students to the national cybersecurity challenges arising from exploitation of computing systems and orienting them for careers in cybersecurity research and technical leadership.

Prerequisite: COSC 51 or equivalent knowledge of a CPU instruction set or assembly. For example, a COSC 69 HackLab or Basics of Reverse Engineering is sufficient.

Degree Requirement Attributes: Dist:TAS

COSC 69.20 - Cybersecurity's Bleeding Edge

This course is a seminar of leading cybersecurity thinkers across the country presenting their latest research. Each will present the broad cybersecurity hard problem that they are investigating, summarize their most recent work, and explore the additional hard problems that need to be addressed in their subspecialty area. We expect to have between 5 and 10 presenters from across the spectrum of academia, government, and industry. Students will actively engage in the seminar by reading published papers by the presenter prior to their talks, actively asking questions about the nature of the problem and alternate solution paths. This course is intended primarily for undergraduates and graduate students interested in doing cybersecurity research at Dartmouth or in preparation for a career in cybersecurity.

Prerequisite: COSC 50, and either COSC 55 or COSC 19.02

Degree Requirement Attributes: Dist:TAS

COSC 69.21 - Building Reliable And Secure Software (BRASS)

Modern society depends on software. Telecommunications, commerce, medical systems, transportation, energy production and distribution, government, and operation and management of critical infrastructures are a few examples where lives and livelihoods depend on the reliable operation of software. For something so vital to everyday lives around the world, software is often fragile, resulting in unexpected results or complete failures. This also makes software a target of those hoping to capitalize on this fragility for criminal activities, influence or notoriety, or disruption. This course will explore modern techniques for building software systems that are reliable, resilient, and secure. The Rust programming language is covered, along with software build systems and the DevOps and DevSecOps methodologies.

Prerequisite: COSC 1, COSC 10, and COSC 50, or their equivalents. Prior completion of COSC 19.02 or 55 is highly recommended.

Degree Requirement Attributes: Dist:TAS

COSC 69.22 - Topics in Architecture and Security

Computer security requires that computation happens correctly despite action by a malicious adversary. However, computation doesn't occur in some magical ether, but on electrical machines in the physical world. Thinking about security in terms of these electrical machines gives rise to techniques for both attack and defense. This course will survey many of these techniques, and will reinforce this survey via hands-on exercises.

Prerequisite: COSC 051 or COSC 050, or instructor permission.

Degree Requirement Attributes: Dist:TAS

COSC 69.23 - Parallel Optimization for Robotics

Many stages of state-of-the-art robotics pipelines rely on the solutions of underlying optimization algorithms. Unfortunately, many of these approaches rely on simplifications and conservative approximations in order to reduce their computational complexity and support online operation. At the same time, parallelism has been used to significantly increase the throughput of computationally expensive algorithms across the field of computer science. And, with the widespread adoption of parallel computing platforms such as GPUs, it is natural to consider whether these architectures can benefit robotics researchers interested in solving computationally constrained problems online. This course will provide students with an introduction to both parallel programming on GPUs as well as numerical optimization. It will then dive into the intersection of those fields through case studies of recent state-of-the-art research and culminate in a team-based final project.

Prerequisite: MATH 8 and COSC 50.

Degree Requirement Attributes: Dist:TAS

COSC 70 - Foundations of Applied Computer Science

This course introduces core computational and mathematical techniques for data analysis and physical modeling, foundational to applications including computational biology, computer vision, graphics, machine learning, and robotics. The approaches covered include modeling and optimizing both linear and nonlinear systems, representing and computing with uncertainty, analyzing multi-dimensional data, and sampling from complex domains. The techniques are both grounded in mathematical principles and practically applied to problems from a broad range of areas. Not open to students who have received credit for COSC 70.01.

Prerequisite: MATH 3, COSC1 required, COSC 10 recommended

Degree Requirement Attributes: Dist:QDS

COSC 71 - Numerical Methods in Computation

A study and analysis of important numerical and computational methods for solving engineering and scientific problems. The course will include methods for solving linear and nonlinear equations, doing polynomial interpolation, evaluating integrals, solving ordinary differential equations, and determining eigenvalues and eigenvectors of matrices. The student will be required to write and run computer programs.

Prerequisite: COSC 1 and COSC 10, or ENGS 20; ENGS 22 or MATH 23, or equivalent.

Cross-Listed as: ENGS 091 MATH 026

Degree Requirement Attributes: Dist:QDS

COSC 72 - Accelerated Computational Linguistics

The study of human language from a computational perspective. This accelerated course has programming background equivalent to that provided by COSC 1 as a prerequisite. This course will survey formal models for representing linguistic objects, and statistical approaches to learning from natural language data. We will pay attention to the use of computational techniques to understand the structure of language, as well as practical engineering applications like speech recognition and machine translation. Students will implement simple algorithms for several key tasks in language processing and learning.

Prerequisite: COSC 01

Cross-Listed as: LING 048

Degree Requirement Attributes: Dist:TAS

COSC 73 - Computational Aspects of Digital Photography

Computational photography lies at the intersection of photography, computer vision, image processing, and computer graphics. At its essence, it is about leveraging the power of digital computation to overcome limitations of traditional photography. The course will cover the optics of cameras and sensors, how cameras form images, and how we can represent them digitally on a computer. We will focus on software techniques like image processing algorithms for photography, high-dynamic-range photography and tone mapping, and the math and algorithms behind popular image manipulation tools like Photoshop. Coursework will include taking some photos and implementing several algorithms to manipulate those photos in weekly programming assignments (in C). We will also read, present and discuss recent research papers in the field. By the end of the term, students should have an understanding of the capabilities and limitations of

photography today, and have sufficient background to implement new solutions to photography challenges.

Prerequisite: COSC 10 and COSC 70; COSC 50 is recommended or instructor permission

Degree Requirement Attributes: Dist:TAS

COSC 74 - Machine Learning and Statistical Data Analysis

This course provides an introduction to statistical modeling and machine learning. Topics include learning theory, supervised and unsupervised machine learning, statistical inference and prediction, and data mining. Applications of these techniques to a wide variety of data sets will be described.

Prerequisite: COSC 1 or ENGS 20; COSC 70/70.1(formerly COSC 11), or MATH 22, or MATH 24.

Degree Requirement Attributes: Dist:QDS

COSC 75 - Introduction to Bioinformatics

Bioinformatics is broadly defined as the study of molecular biological information, and this course introduces computational techniques for the analysis of biomolecular sequence, structure, and function. While the course is application-driven, it focuses on the underlying algorithms and information processing techniques, employing approaches from search, optimization, pattern recognition, and so forth. The course is hands-on: programming lab assignments provide the opportunity to implement and study key algorithms.

Prerequisite: COSC 10; COSC 70/70.01 (formerly COSC 11), or MATH 22, or MATH 24. COSC 30 is recommended.

Degree Requirement Attributes: Dist:TLA

COSC 76 - Artificial Intelligence

An introduction to the field of Artificial Intelligence. Topics include games, robotics, motion planning, knowledge representation, logic and theorem proving, probabilistic reasoning over time, understanding of natural languages, and discussions of human intelligence.

Prerequisite: COSC 10. COSC 30 is recommended.

Degree Requirement Attributes: Dist:TAS

COSC 77 - Computer Graphics

This course provides a broad introduction to the mathematical and programmatic foundations of computer graphics, including modeling, rendering (drawing), and animating three-dimensional scenes. Topics include digital image representation, two- and three-dimensional shape representations (e.g. parametric curves and surfaces, meshes, subdivision surfaces), geometrical transformations (e.g. rotations, scales, translations, and perspective projection), rigging and skinning, the rasterization pipeline,

ray tracing, illumination and shading models, texturing, and light & visual perception. Coursework typically includes a mix of programming assignments, quizzes/hand-written work, assigned readings, and a final project. Knowledge of basic linear algebra and programming skills are assumed.

Prerequisite: COSC 50; COSC 70/70.01 (formerly COSC 11) or MATH 22/24; or instructor permission if the above two prereqs not fulfilled.

Degree Requirement Attributes: Dist:TAS

COSC 78 - Deep Learning

This course provides an introduction to deep learning, a methodology to train hierarchical machine learning models using large collections of examples. Deep learning is a special form of machine learning where rich data representations are simultaneously learned with the model, thus eliminating the need to engineer features by hand.

The course begins with a comprehensive study of feedforward neural networks, which are the model of choice for most hierarchical representation learning algorithms. Other models covered in this course include convolutional neural networks, restricted Boltzmann machines, autoencoders, sparse codes. Several lectures are devoted to discuss strategies to improve the bias-variance tradeoff, such as regularization, data augmentation, pre-training, dropout, and multi-task learning. The course also studies modern applications of deep learning, such as image categorization, speech recognition, and natural language processing.

Prerequisite: COSC 74

Degree Requirement Attributes: Dist:TAS

COSC 81 - Principles of Robot Design and Programming

This course is a hands-on introduction to robotics. Students will build robots, program robots, and learn to mathematically model and analyze manipulation and locomotion tasks. Topics include kinematics and dynamics of rigid-body motion, motion planning, control, mechanics of friction and contact, grasping, sensing, uncertainty in robotics, and applications of robots.

Prerequisite: COSC 70/70.01 (formerly COSC 11), or COSC 01 and Math 22/24. COSC 10 and COSC 50 are recommended.

Degree Requirement Attributes: Dist:TLA

COSC 83 - Computer Vision

This course provides an introduction to computer vision, the art of teaching computers to see. Topics include image formation, feature detection, segmentation, 3D reconstruction from multiple views, motion estimation, and object recognition.

Prerequisite: COSC 1 or ENGS 20; COSC 70/70.01 (formerly COSC 11), or MATH 22, or MATH 24.

Degree Requirement Attributes: Dist:TAS

COSC 84 - Mathematical Optimization and Modeling

Planning, scheduling, and design problems in large organizations, economic or engineering systems can often be modeled mathematically using variables satisfying linear equations and inequalities. This course explores these models: the types of problems that can be handled, their formulation, solution, and interpretation. It introduces the theory underlying linear programming, a natural extension of linear algebra that captures these types of models, and also studies the process of modeling concrete problems, the algorithms to solve these models, and the solution and analysis of these problems using a modeling language. It also discusses the relation of linear programming to the more complex frameworks of nonlinear programming and integer programming. These paradigms broaden linear programming to respectively allow for nonlinear equations and inequalities, or for variables to be constrained to be integers.

Prerequisite: COSC 1 or ENGS 20; COSC 70/70.01 (formerly COSC 11), or MATH 22 or MATH 24; or permission of the instructor.

Degree Requirement Attributes: Dist:TAS

COSC 86 - Computational Structural Biology

Computational methods are helping provide an understanding of how the molecules of life function through their atomic-level structures, and how those structures and functions can be applied and controlled. This course will introduce the wide range of complex and fascinating challenges and approaches in computational structural biology, and will give hands-on experience applying and implementing some important methods.

Prerequisite: COSC 10 or permission of the instructor.

Degree Requirement Attributes: Dist:TAS

COSC 87 - Rendering Algorithms

This class is intended for students interested in obtaining a deep technical understanding of the physically based rendering techniques used to produce photorealistic images in animated films, visual effects, or architectural and product visualizations.

Students will learn how light behaves and interacts with objects in the real world and how to translate the underlying math and physics into practical algorithms for creating photorealistic images. The course will provide a detailed treatment of the industry-standard Monte Carlo methods for light transport simulation, such as path tracing, bidirectional path tracing, and photon mapping.

Each major topic will also be accompanied by a programming assignment where students implement these algorithms within their own software framework to obtain practical experience. Additional coursework includes quizzes/handwritten exercises and assigned readings. At the end of the term, each student will work on a self-directed final project that extends their rendering software with additional features of their own choosing with the goal of creating a photorealistic image.

Prerequisite: COSC 70/70.01 (formerly COSC 11) and COSC 50; or Instructor's Permission.

Degree Requirement Attributes: Dist:TAS

COSC 89 - Topics in Applied Computer Science

This course studies an advanced topic in applied Computer Science that is not covered in the regular curriculum. Students may take courses under this rubric multiple times, subject to the restriction that the topics are distinct. The subject material under this rubric differs from course to course depending on the instructor. Please refer to individual courses for detailed instruction.

Prerequisite: Vary according to the topic. Consult with the instructor.

Cross-Listed as: COSC 189

COSC 89.13 - Robot Motion Planning

This is a small advanced seminar course in robotic motion planning. Topics to be covered include configuration space, forwards and inverse kinematics, differential kinematics, representations for motion planning, and classical planning algorithms including cell-decomposition and probabilistic methods.

Prerequisite: COSC 1, COSC 10, MATH 8

Cross-Listed as: COSC 189

Degree Requirement Attributes: Dist:TAS

COSC 89.14 - Research Topics in Human-Computer Interaction

This is a topics course in Human-computer Interaction. The course is designed to introduce students to advanced HCI research methods and techniques, including observation, design, implementation, and evaluation. It will also expose students to state-of-the-art research topics in HCI, including interaction techniques, actuated interfaces, ubiquitous computing, context-aware computing, tangible interfaces, mobile interfaces, and wearable interfaces. This course involves a mix of lectures given by professor and students with a major focus on the discussion of selected papers from ACM SIGCHI or ACM UIST Conference Proceedings.

Prerequisite: COSC 67, COSC 167

Degree Requirement Attributes: Dist:TAS

COSC 89.17 - Health Informatics

Our health is everywhere. It is affected by how, where, and who we live, work & play with (i.e. biological, behavioral, social, and environmental factors). The explosion of data digitization {captured both outside 'in the wild' and within the healthcare delivery system, allows us to understand and address the many factors affecting the complexity of our health. Today, health & healthcare data is continuously being generated by healthcare delivery systems, organizations, or users and can be accessed through devices, databases, or the web (e.g., APIs). Deriving information and knowledge to improve and support health requires health informatics. Data science plays an active role as a profession and within its research efforts in informing and developing all aspects of health informatics: data capture, data storage, and data analytics.

Degree Requirement Attributes: Dist:TAS

COSC 89.18 - Computational Methods for Physical Systems

The Physical Computing course introduces students to mathematical concepts and algorithmic techniques for developing computational approaches to simulate, optimize, design, and control various physical systems. Course topics cover fundamental numerical approaches for modeling and simulating rigid body, soft body, and cloth, as well as design and optimization algorithms for drones and soft robots. The materials will be illustrated using examples and applications from physics-based animation, robot design, fashion design, and 3D printing.

Prerequisite: COSC 10

Degree Requirement Attributes: Dist:TAS

COSC 89.19 - Machine Learning for Robotics

Machine Learning for Robotics is a course mixed with lectures, students' presentations, and assignments that explore machine learning techniques for robotics applications. After a review of some supervised and unsupervised machine learning techniques, we will focus on some specific ones, currently popular in robotics, including reinforcement and deep learning. Students will have the opportunity to use machine learning frameworks for some robotics problems.

\f

Prerequisite: COSC 11 and COSC 50

Degree Requirement Attributes: Dist:QDS

COSC 89.20 - Data Science for Health

Data science is being employed across diverse fields to improve human sensing and health. However, there are still many untapped opportunities. This course will cover

state-of-the-art methods for data acquisition and analysis, with an emphasis on interpretation of behavioral and physiological data. Students will develop their skills by reading, presenting, and critiquing seminal research papers in the health space. The course will also include assignments and a group project to reinforce concepts and methods widely used in data science.

Prerequisite: COSC 74 or instructor permission

Degree Requirement Attributes: Dist:QDS

COSC 89.21 - Data Mining and Knowledge Discovery

This course introduces the basic concepts, principles, methods, implementation techniques, and applications of data mining. The course covers all the steps required to turn raw data into meaningful insights, including: obtaining and cleaning data, pattern discovery, and data visualisation. Throughout the course, students will work on data mining projects using real-world data to gather hands-on experience. The course will be taught in Python.

Prerequisite: COSC 10; adequate knowledge of probability and statistics through a course such as COSC 74 or Math 10, or the permission of the instructor.

Degree Requirement Attributes: Dist:TAS

COSC 89.23 - Network Science and Complex Systems

Many of the systems that surround us are complex. These systems span almost every scientific field of inquiry, from biological to social, and computational sciences. To understand the behavior of complex systems, we must study not only the parts but the emergent behavior that arises from such systems when the parts act together. Complex systems are by definitions highly interconnected, therefore, at the core of studying complex systems is understanding networks. This seminar is an introduction to the main concepts of networks and complex systems, and their applications. The topics covered in this course will include: network topologies, network dynamics, motifs, dynamic systems, attractors, and chaos. The seminar mainly involves reading and discussing seminal, and ongoing, works in this field, but we will also be doing hands-on modeling and studying toy and real networks using Python.

Prerequisite: COSC 10; Math 3, adequate knowledge of probability and statistics through a course such as COSC 74 or Math 10.

Offered: Winter.

Degree Requirement Attributes: Dist:TAS

COSC 89.24 - Logic and Artificial Intelligence

The goal of this topics course is to study the foundations of different types of logic used commonly in artificial intelligence. Logic forms the basis for many types of reasoning used by humans – researchers in AI have

extended classical logic over the years to numerous more “exotic” logics. This course will cover the foundations of a host of classical and non-classical logics, a number of interesting logics developed by AI researchers for common-sense reasoning, and applications of those logics.

Prerequisite: COSC 76, COSC 176, or permission of the instructor.

COSC 89.25 - GPU Programming and High Performance Computing

The GPU Computing course introduces students to the basic programming and algorithmic techniques for developing the modern parallel computer code for high-performance computing applications. Course topics will cover the fundamentals for GPU (CUDA) and CPU (multi-threading) parallel programming, parallel computer architecture, parallel data structures, parallelizable linear algebra, conjugate gradient and multigrid solvers, particle systems and N-body problems, and vectorization. The materials will be illustrated using large-scale computing examples and applications from computer graphics, computational physics, and machine learning.

Prerequisite: This course assumes an understanding of multi-variable calculus and linear algebra and proficiency in C++ programming. Students are recommended to take COSC 70 as a prerequisite or to show equivalent understanding and comfortableness with the associated materials.

Degree Requirement Attributes: Dist:QDS

COSC 89.26 - Security and Privacy in the Lifecycle of IoT for Consumer Environments

We are entering an era of Smart Things, in which everyday objects become imbued with computational capabilities and the ability to communicate with each other and with services across the Internet. Indeed, the Internet of Things now involves the deployment of Smart Things in everyday residential environments – houses, apartments, hotels, senior-living facilities – resulting in Smart Homes. Although Smart Things offer many potential benefits, they can also create unsafe conditions and increase risk of harm to persons and property. This course explores the key security and privacy challenges required for the vision of Smart Homes to be safely realized, with an explicit focus on consumer-facing “things” where end-user privacy and usability are essential. It will take a holistic approach to the entire lifecycle of security, privacy, and usability challenges from the perspective of the everyday consumer who interacts with Smart Things (intentionally or unintentionally) in a residential setting. Students will read, present, and discuss papers from the research literature; write a survey paper about a subset of the research literature; and conduct a security analysis of a current commercial “smart thing”. Guest lecturers will join the class, weekly, to share expertise from both industry and research.

Prerequisite: Required: COSC 50, and experience or willingness to read technical research literature. Useful: COSC 55, 58, 60, 62, 67, 91.

COSC 89.27 - Security and Privacy of Machine Learning

Today we see applications of machine learning almost everywhere we look – in the domains of autonomous driving, medical diagnosis, fraud detection, etc. While the use of machine learning is increasing in our day-to-day lives, these techniques also pose significant threats to security and data privacy. This course will explore recent academic research at the intersection of machine learning, security, and data privacy that demonstrates the risks adversaries pose to machine learning systems. The research papers explored in this course would cover attacks on machine learning systems as well as defense techniques to mitigate such attacks. Students will read, analyze, and discuss research papers, write summaries, take notes, and undertake a term-long research project.

Prerequisite: COSC 74. Assumes that students understand basics of machine learning. Knowledge of security & privacy useful but not required if students are willing/able to learn background materials on their own.

COSC 89.28 - Computational Healthcare

Machine Learning (ML) lies at the core of a wide range of healthcare applications spanning from diagnosis to delivery of care. This course gives an overview of challenges and opportunities for ML in the era of digital health. We will explore advanced ML methods for healthcare and medicine through research papers. Specifically, we will cover recent successes of natural language processing, time-series analysis, and transfer learning to advance healthcare research. Students will choose and complete a course project, write a project report, and make project presentations at the end of the course. The course also requires the students to analyze, present, and discuss research papers.

The course is open to graduate and ambitious undergraduate students who are interested to gain hands-on experience in applied ML research. The course is designed to enable students to improve their technical communication and review skills and explore new research directions. It is important to note that this course will be conducted like a seminar (i.e. there are no formal lectures). We assume students are willing and able to learn some necessary background materials on their own. There will be office hours outside of scheduled class lectures.

Prerequisite: COSC 74 or instructor's permission. This course assumes that the students are familiar with the basics of machine learning and deep learning.

COSC 89.29 - Music and Artificial Intelligence

This course explores artificial intelligence (AI) for creating and consuming music. Through weekly readings and exercises, students will create music and art with AI-based systems and develop the critical skills to evaluate the outputs of creative AI. Starting with the history of algorithmic art and music, students will explore issues of digital music representation, generative music, computational creativity, and AI-based music production. The goal is to generate original works using algorithms, such as neural networks.

Prerequisite: MUS008, CS001 or CS002

Cross-Listed as: MUS 14.05

Degree Requirement Attributes: DIST:TAS; WCult:WC

COSC 89.30 - Topics in Video Understanding

Video understanding is an area of research that helps machines understand video content by recognizing and localizing different actions or events appearing in a video. Videos have multiple sensory information, including visual, acoustic, and meta information. This class is designed to help students better understand recent trends in video understanding. In particular, we will explore the state of the arts in deep learning for video understanding, especially with multimodality. Students will learn by reading, presenting, and discussing recently published papers. Students will also propose and complete a term project to solve a video understanding problem.

Prerequisite: COSC 78

Degree Requirement Attributes: Dist:TAS

COSC 89.31 - Deep Learning Generalization and Robustness

This course will be an extended version of COSC 78/278 Deep Learning. It is mostly project-based, and it aims to bridge the gap between machine learning course materials and recent developments in machine learning research. The course begins by covering the basics of model training and inference. From there, the course proceeds to discuss various concepts of generalization, different types of robustness issues associated with generalization (e.g., adversarial robustness, out-of-distribution robustness, model poisoning, etc.), and the connections between (robust) generalization to the design of multiple regularization and normalization strategies.

Prerequisite: COSC 74/274

Degree Requirement Attributes: Dist:TAS

COSC 89.32 - Multi-modalities Generative AI

This advanced course delves into the exciting field of Multi-modalities Generative AI, where students will explore the convergence of multiple data modalities such as text, image, and audio to create sophisticated and

expressive AI models. This course is divided into two equally important components. The first half will consist of a lecture series that systematically covers fundamental concepts and technologies in generative AI. This segment aims to establish a solid theoretical foundation while facilitating hands-on learning through practical demonstrations with open-source examples. The second half of the course will be an interactive reading group, where students delve into influential papers and engage in in-depth discussions. This segment is designed to foster critical thinking, encourage exploration of the latest research in multi-modal generative AI.

Students will undertake a term project directly related to Multi-modalities Generative AI. This project will provide an opportunity to apply the acquired knowledge and skills, fostering creativity and innovation in the development of multi-modal generative models. By combining a lecture series, engaging reading group discussions, and a practical term project, this course aims to equip students with a well-rounded understanding of multi-modal generative AI and the ability to contribute meaningfully to this rapidly evolving field.

Prerequisite: COSC 78/278. This course assumes students have basic knowledge in Deep Learning, being able to build, modify and train a deep learning model.

Degree Requirement Attributes: Dist:TAS

COSC 89.33 - The Dark Side of AI/ML: Machine Learning Security, Privacy, Fairness, and Interpretability

The goal of this course is to equip students to responsibly deploy machine learning tools in an unfair and adversarial world. We will survey the vulnerabilities of mainstream machine learning models and algorithms to manipulation, privacy leakage, and unfairness. We will then assess the conditions under which we can understand, interpret, or measure our models' predictions with respect to each of these vulnerabilities. Finally, we will address the feasibility and limitations of appropriate countermeasures. Our course will build towards a final project assignment where students are given the opportunity to develop their own research projects in this emerging field.

Prerequisite: Before taking this course, all students are expected to have completed an advanced undergraduate machine learning course such as COSC 74, 78, 83 or the graduate course equivalent.

Degree Requirement Attributes: Dist:TAS

COSC 89.34 - Human-Centered Generative AI

Generative AI systems capable of producing text, images, sounds, code, and more are becoming ubiquitous in our everyday devices and interactions. This course explores the design, development, and evaluation of such systems. Students will investigate how AI can augment, rather than

replace, human effort, with a focus on *co-creation*: situations in which humans and AI systems work together to produce novel artifacts. Through reading and discussing seminal papers across AI, HCI, and related areas, the course will address questions like: How do we design systems that align with human strengths and needs? How can we evaluate the usability and utility of these systems? What opportunities and challenges arise when humans work with GenAI systems?

Course activities will include reading, design exercises, in-class discussions, student-led presentations, and a term length research project. Students will work in groups to design and/or evaluate novel human-AI systems, with a focus on generative models and their applications. The goal of this course is to prepare students to design and evaluate new Generative AI-powered technologies that meaningfully extend the capabilities of human users.

Degree Requirement Attributes: Dist:TAS

COSC 89.35 - Human-Centered Approaches to Large Language Models: Design, Methods, and Evaluation

The goal of this course is to prepare students to critically assess and design LLMs for real-world applications by combining technical and human-centered perspectives. This course explores the foundations, design, and evaluation of large language models (LLMs) through a human-centered lens. The course covers core concepts such as pretraining, fine-tuning, and instruction tuning, as well as the role and implications of data sources. Additionally, the course examines inference methods, including in-context learning, retrieval-augmented generation (RAG), and using LLMs as agents. A key focus is on evaluating LLMs for alignment, hallucination, fairness, bias, toxicity, reliability, stability, safety, and robustness. Students will analyze how considering human-centered approaches in the design, development and evaluation of LLM-based solutions are essential for responsible and ethical AI. Course activities will include reviewing research articles, student-led presentations, in-class and canvas discussions, writing short reaction papers, and a course project.

Prerequisite: COSC 78 or COSC 72/Ling 48

Degree Requirement Attributes: Dist:TAS

COSC 89.36 - Applied AI for Wearable Neurotech

This course explores the potential of AI-driven neurotechnology, a field at the intersection of machine learning, neuroscience, and wearable systems. By leveraging real-time brain data through EEG-based devices, students will gain hands-on experience designing and developing digital health solutions. These solutions aim to enhance cognitive performance, monitor mental health, and facilitate applications like lucid dream induction and cognitive state classification. Combining foundational research, practical coding assignments, and a

capstone project, this course equips students with cutting-edge skills to innovate in the rapidly evolving landscape of neurotechnology.

Prerequisite: COSC 31, 58, and 76.

Degree Requirement Attributes: Dist:TAS

COSC 89.37 - Visual Computing Seminar

A seminar course in which research topics of special interest in visual computing (computer graphics, computer vision, computational imaging, and adjacent sub-fields) will be presented and discussed by students under faculty direction. Topics and structure will vary from quarter to quarter, but coursework will typically involve some combination of presentations of (in-progress) visual computing research being conducted by the enrolled students; and instruction, practice and refinement of essential skills for research (ideation, pitching, reading, writing, reviewing, presenting, and generally communicating about research).

Only counts once towards COSC degree credit.

Prerequisite: Students should have completed or be currently enrolled in: 1) a visual computing course such as COSC 73, 77, 83, 87, and 2) be actively engaged in visual computing research via COSC 94, 99.

COSC 91 - Writing, Presenting, and Evaluating Technical Papers in Computer Science

Students will learn how to write technical papers in computer science, how to present technical papers in a conference-talk setting, and how program committees and journal editors evaluate technical papers. Writing topics include the proper use of technical typesetting software, organization of technical papers, and English usage. Students will write technical papers, produce official course notes, and give oral presentations. Enrollment limited.

Prerequisite: Each student must submit a short expository piece to be evaluated by the instructor at the start of the course; only those students meeting a required level of competence will be permitted to take the course for a grade. Students should also have a Computer Science background sufficient to understand research papers.

COSC 94 - Reading Course

Advanced undergraduates occasionally arrange with a faculty member a reading course in a subject not occurring in regular courses.

COSC 98.01 - Senior Design and Implementation Project I

Participation in a software engineering group project to meet a real-world need. Group members are responsible for all aspects of a software system, including iterative requirements analysis, design, implementation, and testing.

The course also stresses customer interactions, documentation, process, and teamwork. The result is a software product of significant scope and significant benefit to a user base.

Open only to students pursuing a major in Computer Science or a modified major with Computer Science as the primary part. 98.01 and 98.02 constitute a two course sequence, and they must be taken in consecutive terms, either fall/winter or winter/spring, normally in the senior year.

Students are awarded one course credit for successful completion of this course upon completion of COSC-98.02. Students register for COSC-98.01 and receive a grade of "ON" (ongoing) at the end of the term. Students then register for COSC-98.02 the subsequent term to complete the coursework. A final grade will replace the "ON" in COSC-98.01 upon completion of COSC-98.02.

Prerequisite: At least two courses from COSC 50-69 or at least three courses from COSC 50-89, or permission of instructor.

COSC 98.02 - Senior Design and Implementation Project II

Participation in a software engineering group project to meet a real-world need. Group members are responsible for all aspects of a software system, including iterative requirements analysis, design, implementation, and testing. The course also stresses customer interactions, documentation, process, and teamwork. The result is a software product of significant scope and significant benefit to a user base.

Open only to students pursuing a major in Computer Science or a modified major with Computer Science as the primary part. 98.01 and 98.02 constitute a two course sequence, and they must be taken in consecutive terms, either fall/winter or winter/spring, normally in the senior year.

Students are awarded one course credit for successful completion of this course. Students who have registered for COSC-98.01 register for COSC-98.02 to complete the coursework. A final grade will replace the "ON" for COSC-98.01 upon completion of this course for a total of 2 credits for COSC-98.01 and COSC-98.02.

Prerequisite: COSC 98.01

COSC 99.01 - Thesis Research I

Individual research on a topic along with a thesis advisor. Permission of the Undergraduate Program Director and thesis advisor required. Open only to students pursuing a major in Computer Science or a modified major with Computer Science as the primary part. COSC 99.01 and 99.02 constitute a two-course sequence and must be taken in two consecutive terms, either fall/winter or winter/spring, normally in the senior year. In order to

receive credit for COSC 99.01 and 99.02, a written thesis must be approved by the thesis advisor. A final grade will replace any 'ON' for COSC 99.01 and COSC 99.02 after the faculty vote in the spring term.

COSC 99.02 - Thesis Research II

Individual research on a topic along with a thesis advisor. Permission of the Undergraduate Program Director and thesis advisor required. Open only to students pursuing a major in Computer Science or a modified major with Computer Science as the primary part. COSC 99.01 and 99.02 constitute a two-course sequence and must be taken in two consecutive terms, either fall/winter or winter/spring, normally in the senior year. In order to receive credit for COSC 99.01 and 99.02, a written thesis must be approved by the thesis advisor. A final grade will replace any 'ON' for COSC 99.01 and COSC 99.02 after the faculty vote in the spring term.

Prerequisite: COSC 99.01

CSDA - Digital Arts

CSDA 21 - Foundations of Digital Design

This projects-based course will familiarize students with the fundamentals of digital design, including layout, typography, composition, color theory, and process. Foundational concepts and the universal principles of design will be explored through extensive analyses and a series of design projects. No previous art or technical experience is required. Work is evaluated on a set of technical and aesthetic criteria and class participation. Plan to meet during every X-Hour.

Degree Requirement Attributes: Dist:ART

CSDA 22 - 3D Digital Modeling

This projects-based lab course teaches the principles and practices of 3D modeling. Anyone with an interest in learning how models and environments in film, games, and VR applications are made, this course is for you. We focus on modeling, shading, textures, lighting, and rendering, along with some dynamics, special effects, and animation. Students create environments and a fully rigged character model while learning their way around a state-of-the-art 3D animation program. Work will be evaluated on a set of technical and aesthetic criteria. Assignments are given weekly. Plan to meet every X-Hour. No prior experience, coding or drawing skills needed. CSDA 22 and CSDA 24 can be taken in any order.

Degree Requirement Attributes: Dist:TLA

CSDA 23 - Augmented and Virtual Reality Design

This hands-on projects-based course exposes students to the aesthetic, technical, and societal issues surrounding the emerging frontiers of digitally mediated realities. Students learn the fundamentals of augmented and virtual reality

design and are introduced to interactive development for VR/AR. CSDA 023 and COSC 63.01 have class together and work together on teams. Designers in this course create assets and design the UI/UX while developers build interactive digital tools, games, and visualizations. This course is not open to students who have received credit for COSC 29.22 or COSC 89.22.

Prerequisite: CSDA 22

Degree Requirement Attributes: Dist:TAS

CSDA 24 - Computer Animation: The State of the Art

This hands-on course focuses on state-of-the-art computer animation, presenting techniques and principles of traditional animation and how they apply to 3D computer animation, motion capture, and dynamic simulations. Facial and full-body animation are covered through projects, readings, and presentations. Students will complete weekly assignments and create short animation of their choosing. Students are given models and add weight, force, timing, and spacing to bring the models to life and simulate real-world physics. No prior experience needed. CSDA 22 and CSDA 24 can be taken in any order.

Degree Requirement Attributes: Dist:ART

CSDA 25.01 - Intro to UI/UX Design I

CSDA 25.01 is a hands-on projects-based course that teaches the concepts, principles, and practice of User Interface (UI) and User Experience (UX) Design. It is designed for students with an interest in any form of design, although we focus on the UI/UX of digital tools (e.g. mobile, web, tablets). No previous experience or coding skills needed. Grading is based on weekly assignments, reflections, readings, and in-class exercises that build on each other and are intended to teach the foundational skills and thinking of UI/UX design. This team-based course requires a significant amount of time outside class. Students are encouraged (but not required) to take ENGS 12 prior to taking this course.

Degree Requirement Attributes: Dist:ART

CSDA 25.02 - Intro to UI/UX Design II

This Independent Study course offers students who have taken CSDA 25.01 a chance to put what they learned in the classroom into practice. Students might work as a designer in the DALI Lab or on another project. In addition to completing a project as a designer, students design and build an online portfolio.

Prerequisite: CSDA 25.01 and Instructor Permission is required.

Degree Requirement Attributes: Dist:ART

CSDA 27 - Projects in Digital Arts

This is the culminating course for the Digital Arts Minor. Students complete projects in digital arts, including:

computer animations; games, VR/AR applications, interactive digital installations and media. Students work in small teams to complete work of a high production quality or work that incorporates innovations in technology. Grades are based on aesthetic and technical criteria along with teamwork and adherence to weekly milestones.

Prerequisite: CSDA 22 and either CSDA 24 or CSDA 23

Degree Requirement Attributes: Dist:ART

CSDA 28 - Advanced Projects in Digital Arts

This independent study course is for students who have completed all the courses in the Digital Arts minor and want to continue working on projects in digital arts or for students who want to stretch their skills in a new way. Projects may include computer animations, interactive digital arts, installations, or research projects. Students work alone or in teams. This course may be taken twice.

Prerequisite: CSDA 27 and permission of the instructor is required.

CSDA 29 - Topics in Digital Arts

This course studies an advanced topic in Digital Arts that is not covered in the regular curriculum. Students may take this course multiple times, subject to the restriction that the topics are distinct.

Prerequisite: Vary according to the topic. Consult with the instructor.

CSDA 29.04 - Impact Design

This innovative, team-based, project course is about impact--what it is, how you experience it, how you create it, how you measure it. We focus on designing products and experiences for community partners as part of the Social Impact Practicum program. Rather than looking at how we can solve a problem, we look at how we can create delight for users. Students will learn how to combine core principles from human psychology with the tools of design to create products and user experiences that promote engagement, adoption, and learning. Past community partners have included the Hartford Autism Regional Program (HARP) and the Aging Resource Center.

Degree Requirement Attributes: Dist:TMV

CSDA 29.05 - Digital Fabrication

Artists, designers, creators, and makers increasingly use digital fabrication methods in both two and three dimensions as a means of designing, rapid prototyping and manufacturing. This class uses digital fabrication tools in a studio setting. Students learn digital fabrication through a series of 2D and 3D design projects and through critical discussions of the aesthetic, sociological and practical implications of integrating digital tools and materiality into the design and build process.

Students will have hands-on training in the process of creating and converting computer generated drawings and models into physical objects through the use of 2D and 3D scanners, laser-cutters, wire benders, cnc routers and 3D printers. No previous experience needed.

CSDA 29.06 - Digital Tangible User Interfaces

As computation becomes ubiquitous, we find interactive digital devices scattered around our homes, as integral parts of our living environments, including smart appliances, interactive architectural elements, toys, and interactive artworks. Digital Tangible User Interfaces (TUIs) are an approach to Human-Computer Interaction (HCI) where computation is embedded into objects we can interact with. One challenge of the TUIs is how to create a seamless interface between users and digital information so that the user can naturally interact with the daily product and their living environment. This course will focus on the theory, process, and practice of building intelligent objects and spaces. Students will be required to design and implement tangible user interface projects by using physical computing tools (Arduino) and computer languages such as Processing.

Prerequisite: COSC 1 or COSC 2

Degree Requirement Attributes: Dist:TLA

Comparative Literature - Undergraduate

Program Chair: Veronika Fuechtner

M.A. Director: Miya Qiong Xie

Faculty with joint appointments: A. Coly (African and African American Studies), J. Dorsey (Asian Societies, Cultures and Languages), V. Fuechtner (German), G. Gemünden (German), A. Gomez-Quiñones (Spanish and Portuguese), L. D. Kritzman (French and Italian), E. S. Morsi (Comparative Literature), G. Parati (French and Italian), R. Risham (Film), M. R. Warren (Comparative Literature), D. Washburn (Asian Societies, Cultures and Languages, Film);

Faculty with joint titles: R. E. Biron (Spanish and Portuguese), D. P. LaGuardia (French and Italian), A. Martín (Spanish and Portuguese), K. Mladek (German), I. Reyes (Spanish and Portuguese), A. Tarnowski (French and Italian);

Associated faculty: Y. Komska (German), M. McGillen (German); R. Stewart (Classics), Miya Qiong Xie (ASCL);

Affiliated faculty: T. Aquado (Spanish and Portuguese), J. Baron (Library), J. Beckman (English), M. Broner (Spanish and Portuguese), N. Canepa (French and Italian), M. Caplan (COLT), M. Chaney (English), W. Cheng (Music), H. Denzel (German), T. El-Ariss (Middle Eastern Studies), Y. Elhariry (French and Italian), M. Gilebbi (French and Italian), L. Hollister (French and Italian), E.

Kane (French and Italian), L. Kolomiyets (EEER), M. Larose (French and Italian), A. McCann (English), S. Mefoude Obiono (French and Italian), K. Milich (MALS), C. C. Minchillo (Spanish and Portuguese) C. Richter-Nilsson (COLT), J. Smolin (Middle Eastern Studies), J. Smolin (COLT), P. Stuelke (English), N. Tanoukhi (English and Creative Writing), M. Wyatt (French and Italian), Y. Zheng (COLT);

*Courses in Comparative Literature are designed to meet the needs of students whose literary interests are broader than those that can be met by the curriculum of any single department.

To view Comparative Literature Graduate requirements, click here. (p. 916)

To view Comparative Literature Graduate courses, click here. (p. 917)

Requirements for the Major in Comparative Literature

Each student's major plan is designed individually around a particular focus of interest. Students planning to major in Comparative Literature will normally enroll in an Honors Program, which entails writing a thesis (60 to 80 pages) during their senior year in COLT 85 and COLT 87. Students not writing a thesis will write a senior essay in COLT 85.

The major is administered by the Comparative Literature Steering Committee. Students design their major plan in consultation with an advisor and the Chair, and must fill out an application form, available on the COLT website, describing their major, as well as the online declaration on DartWorks. All applications to the major must be approved by the Steering Committee. Major cards can be signed only by the Chair. Students interested in becoming majors should consult the Chair well in advance of their intended declaration of a major.

Prerequisite for the major: COLT 01 or any from among the COLT 10's.

Required courses: any from among the COLT 72's, COLT 85, and, for honors majors writing a thesis only, COLT 87.

COLT 85 (Senior Seminar) is required to fulfill the culminating experience requirement for all COLT majors. COLT 85 and COLT 87 (Thesis Tutorial) are required students writing honors theses.

Major Requirements:

COLT offers two major options

A. Comparative study of literature and culture in two languages. Students must demonstrate fluency in one language beyond English and competence in another language beyond English. This typically involves 3-4 upper-level courses in one language and 1-2 upper level courses in another language or other evidence of advanced work in the respective languages. Furthermore students take 2-4 Comparative Literature courses above COLT10.

B. Comparative study of literature and culture in one language (normally not English) and one other non-literary discipline (e.g. music, film, art, history, geography, physics, etc.).

Students must demonstrate fluency in one language beyond English. This typically involves 3-4 upper-level courses or other evidence of advanced work in the respective language. Furthermore students take 2-4 Comparative Literature courses above COLT10, and demonstrates substantive preparation in a non-literary discipline (3-4 upper level courses).

Requirements for the Minor in Translation

Translation Studies combines the practice of bringing texts from one language to another with theories of meaning and comparison. Translation is central to many literary traditions as well as to daily communications in a globalized world. Students in the Translation Studies Minor examine translation from multiple perspectives, learning practical skills applicable to many working environments. Students also gain broader analytic insights into language, culture, and literary genres. The Translation Studies Minor offers all students who study at least one language in addition to English the training to engage pragmatically and creatively with multilingual environments.

The Minor in Translation consists of six courses:

Prerequisite course: COLT 1 or COLT 10

Three courses focused on translation: COLT 19 and two others in COLT or other departments as approved

Two upper-level courses in one language (other than English)

Coursework in this Minor may not duplicate work counted towards other majors or minors. Only grades of 'B' and above may count toward the minor.

COLT - Comparative Literature - Undergraduate Courses

To view Comparative Literature Undergraduate requirements, click here. (p. 239)

To view *Comparative Literature Graduate requirements*, [click here](#). (p. 916)

To view *Comparative Literature Graduate courses*, [click here](#). (p. 917)

COLT 1 - Read the World

Instructor: Tarnowski, Parati

Do you know how to read? Faces. Words. Pictures. Bodies. Games. Books. People. What are you really doing when you *read the world*? This course teaches comparative methods designed to confront the (mis)understandings and (mis)translations that constitute reading across the world's languages, locations, cultures, historical periods, and expressive forms. Classwork consists of hands-on exercises that engage ancient and modern myths and materials drawn from various media: text, movies, video games, anime, and digital arts.

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:INT or LIT; WCult:CI

7 - First Year Seminars

Instructor: Morsi, Aquado

Offered: Spring, Winter.

COLT 19 - Translation: Theory and Practice

Each course in the designated COLT 19 rubric addresses translation and the transfer of literary meaning as well and form across languages; it trains the students to notice and interrogate the political, historical, and cultural forces that hinder or facilitate such transfer. In addition, each COLT 19 course may offer guided practice of translation in the language(s) in which the student demonstrates competence (home languages or languages studied at Dartmouth).

Degree Requirement Attributes: Dist:INT or LIT; W; Lang: LRP; WCult:

COLT 19.01 - Translation: Theory and Practice (in English)

Instructor: Morsi, Canepa

Translation is both a basic and highly complicated aspect of our engagement with literature. We often take it for granted; yet the idea of meanings "lost in translation" is commonplace. In this course we work intensively on the craft of translation while exploring its practical, cultural and philosophical implications through readings in theoretical and literary texts. All students will complete a variety of translation exercises, and a substantial final project, in their chosen language.

Cross-Listed as: GERM 82.06

Offered: Fall, Winter.

Degree Requirement Attributes: Dist:INT or LIT; Lang:LRP; WCult:W

COLT 19.06 - Decolonizing Translation

Instructor: Kolomiyets

The course takes a panoramic view of translation as an ambivalent reflection of the (post)colonial condition. As a "channel of colonization," translation has relied on legal and linguistic manipulations and prohibitions to unleash epistemicide and linguicide. As a form of resistance, translation has channeled emancipatory postcolonial struggles. In this course, we will survey both functions between the 18th to the early 21st century. We will draw on case studies from around the globe, including the Middle East, South, Southeast and Western Asia, South and Central America, Mexico and the islands of the Caribbean, as well as North America, Europe and Eurasia. We'll revisit the relationship between translation, orientalism, world literature, have a closer look at border identities across geographical regions and historical circumstances, reconsider translational imagination and the art of self-translation, and reflect on the gains, losses, misses, and un/translatables in translation.

Cross-Listed as: EEER 38.27

Offered: Summer.

Degree Requirement Attributes: Dist:LIT; Lang:LRP; WCult:NW

COLT 19.07 - Translating East Asian Languages: Theory and Practice

Instructor: Dorsey

Translation is an ancient practice tied intimately to interpretation, cross-cultural understanding, colonization, proselytization, and business. When it crosses vast cultural divides such as between Asia and the West, the challenges are amplified, the issues complicated, and the stakes raised. What are the practical, cultural, and philosophical issues involved? This course explores these questions by studying theories of translation and the history of it the East Asian context while also offering an experiential component in the form of various translation assignments ranging from technical manuals, fiction, and religious texts to poetry, song lyrics, and humor. The focus will be on Chinese, Korean, and Japanese; students hoping to work with other Asian languages should consult the instructor before enrolling.

Cross-Listed as: ASCL 70.25

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; Lang:LRP; WCult:NW

COLT 40.01 - History of the Book

Instructor: Beckman

This course examines the book as a material and cultural object. We'll consider various practical and theoretical models for understanding the book form and investigating the materials, technologies, institutions, and practices of its production, dissemination, and reception. We'll focus primarily on the printed book in Western Europe and North America, but we'll also discuss the emergence of the codex (book), medieval manuscript books, twentieth and twenty-first century artist's books and the challenges posed by digitality to the book form. The readings for the course will be balanced by frequent use of exemplars drawn from Rauner Library and practical experience setting type in the Book Arts workshop.

Cross-Listed as: ENGL 54.15

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

COLT 40.07 - Video Games and the Meaning of Life

Instructor: Cheng

Video Games and the Meaning of Life is an interdisciplinary course that explores the modern human condition through the stories, designs, and soundscapes of digital games—from the perils of obedience (Hannah Arendt and *The Stanley Parable*) to the metaphors of illness (Susan Sontag and *That Dragon, Cancer*), from the deathless dreams of pacifism (*Undertale*) to the transnational rise of today's billion-dollar e-Sports industry (*League of Legends*). All students are welcome; no gaming or musical experience needed.

Offered: Fall.

Degree Requirement Attributes: Dist:TMV; WCult:CI

COLT 52.02 - New Latin American Cinema

Instructor: Gemunden

With emergence of filmmakers such as Alejandro Inarritu (Mexico), Lucrecia Martel (Argentina), and Jose Padilha (Brazil), the last decade has seen a creative boom in Latin American cinema that includes art house cinema, blockbusters, documentary, and experimental film. Beginning with a quick overview of key forerunners, this course will focus on the major directors, genres and aesthetic trends that characterize the new Latin American cinema. On the one hand, we will pay special attention to the distinct national cinemas: the different historical and cultural contexts out of which they emerge; and the different aesthetics that this gives rise to.

Cross-Listed as: FILM 42.03 INTS 17.12 LACS 35.01

Offered: Fall.

Degree Requirement Attributes: Dist:INT

COLT 52.08 - Literature and Culture of the Americas

Instructor: Stuelke

This course surveys a series of critical paradigms for studying the literature and culture of the Americas. We'll explore a variety of approaches to hemispheric literary and cultural studies, which may involve analyzing comparative and shared romantic and revolutionary discourses; border cultures; state-sponsored literary institutions that cross national borders; inter-American attempts to imagine solidarity; and hemispheric aesthetic strategies and genres for mapping US empire, global capitalism, and settler colonialism. Authors may include Leonora Sansay, Martin Delany, Carmen Lyra, Gabriel García Márquez, Jamaica Kincaid, Valeria Luiselli, Fernanda Melchor, and Silvia Moreno-Garcia. All texts are available in English or in translation.

Cross-Listed as: ENGL 53.32 LACS 45.01

Offered: Fall.

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

COLT 53.06 - Arab Feminisms

Instructor: Morsi

This course is an introduction to the history of feminism in the Arab world from the 19th century to the present. It examines some of the most important socioeconomic and political issues as well as aesthetic trends that were or continue to be central to feminist activism and cultural production in the region. Throughout the term students will engage with a wide range of primary sources (newspaper articles and op-eds, memoirs, novels, poems, photographs and films) that will help them develop a nuanced and critical understanding of the diverse and dynamic experiences of women in the Arab world.

Cross-Listed as: MES 19.03 WGSS 24.01

Offered: Spring.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

COLT 55.03 - Eco-Fiction: Stories of Ghosts and Other Beings from Premodern China

Instructor: Zheng

In this class, we will read a selection of Chinese literary texts (anecdotes, full-fledged tales, poetry) from the third to the nineteenth centuries that feature ghosts. We will consider these ghost stories as a means by which premodern Chinese literary authors explored the ecological connections between the natural and human worlds, and reflected on the relations among humans and between humans and other beings, both animate and inanimate. We will see that ghosts are not just metaphors in these stories. Interaction with ghosts enable human authors to

contemplate and unlearn conditions of being and becoming human.

Because close reading is the key skill that students will learn and practice throughout the quarter, the class will also incorporate creative writing exercises and creative assignments to help students better understand techniques of storytelling. Towards this goal, we will read selected theoretical texts on ecocriticism and narratology and discuss how premodern Chinese literary texts can respond to questions and propositions raised by modern and contemporary theorists in creative ways.

Cross-Listed as: ASCL 60.10

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:NW

COLT 57.02 - From Dagos to Sopranos

Instructor: Parati

Are Italians white? Where does the word “dago” come from? What is “dago red”? Can Italians be “Afrocentrists”? Are Italians racist? What do you know about the mafia? These and other questions will be at the center of this course. We will also work on the portrayal of ItalianAmericanness in “The Sopranos,” “The Godfather,” and Jim Jarmush’s “Ghost Dog.” The last week of the course will be devoted to the music by Italian Americans such as Sinatra and Madonna.

Open to all students. Text, lectures and discussion in English. Students taking the course for major or minor credit in Italian will attend a weekly x-hour and do all written work in Italian.

Cross-Listed as: ITAL 35.01

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:CI

COLT 57.09 - How to Be a Fascist

Instructor: Parati

How do people become fascists? How do they rise to power? Why did people support fascism? We will focus initially on the original model for fascist dictatorships, that is Italian fascism, but we will also have in-class presentations by Dartmouth professors on German, Spanish, French and Japanese forms of fascism. This is a course that will concentrate on history, film, literature, and fashion in order to talk about the slippery definitions of fascism.

Cross-Listed as: INTS 17.10 ITAL 35.02

Offered: Spring.

Degree Requirement Attributes: Dist:INT; WCult:W

COLT 66.01 - What is Psychoanalysis?

Instructor: Kritzman

This course aims to explore the relationship between literature and the theoretical and clinical writings of psychoanalysis. Through readings representing a range of psychoanalytic and literary traditions, we will examine the connections that can be made between psychic structures and literary structures, between the language of the mind and the emotions and the language of the literary, cultural or cinematic text. What is the relationship between “literary” works and the theoretical and clinical writings of psychoanalysis? How do they inform one another? This large question will be examined through readings of essays and case histories by theorists such as Freud, Lacan, Kristeva, Butler, Phillips, Bersani and Zizek. The course will focus on the theme of the family romance and its relationship to the question of gender in works by authors such as Sophocles, Shakespeare, Montaigne, Kafka, Woolf, Mann, Proust, Duras, and Almadovar.

Offered: Fall.

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

COLT 70.08 - Media and Environment

Instructor: Broner

At a time of increasing reliance on technology to enhance and even transform the environment, how do media shape our perception of the world around us? This course introduces students to environmental media studies methods and concepts through a focus on contemporary Latin America. As we work comparatively across a range of media—including film, photography, visual art, and virtual reality—we will consider the specific ways in which each can reveal or reformulate conceptions of the environmental. Among key topics, we will discuss the stakes of defining nature as media, the ecological materiality of media formats, and the role of environmentalist media in present-day Latin America. The course culminates in a project that asks students to simultaneously analyze and create media.

Conducted in English; no previous media experience required.

Cross-Listed as: SPAN 65.17

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:W

COLT 72.01 - Global Literary and Cultural Theory

Instructor: Morsi

Comparative Literature entails conscious engagements with theories of literature, language, and culture from throughout the world. This course ranges across some of the ideas that have been influential in shaping scholarly

questions in a variety of languages. It also addresses the global dimensions of theory: rhetorics and ethics of comparison, world literature, and indigenous knowledges.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:CI

COLT 79 - Independent Study

Instructor: Program Chair

A tutorial course designed by the student with the assistance of a member of the Comparative Literature faculty who is willing to supervise it. Offers the student an opportunity to pursue a subject of special interest through a distinctive program of readings and reports. During the term prior to the course, applicants must submit a course outline to the Chair for written approval.

Offered: Fall, Spring, Summer, Winter.

COLT 85 - Senior Seminar in Research and Methodology

Instructor: Fuechtner

CoLt 85 is a seminar/workshop designed to support the preparation of the honors thesis or culminating project. The work done in this course supplements the independent research and writing students will be undertaking with their academic advisor. The main tasks for this seminar include: a consideration of possible ways to frame analysis within chosen field; a review of basic research protocols; and practice in how to make use of theory, historical documents, and translation in developing the thesis/culminating project.

Offered: Winter.

COLT 87 - Honors Thesis in Comparative Literature

Instructor: Fuechtner

Permission of the Chair is required.

Offered: Spring.

Divisional Courses

Arts and Humanities

AHUM 095 - Internship Reflection and Analysis in the Arts and Humanities

This course requires an internship related to the student's major in the Arts and Humanities division. Students apply academic principles and skills outside the classroom and submit required written work reflecting on their experience and how it enhances and advances the student's academic program of study.

Students receive a pass/fail (CT/NC) grade based on a final report and, when possible, from an evaluation from an on-

site, internship supervisor. This course may be taken in fall, winter, spring, or summer term, but can only be taken twice during the student's degree program. To be eligible for course enrollment, a student must have declared a major and must submit an application that briefly describes the internship project and explains how the experience is integral to their course of study. Applications are due at least two weeks prior to the start of the internship term. No late applications will be accepted.

International students with immigration sponsorship from Dartmouth College should consult the Office of Visa and Immigration (OVIS) about the application process and eligibility for employment authorization to complete the internship. F-1 students may participate in an internship during an earned leave term following a minimum of three consecutive enrolled terms of R, O, or X based on the student's D-Plan.

Instructor permission require to enroll. To receive permission, students must submit a written proposal which articulates the rationale for participating in an internship as part of their academic trajectory.

Offered: Fall, Spring, Summer, Winter.

Interdisciplinary Studies

ACAD 095 - Internship Reflection and Analysis in Interdisciplinary Studies

This course requires an internship related to the student's major in the Interdisciplinary Studies division. Students apply academic principles and skills outside the classroom and submit required written work reflecting on their experience and how it enhances and advances the student's academic program of study.

Students receive a pass/fail (CT/NC) grade based on a final report and, when possible, from an evaluation from an on-site, internship supervisor. This course may be taken in fall, winter, spring, or summer term, but can only be taken twice during the student's degree program. To be eligible for course enrollment, a student must have declared a major and must submit an application that briefly describes the internship project and explains how the experience is integral to their course of study. Applications are due at least two weeks prior to the start of the internship term. No late applications will be accepted.

International students with immigration sponsorship from Dartmouth College should consult the Office of Visa and Immigration (OVIS) about the application process and eligibility for employment authorization to complete the internship. F-1 students may participate in an internship during an earned leave term following a minimum of three consecutive enrolled terms of R, O, or X based on the student's D-Plan.

Instructor permission require to enroll. To receive permission, students must submit a written proposal which

articulates the rationale for participating in an internship as part of their academic trajectory.

Offered: Fall, Spring, Summer, Winter.

Sciences

SCI 095 - Internship Reflection and Analysis in the Sciences

This course requires an internship related to the student's major in the Sciences division. Students apply academic principles and skills outside the classroom and submit required written work reflecting on their experience and how it enhances and advances the student's academic program of study.

Students receive a pass/fail (CT/NC) grade based on a final report and, when possible, from an evaluation from an on-site, internship supervisor. This course may be taken in fall, winter, spring, or summer term, but can only be taken twice during the student's degree program. To be eligible for course enrollment, a student must have declared a major and must submit an application that briefly describes the internship project and explains how the experience is integral to their course of study. Applications are due at least two weeks prior to the start of the internship term. No late applications will be accepted.

International students with immigration sponsorship from Dartmouth College should consult the Office of Visa and Immigration (OVIS) about the application process and eligibility for employment authorization to complete the internship. Instructor permission require to enroll. To receive permission, students must submit a written proposal which articulates the rationale for participating in an internship as part of their academic trajectory.

Offered: Fall, Spring, Summer, Winter.

The John Sloan Dickey Center For International Understanding

Director: Victoria K. Holt

The John Sloan Dickey Center for International Understanding unites the many strengths of Dartmouth — its students, faculty, undergraduate and professional schools — in addressing the world's challenges, ensuring that a rigorous understanding of the world is an essential part of the Dartmouth experience. The Center honors the commitment to international understanding and social responsibility exemplified by President John Sloan Dickey's lifetime devotion to liberal arts education, scholarship, and values.

The Dickey Center offers students opportunities to expand their knowledge of international issues through international internships, research grants, and the opportunity to join student organizations and publications focused on foreign affairs. Students may choose to pursue the International Studies Minor (ISM), supported by the Dickey Center, and/or further refine their international studies with courses and activities in global security and conflict (Institute for Global Security), polar science, cultures, and climate change (Institute of Arctic Studies), and global health (Global Health and Development). A focus on global issues of gender are cross-cutting throughout these activities.

Through symposia, conferences, public events, the Rosenwald Fellows program in US Foreign Policy and International Security, and extended visits by practitioners and scholars, the Center brings leaders working on the vital issues of the day to campus. It enhances the intellectual life of the Dartmouth community, supports faculty research and publications, and brings new opportunities to students through international studies.

The Center's multidisciplinary approach to complex issues is exemplified by its research areas and special initiatives. The Institute of Arctic Studies promotes interdisciplinary scholarship in polar environmental science and engages the work of scientists, humanists, Indigenous communities, and policy makers. Global Health and Development is a collaborative enterprise with Geisel School of Medicine that marshals the talents of the entire campus and international partners to address global health and human development concerns. In its quest to understand the phenomenon of collective violence, the Institute for Global Security, focusing on issues of global peace and security, incorporates the study of both the global state system as well as the varieties of human conflict, drawing on a range of fields and disciplines. Special initiatives include Dissent + Democracy (a speaker series with international dissidents), Powering Peace (a research collaboration looking at renewable energy in fragile states), and the Middle East Policy Initiative (supporting dialogue and engagement), among others.

The Center benefits from the advice of a distinguished Board of Visitors. The offices of the Dickey Center are located on the first, second, and third floors of the Haldeman Center.

International Studies Minor

Coordinator: Casey Aldrich, Ed.D.

ISM Steering Committee: G. Parati (Chair), L. V. Adams, M. B. Burkins, C. Cortez Minchillo, M. E. Greenleaf, V. K. Holt, P. Novosad, W. C. Wohlforth.

To view International Studies courses, click here

To view information on the John Sloan Dickey Center, click here

The International Studies Minor is open to students from all majors seeking to better understand the cross-cutting global forces that shape the vital issues of our day.

The Minor is coordinated by the John Sloan Dickey Center for International Understanding and draws upon faculty expertise from across the College. Students graduating with a Minor in International Studies will be able to demonstrate that they are cognizant of the interplay between local and global-level processes, human and environmental interactions, and place, identity, and culture. They will further be able to apply this understanding to the complex global issues of our time in order to better understand their causes and consequences, and to assume the mantle of responsibility that comes with global citizenship. Application for the Minor should ideally be made by the student's sixth term of study. No course in the minor may be taken under the Non-Recording Option. For the most up-to-date information on course offerings, please visit the Dickey Center's website: <https://dickey.dartmouth.edu/student-opportunities/international-studies-minor>

Prerequisite: None.

Requirements: A total of six (6) courses, to include the following:

Six (6) *thematic* courses (one from each theme):

International Development; International Security; Global Health; Global Environment; World Language & Culture; Great Issues Seminar.

Thematic Courses / Pre-Approved Thematic Courses for 2025-26:

International Development: INTS 16 / GEOG 8.01 (Intro to International Development); ECON 24 (Development Economics); GEOG 22.02 (Global Poverty and Care); GEOG 33.01 (Geopolitics and Third World Development); GOVT 44 (Power and Development in the Global Economy); ECON 29 (International Finance and open-economy macroeconomics); ECON 39 (International Trade); ECON 64 (Topics in Developing Economics); SOCY 22 (The Sociology of International Development); ENV55 (Ecological Economics)

International Security: INTS 15 (Violence & Security); GOVT 4 (Politics of the World); GOVT 5 (International Politics); GOVT 53 (International Security); ANTH 28 / AAAS 88.08 (Ethnography of Violence); GOVT 50.02 (Civil War, Insurgency, and the International Response); GOVT 50.04 (War and Peace in the Modern Age); GOV 50.19 (Development Under Fire); GOV 59 (Foreign Policy and Decision Making); HIST 08.10 (World War II: Ideology, experience, legacy); HIST 62 (The First World War)

Global Health: INTS 18 / GEOG 21.01 (Global Health & Society); ANTH 06 (Intro to Biological Anthropology); ANTH 55 (Anthropology of Global Health); ANTH 26 (Gender & Global Health); ENGS 16 (Biomedical Engineering for Global Health); ENVS 28 (Global Environmental Health); HIST 8 (Body Parts, Body Wholes: An introduction to the comparative history of medicine)

Global Environment: ENVS 2 (Introduction to Environmental Studies); ENVS 3 (Environment & Society); ENVS 62 (Science Policy & Diplomacy); ENVS 30 (Global Environmental Science); ENVS 15 (Environmental Issues of the Earth's Cold Regions); ENVS 60 (Environmental Law); ENVS 65 (Global Environmental Politics); EARS 18 Environmental Earth Sciences; GEOG 15.01 (Global Climate Change); GEOG 16.01 (Climate for Human Security); EARS 6 (Environmental Change); INTS 80.05 / GEOG 70.04 (Imagining Polar Geographies)

World Languages and Culture: One advanced foreign language or literature course (above 1, 2, 3 introductory sequence); INTS17.09 / COLT 49.06 (Multilingualism); SPEE 27 (Intercultural Communication); ANTH 3 (Intro to Cultural Anthropology); ANTH 9 (Language and Culture); COLT 1 (Read the World); WGSS 3 (Global Race x Global Migration); WGSS 41.06 (Transnational Feminisms); COCO 21 (What's in Your Shoebox?); COCO 26 (What's in Your Toolbox?)

Great Issues Seminar: INTS 19 (Dissent and Democracy); INTS 80.04 / GOVT 85.50 (Diplomacy in a Complex World: Meeting Challenges, Creating Opportunity, and Pushing for Peace); INTS 80.06 (Multilateralism and US Leadership)

Note: if a Great Issues Seminar is not available for your D-plan, please select a second course from one of the other five Thematic Course categories.

INTS - International Studies Courses

To view International Studies requirements, click here.

To view information on the John Sloan Dickey Center, click here.

INTS 15 - Violence and Security

Instructor: E. Shackelford

Violence and Security is a multidisciplinary introduction to scholarship on the causes, consequences, and possible prevention of armed violence between groups. Using multiple social science disciplines, we will examine armed violence within, between, and across states, ranging from civil war, "ethnic" conflict, insurgency, and inter-state war. The course addresses the trade-offs created by different political solutions to the problem of security, and features a group simulation exercise to explore the challenges faced by governments and non-governmental organizations when they seek to ameliorate it.

Offered: Spring.

Degree Requirement Attributes: Dist:INT or SOC

INTS 16 - Introduction to International Development

Instructor: Smith (X25), Fox (W26)

Why are some countries rich and others so persistently poor? What can and should be done about this global inequity and by whom? We address these development questions from the perspective of critical human geography. Focusing on the regions of Latin America, Africa and Asia, we examine how development meanings and practices have varied over time and place, and how they have been influenced by the colonial history, contemporary globalization and international aid organizations.

Cross-Listed as: GEOG 08.01

Offered: Summer, Winter.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

INTS 17.10 - How to Be a Fascist

Instructor: G. Parati

How do people become fascists? How do they rise to power? Why did people support fascism? We will focus initially on the original model for fascist dictatorships, that is Italian fascism, but we will also have in-class presentations by Dartmouth professors on German, Spanish, French and Japanese forms of fascism. This is a course that will concentrate on history, film, literature, and fashion in order to talk about the slippery definitions of fascism.

Cross-Listed as: COLT 57.09 ITAL 35.02

Offered: Spring.

Degree Requirement Attributes: Dist:INT; WCult:W

INTS 18 - Global Health and Society

Instructor: Adams/Carey (W26), Sosin (S26)

Only a few decades ago, we were ready to declare a victory over infectious diseases. Today, infectious diseases are responsible for the majority of morbidity and mortality experienced throughout the world. Even developed countries are plagued by resistant "super-bugs" and antibiotic misuse. This course will examine the epidemiology and social impact of past and present infectious disease epidemics in the developing and developed world. The introduction of drugs to treat HIV/AIDS in sub-Saharan Africa will be considered from political, ethical, medical, legal and economic perspectives. Lessons from past and current efforts to control global infectious diseases will guide our examination of the high-profile infectious disease pathogens poised to threaten our health in the future. Open to all students. Limited to 35 students.

Cross-Listed as: GEOG 21.01

Offered: Spring, Winter.

Degree Requirement Attributes: Dist:INT or SOC

INTS 19 - Dissent and Democracy in the World

Instructor: E. Shackelford

A multi-disciplinary introduction to the role of dissent and its relationship to democracy around the world, from the colonial era to modern day with a focus on 20th and 21st century examples. Learn about what distinguishes dissent from simple disagreement or grievance. Understand how and why authoritarian governments stifle dissent and democratic institutions facilitate it. Study the risks and benefits of dissent for individuals and dissidents, the role of dissent under different regime types, and how stifling dissent harms institutions and societies. Discuss the psychology behind dissent (and conformity), historical case studies from around the globe, methods of dissent, and modern political debates around them and the political freedoms that make them possible.

Offered: Fall.

Degree Requirement Attributes: Dist:INT or SOC

INTS 80.04 - Diplomacy in a Complex World: Meeting Challenges, Creating Opportunity, and Pushing for Peace

Instructor: E. Barks Ruggles

This course is a broad view of how states, societies, and institutions manage complex global challenges including climate change, increasing inequality, emerging technologies, and challenges to the global order that has supported the rapid democratization of over half the world. The course will center on the role of diplomacy in

addressing these challenges, creating opportunities, and preserving a rules-based international order that upholds democratic institutions that reinforce human rights and freedoms.

Cross-Listed as: GOVT 85.50

Offered: Fall.

Degree Requirement Attributes: Dist:INT or SOC

INTS 80.05 - Imaging Polar Geographies

Instructor: J. Kerby

The polar regions are in transition as they undergo rapid climate and environmental changes that in turn have cascading consequences for society, both locally and across the globe. But how do we conceptualize and then measure environmental change in polar systems, particularly in areas with sparse population densities and/or challenging climatic conditions that make monitoring difficult?

Cross-Listed as: GEOG 70.04

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

INTS 80.06 - Multilateralism and U.S. Leadership: How should U.S. engage with the Int'l System it Helped Create?

Instructor: J. DeLaurentis

Explore the principal components of the so-called rules-based international order. Study the origin, roles and competencies of the multilateral organizations which underpin the order, including the UN Security Council, and assess their impact and utility. Should these institutions be reformed or is a new construct required for countries to manage the borderless crises that will inevitably come?

Offered: Fall.

Degree Requirement Attributes: Dist:INT or SOC

The Institute of Arctic Studies

Director: Melody B. Burkins, PhD

Founded in 1989, the Institute of Arctic Studies (IAS) at the Dickey Center is Dartmouth's crossroads for multidisciplinary Arctic Scholarship and global policy dialogs that center inclusion, justice, equity, and Indigenous Knowledge in solutions to Arctic and global challenges. We connect Dartmouth faculty from the College and professional schools with colleagues throughout the circumpolar north and maintain longstanding and valuable partnerships with the University of the Arctic (UArctic), the Stefansson Institute in Iceland, the U.S. Cold Regions Research and Engineering Lab (CRREL), Arctic Indigenous Peoples' leadership, Canada

Fulbright and the U.S. State Department Fulbright Arctic Initiative, the University of Greenland, the U.S. National Academies Polar Research Board, and many more.

The Institute's annual programmatic offerings include ongoing education, research, and policy-engaged scholarship opportunities for students hoping to advance work with our partners in scholarship and practice in Canada, Greenland, the Nordic countries, and the polar region of the south, Antarctica. We also connect Dartmouth communities to UArctic, a network of over 200 Arctic-engaged institutions around the world, where we currently support engagement and leadership in UArctic "thematic networks" ranging from insect ecology to science diplomacy, climate, and gender studies. Since 2008, we have also hosted the UArctic Institute for Arctic Policy, a forum for connecting scientists, policymakers and Indigenous leaders on issues of climate, health, security, and development. Recognized as a trusted and inclusive convener of Arctic education, research, and policy-engaged dialog, we also host and cosponsor a diversity of seminars, conferences, and workshops highlighting the importance of the Arctic region, and Arctic Peoples, in world affairs.

Global Health and Development

Director: Dawn Carey, MPH
Faculty Affiliates: Lisa V. Adams, MD, Sienna R. Craig, PhD, Kendall Hoyt, PhD, Margaret Karagas, PhD, Michael Zegans, MD

Global Health and Development at Dickey (GHAD) is a Dartmouth-wide program dedicated to improving the health of the world's population through multidisciplinary research, education and service. The Dickey Center GHAD works across Dartmouth College and the professional schools, the Dartmouth-Hitchcock Medical Center, and a network of partners around the world to pursue solutions to critical challenges in global health as we help train the next generation of global health leaders.

Global partnerships and the advancement of global health equity are central to all Dickey Center GHAD programming and activities. Our GHAD partners beyond campus include national global health leaders, international ministries of health, academic institutions, research institutes, and local and international non-governmental organizations (NGOs) around the world. Our work to inform policy and advance impact consists of joint research, knowledge sharing, capacity building, and education programs with global health colleagues around the world, all informed and driven by co-created priorities.

Wherever possible, our educational activities provide opportunities for Dartmouth students and trainees to work with counterparts outside of the US in a co-learning environment and/or advance bi-directional exchanges with partner institutions and countries.

Each year, GHAD hosts multiple partnered internships and fellowships supporting students working with faculty and practitioners with diverse experience in global health. Students may apply to a formal Global Health Fellows program, where - through regular meetings, workshops, simulations, and service projects as a cohort - they will learn foundational global health research and practice methods and host conversations with experts in a diversity of global health fields, from health systems and data science to leaders in healthcare policy, infectious disease research, global health security, health and development, health diplomacy, and more.

Institute for Global Security

Faculty Director: Professor Daryl Press

Staff Director: Thomas Candon
Great Issues Fellow: TBA

The Davidson Institute for Global Security at the Dickey Center advances Dartmouth's contributions to international security through research designed to improve policymaking, promoting direct engagement with foreign policymakers, and inspiring students to explore careers in international affairs. The Davidson Institute pursues this mission with two guiding intentions: to generate and disseminate new knowledge of critical importance to global peace and to prepare the next generation of leaders to create policy impact in a complex security environment, marked by a return to great power competition, civil wars, and novel emerging threats. The Institute oversees several programmatic areas. The problems of peace and war demand multifaceted solutions that require the study of such diverse fields as government, history, literature, languages, sociology, environmental studies, geography, anthropology, psychology, and economics.

The Jean Monnet Fund for War and Peace Studies, which is part of the Dickey Center's endowment, was established in 1985 by John C. Baker and Elizabeth Baker to honor the Dartmouth trustees who had the vision in 1961 to award Jean Monnet an honorary degree. It was also to honor the three founders of War and Peace Studies at Dartmouth College: Leonard Reiser, Elise Boulding, and Peter Bien.

The Davidson Institute administers the War and Peace Fellows program for students and presents a series of public speakers, hosts simulations, coordinates trips to

Washington, DC and abroad, and organizes other events. The faculty coordinator for the Fellowship program is Associate Professor of Government Kathleen Powers.

In 2021, the U.S. Foreign Policy and International Security Postdoctoral Fellowship program was named in honor of E. John Rosenwald, Jr. '52 TU'53 for his contributions to Dartmouth and the Fellowship program. The Fellows are selected to spend a minimum of ten months, and up to one or two years, in-residence at Dartmouth researching and writing about issues of international security and foreign policy. The program hosts 5-7 Fellows annually and has over 100 alumni. The faculty coordinator for the Rosenwald Postdoctoral Fellows program is Associate Professor of Government Jeffrey Friedman.

The Davidson Institute also provides support to the Political Violence FieldLab, which is overseen by the James Wright Chair in Transnational Studies and Associate Professor of Government Jason Lyall, provides funding for internships focused on peace and security and for faculty research, hosts an annual security conference in Washington, DC, and brings distinguished visiting practitioners to campus for extended periods. In the 2022-23 year, the Initiative launched a Distinguished Visiting Fellows program, which welcomes accomplished faculty whose research focuses on issues of international security for periods of time ranging from a few weeks to a full academic year.

Earth Sciences - Undergraduate

Chair: Meredith A. Kelly

Undergraduate Major Coordinator Leslie J. Sonder

Professors R. L. Hawley, M. A. Kelly, M. Morlighem, E. C. Osterberg, C. E. Renshaw, M. Sharma; Professors Emeriti J. L. Aronson, X. Feng, G. D. Johnson; Research Professors B. P. Jackson, W. C. McClelland; Associate Professors M.C. Palucis, L. J. Sonder; J. V. Strauss; Associate Professor Emeritus W. B. Dade; Research Associate Professor V. F. Taylor; Assistant Professors C. B. Keller, E. M., Lacroix, S. P. Slotznick; Senior Lecturers E. E. Meyer, M. A. Poage; Lecturers B. D. Barnes, T. Chaffee, A. Koeppel, S. B. Penprase, J. S. Stroup; Adjunct Professor K. J. Peterson; Adjunct Emeritus Professor F. J. Magilligan; Adjunct Associate Professors C. Hicks-Pries, J. Mankin, C. Meyer, H. E. Seroussi, J. M. Winter; Adjunct Assistant Professors E. Newton, Y. Nakayama; Adjunct Senior Lecturer J. W. Chipman

To view Earth Sciences Graduate requirements, click here. (p. 929)

To view Earth Sciences Graduate courses, click here. (p. 930)

Prerequisites for all majors and minors including the modified majors

- One introductory Earth Science course (EARS 1-9, exclusive of EARS 7)
- EARS 40 (not required for the Environmental Earth Sciences Minor)
- CHEM 5 (or CHEM 10) (for the Environmental Earth Sciences Minor, any one of the following courses: CHEM 5 (or CHEM 10), PHYS 13 (or PHYS 3 or PHYS 15), or BIOL 16).
- Any one of the following courses taken at Dartmouth: MATH 3, MATH 8, MATH 9, MATH 11, MATH 12, MATH 13, MATH 14, MATH 23, or MATH 46.

Field studies requirement for all majors except modified majors with EARS as the secondary department

- Successfully complete *one* of the following three options:
 - EARS 45, EARS 46, AND EARS 47 (the Stretch)
 - Any *three* of the following courses having significant field components: EARS 33, EARS 38, EARS 52, EARS 58, EARS 59, EARS 71, or other course(s) approved by the Chair. None of these courses may also be used to satisfy another requirement for the major.
 - Transfer course credit from an accredited geology field studies program (including accessible programs).

The Department of Earth Sciences is committed to making the earth sciences accessible to all and encourages students interested in an immersive field experience but unable to complete the Stretch to consider, as appropriate, summer field courses offered by other universities or the alternative accessible field course listed on the International Association for Geoscience Diversity website. Substitute field methods courses offered by other institutions must be approved in advance by the Chair. Since substitute courses will likely receive one or two Dartmouth course transfer credit(s), a student will usually need one or two additional Earth Sciences courses numbered 30 or above to meet Dartmouth's eight course major requirement. Be advised that the Registrar may charge a fee to transfer course credits to Dartmouth. Contact the Registrar's Office for more information regarding the transfer fee.

Culminating experience requirement for all majors except modified majors with EARS as the secondary department

- Majors must complete one of three options to fulfill the College's culminating experience requirement:
- Honors Thesis, as described below (EARS 89 and, optionally, EARS 90 or 91 but not both).
- Independent research project, generally of one term duration, under the supervision of a faculty member (EARS 87).
- Senior Seminar, EARS 88 (Fall term only).
- In addition, to fulfill the College's culminating experience requirement, all students must attend the weekly research seminar during Winter and Spring of their senior year.

Relevant courses outside the department for the Environmental Earth Science majors and minor that may satisfy some of the required course requirements

The Environmental Earth Science major and minor, including modified majors, permit qualifying courses above the introductory level in Geography, Environmental Studies, Engineering, Chemistry or Biology to satisfy some of the course requirements. The following courses are recommended but others are permitted subject to the permission of the Chair: CHEM 63 (Environmental Chemistry); ENVS 20 (Conservation of Biodiversity), ENVS 25 (Ecological Agriculture), or ENVS 30 (Global Environmental Science); BIOL 21 (Population Ecology), BIOL 25 (Introductory Marine Biology and Ecology), or BIOL 51 (Advanced Population Ecology); ENGS 37 (Introduction to Environmental Engineering), or ENGS 41 (Sustainability and Natural Resource Management); GEOG 31 (The Local and Global Biosphere).

The Earth Sciences Major

Prerequisites: As described above

Required courses:

- One Data Analysis course (EARS 10-19)
- Field requirement as described above
- Two Core Methods and Concepts courses (EARS 30-59, exclusive of 45-47). At least one of these must be an Advanced Core Methods and Concepts course (EARS 50-59).
- One Quantitative Analysis course (EARS 60-69)
- One Advanced Topics course (EARS 70-79)
- Culminating experience as described above

The Environmental Earth Sciences Major

Prerequisites: As described above

Required courses:

- One Data Analysis course (EARS 10-19)
- Field requirement as described above
- One Quantitative Analysis course (EARS 60-69)
- One Advanced Topics course (EARS 70-79)
- At least two additional courses that are either Earth Sciences courses numbered 30 or higher or relevant courses in Geography, Environmental Studies, Engineering, Chemistry or Biology as described above.

Culminating experience as described above

****Advisories for Majors****

First-year students planning a major in Earth Sciences or Environmental Earth Sciences are advised to complete the prerequisite courses, exclusive of EARS 40, by the end of their sophomore year.

Students contemplating a professional career in earth sciences are advised that:

1. Training at the Master's level or above is becoming increasingly necessary.
2. Most graduate schools have minimum entrance requirements equivalent to MATH 3 and MATH 8, CHEM 5-6, and PHYS 3-4 or PHYS 13-14. Minimal expectations for Earth Sciences preparation include material taught in EARS 40, EARS 51, EARS 52, EARS 58, and EARS 59.

The Earth Sciences Minor

Prerequisites: As described above

Required courses: Four Earth Sciences courses numbered above 10, of which three must be numbered 30 or higher.

The Environmental Earth Sciences Minor

Prerequisites: As described above except EARS 40 not required

Required courses: A total of 5 courses in addition to the prerequisite courses is required for the Environmental Earth Sciences minor. Three or more of these must be in Earth Sciences. The Earth Sciences courses must be numbered greater than 10; of these, two courses must be Core Methods and Concepts (EARS 30-59) and one must be numbered 60 or above (Quantitative Analysis of Earth Systems or Advanced Topics). Up to two of the five

required courses may be relevant courses in Geography, Environmental Studies, Engineering, Chemistry or Biology as described above.

The Modified Major

Modified Major with Earth Sciences as the primary department (in addition to the general rules in the Regulations section of this catalog.)

Prerequisites: As described above

Required Courses: six courses, of which three satisfy the Field requirement listed above. Of the other three, all must be above the introductory level (numbered above 10) and two must be numbered above 30 (Core Methods and Concepts, Quantitative Analysis, or Advanced Topics courses).

In addition, fulfill the culminating experience requirement as described above.

Modified Major with Earth Sciences as the secondary department(in addition to the general rules in the Regulations section of this catalog.)

Prerequisites: As described above

Required Courses: Four courses numbered 10 or above, at least one of which must be a Core Methods and Concepts course (EARS 30-59) and at least one of which must be a Quantitative Analysis or Advanced Topics course (EARS 60-79).

Modified Major with Environmental Earth Sciences as the primary department (in addition to the general rules in the Regulations section of this catalog.)

Prerequisites: As described above

Required Courses: six, of which three satisfy the Field requirement listed above. Of the other three, all must be above the introductory level and one may come from a third department (neither the primary nor secondary department); relevant courses in Geography, Environmental Studies, Engineering, Chemistry or Biology are described above.

In addition, fulfill the culminating experience requirement as described above.

Modified Major with Environmental Earth Sciences as the secondary department(in addition to the general rules in the Regulations section of this catalog.)

Prerequisites: As described above

Required Courses: four courses numbered 10 or above, at least one of which must be a Core Methods and Concepts course (EARS 30-59) and at least one of which must be a Quantitative Analysis or Advanced Topics course (EARS 60-79). At most one of these courses may come from a third department (neither the primary nor the secondary

department); relevant courses in Geography, Environmental Studies, Engineering, Chemistry or Biology are described above.

Earth Sciences Honors Program

A candidate for the Honors Program in Earth Sciences must satisfy the College requirements of at least a 3.0 (B) overall grade point average and at least a 3.0 (B) grade point average in the major at the beginning of senior year. Those students who a) enroll in and satisfactorily complete Earth Sciences 89, b) satisfactorily complete and submit a written senior thesis and c) have a 3.3 (B+) average or higher in the 8 courses constituting their major will earn Honors or, in appropriate cases, High Honors, in Earth Sciences at the end of senior year. High Honors will be granted only by vote of the Department faculty on the basis of overall academic performance including both classroom and independent work. Note: enrollment in Earth Sciences 89 in and of itself does not constitute admission to the Honors Program, nor does completion of a senior thesis guarantee the awarding of Honors.

EARS - Earth Sciences - Undergraduate Courses

To view Earth Sciences Undergraduate requirements, click here. (p. 250)

To view Earth Sciences Graduate requirements, click here. (p. 929)

To view Earth Sciences Graduate courses, click here. (p. 930)

EARS 1 - How the Earth Works

Instructor: Meyer, Stroup

This course introduces the principles of physical geology by describing the Earth's components and analyzing the processes that control its evolution. Mountain ranges and deep sea trenches, volcanism and earthquakes, surficial and deep-seated geologic processes provide the evidence we will use to interpret the Earth's makeup and history. Earth resources, geologic hazards, and environmental protection will be discussed in connection with a variety of general geologic topics.

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:SLA

EARS 2 - Evolution of Earth and Life

Instructor: Barnes

The presence of life on Earth potentially makes it unique in this solar system. The reasons that life emerged, persisted, and evolved on Earth are tied to Earth's geochemical and geophysical processes, such as the rock cycle and carbon cycle, which have been active on Earth since its formation 4.5 billion years ago. By examining how the biosphere has interacted with key geochemical and geophysical processes over this time, this course investigates how the evolution of the biosphere and geosphere has been a synergistic process throughout the entire history of the Earth that continues today.

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

EARS 3 - Elementary Oceanography

Instructor: Nakayama

Oceanography is one of the studies in which natural processes are investigated with interdisciplinary approaches by scientists of a wide range of specialties. Physical, chemical, biological and geological processes in the oceans and their interactions are studied in this course. Students will gain appreciation of the complexity of the ocean as a natural system and necessity of interdisciplinary to investigate it. Oceans as a source of resources, as a fundamental part of the global climate engine, as a book of Earth's environmental history, and as a bed of the origin of life are discussed. Use and abuse of ocean resources and associated environmental problems, such as ocean water pollution, over-fishing and whaling are also discussed.

Cross-Listed as: ENGS 03.10

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

EARS 5 - Natural Disasters and Catastrophes

Instructor: The Staff

This course will examine several different kinds of natural hazards, including volcanic eruptions, earthquakes, floods, hurricanes, and meteorite impacts. We will attempt to understand the reasons for the occurrence of these events, the reasons for the wide variations in our ability to accurately predict them, and the role of the scientist in broader societal issues relating to disaster preparation, forecasting events, and damage and cost mitigation.

Offered: Summer.

Degree Requirement Attributes: Dist:SCI

EARS 6 - Environmental Change

Instructor: Stroup

This course will investigate the science of natural and human induced environmental change on a global scale. The Earth has never existed in a pristine balanced state, and an understanding of pre-industrial changes in the Earth's environment provides important information that we can use to interpret current environmental change. Topics that will be discussed include: the evolution of the atmosphere, global temperature variation, sea level change, atmospheric trace gases and global warming, stratospheric ozone, acid rain and tropospheric ozone, human migration and landscape development, and global catastrophes.

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

EARS 6.05 - Modeling the Earth

Instructor: Morlighem

This course focuses on modeling the behavior of the Earth as a coupled system. Students will learn to represent physical, chemical, and biological processes in formal, algebraic fashion, and how to organize and create computer models that implement these expressions. Students will use the STELLA graphical modeling environment, which allows the construction of models with varying levels of complexity. Modeling skills will be developed and applied throughout the course, including lectures, homework, and exams. The modeling will focus on simulating natural processes in the Earth system, such as exchanges of mass and energy, and the course will provide the student with an understanding of how the various parts of the Earth system evolve and interact. The scientific method will be introduced, the students will learn about fundamental physical laws and principles governing the behavior of natural systems, and they will be exposed to various natural phenomena relevant to Earth-system dynamics.

Offered: Fall.

Degree Requirement Attributes: Dist:SLA

EARS 07.06 - First-Year Seminars in Earth Sciences

Instructor: Barnes

Writing Seminar

Offered: Winter.

EARS 8 - Carbon Sequestration: Opportunities and Challenges

Instructor: Sharma

Global warming and ocean acidification resulting from the rise in atmospheric carbon dioxide (CO₂) are a serious threat to the modern civilization and future generations. A transition to a low carbon economy remains in distant future. Effective climate change mitigation requires urgent reductions of CO₂ emissions and a portfolio of strategies

for sequestering CO₂. The intent of this course is to introduce geochemical principles that are being investigated to sequester CO₂ already present in the atmosphere or that is released to the atmosphere by point sources such as coal-fired power plants. We will first focus on the scale of the problem and then study the science behind the proposed strategies that could reduce atmospheric carbon dioxide. The course will draw from readings of primary literature in the diverse fields of mineralogy, petrology, geochemistry, and oceanography. These will be augmented by weekly student-led discussions with researchers in these fields. The course will conclude with a general discussion of issues of scaling and environmental impacts of the CO₂ removal approaches and the way forward. Not open to students who have received credit for EARS 010.

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:SCI

EARS 9 - Earth Resources

Instructor: Sharma

The over-arching goal of this course is to make students—many of them future leaders in their fields—keenly aware of how the foundation and progress of society are based on the utilization of the earth resources. The fact that such resources are finite and unevenly distributed around the globe has been a major driver for not only human exploration and innovation but also wars. Also, the exploitation of earth resources has profoundly altered the earth's natural geochemical cycles with ramifications to our health, security, economy and well-being. We will discuss these issues along with the origin of Earth resources.

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

EARS 12 - Big Data Science in Hydrology

Technological advances that facilitate the routine collection of terabytes of data measuring Earth's environment have resulted in the exponential growth of high-resolution hydrological digital databases spanning wide spatial and temporal dimensions. To take advantage of these new databases, hydrologists are increasingly using new tools developed for "big data" science to discover, manage, and analyze earth's ever-changing hydrology. This course is an introduction to the methods and tools of big data science in hydrology, particularly environmental statistics and the R programming language, with application to understanding Earth's hydrology at the local and regional scale. Topics include quantitative analysis of the hydrologic cycle, floods, droughts, and surface water quality. Prior computer programming experience is helpful, but not required.

Offered: Winter.

Degree Requirement Attributes: Dist:TAS

EARS 13 - Introduction to Computational Methods in Earth Science

Instructor: Keller

This course aims to provide students with a hands-on introduction to the use and analysis of large, open datasets in the Earth Sciences. Along the way, we will introduce (in lab) some of the basic concepts of programming, as code literacy is increasingly obligatory in Earth Science. Prior programming experience may be helpful, but is not required. After introducing some basic concepts and tools, each student will work with the instructor to find a real data analysis question that can be addressed (as a final project) using the techniques learned in class.

Offered: Spring.

Degree Requirement Attributes: Dist:TAS

EARS 14 - Meteorology

Introduction to the science of the atmosphere, emphasizing weather and weather forecasting, but including atmospheric variations on all scales from tornadoes, through the Little Ice Age, to Snowball Earth. We begin by discussing the properties of air and a few basic physical principles that control all atmospheric phenomena. These principles enable us to understand weather systems and associated fronts, clouds, winds, and precipitation, and to forecast weather using simple visual observations, satellite data and supercomputers. They are also the basis for the global circulation of air, energy and water, as well as the restlessly changing, diverse climate zones of our planet. Labs will provide hands-on experience observing the weather, building and using simple meteorological instruments, interpreting network data and satellite images, and forecasting the weather in real time. Additional topics may include air pollution, deliberate and inadvertent weather and climate modification, aviation and marine weather, and atmospheric chaos.

Degree Requirement Attributes: Dist:SLA

EARS 15 - Earth's Climate - Past, Present and Future

Instructor: The Staff

Understanding what drives climate change is one of the major scientific questions of the 21st century. Evidence for past (paleo) climate change provides essential information about Earth's climate system and the potential for future change. In this course, we will investigate paleoclimate changes and the chemistry and physics of the modern climate system. We will explore the mechanisms that influence climate on various time scales and the projections for future change. Laboratory projects will focus on collecting and analyzing data from local sites to develop paleoclimate records.

Offered: Winter.

Degree Requirement Attributes: Dist:SLA

EARS 16 - Hydrology and Water Resources

Instructor: Taylor

This course explores both the physical and technical dimensions of the Earth's surface water resources and water resource management to demonstrate that ensuring sustainable water resources requires not only a firm understanding of the physical-chemical characteristics of water, but also of its social arena. Focus is given to the array of environmental problems resulting from human impacts on water resources and contextualizes them both in terms of their physical underpinnings and in terms of social requirements driving the development of technical analyses. Topics include floods, droughts, domestic water supply, dams and dam removal, habitat degradation, snowmaking, and climate change. Weekly field studies of local streams and lakes are used to introduce hydrological field methods and to illustrate fundamental principles and phenomena. Field studies are complemented with technical analyses of water resources.

Offered: Winter.

Degree Requirement Attributes: Dist:TLA

EARS 17 - Analysis of Environmental Data

Instructor: Morlighem

Topics such as acid deposition, air and water pollution, water quality, acid mine drainage and climate change are used to introduce the fundamentals of environmental data analysis. Basic subjects include descriptive statistics, uncertainty, error propagation, hypothesis testing, regression, and experimental design. Advanced methods for spatial and time series data analysis are briefly introduced.

Prerequisite: One course in Earth Sciences and MATH 3 or permission of instructors.

Offered: Fall.

Degree Requirement Attributes: Dist:QDS

EARS 18 - Environmental Earth Sciences

Instructor: Taylor

This course takes an interdisciplinary approach toward understanding the Earth's present and past environments as systems controlled by natural processes and impacted by human actions. Environmental issues, such as global climate change, acid rain, ozone depletion, and water resources and pollution, are discussed in this context. In the process of developing this understanding, students will gain skills in collecting, interpreting, and reporting scientific data. This course does not emphasize environmental policies, but instead the scientific knowledge and arguments behind them. However, case studies will allow students to gain appreciation of the

complexity of scientific, social, cultural and political interactions surrounding local and global environmental issues and sustainability.

Prerequisite: Introductory course in Earth Sciences or a related field course recommended.

Offered: Fall.

Degree Requirement Attributes: Dist:TLA

EARS 19 - Habitable Planets

Instructor: Newton, Sharma

Is the Earth unique, or are there other planets in the universe which can support life? This question has been pondered for thousands of years, and humanity is now on the cusp of being able to answer this question. This course will examine the question of planetary habitability, focusing on the processes which made the Earth habitable, and the likelihood of finding other habitable planets in the universe. Topics to be covered include the creation of the elements, the formation of structure in the universe, planetary system formation, the habitability of Earth and other bodies in the solar system, the future habitability of Earth, and the prospects of finding habitable planets around other stars.

Cross-Listed as: ASTR 019

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

EARS 21 - Transforming the Energy System: Keeping the Lights on While Saving the Planet

This course will explore how transitioning to renewable energy systems is a necessary leverage point for addressing human-caused climate change, with a specific focus on how energy for electricity and heat is generated and used in New England. Through the collaboration of instructors from the Environmental Studies Program, the Irving Institute for Energy and Society, the Department of Earth Sciences and the Sustainability Office, students will gain an interdisciplinary perspective on New England energy systems and human-caused climate change, including 1) the economic, policy, and regulatory management and distribution of energy, 2) the environmental and societal benefits and impacts of these systems on people and the environment, 3) a scientific understanding of fossil fuel resource formation, extraction, refining and use, and 4) climate change attribution and predictions of future human-caused climate change. The course will culminate in a discussion of Dartmouth's own energy transition as well as regional- and national scale solutions for resolving the urgency of climate action with the current political, economic, and technological constraints governing the renewable energy transition.

Cross-Listed as: COCO 038 ENVS 021

Degree Requirement Attributes: Dist:TLA

EARS 32 - Macroevolution

Instructor: Peterson

Macroevolution focuses on the evolutionary process from the perspective of the species and through the lens of deep time. More specifically, it focuses on the issue of whether life is organized hierarchically, and if so, can selection occur at any/all of these other levels, in addition to the level of the organism. This course is especially well suited for discussion and question, as the definition of macroevolution, as well as its very existence, is under intense discussion by both microevolutionists and macroevolutionists alike. Topics covered include punctuated equilibrium, species-level selection, homology, and mass extinctions.

Cross-Listed as: BIOL 028, ANTH 50.46

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

EARS 33 - Earth Surface Processes and Landforms

Instructor: Penprase

This course is an introduction to geomorphology – the study of the mechanisms that shape the Earth’s surface. Students will learn about river, glacial, hillslope, and wind-driven processes, and the resulting landforms and landscapes they produce. We will also delve into how landscapes respond to and affect tectonics and climate, and the implications for understanding the history of the Earth’s surface and its future. The techniques and tools we use as geomorphologists range from direct observations to chemical, physical, mathematical, and isotopic approaches, all of which we will explore in this course. The processes we discuss are not confined to the Earth, and as such, we will also touch on the geomorphic evolution of other planetary bodies as well.

Not open to students who have received credit for GEOG 033.

Cross-Listed as: GEOG 17.01

Offered: Spring.

Degree Requirement Attributes: Dist:SLA

EARS 34 - Earth’s Biogeochemical Cycles

This course is a survey of biogeochemical interactions among Earth’s crust, oceans, and atmosphere, including perturbations due to human activities. Particular attention is given to carbon, nitrogen, phosphorus, and sulfur biogeochemical cycles and the role of these cycles in applied environmental challenges including, for example, greenhouse warming of atmosphere from carbon dioxide and chlorofluorocarbons and the effects of inorganic and organic wastes in the marine and aqueous systems.

Prerequisite: CHEM 5 or 10 (may be taken concurrently) and one course from EARS 1-9 exclusive of EARS 7.

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

EARS 35 - The Soil Resource

Instructor: Jackson

Soils are a critical natural resource; feeding our growing population depends fundamentally on soils; in fact, soils provide nutrients to all ecosystems. Agriculture and land management has increased soil erosion around the world, potentially influencing the history and fate of civilizations. In the modern era, this use is not sustainable; the physical and chemical degradation of soils far outpaces soil production. This course will explore the nature and properties of soils and examine how these processes occur in natural and human-influenced soils, and identify reasonable limits on what can influence the sustainable utilization of soils as a resource. We will begin by developing an understanding of the geologic, biologic, and chemical processes that lead to soil formation and the development of specific soil properties. The second portion of the course will examine the relationship between soils and underlying bedrock and overlying vegetation and the role of soils in ecosystems. The final section of the course will examine the situations in which soils are used to reduce the impact of human activities and the way in which humans can reduce their impact on soils: the importance of soils in septic tanks and leach fields; the use of soils as solid waste landfill caps and liners; the use of soils in the storage of hazardous wastes; and the conservation and management of soils.

Prerequisite: ENVS 2 or one course from EARS 1, EARS 2, EARS 3, EARS 4, EARS 5, EARS 6, EARS 8, EARS 9, or CHEM 5 and an advanced course from the environmental sciences or Earth Sciences; or permission of the instructor.

Cross-Listed as: ENVS 079

Offered: Fall.

Degree Requirement Attributes: Dist:SLA

EARS 36 - Astrobiology

This course will explore the nascent field of astrobiology—study of life in the universe. Students will be introduced to the various research aspects in the fields of biology, chemistry, geology, planetary science, and astronomy that contribute to our current understanding of astrobiology. Scientific hypothesis testing and evolution will be a course focus as technological innovation continues to shape the field. Together we will work to address the questions: How does life begin and evolve? Is there life beyond Earth and, if so, how can we detect it?

Degree Requirement Attributes: Dist:SCI

EARS 37 - Marine Geology

This course investigates the geology, processes, and paleoarchives hidden beneath the world's oceans. The course material is necessarily broad, covering marine geography, plate tectonics, active and passive margins, coastal processes, ocean processes, sediment processes, and climate interactions. We will investigate a few specific concepts (case studies) in detail to relate the course material to current events and the recent scientific literature. A key objective of this course is for you to use case studies to practice how to critically evaluate and synthesize published marine geological data, and to construct, in writing, sound, logical, succinct arguments based on your analyses. We do not have a lab for this course, but I will introduce you to marine geological field methods throughout the term.

Prerequisite: One course from EARS 1, EARS 2, EARS 3, EARS 4, EARS 5, EARS 6, EARS 8, EARS 9 or permission of the instructor.

Degree Requirement Attributes: Dist:SCI

EARS 38 - Introduction to Sedimentary Systems

Instructor: Strauss

This course considers the evidence, preservation, and temporal record of environmental change as preserved in sedimentary rocks. The aim is to learn how to interpret the sedimentary record through an emphasis on depositional models, both modern and ancient – these will be examined in detail with an eye toward interpretation of depositional processes and paleoenvironmental analysis. Short field exercises and group projects are a significant part of this course and are designed to improve your ability to make observations and cogently describe and interpret sedimentary structures and successions in the field.

Prerequisite: One course from EARS 1, EARS 2, EARS 3, EARS 4, EARS 5, EARS 6, EARS 8, EARS 9 or permission of the instructor.

Offered: Fall.

Degree Requirement Attributes: Dist:SCI

EARS 39 - Remote Sensing of the Environment

This course is an introduction to remote sensing of the environment – the acquisition of information about the earth from a distance, typically via spaceborne sensors. In this course, we will examine all components of the remote sensing process, from the electromagnetic radiation environment, to sensor design and data collection, to image interpretation and analysis. Not open to students who have received credit for EARS 65.01.

Cross-Listed as: GEOG 50.04

Degree Requirement Attributes: Dist:TAS

EARS 40 - Materials of the Earth

Instructor: Renshaw, Meyer

This course will prepare students for the Earth Sciences FSP and for further study in Earth Sciences. It consists of two integrated modules, structural geology and earth materials. In the Structural Geology component, students will learn how to observe and analyze the arrangement of rock units in order to gain insight into the chronology of events occurring in the geological past and the implications for kinematics (e.g., plate tectonic history) and dynamics (e.g., origin and evolution of tectonic forces). Practical skills include making and analyzing geological maps, constructing cross-sections, and analyzing three-dimensional geological data and geometries. In the Earth Materials component, students will develop an understanding of the nature and formation of solid-earth's raw materials in the context of earth's major tectonic, petrologic, hydrologic and biogeochemical systems. This will involve an understanding of the nomenclature of materials and their textures, and systems of classification, the physical and chemical properties of earth materials, associations and occurrences, and an understanding of processes of formation of earth materials resources. Field (hand-and outcrop-scale) and petrographic microscope-based laboratory procedures will be introduced. Field excursions.

Prerequisite: One course from EARS 1, EARS 2, EARS 3, EARS 4, EARS 5, EARS 6, EARS 8, EARS 9. CHEM 5 recommended.

Offered: Summer.

Degree Requirement Attributes: Dist:SLA

EARS 45 - Field Methods: Techniques of Structural and Stratigraphic Analysis

Instructor: The Staff

The study of geologic phenomena and field problems associated with the solid Earth. The analysis of outcrop evidence of the structural, stratigraphic, and geomorphic history of selected regions. The integrated use of geologic instruments, topographic maps, aerial photography, and satellite imagery to enable geomorphic and structural analysis. Because of the nature of this course, class meetings, assignments, readings, and reports are scheduled irregularly.

Prerequisite: EARS 40. Must be taken concurrently with EARS 46 and EARS 47.

Offered: Fall.

Degree Requirement Attributes: Dist:SLA

EARS 46 - Field Methods: Environmental Monitoring

Instructor: The Staff

The study of surface processes and products through the integration of geomorphic, hydrologic, and environmental chemistry techniques. The analysis of field evidence of the interaction between the atmosphere, hydrosphere, and lithosphere at the Earth's surface. The integrated use of geologic instruments, topographic maps, aerial photography, and satellite imagery to enable geomorphic and environmental assessment. Because of the nature of this course, class meetings, assignments, readings, and reports are scheduled irregularly.

Prerequisite: EARS 40. Must be taken concurrently with EARS 45 and EARS 47.

Offered: Fall.

Degree Requirement Attributes: Dist:SLA

EARS 47 - Field Methods: Resource and Earth Hazards Assessment

Instructor: The Staff

Field studies of rock associations, geologic structures, active and fossil volcanism, and mineral resources in the western United States. The interrelationship between upper crustal processes and earth materials in the development of landforms and landscapes, and rock and mineral provinces. The integrated use of geologic instruments, topographic maps, aerial photography, and satellite imagery to enable resource assessment. Because of the nature of this course, class meetings, assignments, readings, and reports are scheduled irregularly. EARS 45, EARS 46, and EARS 47, the Earth Sciences Off-Campus Study Program (D.F.S.P.), require considerable logistical planning for proper execution. It is therefore imperative that Earth Sciences majors planning to be enrolled in this program register in the Off-Campus Programs Office (44 N. College Street, Hinman 6102) no later than February 1 of the sophomore year. All prerequisites for EARS 40 must be met by the end of spring term of the sophomore year; failure to complete prerequisites may cause a student to be denied permission to participate in the Off Campus Program. Enrollment may be limited. Preference given to Earth Science majors.

Prerequisite: EARS 40. Must be taken concurrently with EARS 45 and EARS 46.

Offered: Fall.

Degree Requirement Attributes: Dist:SLA

EARS 51 - Mineralogy and Earth Processes

Instructor: Chaffee

Crystallography, mineral chemistry, and physical properties of the principal rock forming minerals, especially the silicates. In the laboratory, technique of hand identification, the petrographic microscope, and X-ray diffraction are mastered. The course culminates with three case studies that relate mineralogic change to the geologic

cycle, such as in regional metamorphism during mountain building; the origin of petroleum; and soil formation.

Prerequisite: EARS 40 and CHEM 5 or permission of instructor.

Offered: Winter.

Degree Requirement Attributes: Dist:SLA

EARS 52 - Structural Geology

This course examines various aspects of regional-scale geologic processes and structures, or tectonics. Topics of study include the history of relevant geologic thought, rock deformation, the origin and evolution of mountain belts, the growth of continents and ocean basins, the causes of earthquakes and volcanic eruptions, and tectonic geomorphology. Students learn that tectonic analysis requires the synthesis of a wide range of information in an attempt to reconstruct the history and driving dynamics of the large-scale, geologic architecture of a particular region. Format: faculty- and student-led presentations, and discussion of selected articles from the peer-reviewed literature.

Prerequisite: EARS 40 or equivalent or permission of the instructor.

Offered: Spring.

Degree Requirement Attributes: Dist:SLA

EARS 58 - Stratigraphy and Sedimentary Petrology

This is a combined lecture, laboratory, seminar, and field-based course focused on the origin, diagenetic modification, and depositional history of sedimentary rocks. The course will cover theoretical and practical aspects of sedimentary petrology and stratigraphy that are critical to understanding the record of ancient climate and environments, as well as the tectonic development of sedimentary basins. In addition to studying hand specimens and utilizing standard petrographic microscopy, we will also introduce some of the other major instrumental methods used in the field today (e.g., isotope systems, provenance analyses, X-ray diffraction, etc...). This course will culminate in an optional multi-day field excursion to a sedimentary basin to complete a field-based research project.

Prerequisite: EARS 40, 45, 46, and 47. EARS 38 is recommended.

Degree Requirement Attributes: Dist:SLA

EARS 59 - Igneous and Metamorphic Petrology

Instructor: Keller

An overview of high-temperature geochemistry with particular emphasis on the processes that form igneous and metamorphic rocks. We will learn how a combination of rock fabric, texture, mineralogy, phase equilibria, and

chemical composition are used to investigate the origin and evolution of rocks. We will also examine the relationship between rock forming and tectonic processes and the origin of the Earth's crust. The course consists of lectures and laboratory; the latter includes examination of a large number of rocks in hand-samples and their corresponding thin-sections. Additionally, we will have a week-end field trip to the metamorphosed igneous rocks of the Adirondack Mountains.

Prerequisite: EARS 40 or permission of instructor.

Offered: Fall.

Degree Requirement Attributes: Dist:SLA

EARS 60 - Earth System Modeling

What will Earth look like in 2100? Scientists use the world's most sophisticated computer programs—climate models—to answer such questions. This applications-based class introduces the theory and practicalities of process-based modeling for climate science. We will employ a range of models, from 0-dimensional to fully-coupled global-scale Earth System Models. Focusing on climate change, we will learn the potentials and pitfalls of modeling complex systems and how to evaluate models and their societal relevance.

Cross-Listed as: GEOG 060

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

EARS 62 - Geochemistry

The intent of this course is to further our understanding of the Earth by utilizing the principles of chemistry. We will place particular emphasis on how to obtain quantitative information about the processes controlling the composition of Earth's mantle, crust, ocean and atmosphere. We will examine how abundances of elements and isotopes and chemical equilibria can provide such information.

Prerequisite: CHEM 5 and CHEM 6 or equivalent or permission of the instructor.

Degree Requirement Attributes: Dist:SCI

EARS 64 - Geophysics

Instructor: Sonder

Geological methods (mapping and analysis of samples collected at the earth's surface) tell us much about processes occurring near the earth's surface, but very little about deeper parts of the earth. Almost all surface rocks come from depths of no more than a few tens of kilometers, yet 99% of the Earth is deeper than that! How can we learn about parts of the Earth to which there is no hope of ever traveling and from which we have no samples? Geophysics gives us the tools. In this course we

will use the principles of gravity, magnetism, seismology, and heat transfer to "journey to the center of the Earth." Laboratory sessions will be focused more locally; we will collect geophysical data from the Hanover area and interpret them to learn about the rocks hidden below the Earth's surface.

Prerequisite: MATH 3 or permission of the instructor. PHYS 3 (or PHYS 13) and MATH 8 are helpful but not required.

Offered: Spring.

Degree Requirement Attributes: Dist:SLA

EARS 65 - Advanced Remote Sensing

Instructor: Koepfel

Advanced Remote sensing involves the acquisition of information about the earth from airborne and satellite sensors. Both vector (GIS and GPS) and raster (image) data will be treated with an emphasis on their interpretation for various geographic and earth science applications. A significant part of the course will be devoted to practical exercises; there will be a final project involving the computer processing and interpretation of these data.

Prerequisite: One course from EARS 1, EARS 2, EARS 3, EARS 4, EARS 5, EARS 6, EARS 8, EARS 9, or GEOG 3.

Cross-Listed as: GEOG 051

Offered: Fall.

Degree Requirement Attributes: Dist:TLA

EARS 65.01 - Remote Sensing of the Environment

This course is an introduction to remote sensing of the environment – the acquisition of information about the earth from a distance, typically via spaceborne sensors. In this course, we will examine all components of the remote sensing process, from the electromagnetic radiation environment, to sensor design and data collection, to image interpretation and analysis. Not open to students who have received credit for EARS 65/GEOG 51.

Cross-Listed as: GEOG 50.04

Degree Requirement Attributes: Dist:TAS

EARS 66.01 - Environmental Transport and Fate

Introduction to movement and transformation of substances released into the natural environment. Fundamentals of advection, dispersion, and reaction. Aggregation and parameterization of various mixing processes leading to dispersion at larger spatial and temporal scales. Importance of inhomogeneity, anisotropy, and stratification in natural media. Basic principles are illustrated by application to atmospheric, ground water, river, estuarine, coastal, and oceanic pollution problems.

Case studies include urban smog, acid rain, Chernobyl fall-out, and stratospheric ozone depletion.

Cross-Listed as: ENGS 043

Degree Requirement Attributes: Dist:TAS

EARS 67 - Environmental Geomechanics

Instructor: Palucis

The study of our Earth environment requires an understanding of the physical processes within and at the surface of the Earth. This course explores the physics of key Earth surface processes, including volcanic eruptions, landslides and debris flows, and turbulent flows in rivers and the sea. Advanced quantitative concepts are developed through applications in geomorphology, sedimentology, oceanography, and volcanology. Format: faculty lectures, challenging weekly problem sets, independent project, final exam.

Prerequisite: MATH 23 or permission of the instructor.

Offered: Winter.

Degree Requirement Attributes: Dist:SCI

EARS 70 - Glaciology

This course explores the unique nature and scientific importance of glaciers, ice sheets, snow, and frozen ground in the Earth system, collectively referred to as the Cryosphere. We explore how glaciers work, and how they interact with the climate system. We investigate how ice behaves from the molecular scale to the continental scale and compare and contrast this behavior to that of snowpacks. The practical skills and techniques used by glaciologists to study glaciers and ice sheets are considered along with transferable skills in advanced quantitative data analysis, including time series analysis and computational modeling of physical processes, with emphasis on practical application to real data.

Prerequisite: PHYS 3 and MATH 3, or equivalent. EARS 33 is recommended.

Degree Requirement Attributes: Dist:QDS

EARS 71 - River Processes and Watershed Science

Role of surface water and fluvial processes on landscape formation; magnitude and frequency relationships of flood flows; soil erosion, sediment transport, and fluvial landforms. This course examines the links between watershed scale processes such as weathering, denudation, and mass wasting on the supply of water and sediment to stream channels on both contemporary and geologic timescales and further evaluates the role of climate change on the magnitude and direction of shifts in watershed and fluvial processes. Not open to students who have received credit for GEOG 035.

Prerequisite: EARS 16 or EARS 33 or BIOL 23 or permission of the instructor.

Cross-Listed as: GEOG 62.01

Degree Requirement Attributes: Dist:SLA

EARS 73 - Environmental Isotope Geochemistry

This course examines the use of stable, radiogenic and cosmogenic isotopes as tools to study Earth processes, particularly processes that are environmentally important. The theory of isotope principles are introduced followed by their applications in investigating Earth's systems. The main applications include studies of climate change, hydrological processes, biogeochemical cycles, Earth's early environment, origin of life, erosion and mountain building. Labs provide hands on opportunities for students to learn mass spectrometry and isotopic data collection and interpretation.

Prerequisite: CHEM 5 or permission of instructor.

Degree Requirement Attributes: Dist:SLA

EARS 74 - Soils and Aqueous Geochemistry

Instructor: Lacroix

An overview of the basic principles that govern soil chemistry, with particular emphasis on the composition and mineralogy of soils, the chemical processes that function within soils, the reactions that describe the fate of elements (both nutrients and contaminants) within soils and soil solutions. The majority of the course will cover equilibrium soil processes. Occasional field trips will concentrate on the collection of soils and their characterization.

Prerequisite: CHEM 5 and EARS 62 or equivalents, or permission of instructor.

Offered: Spring.

Degree Requirement Attributes: Dist:SCI

EARS 75 - Quaternary Paleoclimatology

Evidence for past (paleo) climate change provides essential information about Earth's climate system and the potential for future change. This course focuses on understanding paleoclimate changes during the Quaternary Period such as glacial-interglacial variability, rapid climate changes, and the recent "stable" climatic conditions of the Holocene epoch. We will rely on published scientific data to examine these various topics and critically evaluate hypotheses for mechanisms of climate change.

Prerequisite: EARS 15 or ENGS 172 or equivalent or permission of the instructor.

Degree Requirement Attributes: Dist:SCI

EARS 76 - Advanced Hydrology

Instructor: Palucis

A survey of advanced methods used to analyze the occurrence and movement of water in the natural environment. The watershed processes controlling the generation of runoff and streamflow are highlighted, and used to explore the transport and fate of sediment and contaminants in watersheds. Throughout the course the ideas and concepts are explored through the primary literature, with emphasis given to methods of observation, measurement, data analysis, and prediction.

Prerequisite: MATH 3, and one of EARS 16 or EARS 33 or BIOL 53 or ENGS 43 or permission of instructor.

Cross-Listed as: ENGS 042

Offered: Spring.

Degree Requirement Attributes: Dist:TAS

EARS 77 - Environmental Applications of GIS

Instructor: Chipman

This course uses geographic information science (GIS) to analyze environmental systems. Students will learn advanced GIS techniques such as topographic analysis, spatial modeling, spatial statistics, remote sensing, and spatiotemporal data analysis. These methods will be explored through a wide variety of applications, including watershed hydrology, water quality, vegetation, land use/land cover, climate, wildlife ecology, and natural hazards. In lectures, laboratory exercises, and class projects, students will gain experience in designing and implementing GIS-based solutions to environmental problems.

Prerequisite: GEOG 50 or GEOG 51/EARS 65, or permission of the instructor.

Cross-Listed as: GEOG 077

Offered: Winter.

Degree Requirement Attributes: Dist:TLA

EARS 78 - Climate Dynamics

This course focuses on the physics that govern the circulation of the atmosphere and ocean, and the dominant patterns of climate variability that we observe today. We explore global-scale atmospheric dynamics that explain why the atmosphere behaves as observed. We also use the scientific literature to investigate the signature and causes of regional ocean-atmosphere variability including the El Nino- Southern Oscillation, monsoons, and North Atlantic Oscillation, and the influence of climate change on these patterns.

Prerequisite: Math 8 or equivalent and EARS 14 or EARS 15 or equivalent or Instructor Permission.

Degree Requirement Attributes: Dist:SCI

EARS 79 - Special Topics

EARS 79.01 - Special Topics Seminar

EARS 79.02 - Community Partnerships for Climate Resilience 1

Instructor: Renshaw

Student teams will partner with a diverse group of Upper Valley organizations facing climate change impacts to propose and develop concrete climate resilience projects. They will learn about adaptation strategies for challenges like extreme rainfall, flooding, heat, tick-borne diseases, and wildfires, as well as effective community partnership practices. This course emphasizes project design and proposal, with an option to continue in the spring for project implementation. Not open to first-year students.

Offered: Winter.

EARS 80.04 - Special Topics - Data Analysis

Offered occasionally to provide a course in a topic which would not otherwise appear in the curriculum.

EARS 80.02 - Astrobiology

This course will explore the nascent field of astrobiology—study of life in the universe. Students will be introduced to the various research aspects in the fields of biology, chemistry, geology, planetary science, and astronomy that contribute to our current understanding of astrobiology. Scientific hypothesis testing and evolution will be a course focus as technological innovation continues to shape the field. Together we will work to address the questions: How does life begin and evolve? Is there life beyond Earth and, if so, how can we detect it?

Degree Requirement Attributes: Dist:SCI

EARS 80.03 - Technical Computation in the Earth Sciences

Driven by increasing data availability, processing power, and model sophistication, scientific or technical computation has become increasingly central to basic research in the Earth Sciences. This course aims to provide Earth Science students with a working introduction to scientific computation including (1) hands-on experience applying common, widely applicable sampling and inversion algorithms to classic Earth Science problems; (2) an awareness of the factors limiting efficiency and scalability when working with large datasets; and (3) an introduction to some of the tools and best practices of software engineering used to produce more robust, maintainable software.

Degree Requirement Attributes: Dist:SCI

EARS 80.04 - Community Partnerships for Climate Resilience 2

Instructor: Osterberg

The course is the second of a two term sequence created to give you the foundational scientific understanding to dive deeply into a meaningful project related to climate resilience, to collaborate as a multidisciplinary team, and to gain experience in the skills needed tackle a real-world challenge that makes a tangible impact outside the classroom. In this second term of the course, you will continue to work with your community partner to begin the implement the climate resilience project you started during winter term. While the project likely will not be fully implemented by the end of the spring term, your idea should be sufficiently advanced to be far more than a concept sketch or slide presentation. The aim is implementation with a measurable impact. Ideally, your project will help your partner organization build on your work well beyond the second term; perhaps leading to a presentation to review board, an application for funding the project or a larger initiative. The format of your project's output can be a physical product, an app, a program, a service, an experience, or any other format relevant to the challenge. EARS 79.02 and EARS 80.04 are intended to be taken in sequence in the same academic year.

Offered: Spring.

EARS 86 - Special Projects

Instructor: Sonder

Advanced study in a particular field of the earth sciences under the supervision of a faculty advisor. Conclusions from the project must be submitted in a suitable oral or written report. Does not satisfy the culminating experience requirement.

Offered: Fall, Spring, Summer, Winter.

EARS 87 - Special Projects: Senior Culminating Experiences

Instructor: Sonder

A 1-term project involving independent work under the supervision of a faculty advisor. Project planning, in consultation with the advisor, should be completed in advance of the term in which the work is to be done. Conclusions from the project must be submitted in a suitable oral or written report. Serves in satisfaction of the culminating experience requirement but does not carry eligibility for Honors in the major. Requires attendance at weekly earth sciences research talks during Winter and Spring terms of the senior year.

Prerequisite: Sufficient training in the area of the project and faculty approval.

Offered: Fall, Spring, Summer.

EARS 88 - The Earth System

Instructor: Poage

A culminating experience for seniors choosing not to pursue independent research, offered concurrently with EARS 201. We review regional geology of the Appalachians in the field, and then review key components of the Earth System, including the origin of our planet and the origin of life, plate tectonics, atmospheric and ocean circulation, Earth surface processes, and environmental change. Format: local field trips, faculty- and student-led presentations, and discussion of selected articles from the peer reviewed literature.

Prerequisite: Earth Science major and fourth-year standing.

Offered: Winter.

Degree Requirement Attributes: Dist:SLA

EARS 89 - Thesis Research I

Instructor: Sonder

Research related to completion of a senior thesis. The initiative to begin a senior thesis project should come from the student, who should consult an appropriate faculty member. Conclusions from the research must presented in both written and oral form. Attendance at weekly earth sciences research seminars is required during Winter and Spring terms. Both EARS 89 and EARS 90 may be taken for course credit, but only one may count toward the major.

Students should register for EARS 89 during fall or winter of their senior year; if they desire a second course credit for thesis work, they should register for EARS 90 in a subsequent term. They may continue with their thesis research into a third term but cannot register for a third course credit. Normally a grade of "ON" (ongoing) will be given at the end of the term in which they registered for EARS 89; a final grade will replace the "ON" upon successful completion of the senior thesis. Serves in satisfaction of the culminating experience requirement.

Prerequisite: permission of a faculty research advisor.

Offered: Fall, Winter.

EARS 90 - Thesis Research II

Instructor: Sonder

Continuation of research related to completion of a senior thesis. Students who have previously registered for EARS 89 register for this course. They may continue with their thesis work into a third term, but cannot register for a third term of course credit. Attendance at weekly earth sciences research seminars is required during Winter and Spring terms.

Students are awarded one course credit for successful completion of this course. A final grade will replace the "ON" for both EARS 89 and EARS 90 upon successful completion of the senior thesis.

Offered: Spring, Winter.

EARS 179.1 - Special Topics Seminar**East European, Eurasian, and Russian Studies**

Chair: Stuart Finkel

Professor: L. Patyk; Associate Professors: V. Apresyan, S. Finkel, M. Gronas, V. Somoff; Assistant Professor: T. Filimonova; Visiting Professor: L. Kolomiyets; Lecturer: N. Plagmann; Professor Emeritus: J. Kopper.

To view Russian Language and Literature courses, click [here](#) (p. 270).

Majors

1. The Major in East European, Eurasian, and Russian Studies.
 - a. Prerequisite: RUSS 3
 - b. Requirements: A total of ten courses, which must include two language courses above RUSS 3 and a course in the teens. Another East European, or Eurasian language studied independently may be substituted for Russian with the permission of the department faculty. Of the remaining seven courses, at least two must be within the EEER Department, and one course must fulfill the culminating experience. The Area Studies Major will include courses both from within the East European, Eurasian, and Russian Studies Department and from such departments as History, Government, Economics, and Music, that, together, provide a cogent study of one or more topics with a focus on the region. The major should be planned in consultation with the chair and the courses outside the department need to be approved by the chair. For the culminating experience, students may write a thesis (RUSS 87), or, with the approval of the department faculty, designate a course in the EEER Department that will serve to satisfy the requirement.
2. The Major in Russian.
 - a. Prerequisite: RUSS 28.
 - b. Requirements: RUSS 29; one course in the sequence 41–42–43; RUSS 71; two courses in the 30s which must include RUSS 31; and one culture course (numbered 10 through 19). In addition, majors must take four additional courses, for a total of 10. Those concentrating on language would select at least some of these four courses from the forties; those focusing in culture would select additional courses in the teens; and those interested primarily in literature would design a major with an emphasis on courses in the thirties. Two courses

from the LSA+ may be counted toward the major and counted as a culture course. The culminating experience requirement must be satisfied by completing RUSS 71 or RUSS 86. In addition, those writing an honors thesis will enroll in RUSS 87, and may also take RUSS 85 as part of their preparation for the thesis.

Minors

1. The Minor in Russian

Prerequisite: RUSS 3, or permission of the chair.

Minor courses: a total of six courses including

 - a. EEER 31, 32, or 33.
 - b. One or two of the following courses: EEER 10 - EEER 19.
 - c. Up to four other RUSS or EEER courses numbered 23 or higher, for a total of six courses beyond the prerequisite.
 - d. Students may count two of the LSA+ courses toward the minor.
2. The Minor in East European, Eurasian, and Russian Studies.

Prerequisite: *One* from EEER 10 through EEER 19.

Requirements: A total of six courses. Not more than two of these may be from the LSA+. Three other courses should be from EEER 30 and higher. Up to two courses may be from other departments or programs (History, Government, Geography, Jewish Studies, etc) with an Eastern European, Eurasian, and Russian Studies focus.

Honors Program

Seniors who give evidence of outstanding ability and who wish to pursue serious research on an independent project are invited to apply for honors work. Students must satisfy the minimum College requirement and must also meet two departmental requirements. First, they must have a grade average of 3.3 for all courses taken within the major. Second, they must have received at least an A- in an advanced course that emphasizes research and analysis.

Area studies majors may satisfy this second requirement with one of these courses, or, if the topic of the thesis is outside the area of language and literature, with a course from the academic area in which they intend to do research. Application is normally made by the third week of the fall term, with RUSS 85 taken in the fall and RUSS 87 in the winter. The thesis must be submitted no later than the third week of spring term. Further information is available from the department Chair.

Term Abroad

Dartmouth Advanced Language Study Program (LSA+) in the Baltic States (Baltic LEAP), also available as Baltic LEAP FSP (see Guarini website).

The Dartmouth Russian LSA+ Program is conducted jointly with Government and the Irving Energy Institute at Vilnius University in Lithuania and at Tartu University in Estonia. Applications for the summer program are due February 1. Those accepted for the program will sign up for EEER 25 and RUSS 22 and 23. Successful completion of the FSP will serve in satisfaction of the Summer Residence Requirement (even when taken in the summer following the first year or third year).

Prerequisite for the Russian LSA+ program: RUSS 1, RUSS 2, RUSS 3, or the equivalent, with a grade of no lower than B- in RUSS 3.

We recommend taking at least one EEER course from the teens (EEER 10, 13, 14, or 15) before embarking on the LSA+.

EEER - East European, Eurasian, and Russian Studies

EEER 10 - Understanding Russia

An examination of Russia as a cultural, national, and historical entity part of and yet apart from both Europe and Asia. Russia is a continental power of vast proportions whose traditions, character, national myths, and forms of political organization often seem a mirror-image to those of the United States. After a brief survey of Russian history, the course will examine certain determinants of Russian culture, including Christianity, multinationalism, and the status of Russian civilization on the periphery of Europe. The course will then deal with the art, music, and popular literature of Russia, and conclude by examining certain contemporary issues, including the complex coexistence of Russian and Soviet culture. Open to all classes.

Offered: Fall, Summer.

Degree Requirement Attributes: Dist:TMV; WCult:CI

EEER 11.04 - Topics in Music History: Russian Music

The objective of this course is to give the student an overview of Russian music in order better to understand the cultural, religious, and political history of Russia's past 1,000 years and to position the student's ongoing mastery of this history within a larger context. Questions that emerge from this course will find echoes in current cultural, religious, and political issues, and students will be directed to explore these intersections in class discussions and coursework.

Cross-Listed as: MUS 40.05

Degree Requirement Attributes: Dist:ART; WCult:W

EEER 12 - Imagining Siberia

This course examines the geographical and cultural space of Siberia through literature, film, journalistic, historical and scholarly writing. Among its central themes are the colonization of Siberia, integration of indigenous Siberians into Russian life; indigenous political and environmental activism; Siberia as a place of exile (imperial and Soviet); Siberia as a site of socialist construction; the effect of industrial development on ecology, indigenous practices, as well as Siberia's wider population; climate change

Degree Requirement Attributes: Dist:SOC; WCult:NW

EEER 13 - Slavic Folklore: Vampires, Witches and Firebirds

In this course, we will discuss a variety of genres from Russian folklore. As we move from the familiar genre of the riddle to the often mystifying beliefs and rituals of the ancient Slavs and then to the fairy tale, comfortingly familiar from childhood, we will learn to not only recognize the richness and density of texts that may initially seem uncomplicated but also to discern the patterns and meanings behind the apparently exotic narratives and behaviors. By thoroughly studying one of the world's richest oral traditions, Slavic folk life and folklore, we will acquire the tools and techniques necessary for collecting, documenting, and interpreting folklore -- which is perhaps the most truly international of all arts. The course is based on materials in Russian and East European cultures, but also draws from other traditions. Open to all classes

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

EEER 14 - The History of Russian and East European Film

An interpretive history of Russian, Soviet, Post-Soviet and Central European film. Topics include: tsarist Russia and the psychological school of the silent film (Evgeny Bauer); the Revolution and the Golden Age of Soviet montage (Sergey Eisenstein and Dziga Vertov); Stalinism and film as an instrument of mind control and propaganda; late Soviet symbolist cinema (Andrey Tarkovsky); and contemporary Russian Film Noir. The course also touches upon Eastern/Central European film, including the Czech New Wave (surrealist animator Jan Svankmeyer) and the "post-Yugoslavian wave" (Emir Kusturica and Dusan Makoveev). In addition to regular weekly screenings, all films will be made available online in an experimental format: divided into separate short clips that will be used in class for in-depth analysis and close cinematic readings. The final project (done in groups) will be creative: you will make a video-parody or video-stylization of one of the studied films. Open to all classes.

Offered: Summer.

Degree Requirement Attributes: Dist:ART; WCult:W

EEER 15 - Russia and the West: From Early Times to Present Day

Instructor: Finkel

In its thousand-year history, Russia has occupied a unique place between Europe and Asia, and both Russian and foreign observers have wrestled with defining its place vis-à-vis western (European) civilization. This course will explore Russia's place in world history, examining the complex and evolving relationship of Russia and Europe, and the Soviet Union and the West, from the middle ages to the present. Particular emphasis will be given to the complex relationship of Putin's Russia with the United States today.

Cross-Listed as: HIST 92.06 RUSS 50.01

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:W

EEER 16 - The Door Opened: Women Writing in Eastern Europe

This course proposes a fresh take on 20th- and 21st-century literature and film by women from a wide range of national and linguistic backgrounds (including Hungary, Ukraine, Romania, Poland, the Soviet Union, Yugoslavia and elsewhere). We examine women's points of view on various topics and what media women prefer for telling stories about their lives and experiences. We also explore the problematic concept of "Eastern Europe," historically exoticized and feminized vis-a-vis its Western "big brothers."

Degree Requirement Attributes: Dist:INT or LIT;
WCult:CI

EEER 17 - Slavic Fairy Tales

In this course we will investigate the reasons why fairy tales are such enduring and powerful forces in our lives. Our special focus will be the incredibly rich body of traditional Russian folk and fairytales as well as their modern adaptations in the visual arts, music, literature, theater, and film.

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 18 - Russian and East European Theater

This course is devoted to Russian drama and theater from the 19th through the 21st century. We will read eight plays that are central to the Russian literary and theatrical tradition and then discuss their most significant interpretations on both the Russian and the world stage. The meetings will be conducted in a non-traditional format. In our examination of the plays, we will attempt to model the process of stage production in accordance with the principles developed by Konstantin Stanislavsky-a

celebrated Russian director whose approach to theater transformed acting in Russia and beyond. The course will culminate in the production of a play by a Russian playwright which students themselves will cast, direct, and design. All readings are in English.

Cross-Listed as: THEA 018

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 19 - Modern Conspiracy: The Russian and American Conspiracist Traditions

Conspiracy narrative has come to dominate our national and international political discourse like no other time in modern history. It is therefore essential that we understand the operation of conspiracy narrative, its psychological allure and political function, and its devastating social consequences. In this course, we will investigate two national conspiracist traditions, the American and the Russian, and the parallel rise and stunning convergence of Russian and American conspiracism in our current political moment. In order to do so, we will inquire into the historical origins, the form, function, and effectiveness of conspiracist narratives in these two traditions in the 20th and 21st centuries. Ultimately we will approach conspiracy theories as ways of knowing, of penetrating and ordering complex and opaque realities. They are also powerful narrative weapons that imperil the shared truths on which cohesive societies are based. Our course texts include *The Master and Margarita* (Bulgakov), *The Crucible* (Miller), and *Libra* (DeLillo), *Ivan the Terrible Part II* (Eisenstein) *The Manchurian Candidate* (Frankenheimer) and *The Matrix* (The Wachkowskis) as well as literary and cultural studies of conspiracist narrative and ideation.

Cross-Listed as: COLT 63.02

Degree Requirement Attributes: Dist:INT or TMV;
WCult:W

EEER 21 - Baltic History, Culture & Regional Identity

This course, taught by the faculty member directing the Saint Petersburg program, introduces students to aspects of contemporary Russian culture through a variety of media, including literature and journalism, film, television, and art. The topic will vary from year to year, depending on the specialty of the faculty member. Credit for this course is awarded to students who have successfully completed the Dartmouth Foreign Study Program in Russia.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:W

EEER 24 - Baltic Energy Systems

The Baltic States -- Estonia, Latvia, and Lithuania -- are a cultural and commercial crossroads. They are also a living laboratory for navigating the complex pressures of transitioning to low-carbon, socially innovative energy systems. This course will explore social and technological

dimensions of energy transitions in the Baltics via two four-week modules, one based at Vilnius University in Lithuania and the other based at the University of Tartu in Estonia. The course will examine how the histories and futures of Baltic energy systems are shaped by their ties to Europe and their proximity to Russia, as well as how the Baltic states are transforming energy infrastructures and policies in response to urgent energy security and climate change challenges.

Cross-Listed as: GOVT 96.05

EEER 25 - Introduction to Baltic History and Culture

This course introduces the history and culture of the Baltic region, encompassing Estonia, Latvia and Lithuania, via two four-week modules, one based at Vilnius University in Lithuania and the other based at the University of Tartu in Estonia. The course explores history from the prehistoric period (including Baltic and Finno-Ugric folklore and mythology specific to the region) to the present day, with special emphasis on the period of nation-states (from the mid-nineteenth century and through the twentieth century). We examine how the histories and cultures of these countries have been shaped by their peculiar geographical and linguistic circumstances, and their proximity to both Europe and Russia/the Soviet Union. The course will meet twice a week for 1.5h. Each week will feature a different guest speaker, including university colleagues from Vilnius and Tartu universities, but also local experts on literature, cultural history (including Jewish history) and other areas.

Degree Requirement Attributes: WCult:CI

EEER 31 - The World as Word: 19th Century Russian Fiction

Instructor: Somoff

In his Philosophical Letters, Pyotr Chaadaev, a 19th century Russian intellectual, compared Russian history to the history of Western civilization. Chaadaev proclaimed that Russia had been cut off from the global community, belonged to no cultural system, and contributed nothing to the progress of the human spirit. Since then, Russian writers and thinkers have wrestled with Chaadaev's categorical verdict. One response from the 20th century poet Osip Mandelstam pointed out that Chaadaev had overlooked one singular contribution: the Russian language. "Such a highly organized, such an organic language is not merely a door into history, it is history itself." Taking Mandelstam's point to its logical conclusion, it is Russia's literature that becomes the Rosetta stone to the exceptional nature of the Russian experience. In this course, we will explore some of the texts that make up this Rosetta stone. While reading some of the most celebrated works from 19th century Russian fiction – texts by Pushkin, Lermontov, Gogol, Turgenev, Goncharov, Dostoevsky, Tolstoy, and Chekhov – we will attempt to account for the distinct character of Russian literature and its unique role in Russian history and culture.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 32 - Reading Red: 20th Century Russian Fiction

Instructor: Somoff

This course examines the major works of 20th century Russian literature. During that century, the people of Russia experienced a series of cataclysmic events including two World Wars; the overthrow of the 300-year-old Romanov dynasty and the triumph of the Bolshevik revolution; a Civil War; the mass trauma of collectivization; the Great Terror of Stalinism; and the collapse of the Soviet Union. As we read and discuss novels, stories, poems, and plays written by the Russian writers of that time, we will consider the correlations and tensions between the Russian sociohistorical reality and artistic expression. In addition to readings from literary and historical sources, we will watch films created by some of the most celebrated Russian filmmakers as well as the recent controversial documentary *The Soviet Story* produced by Latvian director Edvins Snore.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 33 - Dreams and Disasters: Contemporary Post-Soviet Cultures

This course focuses on Russophone literature, film, art and culture in the new millennium (from the early 2000s to the present day), incorporating a crucial discussion of the late Soviet period and the 1990s. Beginning with the collapse of the USSR, cultural life in Russia has been characterized by ceaseless change, but also the reemergence of old patterns, tendencies and problems. Much contemporary Russian literature and art is caught up in complicated negotiations with the Soviet past and its social, cultural and political institutions, while also looking ahead to an uncertain future. We will read novels, short stories, plays and poetry, watch films and discuss visual and performance art with a view to topics ranging from gender and sex, activism and violence, family and national identity, internet communication and other language problems.

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 35 - Dostoevsky and the Problem of Evil

Dostoevsky laid bare the tragedy of human existence and probed the innermost recesses of the human psyche to show the terrifying isolation of a human being separated from God. Revolted by a world in which innocent children suffer, Dostoevsky tested the meaning to be found in Christianity, personal responsibility and human solidarity. This course examines his major novels, with particular emphasis on the artistic expression of his philosophical views. Those views will be examined in the context of

Russian intellectual and literary history. Readings include "Notes from Underground," "Crime and Punishment," "The Idiot," "Demons," and "The Brothers Karamazov." Taught in English. Open to all classes

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 36 - Leo Tolstoy's Art and Thought

From childhood to the end of his life, Tolstoy struggled to overcome his fear of death. As he himself put the problem, 'Is there any meaning in my life which the inevitable death awaiting me does not destroy?' In his quest for bulwarks against that fear, he studied the great philosophers and he examined closely the value system of the peasants. He found temporary relief in war and in marriage, but the definitive solution always eluded him. The evolution of this theme, and the formal devices by which Tolstoy expressed it in his prose, will be traced in the major novels, War and Peace and Anna Karenina. The course will conclude with a brief examination of the prose that Tolstoy produced after his conversion. Taught in English. Open to all classes.

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 37 - The Good Doctor: Anton Chekhov and the Healing Arts

Instructor: Patyk

The great Russian writer, Anton Chekhov (1860-1904) is not only credited with pioneering the modern short story form and inventing modern theater, but he was also a beloved and practicing doctor. Chekhov's works can be read as a guide to the non-medical healing arts, including humor, adventure, compassion, and art itself. We will draw on his works, as well as on Chekhov's own epistolary advice, with the goal of learning "how to write like Chekhov."

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 38 - Special Topics in Russian Literature, Culture and Area Studies

These courses focus on areas of Russian literature, culture, and society that are not covered by our core curriculum. They introduce students to the study of aspects of Eurasian culture and society, including contemporary media culture, Russian Orthodoxy, politics and society, and environmental studies through various media and forms of cultural representation (literature, film, digital media), as well as interdisciplinary approaches.

EEER 38.08 - The "New Man" on the Moon: Science Fiction Under Socialism

Cyborgs, intergalactic vistas, and overextended futurities ostensibly characterize western science fiction. Yet space age put cosmic agendas on writing and film-editing desks

all over the former Socialist bloc as well. We will explore the East/West differences in generic conventions and investigate the uneasy fit between Socialist Realism—the state-sponsored style for picturing the real life of the “New Socialist Man”—and the questionable political orders and subversive desires unleashed by fictions of deregulated space travel.

Degree Requirement Attributes: Dist:INT or LIT

EEER 38.09 - Creative Writing in Russian: Russian and Ukrainian Short Story

This class is conducted in the format of a workshop and provides learners and speakers of Russian with an opportunity to engage in creative writing in Russian. We will read selected Russian, Ukrainian (and other) literary texts and examine them from the perspective of a writer rather than a reader or a critic. We will also explore semantic, stylistic, and poetic resources of language through a variety of experimental assignments. Finally, each student will undertake their own creative writing project, which will center on a specific literary genre and a specific topic chosen as the cultural-historical focus for the course. For the Fall of 2017, this topic will be the 1960s-70s in Ukraine, which, at that time, was part of the Soviet Union. Each student will write one short story, set in 1960-70s Ukraine, and written from the perspective of an imaginary, yet historically grounded, narrator. The reading list for the course will include some of the best short stories written in the Russian and the Ukrainian languages as well as collateral texts and films of various genres devoted primarily to the 1960s-70s in Ukraine and the Soviet Union. These readings and viewings will serve as a reservoir of characters, situations, plots etc. which could inspire, or even serve as prototypes for the students' own short stories.

Degree Requirement Attributes: Dist:ART; WCult:W

EEER 38.12 - History of Attention

The course will trace a broad outline of the social and cultural history of human attention. We will begin by establishing a firm foundational understanding of attention as a neuroscientific and cognitive phenomenon. We will then proceed to attention in preliterate societies (hunter-gatherers' attention, attentional strategies in oral literary genres, such as the epic narrative); modern forms of attention in literature, music, pictorial art, and film; attention in the context of religious and spiritual practices; and finally, the current state of attention, including the social and political implications of the generalized 'attention deficit disorder' induced by the media and the internet.

Degree Requirement Attributes: Dist:TMV

EEER 38.15 - Homelands and Diasporas: Russian Jews on Three Continents

Drawing on a variety of disciplines, such as anthropology, history, sociology, political science, and cultural studies, and sources ranging from academic works to works of fiction and films, the course first explores the history and culture of Russian (pre-1917) and especially Soviet Jews (1917-1991)—a major and significant segment of the world Jewry—prior to the massive immigration of the 1970s-1990s. The rest of the course involves a comparison of the experience of Russian-speaking Jews in the three major countries they have immigrated to—Israel, US, and Germany—as well as those remaining in Russia today.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:CI

EEER 38.17 - Modern Russia and it's Culture: Historical Roots and Global context

This course examines modern Russia and its culture in a historical and global context. By focusing on Russian culture, socioeconomic issues, and geopolitical affairs of the late-20th and 21st century, we will discuss the impact of history on Russia's present, on Russian consciousness and identity, and on the major trends in Russian society and politics. We will analyze how Russia demonstrates power and presents itself around the world, and how it is perceived by others.

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 38.20 - Poetry After War

The course will focus on poetry written after catastrophe, that takes on the impossibility of speaking and using language. We will read poets who lived through the fall of totalitarian regimes and the Holocaust, as well as later poets who sought to work through this trauma in order to recover language for writing. We will also examine work by poets who are grappling with the catastrophic failure of language in today's war in Ukraine.

Degree Requirement Attributes: Dist:INT or TMV;
WCult:W

EEER 38.21 - Translation and Censorship in Eastern Europe

Translation has been a target of censorship and control over several centuries. In this course, we will use Ukraine as a case study to trace and discuss the relationship between translation and censorship, with close references to other countries of Eastern Europe, in particular the Baltic states under Soviet rule and those belonging to soviet bloc, such as Poland, Hungary, Bulgaria, etc., as well as new countries appeared in the place of old Soviet entities.

Cross-Listed as: COLT 19.03

Degree Requirement Attributes: Lang:LRP; Dist:SOC;
WCult:NW

EEER 38.22 - Language Ideologies in Literary and Media Translation

Our focus in this course will be on translation as an ideological weapon, with the capacity for far-reaching misrepresentation of key political and cultural concepts and messages. Such misrepresentation has proliferated in recent times, not least through translations that have been mediated by the Russian language or through deliberately misleading translations. We will use tools including corpus linguistic approaches, pragmatics, and theories of discourse to provide a new perspective on language ideologies.

Cross-Listed as: COLT 19.04

Degree Requirement Attributes: Lang:LRP; Dist:SOC;
WCult:W

EEER 38.24 - Jewish Folklore

Instructor: Gronas

What makes stories and songs necessary to our identity, dignity, and spirituality? This course attempts to answer these questions through the study of Jewish folklore. We'll focus mostly on stories and songs, but also address bordering genres (riddles, proverbs, folk drama). Along with studying Jewish folklore, we will *experience* it by singing songs and enacting a folk-play. This dual approach stems from the backgrounds of the co-teachers, one a scholar, the other a Grammy-nominated songwriter.

Cross-Listed as: JWST 34.05

Offered: Fall.

Degree Requirement Attributes: Dist:INT or LIT;
WCult:W

EEER 38.25 - Ukrainian Dreams after Communism

For many Ukrainians, 1991 became a crucial point when the long-held dream of their independence came true. Our course takes a multi-dimensional look at the period of the three recent decades as an advance towards the realization of collective dreams shaping the post-Soviet nation, combined with everyday disappointments, anxiety, and uncertainty. The course aims to analyze the agency of contemporary Ukrainian people, the media, literature, and digital folklore in creating new messages, meanings, and values.

Degree Requirement Attributes: Dist:SOC; WCult:CI

EEER 38.27 - Decolonizing Translation

The course takes a panoramic view of translation as an ambivalent reflection of the (post)colonial condition. As a "channel of colonization," translation has relied on legal

and linguistic manipulations and prohibitions to unleash epistemicide and linguicide. As a form of resistance, translation has channeled emancipatory postcolonial struggles. In this course, we will survey both functions between the 18th to the early 21st century. We will draw on case studies from around the globe, including the Middle East, South, Southeast and Western Asia, South and Central America, Mexico and the islands of the Caribbean, as well as North America, Europe and Eurasia. We'll revisit the relationship between translation, orientalism, world literature, have a closer look at border identities across geographical regions and historical circumstances, reconsider translational imagination and the art of self-translation, and reflect on the gains, losses, misses, and un/translatables in translation.

Cross-Listed as: COLT 19.06

Degree Requirement Attributes: Dist:LIT; Lang:LRP; WCult:NW

EEER 38.28 - Literature and Ideology in Eastern Europe

Instructor: Kolomiyets

The course will focus on the politics and contexts of language functioning in literary works as an instrument of ideological influences as well as the tool of counterinfluence, or resilience, to various kinds of ideological pressure. We will analyze a selection of literary works representing new and updated genres and styles, with a special look at literary works as war testimony "after Bucha" in Ukraine. Among the considered authors are winners of prestigious literary prizes.

Cross-Listed as: COLT 50.01 RUSS 38.28

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:NW

EEER 38.29 - Ukraine, Jews, and the Literature of War

This course explores the Jewish contribution to, and integration with, Ukrainian culture. It focuses on the writers and poets of Jewish descent whose literary activities span from the early 20th century to the 2020s. We'll develop a consistent vision of Jewish encounter and participation in Ukrainian modernity, literary and cultural life. The course also embraces and contextualizes Jewish writers who were born in Ukraine and Ukrainian authors of Jewish origin as important participants in the oikumene that shaped them as writers.

Degree Requirement Attributes: Dist:INT; WCult:W

EEER 38.30 - Languages of Russia and the Former Soviet Union

When asked what languages are spoken in Russia, most people would probably say Russian. Yet, Russia and the

former Soviet territories stretch from the icebergs of the Arctic to the steppes of Central Asia and are home to more than 150 languages from a multitude of language families, including Indo-European, Uralic, Turkic, and Mongolic.

This course examines the evolution of languages in different regions of Russia and the former Soviet Union, highlighting present-day efforts to document and conserve endangered languages and the challenges encountered by language activists. In terms of content, the course combines academic readings with popular and opinion pieces and videos.

Cross-Listed as: LING 11.26

Degree Requirement Attributes: Dist:INT or SOC; Lang:LRP; WCult:NW

EEER 39 - Wonder Works from Ukraine: Folklore, Literature, Film

Instructor: Somoff

This course explores Ukrainian folklore, including vampire legends, rites of passage, and fairy tales. We will uncover the patterns and meanings behind these narratives and customs, reflecting on their enduring appeal to modern writers, artists, and ourselves. Students will collaborate with peers in Ukraine on projects such as the art of *pysanka* workshop and gather contemporary folklore from Ukraine-based informants (via Zoom), examining the vital role folklore plays in the wartime experiences of present-day Ukrainians.

Offered: Spring.

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

EEER 50 - Special Topics in Russian History

Students will work with primary and secondary sources to examine periods of Russian, Soviet and Eurasian history. Each course will focus on a particular time period or theme.

EEER 50.02 - The Russian Revolution

The Russian Revolution of 1917 and the Bolshevik seizure of power proved to be among the most important events of the 20th century, and they had profound implications for world history up until the current day. In this course, students will examine the causes and consequences of these momentous occurrences and grapple with a set of complex and intricate historical questions that still divide historians. We will begin by examining how in the late 19th century far-reaching social changes & external challenges confronted the 300 year-old Romanov dynasty, and how, ultimately, this dynasty was unable to adapt to the modern era. Students will learn about the multifarious political movements that emerged in opposition to the old regime, and about the so-called Revolution of 1905, which shook but did not overthrow the tsar.

Cross-Listed as: HIST 055

Degree Requirement Attributes: Dist:SOC; WCult:W

EEER 50.03 - Twentieth-Century Russia

Instructor: Finkel

An examination of major developments and problems in twentieth-century Russian history with particular attention to the consequences of the October Revolution, Leninism, civil war and its impact, politics and society during the New Economic Policy of the 1920s, the formation of the Stalinist system and its historical legacy, the Krushchev era, the Brezhnev years of “stagnation,” Gorbachev’s perestroika and the problems of transition to a law based on democratic and open market system of the Russian Federation, the successor state to the Soviet Union. Open to all classes.

Cross-Listed as: HIST 056

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:W

EEER 50.04 - Behind the Iron Curtain: The Cold War From the Other Side

Instructor: Finkel

This course explores the Cold War from “Behind the Iron Curtain,” including both the global political struggle for ideological and strategic primacy and the reflection of this struggle in domestic cultural and material developments from the end of World War Two until the Soviet collapse in 1991. We will examine how “Cold War competition” played out in a variety of interlocking spheres, from expansionist foreign policies that first divided Europe and gradually extended to the entire global south, to urgent economic competition in both military technology and domestic consumer products, to ideological and cultural competition.

Cross-Listed as: HIST 57.01

Offered: Fall.

Degree Requirement Attributes: Dist:SOC; WCult:W

EEER 71 - Advanced Seminar in East European, Eurasian, and Russian

In these seminar courses, advanced learners and native speakers of Russian have an opportunity to read in the original and to study in depth works that are central to Russian intellectual history and literary tradition. Topics vary from year to year and may concentrate either on individual authors (Pushkin, Chekhov, Gogol), or a period (Middle Ages, The Silver Age, the Post-Soviet era), or a phenomenon (Russian Humor, Popular Culture, Utopianism). The course is conducted in Russian.

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 71.01 - Media Research and Creative Writing in Russian

In this class, we will conduct a collaborative research and writing project. The result will be an epistolary novel (a novel in letters) written by our class entirely in Russian. The setting of the action is going to be contemporary Russia with the context for the letters encompassing all spheres of everyday Russian life.

Degree Requirement Attributes: Dist:LIT; WCult:W

EEER 85 - Independent Reading

Russian 85 is available to students in the Honors Program who intend to do preparatory work for a thesis or to students who wish to study a topic not normally covered in a regularly offered course. In the latter case it is necessary to prepare a one-page proposal describing what the student plans to study and to accomplish during the term. The proposal must then be approved by the faculty member who has agreed to direct the course and by the Department as a whole. Final approval must be received before the beginning of the term in which the course is to be taken.

EEER 86 - Independent Reading and Research in Russian

Independent reading and research.

EEER 87 - Thesis

A program of individual research designed for honors students. Interested students should consult the Chair of the Department.

RUSS - Russian Language and Literature Courses

To view Russian Language and Literature requirements, click here (p. 262).

RUSS 1 - Introductory Russian

Instructor: Apresyan

An introduction to Russian as a spoken and written language. None of these serves in partial satisfaction of the Distributive or World Culture Requirements.

Offered: Fall.

RUSS 2 - Introductory Russian

Instructor: Apresyan

An introduction to Russian as a spoken and written language. None of these serves in partial satisfaction of the Distributive or World Culture Requirements.

Offered: Winter.

RUSS 3 - Introductory Russian

Instructor: Filimonova

An introduction to Russian as a spoken and written language. None of these serves in partial satisfaction of the Distributive or World Culture Requirements.

Prerequisite: Russian 2

Offered: Spring.

RUSS 22 - The Russian Language: Study Abroad

The second course in the Russian Moscow program, credit for this course is awarded to students who have successfully completed the Dartmouth Foreign Study Program in Russia.

Prerequisite: membership in the Foreign Study Program.

Degree Requirement Attributes: WCult:W

RUSS 23 - The Russian Language: Study Abroad

This course represents the work done in the phonetics classes and in the conversation classes at the Higher School of Economics in Moscow. Credit for this course is awarded to students who have successfully completed the Dartmouth Foreign Study Program in Russia.

Prerequisite: membership in the L.S.A. Program.

Degree Requirement Attributes: WCult:W

RUSS 27 - Intermediate Russian I

Instructor: Plagmann

A continuation of the 1-2-3 cycle, this course is the first of the intermediate language courses offered by the Department. The course prepares the student for further upper-level study of the language. It includes intensive review, introduction to new grammatical topics, as well as reading, composition and conversation.

Prerequisite: RUSS 3 or permission

Offered: Fall.

RUSS 28 - Intermediate Russian II

Instructor: Plagmann

The sequence RUSS28 and RUSS29 completes the cycles of second-year Russian. Special emphasis is placed on such difficult areas as participles, aspects and verbs of motion. The course includes extensive reading, video work and vocabulary building.

Prerequisite: RUSS 27 or permission

Offered: Winter.

RUSS 29 - Intermediate Russian III

Instructor: Plagmann

The sequence RUSS 28 and RUSS 29 completes the cycles of second-year Russian. Special emphasis is placed on such difficult areas as participles, aspects and verbs of

motion. The course includes extensive reading, video work and vocabulary building.

Prerequisite: RUSS 28 or permission

Offered: Spring.

RUSS 41 - Advanced Conversation and Composition

The language-learning goal of the course is to expand the students' vocabulary, work with new vocabulary and idioms, to review and reinforce certain grammatical and stylistic subtleties. Students will be introduced to Russian cultural traditions and some specifically Russian attitudes in an exploration of problems of cross-cultural communication and miscommunication. There will be films, short stories, and articles for discussion.

Prerequisite: RUSS 29 or higher

Offered: Fall.

RUSS 42 - Advanced Russian through History, Press and Film

Advanced Russian through the study of the Russian society and a brief synopsis of Russian history. Students will continue to develop their spoken, written, and reading proficiency in the Russian language. There will be stories and articles for discussion, one film, and grammar exercises.

Offered: Summer.

RUSS 43 - Seminar in Russian Culture

Instructor: Somoff

In these seminar courses, numbered in the forties, advanced learners and native speakers of Russian have an opportunity to read texts in their original Russian and to study aspects of Russian intellectual history and the literary tradition in depth. The course focus varies from year to year and may concentrate on particular topics and phenomena (e.g. popular culture, media, humor, poetry, and translation). The course also continues work on advanced grammar and is conducted in Russian. Students will complete a project in Russian.

Offered: Spring.

RUSS 43.01 - Media Research, Creative Writing, and Translation Workshop

This class will be devoted to collaborative research, writing, and translation projects. Using authentic Russian-language sources, from scholarly articles to social media networks, the students will conduct research for a "case study" which is of major significance in contemporary Russia and write a one-act play, entirely in Russian, in the genre of documentary drama. The students will then translate their play into English and present a staged reading of it at the end of term.

Degree Requirement Attributes: Dist:LIT; WCult:W

RUSS 45 - Special Topics in Russian Language

History of the Russian Language. This course introduces the student to the history of the phonology (sound development) and morphology (development of grammatical categories) of Russian as a Slavic and Indo-European language.

Prerequisite: RUSS 29 or higher

RUSS 48 - Structure of Modern Russian

This course will introduce the student to the necessary methodology for analyzing the linguistic structure of Russian, and will examine the theoretical foundations of such analysis. The course will focus on the structure of the noun, pronoun, and verb, as well as on various aspects of Russian word formation.

Prerequisite: RUSS 29

UKRA - Ukrainian Language and Literature**UKRA 3 - Introductory Ukrainian III**

Instructor: Kolomiyets

Building on Intensive Ukrainian, this course further develops students' oral and written communicative skills through authentic materials, analytical and creative exercises, and project work. Each student will partner with a student in Ukraine for conversational practice. The class will collaborate with a Kyiv-based professional theater and participate in the Worldwide Ukrainian Play Readings initiative.

Offered: Winter.

UKRA 11 - Intensive Ukrainian

Instructor: Somoff

Immersive study of Ukrainian language and culture that combines Ukrainian 1 and 2 into a single term. The course emphasizes oral communication while developing basic listening, reading, and writing skills. Students partner with their peers in Ukraine for conversational practice and project work. Upon successful completion of the course, students can take UKRA 003. This is an accelerated Language (LACC) course.

Offered: Fall.

UKRA 27 - Intermediate Ukrainian I

The course is designed for the students with the Novice mid to high level of language proficiency (ACTFUL 1989 standards). Upon completion of this course students should be able to achieve the Intermediate Low level of language proficiency.

This course aims to further students' knowledge of the Ukrainian language. The course materials are organized around various themes to enhance students' involvement

and interaction with the living culture of the Ukrainians and introduce students to various discourses of the Ukrainian language. An in-depth overview of grammar and syntax is offered. Further mastering of four basic linguistic skills – speaking, reading, listening, and writing – is emphasized at the higher levels of language proficiency. Course material will engage students in exploring Ukraine's living cultural and linguistic environment through the study of its living language on site.

Economics

Chair: James D. Feyrer

Vice Chair: Ethan G. Lewis

Welborn; Lecturers H. Lee Research Associate M. Yedomiffi

To view Economics courses, [click here](#) (p. 274).

Requirements for the Major

Prerequisites: ECON 1 and ECON 10, with an average grade no lower than C, and MATH 3. A student who fails to achieve the minimum grade average for the prerequisites may, with the permission of the vice chair, substitute grades in ECON 21 and ECON 20 for those in ECON 1 and ECON 10, respectively. Another statistics course may be substituted for ECON 10 with permission of the vice chair. Newly declared Econ Majors who have not previously satisfied this requirement must take Econ 10.

Requirements : Nine courses in addition to the prerequisites, with a GPA for these nine courses of no less than 2.0. The nine courses must include the following:

1. ECON 20, ECON 21, and ECON 22
2. A culminating experience class and its prerequisites. This implies choosing a 3-course sequence from among the following:
 - a. ECON 62, with prerequisites ECON 32 and ECON 29
 - b. ECON 64, with prerequisites ECON 24 and either ECON 27 or ECON 39
 - c. ECON 65, with prerequisites ECON 25 and ECON 35
 - d. ECON 66, with prerequisites ECON 26 and ECON 36
 - e. ECON 67, with prerequisites ECON 27 and either

ECON 24 or ECON 28 or ECON 37

- f. ECON 68, with prerequisites ECON 28 and ECON 38
- g. ECON 69, with prerequisites ECON 29 and ECON 39
- h. Honors via the 80-81-82 sequence (see below)

3. Three additional ECON courses, at least two of which must be numbered between 23 and 69

Notes: ECON 2, ECON 5 and ECON 6 may not be counted toward fulfillment of the major requirement.

Requirements for the Modified Major

The modified major is intended to fit the needs of students who have a definite interest in economics but are interested also in studying some specific problem or topic that falls partly in the field of economics, the study of which depends also upon courses in related fields, e.g., mathematics and computer science. Each student's program must be approved by the vice chair of the department (who consults the curriculum committee) no later than fall of senior year; this approved program of courses constitutes the major. Note that the department website provides examples of several "pre-approved" modified majors that meet the guidelines.

Prerequisites : ECON 1 and ECON 10, with an average grade no lower than C, and MATH 3. A student who fails to achieve the minimum grade average for the prerequisites may, with permission of the vice chair, substitute grades in ECON 21 and ECON 20 for those in ECON 1 and ECON 10, respectively. Another statistics course may, in certain instances, be substituted for ECON 10 with permission of the vice chair. Newly declared Econ modified majors who have not previously satisfied this requirement must take Econ 10.

Requirements:

1. A unified, coherent program of at least ten courses is required, of which at least six courses must be in economics (in addition to ECON 1, ECON 10 and MATH 3) and four courses in a field or fields related to the special topic approved by the department vice chair. The GPA for the six courses in Economics must be no less than 2.0. The additional courses in a field outside of economics must be chosen from those satisfying the major of the department offering the course.
2. The six courses in economics must include the following:
 - a. ECON 20, ECON 21, and ECON 22
 - b. A culminating experience class and its prerequisites. This implies choosing a 3-course sequence from among the following:
 - i. ECON 62, with prerequisites ECON 32 and ECON 29
 - ii. ECON 64, with prerequisites ECON 24 and either ECON 27 or ECON 39
 - iii. ECON 65, with prerequisites ECON 25 and ECON 35
 - iv. ECON 66, with prerequisites ECON 26 and ECON 36

- v. ECON 67, with prerequisites ECON 27 and either ECON 24 or ECON 28 or ECON 37
- vi. ECON 68, with prerequisites ECON 28 and ECON 38
- vii. ECON 69, with prerequisites ECON 29 and ECON 39

Requirements for Another Major Modified with Economics

Prerequisites : ECON 1 and ECON 10, with an average grade no lower than C, and MATH 3. (A student who fails to achieve the minimum grade average for the prerequisites may, with the permission of the vice chair, substitute grades in ECON 21 and ECON 20 for those in ECON 1 and ECON 10, respectively. Another statistics course may, in certain instances, be substituted for ECON 10 with permission of the vice chair.)

Requirements : A unified, coherent program of at least four courses in economics in addition to the prerequisites, with a GPA of no less than 2.0. The four courses must contain ECON 21, ECON 22, and two additional classes numbered between 20 and 69.

Economics Minor

Prerequisites : ECON 1 and ECON 10, with an average grade no lower than C, and MATH 3. A student who fails to achieve the minimum grade average for the prerequisites may, with the permission of the vice chair, substitute grades in ECON 21 and ECON 20 for those in ECON 1 and ECON 10, respectively. Another statistics course may be substituted for ECON 10 with permission of the vice chair. Newly declared Econ minors who have not previously satisfied this requirement must take Econ 10.

Requirements : Six courses in addition to the prerequisites, with a GPA for these six courses of no less than 2.0. No courses can be counted toward both a major and a minor. The six courses must include the following:

1. ECON 20, ECON 21, and ECON 22
2. A culminating experience class and its prerequisites. This implies choosing a 3-course sequence from among the following:
 - a. ECON 62, with prerequisites ECON 32 and ECON 29
 - b. ECON 64, with prerequisites ECON 24 and either ECON 27 or ECON 39
 - c. ECON 65, with prerequisites ECON 25 and ECON 35
 - d. ECON 66, with prerequisites ECON 26 and ECON 36
 - e. ECON 67, with prerequisites ECON 27 and either ECON 24 or ECON 28 or ECON 37
 - f. ECON 68, with prerequisites ECON 28 and ECON 38
 - g. ECON 69, with prerequisites ECON 29 and ECON 39

Transfer Credit

Upon approval by the Vice Chair, a maximum of two course credits for work taken elsewhere may be counted

toward the economics major, including prerequisites. For an economics modified major or economics minor, only one economics course may be transferred, while no economics courses may be transferred for another major modified with economics. In the case of a major, modified major, or minor, the culminating experience course and its two prerequisites are required to be taken at Dartmouth. ECON 20 taken elsewhere may not be allowed to be transferred. It is recommended that transfer credit be sought mainly for courses not regularly offered by the Department. Transfer credit will only be accepted from respected degree-granting institutions of higher education. Only courses requiring the equivalent of ECON 1 as a prerequisite will be credited toward the fulfillment of a major, modified major, or minor. Students contemplating taking major, modified major or minor courses elsewhere should thus consult the Vice Chair well in advance, to assure that appropriate transfer credits will be accepted.

Economics Honors Program

The Honors Program in Economics provides qualified students with several different pathways to graduating with 'Honors in Economics' or with 'High Honors in Economics,' each of which are outlined below.

To be eligible for the Program, a student must have a grade point average of at least 3.3 in courses counting toward the major (excluding ECON 1, ECON 10, and MATH 3), and an overall grade point average of at least 3.0. Additionally, in order to be eligible for 'High Honors,' a student must take ten major courses (beyond prerequisites), rather than just the nine courses required for a standard or 'Honors' major.

Majors enrolled in a culminating experience class whose research papers for that course are deemed of exceptional merit by the instructor, and who are otherwise eligible for the Program, shall be granted 'Honors in Economics' with no additional coursework necessary. No more than two students per section may be granted 'Honors' in this way without a vote of the department.

An additional method of earning 'Honors' is to complete the ECON 80-81-82 sequence with an average grade of B+ and having received a grade of A- or better in each of the prerequisite classes (i.e. ECON 20, ECON 21 and ECON 22). The instructors of this sequence may additionally recommend that students who have done such outstanding work in these courses that it would achieve the 'Honors' designation by the method described above be granted 'High Honors' by vote of the Department, provided the student has completed ten major courses (beyond prerequisites). Note that successful completion of this sequence may take the place of 3-course culminating experience sequence described above in the regular major section.

A final, more traditional method of achieving 'Honors' or 'High Honors' is by writing an Honors thesis. Honors theses are, in all cases, continuation of original research papers completed in another 60- or 80-level class, and/or, in rare cases, an independent study (ECON 85). A thesis is generally completed in conjunction with taking ECON 87.01, which is offered every spring term. Permission is required to enroll in ECON 87.01, and is decided by a committee consisting of the potential Honors thesis advisor(s) and the ECON 87.01 instructors. The application is due by the end of the winter term.

In rare cases students can complete an Honors thesis in a term other than the spring term by enrolling in ECON 87 with an advisor's permission. The standards for permission to enroll in this case are the same as for ECON 87.01.

Both regular majors and modified majors who wish to enroll in ECON 87 or ECON 87.01 will be expected to have taken all courses relevant to their topic prior to enrollment. For those enrolling in ECON 87 or ECON 87.01, an average grade of B+ (3.33) or better in the 60- or 80- level course (and/or ECON 85) and ECON 87.01 (or ECON 87) is necessary for the student to graduate with 'Honors in Economics.' A vote of the Department is necessary to achieve 'High Honors in Economics,' along with one additional major course beyond those required for the standard or 'Honors' major. The Department will consider the student's performance on the thesis and his or her record in Economics courses in awarding 'High Honors.'

ECON - Economics Courses

To view Economics requirements, [click here](#) (p. 272).

ECON 1 - The Price System: Analysis, Problems, and Policies

Instructor: Lee, Petre, Ramos-Toro, Uddin

Emphasis will be placed on problems and policies of current interest as they relate to resource use and the distribution of income and output. Students will receive an introduction to the theory of supply and demand in both product and factor markets in order to examine selected topics drawn from such areas as industrial organization and antitrust policy, labor economics, international trade, economic development, agriculture, urban problems, poverty and discrimination, public sector economics, and environmental problems.

Offered: Fall, Spring, Winter.

Degree Requirement Attributes: Dist:SOC

ECON 2 - Economic Principles and Policies

Instructor: Blanchflower

This is a general survey course for students who have had no previous college level economics and who do not plan to take further economics courses. It is divided between microeconomic concepts—supply and demand, labor and capital markets, tax incidence, comparative advantage, international trade, and benefit-cost analysis—and macroeconomic issues such as economic growth, unemployment inflation, national income and product accounting, the banking system, and monetary and fiscal policy. Applications to current policy issues will be emphasized throughout. ECON 2 may be taken under the Non-Recording Option (NRO). It does not count towards the major or minor.

Prerequisite: Students who have previously taken ECON 1 or who have been exempted from ECON 1 at matriculation may not enroll in ECON 2. Completion of ECON 2 does not, however, preclude subsequent enrollment in ECON 1.

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

ECON 3 - Essential Mathematics for Economic Analysis

Instructor: Doyle

This course covers many of the same basic calculus topics as Math 3, but with the focus on developing an understanding of the mathematical structure of economics, since having mathematical skill is essential to the study of economics. Examples of economic applications of calculus topics include using derivatives to study consumer demand and labor productivity and using integrals to study income distributions. Additionally, key statistical measures needed for econometrics classes, such as expected value and variance will be introduced. Not open to students who have received credit for Math 3.

Prerequisite: Math 1

Offered: Winter.

Degree Requirement Attributes: Dist:QDS

ECON 5 - Adam Smith and Political Economy

Instructor: Clark

The eighteenth-century Scottish philosopher Adam Smith was one of the founders of "political economy," the study of the interrelationship between society, government, and the economy. This course focuses on Smith's major ideas through his two important works, *The Theory of Moral Sentiments* and *The Wealth of Nations*, and deals with such topics as the origins and consequences of economic

growth, and the role of government in a commercial society.

Cross-Listed as: GOVT 86.25

Offered: Spring.

Degree Requirement Attributes: Dist:SOC; WCult:W

ECON 6 - Personal Finance

Instructor: Curtis

Managing one's own finances is something most of us will need to do over the course of a lifetime. Decisions like how much to borrow to fund education or how much to save for retirement, or the monthly budget choices we might make to balance necessary and desired spending with net income, all affect our personal well-being. This course is designed to do three important things: 1) give students a basic grounding in financial literacy by learning some tools and principles of personal finance that can be used in daily life, 2) introduce students to empirical research on the ways households use the financial system with particular emphasis on understanding some behavioral biases and common mistakes people make, and 3) explore ways in which the financial system can be improved to make it easier and safer to use. Over the course of the term, students will build their own personal finance portfolios incorporating their learning into their own individualized plans. **Not open to students who have received credit for ECON 26, 36, or 66.**

Offered: Spring.

ECON 10 - Introduction to Statistical Methods

Instructor: Lee, Wyse

This course introduces the student to the basic concepts and methods of statistics. It covers descriptive statistics and inference (estimation and hypothesis testing) for a single variable and for two variables. The probability theory required for these topics will be developed.

Because of the large overlap in material covered, no student may receive credit for more than one of the courses ECON 10, ENVS 10, GOVT 10, LING 10, MATH 10, PSYC 10, PBPL 10, QSS 15, or SOCY 10.

Prerequisite: ECON 1 and MATH 3 (or MATH 1 or ECON 3) are recommended

Offered: Fall, Spring, Winter.

Degree Requirement Attributes: Dist:QDS

ECON 15 - Political Economy of China

Instructor: Welborn

This course examines how politics, economics, and culture have shaped the modern Chinese economic policy. Course topics include the Mao era, the pathologies of socialism and central planning, and the post-Mao transition to the

market. Special emphasis will be placed on how "capitalism with Chinese characteristics" affects innovation, entrepreneurship, and law. Students will be graded on class participation as well as original research.

Prerequisite: ECON 1

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC

ECON 16 - Regulation

Instructor: Welborn

This course examines the history, politics and economics of market regulation in the United States. Class discussions will focus on the arguments for and against state intervention in the market. We will also explore the meaning of "market failure" and "government failure" in the context of financial markets, transportation, the environment, health care, and public utilities. Special emphasis will be placed on how regulation affects prices and why regulated firms may demand regulation. Students will be graded on class participation as well as original research.

Prerequisite: ECON 1

Cross-Listed as: PBPL 022

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

ECON 17 - Technological Progress and the Entrepreneurial Economy

The course examines technological invention and innovation and the path of technological progress and economic growth. Readings and discussion will develop understanding of the relation of new technology to science and cultural evolution and will describe the roles played, within economic and political systems, by inventors, entrepreneurs, companies, and finance when, from needs and opportunities, technologies emerge as creative new combinations.

Prerequisite: ECON 1

Degree Requirement Attributes: Dist:SOC

ECON 19 - The Clash of Economic Ideas

Do the ideas of economists change the world? Or do major events change the ideas of economists? This course interweaves economic history with the history of economic thought to explore some of the major economic events that have changed our world over the past two centuries, such as the industrial revolution, the Great Depression, the collapse of socialism, and the globalization of the world economy. We will explore how the ideas of economists continue to influence how we think about how the economy works and the role of government in the economy. In particular, we will be studying the works of

Adam Smith, Karl Marx, John Maynard Keynes, Friedrich Hayek, and Milton Friedman.

ECON 20 - Econometrics

Instructor: Duque, Fetter, Mello, Zitzewitz

Econometrics is the statistical analysis of economic data. This course focuses on regression analysis (specification, estimation, and hypothesis testing) and problems and pitfalls in its application in economics. The course involves extensive use of the statistical program STATA and will enable students to implement their own empirical research projects in preparation for the culminating experience in the economics major.

Prerequisite: ECON 10 and MATH 3 (or ECON 3 or MATH 8 or MATH 11 or MATH 12 or MATH 13)

Offered: Fall, Spring, Summer, Winter.

Degree Requirement Attributes: Dist:QDS

ECON 21 - Microeconomics

Instructor: Doyle, Lee, Petre

This course is a study of the pricing and allocation process in the private economy. Topics include the theories of demand and production, and the determination of prices and quantities for commodities and factors of production in competitive and noncompetitive markets. Applications of the theory and its implications for empirical analysis are also considered.

Prerequisite: ECON 1 and MATH 3 (or ECON 3 or MATH 8 or MATH 11 or MATH 12 or MATH 13)

Offered: Fall, Spring, Summer, Winter.

Degree Requirement Attributes: Dist:SOC

ECON 22 - Macroeconomics

Instructor: Curtis, Diaz

This course is concerned with the behavior of the economy as a whole, particularly fluctuations in economic activity. General equilibrium models are developed to analyze the determinants of GNP, unemployment, the rate of inflation, and the growth of output. The micro foundations of macro aggregates are developed, with special emphasis on the role of expectations. The analytic tools are used to evaluate monetary and fiscal policies and to understand current macroeconomic controversies.

Prerequisite: ECON 1 and MATH 3 (ECON 3 or MATH 8 or MATH 11 or MATH 12 or MATH 13)

Offered: Fall, Spring, Summer, Winter.

Degree Requirement Attributes: Dist:SOC

ECON 24 - Development Economics

Instructor: Duque, Edmonds, McKelway, Yedomiffi

This course uses economic analysis to understand contemporary issues in low-income countries. We consider why extreme poverty and hunger, child mortality, low-levels of education, gender inequality, environmental degradation, high fertility, and child labor are pervasive in the developing world. We also examine the economic consequences of globalization and infectious diseases such as malaria and HIV/AIDS. For each topic, we seek to understand the factors and constraints influencing decision-making in developing countries. We use this understanding to discuss the role of markets, civil organizations, government policy, and international institutions.

Prerequisite: ECON 1 and ECON 10

Offered: Fall, Spring, Summer, Winter.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ECON 25 - Competition and Strategy

Instructor: Welborn

This course examines the strategies that businesses use in choosing prices, advertising, research and development, and mergers to maximize their profits. The course studies how business strategy is constrained by market competition and antitrust policy (government policy toward monopoly, collusion, and mergers). The analysis is conducted using game theory, empirical methods, and experimental methods.

Prerequisite: ECON 1 and MATH 3 (or ECON 3 or MATH 8 or MATH 11 or MATH 12 or MATH 13), ECON 10 and ECON 21

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

ECON 26 - The Economics of Financial Intermediaries and Markets

Instructor: Kohn

This course examines the nature and function of financial intermediaries (e.g., banks, mutual funds, and insurance companies) and of securities markets (e.g., the money and capital markets and the market for derivatives). It analyzes liquidity and risk management and studies the efficiency, stability, and regulation of the financial system.

Prerequisite: ECON 1

Offered: Fall, Winter.

Degree Requirement Attributes: Dist:SOC

ECON 27 - Labor Economics

Instructor: Anderson

This course studies the economic behavior of employers and employees as they interact in the labor market. The

class will move beyond the basics of labor supply and demand to cover such topics as human capital investment, the structure and determinants of financial compensation and benefits packages, contract negotiations and arbitration. Additionally, since many of the pressing problems facing the United States are labor market issues, this course will provide a basis for better understanding of nationally-debated issues such as reforms of the welfare system, the income tax system, immigration policy, and affirmative action programs.

Prerequisite: ECON 1.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

ECON 28 - Public Finance and Public Policy

Instructor: Luttmmer, Mello

Government policies exert a pervasive influence over the economy and people's wellbeing. This course first analyzes the economic effects of public policies in the areas of environmental pollution, social insurance, retirement income, health, and poverty alleviation. The course then studies how governments finance their operations, paying attention both to institutional details and the effects of tax systems on efficiency and inequality. Throughout, we use empirical evidence and economic reasoning to better understand economic tradeoffs involved in current and proposed policies, including health reform, universal basic income, wealth taxation, unemployment insurance, fundamental tax reform, and Social Security.

Prerequisite: ECON 1

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:SOC

ECON 29 - International Finance and Open-Economy Macroeconomics

Instructor: Sublet, Zorzi

This course covers introductory material in the area of international monetary theory and policy. It examines the behavior of international financial markets, the balance of payments and exchange rates, interactions between the balance of payments, the exchange rate and domestic economic activity and ways of organizing the international monetary system.

Prerequisite: ECON 22

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:INT or SOC

ECON 31 - An Introduction to Behavioral Economics

Instructor: Zinman

Behavioral economics seeks to enrich economics with insights, often drawn from other disciplines, that help us

better the world by improving understanding of human decision making and its limitations. This course provides an overview of how behavioral economists go about doing this, and the extent to which we are making progress, with a focus on individual decision making. We start with the standard approach to behavioral economics-- augmenting a classical model with allowance for one or two among dozens of potential decision making biases or constraints at a time-- and build to prospects for grand unification of behavioral economics.

Prerequisite: ECON 1, ECON 21

Offered: Spring.

ECON 32 - Monetary Policy and the Macroeconomy

Instructor: Levin

This course will examine the key elements of a monetary policy framework, investigate how monetary policy decisions influence financial conditions and macroeconomic outcomes, and consider the practical challenges of monetary policymaking in a global context. Basic methods in time-series econometrics will be used to analyze macro data, construct forecasts, and assess current monetary policy strategies. Students will work together in teams, each of which will collect and analyze information for a specific country and give a series of oral presentations to the class.

Prerequisite: ECON 1, ECON 10 and ECON 22

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

ECON 35 - Games and Economic Behavior

Instructor: Uddin

Game theory is the study of decisions made in strategic settings. The course introduces equilibrium concepts solving the infinite-regress problem (A's decision depends on B's which depends on A's, and so forth) in increasingly complex environments. A wealth of social-science applications are considered ranging from business competition to terrorism as well as lighter applications to sports and games.

Prerequisite: ECON 1, ECON 10 and MATH 3 or ECON 3

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

ECON 36 - Theory of Finance

Instructor: Samwick, Welborn

This course studies decision making under risk and uncertainty, capital budgeting and investment decisions, portfolio theory and the valuation of risky assets, efficiency of capital markets, option pricing, and problems of asymmetric information.

Prerequisite: ECON 10, ECON 21

Offered: Fall, Spring, Winter.

Degree Requirement Attributes: Dist:SOC

ECON 37 - Gender and Family Issues in Modern Economies

Instructor: Olivetti

This course examines the changing economic roles of women and men in modern economies and the trade-offs faced by households. The origins and persistence of these trade-offs are analyzed through the lenses of economic models. The ultimate objective is to provide you with the tools to critically address a wide range of real-world questions related to gender and family. For instance: How have technological changes in the home and the market transformed families? In what ways are families in the US becoming increasingly stratified? What forces led married women to enter paid employment? What forces might lead them to "opt-out"? What is the rationale for paid parental leave? Why some firms offer it? Should they?

Prerequisite: ECON 1, ECON 10

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

ECON 38 - The Economics of Governments and Public Policy

Instructor: Cascio

Fundamental questions in public finance concern *when* and *how* governments should intervene in the economy. However, another fundamental question is: *why* do governments do what they do? This course considers governments as economic actors. We will theoretically and empirically investigate how social decisions are made; why governments fail; why different levels of government (federal, state, local) fund different public goods and services; and how governments at different levels interact. Topics to be covered include externalities and public goods, political economy, and fiscal federalism. K-12 education in the United States will provide a detailed case study, though other applications may be considered from time to time. Course involves an empirical project.

Prerequisite: ECON 1, ECON 10

Degree Requirement Attributes: Dist:SOC

ECON 39 - International Trade

Instructor: Irwin, Staiger R.

This course deals with the causes and consequences of international trade and factor movements. Topics covered include theories of why nations trade, the consequences of trade for economic welfare and the distribution of income, the determinants of trade patterns, the tariff and other forms of commercial policy, trade policies of selected

countries, and the formation of the multinational corporation.

Prerequisite: ECON 1

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:INT or SOC

ECON 41 - Health Economics and Policy

Instructor: Colla

The goals of the course are: 1) to understand the economic forces that have created the current challenges in US healthcare; 2) to develop skills that enable you to determine what types of information, data, and analyses are needed to analyze the economics of health policies designed to expand coverage, improve quality, and contain costs; and 3) through in-class exercises and a project, to perform and present economic analysis of current topics relevant for state and federal health system reform. Not open to students who have received credit for ECON 071.

Cross-Listed as: PBPL 84.02

Offered: Winter.

Degree Requirement Attributes: Dist:SOC; WCult:W

ECON 45 - Environmental and Energy Economics

This course examines environmental and energy issues from an economics perspective. The course begins by discussing fundamental concepts in environment economics including cost benefit analysis and economic valuation of the environment. We also explore issues of policy design from an efficiency perspective. The class is introduced to issues of energy economics, including oil, natural gas, and electricity markets, renewables policy, transportation policies, and climate change policies. Finally, the course examines environmental issues related to trade, development, public finance, and competitive strategy. Not open to students who have received credit for ECON 075

Degree Requirement Attributes: Dist:SOC

ECON 57 - Data Analysis for Economic Policy: Economics of Career and Family

Instructor: Blanchflower

This course examines the changing significance, timing, and meaning of career, family, and marriage, with special emphasis on the economic role of women and on determinants of gender gaps. For example, the gap between men's and women's earnings exists across the income distribution and the education distribution. But the gap is generally far greater for higher earners and for those with more education. Why? How do these gaps arise and what might reduce or eliminate them? Topics include the role of time controllability and compensating differentials; discrimination in pay in a host of circumstances; women's

bargaining skills; feedback mechanisms between household's decisions and the labor market; children; parental leave policy; firm-level policies; childcare policies.

Prerequisite: ECON 1, ECON 20 and ECON 21

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

ECON 62 - Topics in Macroeconomics

Instructor: Levin

This seminar course will involve an in depth examination of selected topics that are of significance to the macro economy and economic growth. Topics will vary from year to year. It will examine developments in the United States and other advanced and developing economies. It will build on work done in Intermediate Macro (Econ 22) and Monetary Policy and the Economy (Econ 32) as well as the Financial Crisis (Econ 76). It focuses especially on issues and trends in the macro-economy and movements in the business cycle that develop over time. It is also possible to take an historical perspective on past macroeconomic developments including the Great Recession. Will require writing a major paper. Not open to students who have received credit for ECON 042.

Prerequisite: ECON 20, ECON 21, ECON 22, ECON 29 and ECON 32

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC

ECON 64 - Topics in Development Economics

Instructor: Startz

This seminar considers microeconomic aspects of the causes and consequences of extreme poverty in the developing world. Recent research on topics such as child labor, credit, education, environmental degradation, fertility, gender discrimination, health, HIV/AIDs, insurance, malnutrition, social capital, and technology adoption will be considered in depth. Topics vary from year to year. Students are required to write a major research paper. Not open to students who have received credit for ECON 044.

Prerequisite: ECON 20, ECON 21, and ECON 24

Offered: Spring, Winter.

Degree Requirement Attributes: Dist:INT or SOC; WCult:NW

ECON 65 - Topics in Industrial Organization

This course examines selected topics in business strategy and public policies designed to facilitate competition. These topics include market power, price discrimination, entry, product differentiation, vertical integration,

regulation, and anti-trust. Students will discuss a broad range of papers on empirical industrial organization, apply concepts in a competitive strategy game, and write a major paper. Not open to students who have received credit for ECON 045.

Prerequisite: ECON 20, ECON 21, ECON 22, ECON 25 and ECON 35

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

ECON 66 - Topics in Money and Finance

Instructor: Gupta, Zitzewitz

A seminar course covering in depth such selected topics as the following: the theory of financial institutions; banking panics; the excess variability of asset prices; finance constraints and capital market imperfections; the theory of monetary policy; inflation and financial markets; debt and deficits. Will require writing a major paper. Not open to students who have received credit for ECON 046.

Prerequisite: ECON 20, ECON 21, ECON 22, ECON 26 and ECON 36

Offered: Spring, Winter.

Degree Requirement Attributes: Dist:SOC

ECON 67 - Topics in Labor Economics

Instructor: Lewis

This seminar provides an in-depth examination of selected topics in labor economics, with an emphasis on recent empirical studies. Readings will vary from year to year, but areas studied will generally build on material introduced in Econ 27. Will require writing a major empirical paper. Not open to students who have received credit for ECON 047.

Prerequisite: ECON 20, ECON 21, ECON 22, ECON 27 and either ECON 24 or ECON 28 or ECON 37

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

ECON 68 - Topics in Public Economics

Instructor: Cascio

This seminar explores pressing public policy issues using the theoretical and empirical tools of public economics. The course begins with a review of research design and relevant econometric techniques. We then move on to in-depth explorations in selected topic areas, with a focus on the U.S. Topics vary from year to year but have recently included public goods and externalities; finance, accountability, and choice in K-12 education; behavioral and external effects of the cash and near-cash social safety net or of tax policy; and moral hazard and welfare impacts of social insurance. Will require writing a major empirical

paper. Not open to students who have received credit for ECON 048.

Prerequisite: ECON 20, ECON 21, ECON 22, ECON 28 and ECON 38

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

ECON 69 - Topics in International Economics

Instructor: Grant

This seminar will cover selected topics in international trade and finance beyond those covered in ECON 29 and ECON 39. Offerings in the next few years are expected to include current research on (1) financial crises in emerging markets, (2) the role of trade, open capital markets, and financial development on growth in developing countries, (3) the determinants and consequences of foreign direct investment, (4) the impact of the multilateral trade agreements on world trade, and (5) issues related to globalization. Will require writing a major paper. Not open to students who have received credit for ECON 049.

Prerequisite: ECON 20, ECON 21, ECON 22, ECON 29 and ECON 39

Offered: Spring, Winter.

Degree Requirement Attributes: Dist:INT or SOC

ECON 70 - Immersion Experience in Applied Economics and Policy

In Economics 70, students study a specific topic in applied economics or policy on campus and then engage with that topic during a two-week immersion off campus after the end of the exam period. Specific topics and destinations for the off-campus component vary by term offered. This course may not be repeated for credit. For details on how to enroll see: <https://economics.dartmouth.edu/immersion-experience>.

Prerequisite: ECON 1

ECON 70.01 - The Transition of Poland to a Market Economy

Instructor: Curtis

Most economics courses taught in the US heavily emphasize the efficiency of markets and how individual decision-making, in freely functioning markets, can be modeled and understood. But there are a number of countries around the world whose economic organization is NOT mainly guided by markets; some of these economies remain partially controlled, or planned, where property and the means of production are formally government-owned and prices are centrally determined. This history of central planning has influenced the development of markets in much of Eastern Europe and the former Soviet Union; some economies have fully

transitioned from planning to markets, while some lag significantly behind. In this class, students will study the history of the centrally-planned economic system and how it influenced economic development in Poland and we learn how Poland's economy has transitioned to a market-oriented economy.

Prerequisite: ECON 1

ECON 70.02 - China: The Country, The Companies and the People

Instructor: Comin

China will study inclusive growth in China from three distinct perspectives: the aggregate, the company and the people. The aggregate/macro level will inform us about the economic mechanisms that are driving growth and inequality and how the policies and institutions are impacting them. From a company perspective, we will investigate how they operate in China. Finally, people are what ultimately we care about as social scientists. Therefore, we will make a central goal of the off-campus portion of Ec70 to interact with the Chinese population and to shed some light on all those important questions posed above that are very hard to grasp from the distance.

Prerequisite: ECON 1

ECON 70.04 - Human Development in Peru

Instructor: Comin

Peru, like many developing countries, is struggling to lift the income level of a vast part of its population. At the same time, economic progress is often achieved at the cost of environmental degradation. This course studies the drivers of under-development with an emphasis in finding avenues to achieve simultaneously economic and environmental progress. To explore this overarching theme, we will explore a broad range of topics which include (but are not limited to) (i) the informal economy, (ii) the rural-urban divide, (iii) underdevelopment and the environment and (iv) tourism. In addition to reading and discussing the literature on these topics, we will approach them via projects that students design and implement. Projects can have either a research goal or an operational one. In the latter case, the successful implementation of the project will have a positive impact on some local community in Peru.

ECON 70.06 - Frauds, Panics, Crashes, and Bank Runs

Instructor: Sacerdote

This is an immersive course that will feature intensive group projects, presentations of academic papers, and original research on a topic within the theme of the course. The theme of the course is to understand the conditions and human behavior that lead to large scale financial fraud, panics, market crashes and bank runs. The course contains ethical themes as well as economic

ones. A Dartmouth education includes understanding why you should not engage in the behaviors profiled both from a rational and from an ethical point of view. A Dartmouth economics education includes understanding how markets work and how they can fail and perhaps how structural and regulatory changes can improve market functioning.

Prerequisite: ECON 1, ECON 10 and ECON 26 with ECON 20 recommended

Offered: Fall.

ECON 72 - Fed Challenge

Instructor: Curtis

The College Fed Challenge is intended to help students become more knowledgeable about the Fed and the decision-making process of the Federal Open Market Committee (FOMC), the Federal Reserve's monetary policy-setting group. The cap for the class is 10 students by instructor permission (5 of the 10 will be chosen to go to the competition). Not open to students who have received credit for ECON 078.

ECON 73 - The Political Economy of Development

Instructor: Kohn

Why are some nations rich and others poor? Answering this question requires an understanding of the process of economic development and growth and also of the obstacles—predominantly political—that are placed in its way. This course develops such an understanding using the evidence of preindustrial Europe and China and building on the insights of Adam Smith. It then applies this understanding to analyze the problems of developing and developed countries today.

Prerequisite: ECON 1

ECON 76 - Pandemics and Financial Crises

Instructor: Blanchflower

Topics covered will include (but are not limited to): the impact of the COVID pandemic, and subsequent recovery or lack of it and policy responses. Monetary and fiscal policy responses including quantitative easing will be examined. Direct comparisons will be drawn with the Great Depression, the Great Recession and other financial crises.

Prerequisite: ECON 1, ECON 10

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:INT or SOC

ECON 77 - Social Entrepreneurship

Instructor: Samwick

This course provides an introduction to the theory and practice of social entrepreneurship, defined as the process of finding innovative, sustainable solutions to social

problems, particularly those related to poverty. Students will learn about the nature and causes of poverty, both domestically and internationally, and about the role that social entrepreneurs play in addressing poverty. The course culminates with teams of students developing business models for their own social entrepreneurship ventures.

Prerequisite: ECON 1

Cross-Listed as: PBPL 043

Degree Requirement Attributes: Dist:SOC; WCult:W

ECON 79 - Research in International Economics

Instructor: Allen

The course covers the latest research in international economics. Students will attend seminars where leading experts from both Dartmouth and other top institutions worldwide present their latest research and participate in an active discussion of the merits and limitations of the research. The primary outcomes of the course will be (1) a series of writing assignments summarizing these discussions; and (2) a proposed independent research proposal the student can pursue in a culminating experience and/or a senior thesis.

Offered: Spring.

Degree Requirement Attributes: Dist:INT or SOC

ECON 80 - Advanced Topics in Econometrics

Instructor: Staiger

This course has two goals: (1) To further develop techniques that test for and remedy common problems associated with linear and non-linear regression analysis, and (2) to develop a practical understanding of how regression analysis can be used to examine the empirical relevance of economic theory.

Prerequisite: ECON 20, ECON 21 and ECON 22 with a grade of A- or better or permission of instructor

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

ECON 81 - Advanced Topics in Microeconomics

Instructor: Snyder

This is an advanced course on the economics of information. The focus of the course is a rigorous mathematical treatment of the value of information, moral hazard, learning, adverse selection, and signaling. Applications to labor markets, corporate governance, financial markets, and insurance will be discussed.

Prerequisite: ECON 20, ECON 21 and ECON 22 with a grade of A- or better and MATH 8 or permission of instructor

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

ECON 82 - Advanced Topics in Macroeconomics

Instructor: Zorzi

The purpose of this course is to study in depth selected topics in Macroeconomics. Topics will include consumption, savings and investment; dynamic inconsistency and the design of monetary and fiscal policies, multiple equilibria, bubbles and cycles, and economic growth.

Prerequisite: ECON 20, ECON 21 and ECON 22 with a grade of A- or better or permission of instructor

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

ECON 85 - Independent Study in Economics

This course is required of all majors in the Honors Program who do not initiate their honors work in their 60-level course; they will be expected to do the preliminary work on their Honors theses in this course. This course offers an opportunity for a student to do independent work under the direction of a member of the Department. For students who take this course in order to engage in independent study of a topic of interest rather than as a part of honors work, the prerequisite background will consist of all the regularly offered courses in the chosen field of study. Such a student will normally be expected to prepare, prior to the taking of ECON 85, a prospectus and a list of reading pertaining to the study he or she wishes to pursue.

Prerequisite: Requires permission of the vice chair and of the department faculty member who will be advising the student.

Offered: Fall, Spring, Summer, Winter.

ECON 87 - Senior Thesis

As explained above under 'Economics Honors Program', selected students will be invited to enroll in ECON 87 after they have completed their 40-level course. Alternatively, a student can initiate honors work in ECON 85 and then enroll in ECON 87 with the approval of the student's adviser and the vice chair. Honors students will normally take ECON 87 in the term following their enrollment in ECON 85, or alternatively, following their enrollment in a 40-level course in which a thesis has been started. Other majors who wish to write a non-Honors thesis for single course credit will be required to have as prerequisite background all regularly offered courses in the chosen field of study and may take the course in either the first or second terms of the senior year.

Prerequisite: Requires permission of the vice chair, permission of the department faculty member who will be advising the student, and, in the case that the research was

begun in a 40-level course, the permission of the faculty member who taught the 40-level course in which the thesis topic and the research were developed.

Offered: Fall, Spring, Summer, Winter.

ECON 87.01 - Senior Thesis in a Collaborative Setting

Instructor: Cascio, Novosad

Most economics students that write an honors thesis start their idea for an honors thesis topic based on independent research project completed in an Economics culminating experience seminar (any 60-level course) or the honors courses (any 80-level course). This course is meant to provide assistance in completing an honors thesis in economics that goes well beyond just advice from a single advisor. Completing an honors thesis in a collaborative setting will involve tasks such as presenting your work at multiple stages, as well as contributing to your peers' success by providing constructive feedback.

Offered: Spring.

Minor in Education

Chair of the Education Minor Steering Committee:
Michele T. Tine, Associate Professor, Sociology

Professor D. J. Coch, Psychological and Brain Sciences;
Associate Professor D. J. M. Kraemer, Psychological and Brain Sciences; Lecturer F. M. A'Ness.

To view Education courses, click here (p. 283).

Students may minor in Education. Students may take Education courses singly, to fill distributive requirements or as electives, or in a set that will satisfy the requirements for the minor. Any cross-listed courses used for the Education minor require sign-up in the Education enrollment. Students who wish to have Education as the secondary part of a Modified Major may do so if the major forms a unified and coherent whole as approved by the primary department and the Registrar. All transfer courses must be approved by the Chair of the Education Minor Steering Committee.

The Education minor investigates the complex world of education through a research-based, interdisciplinary lens. [EDUC 1](#) (p. 283) serves as the introductory course but is not a prerequisite for other Education courses. Courses numbered in the 10s through 40s are mid-level courses that explore broader topics, whereas courses numbered in the 50s and 60s are higher-level courses that examine more specific topics in more depth.

The minor is composed of six courses: [EDUC 1](#) (p. 283) is required, along with five other EDUC courses. Of the five other EDUC courses, at least four must be core Education

courses: EDUC 13, 17, 19, 20, 27, 46, 47, 50, 52, and 64. It is strongly recommended that minors take both mid-level and higher-level courses. A list of all EDUC courses, the terms and times they will be offered, and sample syllabi (if available), are on the minor website.

EDUC - Education Courses

To view Education requirements, click here. (p. 283)

EDUC 1 - Introduction to Education: Learning, Development, and Teaching

Instructor: Tine, Coch

Education, development, and learning are inextricably intertwined. In this course, we will explore how pre-Kindergarten through high school education is informed by scientific evidence across multiple domains. Topics to be explored may include the educational system in America; the research-to-practice gap and educational misconceptions; social, emotional, and motivational development in school context; memory, study strategies, metacognition, and assessment as related to learning; and learning and teaching in early math, science, and reading. Open to all classes.

Offered: Fall, Spring.

Degree Requirement Attributes: Dist: SOC

EDUC 13 - Disability in Children's Literature

Instructor: Coch

In this course, we will explore how disability is represented in contemporary children's literature for middle-grade readers. Using educational, medical, and social lenses, we will critically consider the portrayal of students with various disabilities and others in their lives (teachers, parents, siblings, peers) in select children's books, and discuss and determine how such books might be used for teaching and learning. Reading is one essential way that students learn about the world. Can children's books be used to learn and teach about disability? Are students with disabilities represented accurately in children's books? Are they portrayed as having equal educational opportunities?

Offered: Spring.

Degree Requirement Attributes: Dist: SOC

EDUC 15 - Language Acquisition

Instructor: Wray

Language is a socially and cognitively complex activity, yet most healthy individuals acquire language in the first years of their life with no expended effort. This course provides an in-depth overview of typical language development from fetus to adult, as well as atypical development. The study of this topic within this course is informed by cognitive science, speech and hearing,

psychology, philosophy, and neurology, and is ultimately couched in linguistic framework and terminology.

Not open to students who have received credit for LING 11.17.

Cross-Listed as: LING 015

Offered: Winter.

Degree Requirement Attributes: Dist: SOC

EDUC 17 - What Works in Education?

Instructor: Coch

In a federally-mandated era of “evidence-based” education, what works in K-12 education? How do we know what works, and what does not? What does research show about which aspects of the classroom and school (other than content and curriculum, or what is taught) have a meaningful impact on student growth, learning, and achievement? We will consider topics such as class size, ability grouping and tracking, school start times, summer school, homework, direct instruction, problem- and project-based learning, personalized learning, and teacher education.

Offered: Winter.

Degree Requirement Attributes: Dist: SOC

EDUC 19 - Educational Testing

Instructor: Kraemer

Increasingly, standardized tests define the landscape of American education. We use test scores to evaluate students, teachers, schools, states, and nations. But what do these test scores really mean? In this course, students examine the fundamentals of test development, and discuss what we can and cannot infer from test scores. Topics include using tests to assess learning, to promote learning, and to identify factors that predict different learning outcomes for different students. Open to all.

Degree Requirement Attributes: Dist: SOC

EDUC 24 - Education and Inequality

Instructor: McCabe

How are schools organized and how do they organize society? What effects do schools have on individuals and what effects do they have on society? Using sociological theories and methods, we will examine the structure of schools and their effects on individuals and society. We will explore both formal and informal education. This course will focus on inequalities, specifically how social class, race, gender, and sexuality both organize and are organized by educational environments.

Cross-Listed as: SOCY 058

Offered: Winter.

Degree Requirement Attributes: Dist: SOC; WCult: W

EDUC 27 - The Impact of Poverty on Education

Instructor: Tine

Rising income inequality is undermining the ability of public K-12 schools to meet a foundational goal: to provide children from impoverished areas the opportunity to succeed. This course focuses on the forces that have translated the growing income gap into a growing education gap. We will examine primary research from various fields that details how poverty affects developing children, families, neighborhoods, and schools in ways that go on to affect educational outcomes. We will also consider how interventions strategically targeted at these contexts can improve the educational success of children growing up in poverty.

Cross-Listed as: SOCY 024

Offered: Spring.

Degree Requirement Attributes: Dist: SOC

EDUC 30 - Educational Psychology

Instructor: Kraemer

How do we learn? How can modern educational settings harness recent innovations concerning the essence of human learning? Educational psychology provides a foundation for applying the psychological principles that underlie learning in both formal and informal educational settings. In this course, we will explore the multitude of ways that people learn, the effects of different types of teaching strategies on learning, and the impact of individual differences on learning. We will also explore assessment, creativity and problem solving, as well as cultural and motivational influences on learning across diverse educational situations. Underlying the course will be an account of the way the human mind works, changes, and adapts in different settings. This includes the home, the school, the university and any context in which explicit or implicit education takes place. Open to all classes.

Cross-Listed as: COGS 031 PSYC 52.07

Degree Requirement Attributes: Dist: SOC

EDUC 32 - Learning and Education Across Cultures

Instructor: A'Ness

What role does culture play in human learning and development? Do differences in learning and schooling across cultures lead to disparities in learning outcomes? We will (i) explore the influence culture has on cognitive, social, and moral development, (ii) consider the diversity of views and practices regarding learning and education across cultures, (iii) examine differences in academic systems and achievement across countries, and (iv) discuss the implications for educational policy and practice in the US. Open to all classes.

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

EDUC 35 - Who Gets In? College Admissions Post Affirmative Action

Instructor: Herman

Given the US Supreme Court's 2023 ruling on affirmative action, how can public and private policies adapt to meet the legal standards for choosing applicants to highly selective colleges and universities? Through a careful examination of legislation, executive policies, and legal action, this course looks at both the intent and the implementation of affirmative action, its history, its consequences, and its future. Students will consider why institutions of higher education are interested in recruiting a diverse range of students, why they have experienced lawsuits against their affirmative action policies, and how things are changing with the SCOTUS decision. Teaching methods include some traditional classroom techniques (text analysis, writing, discussion) as well as experiential education techniques (such as creating a public policy portfolio project, conversing with professionals who administer admissions programs at colleges and universities, and pitching proposals to a panel of policy experts). This course seeks open-minded people of all political persuasions to have robust discussions that will lead to policies with a chance of succeeding in our polarized environment.

Cross-Listed as: GOVT 30.12 PBPL 027

Degree Requirement Attributes: Dist:SOC; WCult:CI

EDUC 46 - STEM Learning and Education

Instructor: Kraemer

How do we learn, understand, and teach science, technology, engineering, and math (the STEM disciplines)? In this class, we will explore the nature and development of the scientific mind; how we formulate theories, design experiments, and understand scientific, technological, and mathematical concepts; and how we learn and teach related skills in the classroom, addressing the debate about the effectiveness of direct instruction and hands-on approaches. Open to all classes.

Cross-Listed as: PSYC 52.08

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

EDUC 47 - Social and Emotional Development

Instructor: Tine

This course investigates the social and emotional development of children as they move through middle school, and into adolescence. Throughout, students will read, analyze, and apply (in various assignments) classic

and current empirical research on topics including the development of self-conscious emotions, gender roles, temperament, personality, motivation, aggression, self-esteem, identity, romantic relationships, delinquency, and the roles that parents and peers play in child development. Educational implications will be considered. Open to all classes.

Offered: Winter.

Degree Requirement Attributes: Dist: SOC

EDUC 50 - The Reading Brain: Education and Development

Instructor: Coch

The majority of children entering first grade do not know how to read; the majority of children leaving first grade do know how to read, at least at a basic level. What is involved in the amazing development of the ability to make meaning of marks on a page? What goes on in the brain during reading and learning to read? We explore answers to these questions and more in this introduction to reading as we investigate the roles of orthography, phonology, semantics, syntax, and comprehension in reading. We focus on the development of reading behaviors, the brain bases of reading skills, and how scientific discoveries can inform educational practices. Open to all classes.

Cross-Listed as: COGS 033 LING 11.19 PSYC 52.09

Degree Requirement Attributes: Dist:SOC; Lang:LRP

EDUC 52 - Topics in Educational Theory

Instructor: Tine

In this course we will learn about the major theories that have influenced the study of human development throughout history. Readings and discussions will provide an in-depth historical lens onto the major conceptual approaches to the study of human development and learning including Freud, Piaget, Vygotsky, Behaviorism, Information Processing, Nativism, and Mind, Brain and Education. The course aims to explain the historical origins of current trends in the study of human development, learning and education. Open to all classes.

Degree Requirement Attributes: Dist: SOC

EDUC 59 - Thinking

Understanding how people think is a central quest in cognitive psychology. The extraordinary human capacity for logic and reason have earned our species the moniker "rational animal". But research points to a dizzying array of cognitive functions that may come into play when we think. Thought may be infused with emotion, blinded by illusion, relativized by culture, or biased by ideology or self-interest. Thought is framed by mental categories, constrained by selective attention, memory and forgetting,

and skewed by the familiar or the novel. In this course, we will examine research on many of these facets of thinking - from lucidly logical thinking to brazenly irrational thinking to aesthetic thinking that is neither. Along the way, we will consider a range of related issues: slow and fast thinking; conscious and unconscious processing; verbal and spatial thinking; the relationship between thought and language; imagination, creativity, and artistic thinking; attributions of causality; moral thinking; and judgments of people and groups.

We will also touch upon the evolutionary bases for thought and a comparison of human intelligence with artificial intelligence.

Cross-Listed as: PSYC 51.11

Degree Requirement Attributes: Dist:SOC

EDUC 64 - Development in the Exceptional Child

Instructor: Coch

What is an "exceptional" child? How might an exceptional child think about and experience the world? What is happening inside the brain of an exceptional child? We will learn about specific types of exceptionality likely to be encountered in the classroom, including attention deficit/hyperactivity disorder, autism spectrum disorders, depression, dyscalculia, specific language impairment, dyslexia, and dysgraphia. In exploring exceptionality, we will focus on behaviors that define the exceptional child; different approaches to learning, viewing the world, and interacting with others that characterize exceptional children; the brain bases of atypical or exceptional development; and how scientific knowledge affects educational practice. Open to all classes.

Cross-Listed as: COGS 034

Offered: Winter.

Degree Requirement Attributes: Dist: SOC

Engineering Sciences - Undergraduate

Chair: Vicki V. May

Professors M. Ackerman, I. Baker, S. Chin, B. Cushman-Roisin, G. Cybenko, E. Fossum, I. Georgakoudi, T. U. Gerngross, K. E. Griswold, R. Halter, K. Keller, J. Liu, L. R. Lynd, G. P. Parker, K. D. To view Engineering Sciences Graduate courses, click here (p. 904).

The undergraduate Engineering Sciences major leads to an A.B. degree. It provides engineering students with a common core of Science and Engineering Sciences courses. Interest in the various branches of engineering is accommodated through electives and usually through additional study leading to a Bachelor of Engineering or higher degree. For those students considering careers in such diverse fields as medicine, management, or law, the Engineering Sciences major enables them to better understand our increasingly technological society.

Students interested in a career in Engineering should plan on completing the Bachelor of Engineering. The Bachelor of Engineering (BE) degree program is accredited by the Engineering Accreditation Commission of ABET under the commission's General Criteria. The Bachelor of Engineering is equivalent in technical content to the Bachelor of Science degree in Engineering offered at many other universities but is broader in scope.

Graduate degrees are differentiated according to function. For those interested in design, professional practice, and engineering management, the Master of Engineering (MEng.) and Master of Engineering Management (M.E.M.) degrees are offered; for those interested primarily in research, the M.S. and Ph.D. degrees are offered. Additionally a joint M.D./Ph.D. program and M.D./MEng. are offered in conjunction with the Dartmouth Medical School and a joint M.E.M./M.B.A. and MEng./M.B.A. program are offered with the Tuck School of Business. The Thayer School Guide to Programs and Courses should be consulted for detailed information on all programs beyond the AB.

Courses Available To Non-Majors and First-Year Students

Several engineering sciences courses have few or no prerequisites and may be taken by first-year students exploring a potential interest in the major, or by non-majors seeking to broaden their education with the study of technology. In general these courses are numbered ENGS 1 through 21.

Technology

Most undergraduate courses up to [ENGS 86](#) satisfy the Technology and Applied Sciences distributive requirements (TAS). Some also satisfy the distributive laboratory requirement (TLA). For those students interested in an introduction to technology and applied sciences one of the courses [ENGS 1](#) through [ENGS 21](#) is recommended.

Use of NRO ([Non-Recording Option](#)) in all Majors and Minors

Unless otherwise prohibited, prerequisites may be taken under the [non-recording option](#). Any course being used to satisfy major or minor requirements beyond the prerequisites, may not be taken under the non-recording option.

Satisfactory Completion of Engineering Majors and Minors

Satisfactory completion of engineering majors requires a grade point average of 2.0 in the courses satisfying the major (other than those prerequisite to the major or minor). The same criterion holds for courses in a modified major and those in a minor.

Requirements for the Major

The sequential nature of the Engineering Sciences curriculum, and the possibilities for developing modified majors with other departments require that students plan their study programs well in advance. Assistance in planning programs may be obtained from an engineering faculty advisor.

All first-year students interested in the sciences should take the placement test in mathematics. The prerequisite courses for the Engineering Sciences major are [MATH 3](#), [MATH 8](#), [MATH 13](#), [PHYS 13](#), [PHYS 14](#), plus [ENGS 20](#) and [CHEM 5](#). [COSC 1](#) and [COSC 10](#) can be substituted for [ENGS 20](#). For students prepared for advanced placement in Calculus it is advisable to take the sequence, [MATH 8](#) and [MATH 13](#), or [MATH 11](#).

No more than two transfer courses may be used for credit in the major.

The Engineering Sciences Major requires seven courses from the core program:

1. [ENGS 21](#), [ENGS 22](#), and [ENGS 23](#) are required.
 2. Two from [ENGS 24](#), [ENGS 25](#), [ENGS 26](#), [ENGS 27](#), and [ENGS 28](#)
 3. Two from [ENGS 31](#) or [ENGS 32](#); [ENGS 33](#) or [ENGS 34](#); [ENGS 30](#), [ENGS 35](#) or [ENGS 36](#); or [ENGS 37](#).
- Two additional courses are required:
4. One elective in Engineering Science.
 5. One additional course in Engineering Science, mathematics or a science.

A Culminating Experience in Engineering Sciences is required. This is typically taken as one of the two electives or may be an additional course. The culminating experience may be: a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of the two-course design sequence [ENGS 89/ ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list.

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

Only Engineering Sciences courses numbered above 20 (excluding [ENGS 87](#)) may be counted as electives in the major.

Students seeking to complete the A.B. and B.E. degrees concurrently should note that [ENGS 89](#) may also be counted toward requirements for the B.E. program.

Requirements for the Major in Biomedical Engineering Sciences

The biomedical engineering major is offered to students interested in going to medical school. .

Prerequisites are [MATH 3](#), [MATH 8](#), [MATH 11](#) or [MATH 13](#), [PHYS 13](#), [PHYS 14](#), [CHEM 5-6](#) or [CHEM 11](#), plus [ENGS 20](#). [COSC 1](#) and [COSC 10](#) can be substituted for [ENGS 20](#).

Unless otherwise prohibited, prerequisites for the major may be taken under the Non-Recording Option though this is discouraged for medical school applications. Students should consult the pre-health advising program for more information.

The biomedical engineering major consists of five engineering science courses, [ENGS 21](#) and [ENGS 22](#), one additional core course chosen from [ENGS 23](#), [ENGS 24](#), [ENGS 25](#), [ENGS 26](#) [ENGS 27](#), [ENGS 28](#) one gateway

course chosen from [ENGS 31](#), [ENGS 32](#), [ENGS 33](#), [ENGS 34](#), [ENGS 35](#) or [ENGS 36](#) and [ENGS 56](#) or one additional course chosen from [ENGS 23](#), [ENGS 24](#), [ENGS 25](#) or [ENGS 26](#); four biology and chemistry courses, two from [BIOL 12](#), [BIOL 13](#), [BIOL 14](#) and [CHEM 51/CHEM 52](#) (p. 186) or [CHEM 57/CHEM 58](#) and one biochemistry or engineering science elective chosen from [BIOL 40](#) or [CHEM 41](#), or an engineering science course numbered 23 or above.

Students wishing to pursue the BE degree are advised to choose an Engineering Sciences course as their elective.

A Culminating Experience in Engineering Sciences is required and should be consistent with a student's career objectives and courses taken. This can be taken as one of the two electives or as an additional course. The culminating experience may be: a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of the two-course design sequence [ENGS 89/ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list.

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

Dartmouth Medical School offers an opportunity for accomplished biomedical engineering sciences majors to apply for early admission to the Dartmouth Medical School through the Early Assurance Program. For more information, please consult the Thayer website at: <http://engineering.dartmouth.edu/undergraduate/ab/biomed-major.html>

Requirements for the Engineering Physics Major

The Department of Engineering Sciences and the Department of Physics and Astronomy offer a major in Engineering Physics. The Engineering Physics major features a 5/5 split in courses, unlike a modified major which requires six courses from one field and four from the other.

Students interested in a future career in Medical Physics are encouraged to consider the Engineering Physics major. The Thayer School Guide to Programs and Courses should be consulted for more detailed information.

The prerequisite courses for the Engineering Physics major are [MATH 3](#), [MATH 8](#), [MATH 13](#), [MATH 23](#); [PHYS 13](#), [PHYS 14](#); [CHEM 5](#); and [COSC 1](#) and [COSC 10](#) or [ENGS 20](#);

The Engineering Physics major is a ten-course program consisting of three Engineering Sciences core courses ([ENGS 22](#), [ENGS 23](#), [ENGS 24](#)); three Physics core courses ([PHYS 19](#), [PHYS 40](#), [PHYS 43](#) [Students taking

[PHYS 15](#) and [PHYS 16](#) should substitute a third physics elective for [PHYS 19](#)]); and four electives, two from each department. Two electives must be selected from the following list: [ENGS 25](#), [ENGS 33](#), [ENGS 34](#); [PHYS 50](#), [PHYS 68](#), [PHYS 90](#) (p. 668); [PHYS 73](#) or ENGS 131; [PHYS 66](#) or [ENGS 64](#) or ENGS 120; [PHYS 44](#) or [ENGS 72](#). The other two electives may be courses from the Engineering Sciences Department (numbered above 20, excluding ENGS 80 and [ENGS 87](#)) or courses from the Physics and Astronomy Department which fulfill the straight physics major.

Note: Five courses should be from Engineering Sciences and five courses should be from Physics and Astronomy.

Students wishing to pursue the BE degree are advised to choose an Engineering Sciences course as their elective.

A culminating experience is required in the major and may count as one of the electives above. It must be one of the following: a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of the two-course design sequence [ENGS 89/ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list) or [PHYS 68](#), [PHYS 72](#), [PHYS 73](#), [PHYS 74](#), [PHYS 76](#), [PHYS 82](#), [PHYS 87](#).

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

For more information contact Professor Kristina Lynch (Physics and Astronomy) or Professor Jifeng Liu (Engineering Sciences).

Modified Majors

Diverse interests of students have, in the past, led to the construction of Engineering Sciences majors modified by courses in biology, chemistry, mathematics, computer sciences, physics, studio art, or environmental studies.

The following specific modified majors have been established. For questions, please contact the Engineering Sciences Department.

Modified major with Biology: Students interested in engineering and biology may elect a modified major with biology. This modified major must include:

1. as prerequisites: [MATH 3](#), [MATH 8](#), and [MATH 13](#); [PHYS 13](#) and [PHYS 14](#); [CHEM 5](#) or [CHEM 11](#), [ENGS 20](#), and [BIOL 12](#);
2. for the Engineering Sciences portion: [ENGS 22](#), [ENGS 25](#) and [ENGS 35](#) plus three courses elected from [ENGS 21](#),

[ENGS 23](#), [ENGS 24](#), [ENGS 26](#), [ENGS 33](#), [ENGS 34](#), [ENGS 36](#), [ENGS 37](#), [ENGS 52](#), [ENGS 56](#), [ENGS 58](#), [ENGS 91](#), ENGS 161, ENGS 162, ENGS 165 ([ENGS 91](#), ENGS 161 and 165 also satisfy the culminating experience requirement, see below);

3.
for the biology portion: [BIOL 13](#), plus three courses elected from [BIOL 37](#), [BIOL 42](#), [BIOL 43](#), [BIOL 45](#), [BIOL 46](#), [BIOL 71](#) or [CHEM 51](#) or [CHEM 57](#).

4.
the modified major must also include a culminating experience, which may be a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 90](#) must be taken as part of the two-course design sequence [ENGS 89/ ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. (Consult the Engineering Sciences Department for the most recent list.)

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

Modified major with Chemistry: Students interested in engineering and chemistry may elect a modified major with chemistry. The major enables students to design programs of study that reflect the diversity of their interests. It requires a core of three engineering courses, provides a broad yet relevant set of engineering electives, requires a two-course chemistry core, and is completed with two chemistry electives. This modified major must include:

1.
as prerequisites: [MATH 3](#), [MATH 8](#), and [MATH 13](#); [PHYS 13](#) and [PHYS 14](#); [CHEM 5/ CHEM 6](#) or [CHEM 10](#); [ENGS 20](#);

2.
for the Engineering Sciences portion: [ENGS 22](#), [ENGS 25](#) and 36 plus three courses elected from the following: [ENGS 21](#), [ENGS 23](#), [ENGS 24](#), [ENGS 26](#), [ENGS 33](#), [ENGS 34](#), [ENGS 35](#), [ENGS 37](#), [ENGS 52](#), [ENGS 91](#), ENGS 156, ENGS 158 ([ENGS 91](#), ENGS 156 and ENGS 158 also satisfy the culminating experience requirement, see below.) Not more than two from [ENGS 21](#), [ENGS 35](#) and [ENGS 37](#) may be counted toward the major.

3.
for the Chemistry portion: [CHEM 51](#) or [CHEM 57](#) and [CHEM 75](#) plus two courses elected from [CHEM 41](#), [CHEM 52](#) or [CHEM 58](#), [CHEM 63](#), [CHEM 64](#), CHEM 67, [CHEM 76](#).

4.
the modified major must also include a culminating experience, which may be a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of

the two-course design sequence [ENGS 89/ ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list.

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

Modified Major with Computer Science: Students interested in engineering and computer science may elect a modified major with computer science. Such a modified major must include:

1.
as prerequisites: [MATH 3](#), [MATH 8](#), [MATH 13](#); [COSC 1](#) and [COSC 10](#); [PHYS 13](#) and [PHYS 14](#); and [CHEM 5](#).

2.
for the modified major required courses include: [ENGS 22](#), [ENGS 27](#), [ENGS 31](#), [COSC 50](#), plus [ENGS 23](#) or [ENGS 24](#).

3.
for the modified major, breadth options include: a total of five courses from Groups A, B, and C with at least one course from each of the groups and three of the courses must be Computer Science courses; Group A includes [ENGS 32](#), [ENGS 62](#), [COSC 51](#); Group B includes [ENGS 26](#), [ENGS 68](#), [ENGS 92](#) ([ENGS 92](#) also satisfies the culminating experience requirement, see below), [COSC 60](#); Group C includes [ENGS 91](#), [COSC 31](#), [COSC 77](#), [COSC 58](#).

4.
the modified major must also include a culminating experience, which may be a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of the two-course design sequence [ENGS 89/ ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list.

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

Modified Major with Earth Sciences : Students interested in engineering and earth sciences may elect a modified major with earth sciences. Such a modified major must include:

1.
as prerequisites: [MATH 3](#), [MATH 8](#), and [MATH 13](#); [PHYS 13](#) and [PHYS 14](#); [CHEM 5](#), [ENGS 20](#), one introductory Earth Sciences course ([EARS 1-9](#) exclusive of [EARS 7](#)) plus [EARS 40](#);

2.
for the Engineering Sciences portion: [ENGS 22](#), [ENGS 23](#), [ENGS 24](#) and [ENGS 25](#) plus two engineering sciences electives, numbered above 20 (except ENGS 87);

3.
for the Earth Sciences portion: Four Earth Sciences courses, numbered 10 or above, at least one of which must be a Core Methods and Concepts course (Earth Sciences 30-59) and at least one of which must be a Quantitative Analysis or Advanced Topics course (Earth Sciences 60-79).

4.
the modified major must also include a culminating experience, which may be a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of the two-course design sequence [ENGS 89/ ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list.

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

Modified Major with Environmental Sciences: Students interested in engineering and environmental science may elect an engineering major modified with environmental science courses. Effective preparation for graduate study or professional activity in the environmental sciences requires an assimilation of material traditionally encountered in biology, chemistry, ecology, and earth sciences, as well as in engineering sciences. This modified major must include:

1.
as prerequisites: [MATH 3](#), [MATH 8](#), and [MATH 13](#); [PHYS 13](#) and [PHYS 14](#); [CHEM 5](#) or [CHEM 10](#); and [ENGS 20](#); at least one additional prerequisite from BIOL, CHEM, or EARS as appropriate for the environmental sciences electives below.

2.
for the Engineering Sciences portion: [ENGS 22](#), [ENGS 25](#), [ENGS 37](#) and three of the following: [ENGS 27](#), [ENGS 34](#), [ENGS 35](#), [ENGS 36](#), [ENGS 41](#), [ENGS 43](#), [ENGS 44](#), [ENGS 52](#), ENGS 171, ENGS 172, with at least two courses from among [ENGS 41](#), [ENGS 43](#), [ENGS 44](#), [ENGS 45](#) (p. 303).

3.
for the Environmental Sciences portion: four courses from the following list, with at least two courses from one department. [BIOL 21](#) or 51, [BIOL 26](#), [BIOL 27](#) or BIOL 68, [BIOL 22](#), 25, 53; [CHEM 51](#), [CHEM 63](#); [EARS 16](#), [EARS 35](#), [EARS 66](#), [EARS 67](#) (p. 259), [EARS 71](#), [EARS 72](#), [EARS 77](#), [EARS 78](#); [ENVS 12](#), [ENVS 15](#), [ENVS 20](#),

[ENVS 25](#), [ENVS 30](#). Additional requirements: [CHEM 51](#) is permitted only as a prerequisite to [CHEM 63](#).

4.
the modified major must also include a culminating experience, which may be a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of the two-course design sequence [ENGS 89/ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list.

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

Modified major with Public Policy: Students interested in technology and public policy may elect an engineering major modified with public policy. This modified major must include:

1.
as prerequisites: [MATH 3](#), [MATH 8](#) and [MATH 13](#); [PHYS 13](#) and [PHYS 14](#); [ENGS 20](#) or [COSC 1](#) and [COSC 10](#); [CHEM 5](#); a course in statistical data analysis, such as [ECON 10](#), [SOCY 10](#), or [MATH 10](#).

2.
for the Engineering Sciences portion: [ENGS 21](#) and [ENGS 22](#), plus one course selected from [ENGS 23-ENGS 28](#), one course selected from [ENGS 30-37](#), one course selected from [ENGS 41](#), [ENGS 43](#), [ENGS 44](#), ENGS 51, [ENGS 52](#), [ENGS 56](#) and one Engineering Sciences course numbered above 20.

3.
for the Public Policy portion: [PBPL 5](#), plus at least one Public Policy methods course, such as: [PBPL 40-48](#) or [ECON 20](#), and at least one course from a policy track. These are typically mid-level courses in Public Policy or related departments, and cannot include Engineering Sciences courses. Possible tracks include: Environment and Public Policy; Health and Public Policy; Natural resources and Public Policy; and Science/technology and Public Policy. The Rockefeller Center maintains a list of suggested offerings in these areas.

4.
the modified major must also include a culminating experience, which may be a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of the two-course design sequence [ENGS 89/ ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list.

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

Modified major with Studio Art: Students interested in architecture or product design may elect an engineering major modified with studio art. This modified major must include:

1. as prerequisites: [MATH 3](#), [MATH 8](#), and [MATH 13](#); [PHYS 13](#) and [PHYS 14](#); plus [ENGS 20](#) and [CHEM 5](#);
2. for the engineering science portion: [ENGS 21](#), [ENGS 22](#), [ENGS 24](#) and [ENGS 33](#), plus two courses elected from any Engineering Sciences course available for AB credit in the major ([ENGS 76](#) or a graduate level elective also satisfy the culminating experience requirement, see below);
3. for the studio art portion: [SART 15](#) and [SART 16](#), plus two upper level studio art courses.
4. the modified major must also include a culminating experience, which may be a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of the two-course design sequence [ENGS 89/ ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list. Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

Requirements for a Modified major with Engineering Sciences as the Primary Department

Prerequisites are [MATH 3](#), [MATH 8](#), [MATH 13](#), [PHYS 13](#), [PHYS 14](#), plus [ENGS 20](#) and [CHEM 5](#). [COSC 1](#) and [COSC 10](#) can be substituted for [ENGS 20](#). For students prepared for advanced placement in Calculus it is advisable to take the sequence, [MATH 8](#) and [MATH 13](#), or [MATH 11](#).

1. [ENGS 21](#), and [ENGS 22](#), are required.
2. One from [ENGS 24](#), [ENGS 25](#), [ENGS 26](#), [ENGS 27](#), and [ENGS 28](#)
3. One from [ENGS 30](#), [ENGS 31](#), [ENGS 32](#), [ENGS 33](#), [ENGS 34](#), [ENGS 35](#), [ENGS 36](#); or [ENGS 37](#).
- 4.

One elective in Engineering Science numbered above 20 (excluding ENGS 80 and [ENGS 87](#))

5. And a Culminating Experience

A Culminating Experience in Engineering Sciences is required. This is typically taken as one of the electives or may be an additional course. The culminating experience may be: a project or a thesis, [ENGS 86](#), [ENGS 88](#) or [ENGS 89](#) ([ENGS 89](#) must be taken as part of the two-course design sequence [ENGS 89/ ENGS 90](#)); or an advanced engineering sciences course with a significant design or research project, normally taken in the senior year, chosen from an approved list. Consult the Engineering Sciences Department for the most recent list.

Prior to enrollment in [ENGS 89](#), at least six engineering sciences courses must be completed; [ENGS 21](#) plus five additional courses numbered 22 to 76 and 91 and above.

For more information, please contact the Engineering Sciences Department.

All modified Engineering Sciences majors must be approved by the Chair of the Engineering Sciences Department.

Requirements for Another Major Modified with Engineering Sciences

Prerequisites are [MATH 3](#) and [MATH 8](#), and [PHYS 13](#) or [PHYS 3](#) and [PHYS 4](#)*. The required courses are four Engineering Sciences courses numbered above 20 (excluding [ENGS 87](#)), to include [ENGS 21](#) and should be coherent with the student's major field of study and approved, upon petition, by the Chair of Engineering Sciences. Students should note that many Engineering Sciences courses require prerequisites in addition to [MATH 8](#) and [PHYS 13](#). No engineering sciences courses 20 and above may be taken under the Non-Recording Option.

*Must have been taken at Dartmouth, no AP credit is permitted.

All modified Engineering Sciences majors must be approved by the Chair of the Engineering Sciences Department.

Requirements for the Minor in Engineering Sciences

Prerequisites are [MATH 3](#), [MATH 8](#) and [MATH 13](#), and [PHYS 13](#) and [PHYS 14](#). The required courses are [ENGS 20](#), [ENGS 21](#), [ENGS 22](#) and two Engineering Sciences undergraduate courses numbered above 20 (excluding ENGS 80 and [ENGS 87](#)). Students should note that some Engineering Sciences courses require prerequisites in addition to those noted. No courses beyond the prerequisites may be taken under the Non-Recording Option. No course may be used for both a major and a

minor (although a course may be part of one of these and prerequisite to the other, or prerequisite to both).

No more than one transfer course may be used for credit in the minor.

Requirements for the Minor in Materials Science

The minor in Materials Science is sponsored by faculty in Chemistry, Physics and Engineering with an interest in interdisciplinary education and research in materials science.

1.
As prerequisites: [PHYS 13](#) and [PHYS 14](#); [CHEM 5](#) or [CHEM 11](#),
2.
[ENGS 24](#) is required
3.
One from [PHYS 76](#) or [ENGS 133*](#)
4.
Two from:
 - a.
Group A [ENGS 131](#) or [PHYS 73](#)
 - b.
Group B [CHEM 96.04](#) (p. 189) or [CHEM 96.06](#) (p. 189)
 - c.
Group C [ENGS 73](#), [ENGS 132](#), or [PHYS 43](#)

*If ENGS 133 is taken as part of the requirement for the courses under Methods, at least one elective from outside the Engineering Sciences Department must be chosen.

No course may be used for both a major and a minor (although a course may be part of one of these and prerequisite to the other, or prerequisite to both).

No more than one transfer course may be used for credit in the minor.

Requirements for the Minor in Human-Centered Design

The minor in human-centered design in Engineering Sciences is an interdisciplinary program comprising six courses, one from Section 1, two from Section 2, and three from Section 3:

Section 1. Prerequisites: ENGS 12

Section 2. *Ethnographic Methods and Human Factors /Psychology*: [ANTH 3](#), [ANTH 18](#), [ENGS 15.07](#), [GEOG 11](#), [PSYC 22](#), [PSYC 23](#), [PSYC 28](#), [PSYC 38](#), [PSYC 43](#), [PSYC 50.02](#), [PSYC 51.11](#), [PSYC 53.10](#), [PSYC 53.12](#), [PSYC 53.13](#), [SOCY 11](#)

3. Design Electives: [ENGS 15.01](#), [ENGS 15.02](#), [ENGS 15.09](#), [ENGS 15.11](#), [ENGS 15.12](#), [ENGS 18](#), [ENGS 21](#), [ENGS 19.01](#), [ENGS 44](#), [COSC 23.01](#), [COSC 25.01](#), [COSC 25.02](#), [COSC 28](#), [COSC 29.06](#), [COSC 63.01](#), [COSC 67](#), [COSC 89.34](#), [FILM 51](#), [PBPL 43](#), [SART 65](#), [SART 66](#)

It is recommended that students take ENGS 12 first. Before taking courses in section 3, it is recommended that students take ENGS 12 plus at least one course from Section 2.

No course may be used for both a major and a minor (although a course may be part of one of these and prerequisite to the other, or prerequisite to both).

No courses in the HCD minor may be taken under the Non-Recording Option.

No more than one transfer course may be used for credit in the minor.

For Engineering majors: Only ENGS courses numbered below 20 may be counted towards the minor.

*One of the two courses in Section 2 must be outside of the student's major.

Students majoring in Cognitive Science, Cultural Anthropology, Neuroscience, Psychology, and Sociology may substitute an additional Section 3 course in place of their second Section 2 course.

For advice contact the Faculty Advisor for the minor, Peter Robbie.

Requirements for Any Major Modified with Human-Centered Design

Any major may be modified with the minor in Human-Centered Design. The HCD minor portion of the modification requires a total of six courses, one from Section 1, two from Section 2, and three from Section 3.

Section 1. Prerequisites: [ENGS 12](#)

Section 2. *Ethnographic Methods and Human Factors /Psychology*: [ANTH 3](#), [ANTH 18](#), [ENGS 15.07](#), [GEOG 11](#), [PSYC 22](#), [PSYC 23](#), [PSYC 28](#), [PSYC 38](#), [PSYC 43](#), [PSYC 50.02](#), [PSYC 51.11](#), [PSYC 53.10](#), [PSYC 53.12](#), [PSYC 53.13](#), [SOCY 11](#)

3. Design Electives: [ENGS 15.01](#), [ENGS 15.02](#), [ENGS 15.09](#), [ENGS 15.11](#), [ENGS 15.12](#), [ENGS 18](#), [ENGS 21](#), [ENGS 19.01](#), [ENGS 44](#), [COSC 23.01](#), [COSC 25.01](#), [COSC 25.02](#), [COSC 28](#), [COSC 29.06](#), [COSC 63.01](#), [COSC 67](#), [COSC 89.34](#), [FILM 51](#), [PBPL 43](#), [SART 65](#), [SART 66](#)

Students majoring in Cognitive Science, Cultural Anthropology, Neuroscience, Psychology, and Sociology may substitute an additional Section 3 course in place of their second Section 2 course.

Students wishing to modify their major with HCD should discuss their plans with their major advisor as well as the

Faculty Advisor for the minor, Peter Robbie. Formal proposals for modification require approval of both the major department as well as Engineering Sciences Department Chair, Vicki May.

**Due to the potential overlap between the HCD courses and existing majors, there is potential for creating a program of study that does not add significant value beyond a straight major. Students pursuing the modification should note that 1) there should be a strong intellectual rationale, 2) the proposed plan should be adding something new and significant that is not possible with the straight major, and 3) there should not be significant overlap in courses between the modifier and the primary field of the major.

Honors in the Major

During their junior or senior year, students may apply for admission to the Honors Program in Engineering Sciences. The application must be filed no earlier than the second week of the fall term in the junior year and no later than the second week of the winter term in the senior year. Contact the Chair of the Engineering Sciences Department for details. Admission to the Honors Program may be granted to those students who have attained an overall grade point average of 3.0, and a grade point average of 3.33 in the major.

The main requirement of the Honors Program is the completion of an honors project. The project, a creative activity suitable to the major subject, is not restricted to experimental work but can equally take the form of a theoretical investigation. Much of the development of the honors project will normally take place within the framework of [ENGS 88](#), the Honors Thesis. ([ENGS 88](#) also fulfills the requirement for a culminating experience in the major.) Upon completion of the project, the student will submit a written thesis and give an oral presentation. Those students who satisfactorily complete the Honors Program with a 'B+' average or better and have a grade point average of 3.3 or higher in the major at the time of graduation, will earn Honors recognition in the major. High Honors will be granted to those students who, in addition, have taken two engineering science courses beyond those required for the major (excluding courses under [ENGS 20](#) and [ENGS 87](#)), have attained a grade point average of 3.50 in all engineering courses, and have completed outstanding independent work. A vote of the Department is also required prior to awarding High Honors. Students may begin their project the previous term by enrolling in [ENGS 87](#), Undergraduate Investigations. An interim evaluation of honors students will be made after one term and continuation will be recommended for those students whose work demonstrates the capacity for satisfactory (B+) work. Students who satisfactorily complete the Honors Program will have entered on their permanent record Honors in Engineering Sciences, or High Honors in Engineering Sciences.

Advanced Standing in Thayer School Graduate Programs

Many students majoring in engineering sciences enter Dartmouth College with course credits, proficiencies, or both, in a number of subjects resulting from exceptional preparation in high school. As a result, these students have increased elective freedom in choosing courses to satisfy their A.B. requirements.

The 100- and 200-level Engineering and Engineering Sciences courses described in this catalog can be used to satisfy the A.B. degree requirements.

Election of 100- and 200-level Engineering and Engineering Sciences courses in excess of the undergraduate requirements for the major and for admission to any of Thayer's post-A.B. programs will permit a student to be admitted to the Thayer School with advanced standing. Depending upon the number of elective opportunities, significant reduction in the time required to complete Thayer School's graduate degree programs is possible.

To take full advantage of this opportunity students are urged, as early as possible after declaring their major, to consult with their Thayer School adviser. Additional details are contained in the Thayer School Guide to Programs and Courses.

Requirements for the Bachelor of Engineering Degree (B.E.)

The Bachelor of Engineering (BE) degree program is accredited by the Engineering Accreditation Commission of [ABET](#) under the commission's General Criteria.

Consult the current Thayer School Guide to Programs and Courses for details on the requirements for the Bachelor of Engineering degree, as well as Master's degree programs.

ENGS - Engineering Sciences - Undergraduate Courses

To view Engineering Sciences Undergraduate requirements, [click here](#). (p. 286)

To view Engineering Sciences Graduate requirements, [click here](#). (p. 899)

To view Engineering Sciences Graduate courses, [click here](#). (p. 904)

ENGS 1 - Everyday Technology

Instructor: Davis

This course is intended to take the mystery out of the technology that we have grown to depend on in our everyday lives. Both the principles behind and examples of devices utilizing electricity, solid and fluid properties, chemical effects, mechanical attributes and other topics

will be discussed. In the associated lab project, students will dissect, analyze, (and possibly revive!) a broken gadget or appliance of their choosing. This course has no prerequisite, but enrollment may be limited.

Degree Requirement Attributes: TLA

ENGS 1.01 - Mathematical Concepts in Engineering

Instructor: P. Taylor

This course introduces prospective engineering students to mathematical concepts relevant in engineering while emphasizing the solving of engineering problems rather than mathematical derivations and theory. All topics are driven by engineering applications taken directly from core engineering courses. The course includes hands-on laboratory exercises as well as a thorough introduction to Matlab.

Degree Requirement Attributes: Dist:TAS

ENGS 2 - Integrated Design: Engineering, Architecture, and Building Technology

Instructor: Wilson

An introduction to the integrated design of structures and the evolving role of architects and engineers. The course will investigate the idea that design excellence is very often the result of deep collaboration between engineers, architects, and builders and that it is only in relatively recent history that a distinction between these areas of expertise has existed. The historical, social, and architectural impact of structures will be explored and several structures and their designers will be studied in depth. Enrollment limited to 50 students. No Prerequisite.

Degree Requirement Attributes: TAS

ENGS 3 - Materials: The Substance of Civilization

Instructor: Lasky, Bish

With the exception of ideas and emotions, materials are the substance of civilization. From the "Iceman's" copper ax to indium phosphide gallium arsenide semiconductor lasers, materials have always defined our world. We even name our epochs of time based on the dominant material of the age: Stone Age, Bronze Age, Iron Age and now Silicon Age. In addition to discussing the nature and processing of metals, polymers, ceramics, glass and electronic materials, this course will analyze the dramatic developments in civilization directly resulting from advances in such materials. The text Stephen Sass's *The Substance of Civilization* will be used in the course. Enrollment limited to 50 students per section. No Prerequisite.

Degree Requirement Attributes: TAS

ENGS 3.10 - Elementary Oceanography

Oceanography is one of the studies in which natural processes are investigated with interdisciplinary

approaches by scientists of a wide range of specialties. Physical, chemical, biological and geological processes in the oceans and their interactions are studied in this course. Students will gain appreciation of the complexity of the ocean as a natural system and necessity of interdisciplinary to investigate it. Oceans as a source of resources, as a fundamental part of the global climate engine, as a book of Earth's environmental history, and as a bed of the origin of life are discussed. Use and abuse of ocean resources and associated environmental problems, such as ocean water pollution, over-fishing and whaling are also discussed.

Cross-Listed as: EARS 003

Degree Requirement Attributes: Dist:SCI

ENGS 4 - Technology of Cyberspace

Instructor: Taylor

This course will cover some basic concepts underlying the 'information superhighway.' The technologies of high speed networking have stimulated much activity within the federal government, the telecommunications and computer industries, and even social science and popular fiction writing. The technical focus will be on communications technologies, information theory, and the communications requirements of video (standard and ATV), speech (and other audio), text data. Social economic and policy issues will be an integral part of the course. Enrollment limited to 30 students.

Degree Requirement Attributes: TAS

ENGS 5 - Healthcare and Biotechnology in the 21st Century

Technologies that will impact healthcare in the 21st century are explored, including biology, robotics, and information. Biotechnologies are explored that will be used for the treatment of diseases and the regeneration of missing organs and limbs. Robotics will be explored that will replace parts. This will include artificial organs, robots as replacement for human parts, the human genome project, gene therapy, biomaterials, genetic engineering, cloning, transplantation (auto, allo and xeno), limb regeneration, man-machine interfaces, robotics, prosthetic limbs, artificial organs and joints. This section will also cover ethical issues related to the above topics and issues regarding the FDA and the approval of new medical treatments. We will discuss going beyond normal with respect to the senses, muscles and creating wings. Enrollment is limited to 75 students. No Prerequisite.

Degree Requirement Attributes: TAS

ENGS 6 - Technology and Biosecurity

Instructor: Hoyt

This course will introduce students to the technologies used to combat biological threats to security ranging from pandemic influenza to bioterrorism. In particular, this

course will explore the dual role that technology plays in both enhancing and destabilizing security. Specific technologies covered include the use of nanotechnology, synthetic biology, and mass spectrometry. The course considers questions such as: Where can technological solutions have the greatest impact? When can defensive technologies have offensive applications? And, how can we balance the need to regulate potentially dangerous technologies against the need for academic freedom and high tech innovation? This course has no prerequisite, but enrollment is limited to 30 students.

Degree Requirement Attributes: TAS

ENGS 7 - First-Year Seminars in Engineering Sciences

ENGS 8 - Materials in Sports Equipment

Sports equipment uses almost every type of material imaginable, as athletes and designers leverage state-of-the-art materials to maximize human efficiency, performance, comfort and safety. As something most people have some familiarity with, active Dartmouth students in particular, it is an excellent subject for an exploration of material characteristics, selection, design, and failure. This course will introduce materials science concepts in a way that is accessible and useful for the non-major. It will exercise student's critical thinking, quantitative and communication skills. In-class demonstrations will allow students to explore material behavior and differences between materials 'hands-on' and possible field trips or lab visits will introduce them to some engineering test methods. Finally, this course will demystify terms used by manufacturers and salespeople, and help students, as athletes and consumers, make informed equipment choices. Enrollment is limited to 40 students. No prerequisite.

Degree Requirement Attributes: TAS

ENGS 9 - Everyday Technology

Instructor: Davis

This course is intended to take the mystery out of the technology that we have grown to depend on in our everyday lives. Both the principles behind and examples of devices utilizing electricity, solid and fluid properties, chemical effects, mechanical attributes and other topics will be discussed. In the associated lab project, students will dissect, analyze, (and possibly revive!) a broken gadget or appliance of their choosing. This course has no prerequisite, but enrollment is limited to 50 students.

Degree Requirement Attributes: Dist:TLA

ENGS 11 - The Way Things Work: A Visual Introduction to Engineering

Instructor: Macaulay

Students will explore and compare engineered systems and processes in the world around them. They will sketch and

build models to help them understand and communicate. Each week, students will learn new sketching and visual communication techniques that they will use to visually explain how engineered systems or processes work. Students will also maintain a sketchbook to practice new sketching techniques. After being exposed to some basic engineering principles students will further investigate specific engineered systems through sketching, research, disassembly, and building. They will communicate their findings visually.

Prerequisite: None

Degree Requirement Attributes: Dist:ART

ENGS 12 - Design Thinking

A foundation course on the cognitive strategies and methodologies that form the basis of creative design practice. Design thinking applies to innovation across the built-environment, including the design of products, services, interactive technology, environments, and experiences. Topics include design principles, human need-finding, formal methodologies, brainstorming, heuristics, thinking by analogy, scenario building, visual thinking, and study of experienced thinkers. Weekly projects and exercises in a variety of media provide practice and development of students' personal creative abilities. Enrollment limited to 20 students. No prerequisite.

Degree Requirement Attributes: Dist:TAS

ENGS 13 - Virtual Medicine and Cybercare

There is a revolution in technology that is occurring in health care. This new technology will dramatically change how health care is delivered in the future. This course will cover topics related to the virtual human created from bits. This will include virtual reality, augmented reality and datafusion, computer simulation, advanced 3D and 4D imaging techniques, the operating room of the future, minimally invasive surgery, space medicine, teleoperations, telemedicine and telesurgery, internet 2 and cyber-space, artificial intelligence and intelligent agents applied to medicine, and the national library of medicine virtual human project. We will also discuss the FDA approval of computer simulators, robotic surgeons, and the ethics of robots doing surgery. In addition we will discuss the medical library of the future, teleconferencing and the use of interactive media in healthcare education. We will also discuss computerized patient records (CPR) and clinical information systems. Enrollment limited to 48. No prerequisite.

Degree Requirement Attributes: TAS

ENGS 14 - The Science and Engineering of Music

Instructor: Hartov

Almost everyone enjoys some forms of music, but few are familiar with the science and engineering that make music possible. In this course students are invited to explore the making of music from technical and scientific perspectives. In particular this covers aspects of acoustics, the workings of musical instruments, and selected aspects of musical theory and audio engineering. Students in the course explore music with many in-class demonstrations and hands-on experimentation. Course topics include how sound is recorded and stored digitally, the composition of sound from a musician's point of view (pitch, chords, harmony and melody) and from an engineer's point of view (frequency, harmonics). The relationships between these two perspectives are then explored. This course does not require proficiency in either music or any particular instrument. Enrollment is limited to 75 students.

Degree Requirement Attributes: TAS

ENGS 15 - Undergraduate Investigations in Engineering

An original investigation in a phase of science or engineering under the supervision of a member of the staff. Students electing the course will be expected to have a proposal approved by the department chair and to meet weekly with the staff member supervising the investigation. The course is open to undergraduates who are not majoring in engineering. A report describing the details of the investigation must be filed with the department chair and approved at the completion of the course.

\f

Prerequisite: Permission of department chair (a one-page proposal submission is required and must be submitted for approval prior to the end of the term preceding the term in which the course will be taken).

Degree Requirement Attributes: Dist:TAS

ENGS 15.01 - Senior Design Challenge I

Instructor: Korsunskiy

The Senior Design Challenge is a two-term course designed to serve as a senior capstone experience for Dartmouth students across all majors. Students in this project-based course will practice human-centered design, developing not only the skills, but also the creative confidence to apply their liberal arts education to make a positive difference in the world beyond Dartmouth. Students will work in interdisciplinary teams on projects that will be determined in partnership with organizations in the Upper Valley. The project topics will be designed to give students some flexibility in determining the specific problem on which to focus, while ensuring client responsiveness and substantial fieldwork opportunities. Enrollment is limited.

Students are awarded one course credit for successful completion of this course upon completion of ENGS-15.02. Students register for ENGS-15.01 and receive a grade of "ON" (ongoing) at the end of the term. Students then register for ENGS-15.02 the subsequent term to complete the coursework. A final grade will replace the "ON" in ENGS-15.01 upon completion of ENGS-15.02.

Degree Requirement Attributes: Dist:TAS

ENGS 15.02 - Senior Design Challenge II

Instructor: Korsunskiy

The Senior Design Challenge is a two-term course designed to serve as a senior capstone experience for Dartmouth students across all majors. Students in this project-based course will practice human-centered design, developing not only the skills, but also the creative confidence to apply their liberal arts education to make a positive difference in the world beyond Dartmouth. Students will work in interdisciplinary teams on projects that will be determined in partnership with organizations in the Upper Valley. The project topics will be designed to give students some flexibility in determining the specific problem on which to focus, while ensuring client responsiveness and substantial fieldwork opportunities. Enrollment is limited.

Students are awarded one course credit for successful completion of this course. Students who have registered for ENGS-15.01 register for ENGS-15.02 to complete the coursework. A final grade will replace the "ON" for ENGS-15.01 upon completion of this course for a total of 2 credits for ENGS-15.01 and ENGS-15.02.

Degree Requirement Attributes: Dist:TAS

ENGS 15.03 - The Ecosystem for Bio-Innovation

Instructor: Cooper

We are living through biology's century: global pandemics; \$100 genomes; bio-reactor beef; plastic-eating engineered microbes...and we still have 80 years to go.

This course is built around the basic idea that biotechnology is changing the world, but will only reach its greatest potential—technologically, economically, ethically—if we learn to guide it as a complex ecosystem of inter-dependent actors. Biotech hubs thrive where there is a dense milieu of intellectual and financial capital from top universities, academic medical centers, entrepreneurs, and venture capital. This course aims to ensure that future leaders—physicians, scientists, journalists, lawyers, financiers, patients, legislators—understand the ways that scientific advances, innovation policy, and entrepreneurship feed one another.

Taught by a biotech venture capital investor, this is an inter-disciplinary course designed to empower students with the context and confidence to go deeper than news

headlines that fail to see *both* the ‘forest’ *and* the ‘trees’. The term will unfold in a cumulative manner. We begin with a diagnosis and overview of the Ecosystem for Bio-Innovation, and then go deeper into the institutions and players that cross-pollinate within this ecosystem, focusing on healthcare (e.g. mRNA vaccines, genetic disease treatments) while making note of biotechnology’s far broader impact on our society and planet. Each week of the course will focus on one theme, while also introducing new intellectual frameworks, plus real-world cases to help concretize key concepts. We will bring material to life through a combination of lecture, Socratic learning, student projects, guest speakers, and in-class debates, always infusing our time together with a sense of the scientific, economic, political, and ethical choices at stake. Final projects will allow students to critically apply coursework toward a cutting-edge area of biotechnology.

Degree Requirement Attributes: Dist:TAS

ENGS 15.04 - Computing Before Electronics

Instructor: Frost

In this course we explore the computational techniques by which society survived and thrived before the advent of the integrated circuit and the electronic calculator. From the commerce of early civilizations until the last third of the 20th century, there was a progression of mechanical calculating gadgets, some simple – some quite ingenious and complex. Among these we will study slide rules, planimeters, integrators, digital adding machines, nomographs, and other special charts and graphical techniques. We will also cover celestial navigation, which in its day was a particularly important application of calculation; technical drawing and perspective, the precursors to computer graphics; and cryptography, whose computational requirements helped propel us into the electronic age. Laboratory sessions will give students direct experience using antique and period calculating instruments, plus the opportunity to create their own calculating devices.

Prerequisite: Introductory Calculus (Math 3, or equivalent, or permission)

Offered: Spring.

Degree Requirement Attributes: Dist:TLA

ENGS 15.05 - Blockchain Explored: Promise, Pitfalls and Plumbing

This course will explore blockchains – how they work, how they have been used, and how they are affecting society in finance, information sharing, and law. Blockchain technology and its applications have been hyped and condemned with equal fervor. We will examine the phenomenon from a number of perspectives, and aim to provide all participants, no matter what their background or level of technical skill, with both some hands-on experience in working with blockchain-based software and

some understanding of the place of applications such as cryptocurrencies, NFTs and DAOs in contemporary America.

ENGS 15.06 - Technology Entrepreneurship

This course introduces students from all majors, including science, engineering, and humanities to the fundamentals of entrepreneurship as applied to the commercialization of new technologies.

Through case studies, readings, lectures, projects, and engagement with class guests the course will provide instruction and perspective on the process entrepreneurs take to start, resource, adapt and grow innovative technology-based ventures and help develop students’ understanding of their own interest in pursuing careers in the field.

ENGS 15.07 - Research Methods for Human-Centered Design

Research to inform Human-Centered design draws from a variety of disciplines (chiefly Human Factors and User Research) to solve complex, ambitious problems in technology design. The process across fields is the same: leveraging empathy and psychological research principles to bring human needs and experience into product design and development.

This course will cover a range of research methods that apply to product design, predominantly through the lens of digital products (but applicable to other technologies). Key primary research methods will include contextual inquiry, expert interviews, diary studies, usability testing, cognitive walk throughs, A/B testing, and surveys.

In order to ground these methods in theory, as well as provide practical experience, the course will be a blend of lecture, readings, discussion, and projects. The course is ideal for students with a social science background and an interest in applying this discipline to technology, or students who have had an introduction to research methods for product design and an interest in learning more. A background in statistical or data analysis is helpful but not compulsory.

ENGS 15.08 - AI Demystified: A Roadmap To Understand Evolving Technologies

AI Demystified unfolds the pivotal world of Artificial Intelligence (AI), spotlighting its multifaceted applications and theoretical concepts across diverse sectors such as healthcare and commerce. This course, while demystifying AI, delves deep into its practical and ethical aspects, aligning with its impactful presence in our daily lives and future. Through a combination of illuminative lectures, hands-on coding sessions, weekly assignments, and a group project, students traverse through AI’s principles, applications, and societal impacts, culminating in a wholesome learning experience tailored for AI beginners

and prospective professionals, and preparing them to adeptly navigate our increasingly AI-infused future.

Prerequisite: COSC 1 or ENGS 20. A working knowledge of Python is recommended. Students will be expected to have an elementary knowledge of Python by the end of week 2. Materials will be provided to support this.

ENGS 15.09 - Design Ethics

Every physical and digital artifact in the human-built environment is the product of a design process, and every decision that designers make—from how to gather research information, to what materials to use—carries ethical implications. That is, every choice that designers make has the potential to shape the distribution of benefits and harms. Yet, very often, designers are not fully aware of these ethical implications and are not trained to navigate the complex ethical dilemmas that they encounter in their work. Consequently, we are surrounded by objects and systems that perpetuate social injustices and environmental destruction. This course integrates philosophical theorizing and design practice, exploring the moral, social, and environmental responsibilities of designers in, e.g., product design, engineering design, UI/UX design, and other related fields. Through readings, group discussions, short lectures, case studies, guest speakers, and hands-on projects, students will learn to critically analyze and apply ethical principles in the context of design. Along the way, students will develop not only a deeper understanding of the role of design in shaping our world, but also the skills needed to become more thoughtful and responsible designers.

Prerequisite: Any one of: ENGS 12, ENGS 21, or COSC 25.01

Degree Requirement Attributes: Dist:TMV

ENGS 15.10 - Narrative Design for Innovators

Innovators cannot avoid narrative. It simply comes with the territory. Would you have heard of Apple if it didn't break through with a powerful THINK DIFFERENT brand? Or what about Theranos? Would they have risen (and fallen) so quickly if it weren't for a captivating idea about changing healthcare with just one drop of blood? In both of these cases, would the founders have been so iconic without their infamous black turtlenecks?

Innovation, scale, and story go hand in hand. As the innovator brings their idea to the world, they have a number of questions to consider: how do I communicate what's so game-changing about this idea? How do I tell my story so investors and advocates trust me to bring this innovation to market? How do I build a brand my audience identifies with (and wants to buy)? How do I build a company culture that recruits and retains the best talent—and rallies people to make a positive impact on the world?

These are all designed objects with narrative at the core, which we'll learn to craft.

We'll explore how traditional design processes and mindsets used to create digital and physical artifacts can be applied to the narrative artifact. Building on this foundation, we'll also expand the designers' toolkit with new methods of research, analysis, and craft specific to the narrative dimension of design work.

From Airbnb to Tesla, Beyonce to Taylor Swift, we'll go way beyond "marketing" and analyze case studies of how the world's most impactful innovators use diverse narrative strategies to grow traction around their ideas and achieve their goals.

Students will then get to try their hand at applying these strategies to design impact-focused narratives through practice projects. For the midterm project, student groups will redesign Budweiser to speak to a modern story of masculinity. For the culminating project of the course, students will design and pitch narrative objects to real-world founders to help them launch their new-to-world businesses.

ENGS 15.11 - Design & Education

This course explores intellectual synergies between design and education including three explicit intersections: how design methods help us create better learning experiences; how design pedagogies can be valuable to the instruction of non-design subjects; and how human-centered design might help us address persistent problems in education systems. In an attempt to practice what it preaches, this course does not use the standard letter grading system—please inquire with the instructor about implications for your minors/modifications.

Prerequisite: One of: ENGS 12, EDUC 01, EDUC 17, EDUC 27, EDUC 32; or instructor permission

ENGS 15.12 - Design and Entrepreneurship

In this course, students will learn how entrepreneurs reason and behave in contexts with high uncertainty and how entrepreneurial skills might help us effect positive change in applications including and beyond venture formation. Through short sprints, weekly readings and discussions, and a longer project, students will experience several approaches to "entrepreneurial thinking." Throughout the term, the class will discuss how each approach relates to design thinking, uncertainty, innovation, and the goals of the liberal arts.

ENGS 15.13 - Vaccines, Drugs, and Entrepreneurship

This course will introduce students to how new vaccines and drugs are developed and delivered to patients by scientists, industry, and entrepreneurs. This course will also examine new opportunities to improve speed, scale and access to new medicines that are not just commercially viable, but socially valuable. To tell this story, we will follow the development of Covid-19 vaccines from the initial discoveries made in protein, nucleic acid, and nano-material engineering, the transfer of these technologies into

entrepreneurial venture capital-backed startup companies like Moderna and BioNTech, and their development into novel vaccines that saved millions of lives. We will examine the technical, clinical, business, and marketing/educational, and policy strategies that determine the development, access, and acceptance of these new vaccines and drugs.

A key feature of this course is a student team project in which students use entrepreneurial thinking to design a comprehensive development plan for a novel biomedical product candidate that employs engineering, business, and social science strategies identified throughout the term. The objective of the plan is to design, test, manufacture, and sell a safe and effective product that will be both accessible and acceptable to the end-user population. By the end of the course, students will be able to analyze the biotechnology landscape, identify promising biomedical venture opportunities, understand effective business strategies, and identify strategies that can enhance the social value of these ventures. Students will emerge from this course with a deeper understanding of unique challenges and opportunities inherent in biotech entrepreneurship.

ENGS 16 - Biomedical Engineering for Global Health

The past 20 years have seen an incredible amount of high-tech medical advances, but to what degree have these impacted the health of those living in the developing world? The potential for years of life gained through biomedical technology is tremendous in some of the world's poorest regions, but appropriate design requires an understanding of the clinical, political, and cultural landscape, and a clean-slate approach to developing low-cost, effective tech. This course offers an exciting opportunity to understand how to design solutions for the most important health challenges of the developing world. Learning goals will be achieved through hands-on experience, including: a laboratory component where we deconstruct, design and build a low-cost medical device, case study discussions on successful global health innovations, and several "teardowns" of common medical devices. Lecturers from Thayer, Tuck, TDC and Geisel will cover complimentary topics in clinical medicine, healthcare delivery, innovation and medical imaging. A final project will bring everything together by addressing a real health problem with a prototype of a low-cost tech solution. Enrollment is limited to 40 students.

Degree Requirement Attributes: TAS

ENGS 17 - Electronics for Musicians

Instructor: Hartov

From public address systems to recording performances and the creation of synthetic sounds, electronic technology permeates the making of music in many ways. In this course we propose to familiarize students with the technology behind the production of music. The course

will cover analog electronics from microphone to speaker, digital electronics from the acquisition of sounds, their digital processing and their digital synthesis. This course is targeted to undergraduate students in music but is open to all students with an interest in the topic. Students will learn through in-class exploration and through labs. The course will conclude with students completing a project of their choice demonstrating their mastery of the subject.

Degree Requirement Attributes: TLA

ENGS 17.04 - Making Music: The Art, Science, and Symbolism of Musical Instruments

Instructor: Levin, Wegst

A hands-on course in which students working in groups build and assemble simple musical instruments with the aim of understanding how materials, technologies, craftsmanship, and cultural knowledge interact in the conception, design, and production of diverse instruments around the world. Merging the methodologies of engineering and materials science with the approaches of arts and humanities, the course explores from an interdisciplinary perspective the social meanings and powers ascribed to musical instruments, and the way that instruments have come to function as potent symbols of personal, cultural, and political identity.

Cross-Listed as: COCO 020 MUS 17.04

Degree Requirement Attributes: WCult:NW

ENGS 18 - System Dynamics in Policy Design and Analysis

Instructor: Peterson

This course introduces systems dynamics, an approach to policy design and analysis based upon feedback principles and computer simulation. The approach is useful for gaining an understanding of the underlying structural causes of problem behavior in social, economic, political, environmental, technological, and biological systems. Goals of this approach are to gain better understanding of such problem behaviors and to design policies aimed at improving them. Lectures and exercises illustrate applications of the approach to real, current problems such as urban decay, resource depletion, environmental pollution, product marketing and distribution, and agricultural planning in an expanding population. The similarity and transferability of underlying feedback characteristics among various applications is emphasized. No prior engineering or computer science experience is necessary.

Prerequisite: MATH 3

Degree Requirement Attributes: TAS

ENGS 19.01 - Future of Energy Systems

Instructor: Peterson

Energy production, distribution, and use is central to human activity. In many quarters, there is growing appreciation for the nexus among energy, climate change, the environment, and economic development. This course will focus on futures of energy as they impact, and are impacted by, these drivers. The course uses model-based approaches to develop global-scale energy scenarios and to explore the potential evolution of current and potential energy options in both localized and global settings.

Degree Requirement Attributes: Dist:TAS

ENGS 20 - Introduction to Scientific Computing

In this course, students learn how to solve problems in engineering and sciences by writing computer programs. To this end, students learn general concepts to design programming solutions to problems and gain experience implementing these solutions in the commonly used programming language C. Programming topics include problem decomposition, control structures, recursion, arrays and other data structures, file I/O, and code modularization. Applications will be drawn from numerical solutions of ordinary differential equations, root finding, searching and sorting, simulation, and data analysis. Good programming style, debugging techniques and computational efficiency are emphasized. Although no previous programming experience is assumed, a significant time commitment is required. Students planning to pursue the engineering sciences major are advised to take ENGS 20. Students considering the computer science major should take COSC 1 and COSC 10. Students considering both majors should consider taking ENGS 20 and COSC 10.

Prerequisite: MATH 3 and prior or concurrent enrollment in MATH 8

Degree Requirement Attributes: Dist:TAS

ENGS 21 - Introduction to Engineering

The student is introduced to engineering through participation, as a member of a team, in a complete design project. The synthesis of many fields involving the laws of nature, mathematics, economics, management, and communication is required in the project. Engineering principles of analysis, experimentation, and design are applied to a real problem, from initial concept to final recommendations. The project results are evaluated in terms of technical and economic feasibility plus social significance. Lectures are directed toward the problem, and experiments are designed by students as the need develops.

Prerequisite: MATH 3 or equivalent

Degree Requirement Attributes: Dist:TLA

ENGS 22 - Systems

The student is introduced to the techniques of modeling and analyzing lumped systems of a variety of types,

including electrical, mechanical, reacting, fluid, and thermal systems. System input will be related to output through ordinary differential equations, which will be solved by analytical and numerical techniques. Systems concepts such as time constant, natural frequency, and damping factor are introduced. The course includes computer and laboratory exercises to enhance the students' understanding of the principles of lumped systems. Students will develop the ability to write MATLAB code. Enrollment is limited to 35 in fall and 50 students for winter and summer.

Prerequisite: MATH 13, PHYS 14, and ENGS 20

Degree Requirement Attributes: TLA

ENGS 23 - Distributed Systems and Fields

A study of the fundamental properties of distributed systems and their description in terms of scalar and vector fields. After a summary of vector-field theory, the formulation of conservation laws, source laws, and constitutive equations is discussed. Energy and force relations are developed and the nature of potential fields, wave fields, and diffusion fields examined. A survey of elementary transport processes is given. Particular attention is given to the relation between the description of systems in terms of discrete and distributed parameters. Applications are chosen primarily from fluid mechanics, electromagnetic theory, and heat transfer. Includes a set of laboratories.

Prerequisite: ENGS 22, or equivalent

Degree Requirement Attributes: TAS

ENGS 24 - Science of Materials

An introduction to the structure/property relationships that govern the mechanical, the thermal, and the electrical behavior of solids (ceramics, metals, and polymers). Topics include atomic, crystalline, and amorphous structures; x-ray diffraction; imperfections in crystals; phase diagrams; phase transformations; elastic and plastic deformation; free electron theory and band theory of solids; and electrical conduction in metals and semiconductors. The laboratory consists of an experimental project selected by the student and approved by the instructor. Enrollment limited to 60 students.

Prerequisite: PHYS 14 and CHEM 5

Degree Requirement Attributes: TLA

ENGS 25 - Introduction to Thermodynamics

The fundamental concepts and methods of thermodynamics are developed around the first and second laws. The distinctions among heat, work, and energy are emphasized. Common processes for generating work, heat, refrigeration, or changing the physical or chemical state of materials are analyzed. The use of thermodynamic data and auxiliary functions, such as entropy, enthalpy, and free

energy, is integrated into the analysis. The numerous problems show how theoretical energy requirements and the limitations on feasible processes can be estimated. Enrollment is limited to 60 students.

Prerequisite: MATH 13, PHYS 13, ENGS 20 or COSC 1 and COSC 10

Degree Requirement Attributes: TAS

ENGS 26 - Control Theory

The course treats the design of analog, lumped parameter systems for the regulation or control of a plant or process to meet specified criteria of stability, transient response, and frequency response. The basic theory of control system analysis and design is considered from a general point of view. Mathematical models for electrical, mechanical, chemical, and thermal systems are developed. Feedback control system design procedures are established using root-locus and frequency-response methods.

Prerequisite: ENGS 22

Degree Requirement Attributes: Dist:TLA

ENGS 27 - Discrete and Probabilistic Systems

Instructor: Cybenko

This course is an introduction to probabilistic methods for modeling, analyzing, and designing systems. Mathematical topics include the fundamentals of probability, random variables and common probability distributions, basic queueing theory, and stochastic simulation. Applications, drawn from a variety of engineering settings, may include measurement and noise, information theory and coding, computer networks, diffusion, fatigue and failure, reliability, statistical mechanics, ecology, decision making, and robust design.

Prerequisite: MATH 8 and either ENGS 20 or COSC 1 and COSC 10. PHYS 13 or CHEM 5 recommended.

Degree Requirement Attributes: TAS

ENGS 28 - Embedded Systems

Instructor: P. Taylor

Small computers have been embedded in engineered systems, such as automobiles, for a few decades. With the growth of such application areas as the Internet of Things (IoT) and advanced driver assistance systems (ADAS), embedded systems are becoming yet another fundamental tool for engineering design. The purpose of this course is to introduce embedded systems to students at an early stage in their engineering education, with minimal prerequisites. Many students have been exposed to the potential of embedded systems at the hobby or maker level through robotics and the boards such as the popular Arduino and are excited to go farther. Other students see programming for the first time in introductory computing courses and want to do more. This course offers a path into

important physical applications of computing in engineering, equipping you with skills you can use throughout your project work at Thayer School. Engs 28 will introduce you to a variety of physical sensors and actuators, and how to connect them to a microcontroller. Our development platform is an Arm-based STM32 Nucleo-64 board, and we will teach you to program its STM32C031C6 microcontroller with the industry-standard ANSI C language rather than making use of this board's Arduino compatibility or using the STM32 Hardware Abstraction Layer library. This will give you a stronger understanding of how a microcontroller works and skills that will transfer to more complex processors later. Students interested in pursuing embedded systems after this course can go on to courses in digital and analog electronics (Engs 31 and 32), software design (Engs/CoSc 50), microprocessors (Engs 62), and mechatronics (Engs 147).

Prerequisite: ENGS 20 or COSC 10; and PHYS 14

Degree Requirement Attributes: Dist:TLA

ENGS 29 - Computer-Aided Design and Kinematics

This course introduces computer-aided design and kinematics applied to study the geometry of motion in linkage systems that are components of machines ranging from vehicle suspensions to robotic arms. The principles and methods introduced include capturing design intent in parametric models, design communication with mechanical drawings, computer-based kinematic design, and design validation with rapid prototyping. A series of project-based learning activities focus on the design of linkage mechanisms to control the leg movements of walking machines where the objective is to transform the rotation of an input crank into a desired walking movement for the legs. The course aims to develop spatial and geometric thinking abilities while practicing mechanical design within constraints and building prototypes of increasingly complicated walking mechanisms. The lessons and projects examine technologies that surround us and art that explores the boundary of mechanical animals and life.

Prerequisite: ENGS 021

Offered: Spring.

Degree Requirement Attributes: Dist:TAS

ENGS 30 - Biological Physics

Instructor: Samkoe

Introduction to the principles of physics and engineering applied to biological problems. Topics include the architecture of biological cells, molecular motion, entropic forces, enzymes and molecular machines, and nerve impulses.

Prerequisite: CHEM 5, PHYS 13 and PHYS 14 (or equivalent). PHYS 14 (or equivalent) may be taken concurrently. Students with strong quantitative skills who have taken PHYS 3 and PHYS 4 can enroll with permission of the instructor.

Cross-Listed as: PHYS 30

Degree Requirement Attributes: TAS

ENGS 31 - Digital Electronics

This course teaches classical switching theory including Boolean algebra, logic minimization, algorithmic state machine abstractions, and synchronous system design. This theory is then applied to digital electronic design. Techniques of logic implementation, from Small Scale Integration (SSI) through Application-Specific Integrated Circuits (ASICs), are encountered. There are weekly laboratory exercises for the first part of the course followed by a digital design project in which the student designs and builds a large system of his or her choice. In the process, Computer-Aided Design (CAD) and construction techniques for digital systems are learned. Enrollment is limited to 60 students.

Prerequisite: ENGS 20 or COSC 1 and COSC 10.

Cross-Listed as: COSC 56 (formerly 47)

Degree Requirement Attributes: TLA

ENGS 32 - Electronics: Introduction to Linear and Digital Circuits

Principles of operation of semiconductor diodes, bipolar and field-effect transistors, and their application in rectifier, amplifier, waveshaping, and logic circuits. Basic active-circuit theory. Introduction to integrated circuits: the operational amplifier and comparator, to include practical considerations for designing circuits with off-the shelf components. Emphasis on breadth of coverage of low-frequency linear and digital networks, as well as on high order passive and active filter design. Laboratory exercises permit "hands-on" experience in the analysis and design of simple electronic circuits. The course is designed for two populations: a) those desiring a single course in basic electronics, and b) those that need the fundamentals necessary for further study of active circuits and systems.

Prerequisite: ENGS 22, or equivalent background in basic circuit theory.

Cross-Listed as: PHYS 48

Degree Requirement Attributes: TLA

ENGS 33 - Solid Mechanics

After a brief review of the concepts of rigid body statics, the field equations describing the static behavior of deformable elastic solids are developed. The concepts of stress and strain are introduced and utilized in the development. Exact and approximate solutions of the field

equations are used in the study of common loading cases, including tension/compression, bending, torsion, pressure, and combinations of these. In the laboratory phase of the course, various methods of experimental solid mechanics are introduced. Some of these methods are used in a project in which the deformation and stress in an actual load system are determined and compared with theoretical predictions. The course includes several computer exercises designed to enhance the student's understanding of the principles of solid mechanics.

Prerequisite: MATH 13 and PHYS 13

Degree Requirement Attributes: TLA

ENGS 34 - Fluid Mechanics

Instructor: Meyer

We interact with fluids every day. From complex systems such as cars, airplanes, and chemical plants, to simple devices like a bike pump, our world is filled with engineering applications that make use of the principles of fluid mechanics. This course surveys the fundamental concepts, phenomena, and methods in fluid mechanics, as well as their application in engineered systems and in nature. Emphasis is placed on the development and use of conservation laws for mass, momentum, and energy, as well as on the empirical knowledge essential to the understanding of many fluid dynamic phenomena. Examples are drawn from mechanical, chemical, civil, environmental, biomedical, and aerospace engineering.

Prerequisite: ENGS 23 or equivalent

Degree Requirement Attributes: TLA

ENGS 35 - Biotechnology and Biochemical Engineering

Instructor: Gerngross

A consideration of the engineering and scientific basis for using cells or their components in engineered systems. Central topics addressed include kinetics and reactor design for enzyme and cellular systems; fundamentals, techniques, and applications of recombinant DNA technology; and bioseparations. Additional lectures will provide an introduction to metabolic modeling as well as special topics. The course is designed to be accessible to students with both engineering and life-science backgrounds. This course has a graduate section, see ENGS 160. Enrollment is limited to 25 students.

Prerequisite: MATH 3, CHEM 5, BIOL 12 or BIOL 13 or permission

Degree Requirement Attributes: TLA

ENGS 36 - Chemical Engineering

Instructor: Lee

This course will expose students to the fundamental principles of chemical engineering and the application of

these principles to a broad range of systems. In the first part of the course, aspects of chemical thermodynamics, reaction kinetics, and transport phenomena will be addressed. These principles will then be applied to a variety of systems including industrial, environmental, and biological examples.

Prerequisite: ENGS 22, ENGS 25; CHEM 5

Degree Requirement Attributes: TAS

ENGS 37 - Introduction to Environmental Engineering

Instructor: Roisin

A survey of the sources, measurement techniques, and treatment technologies relating to environmental pollution resulting from the activities of humans. The course will be technology-focused, but will also touch on topics related to the implementation of technology in the real world such as public perception, policy and legislation, and choosing between technological alternatives. Technological and other issues will be addressed relating to water pollution, air pollution, solid wastes, and the fate and transport of pollutants in the environment. Consideration of each area will include general background and key concepts, detailed design examples of importance in the area, and case studies/current topics. The course will include guest lectures.

Prerequisite: MATH 3 and CHEM 5, or equivalent, or permission

Degree Requirement Attributes: TAS

ENGS 41 - Sustainability and Natural Resource Management

Instructor: Roisin

Natural resources sustain human productivity. Principles of scientific resource management are established, including mathematical model development based on material balances and decision making based on dynamical and stochastic systems. Three generic categories of resource are analyzed: exhaustible, living, and renewable. In the first category we emphasize the life-cycle of exploitation including exhaustion, exploration and substitution. In the living category we explore population dynamics under natural and harvested regimes, for fisheries, fowl and forests. The renewable case of water is treated in terms of quantity and quality. Finally, air quality management is considered through the lens of assimilative capacity. Throughout, the intersection of natural processes and economic incentives is explored with dynamical systems theory, computer simulations, and optimization techniques. Case studies illustrate contemporary management problems and practices.

Prerequisite: MATH 23 or ENGS 22, and ENGS 37

Degree Requirement Attributes: Dist:TAS

ENGS 43 - Environmental Transport and Fate

Instructor: Renshaw

Introduction to movement and transformation of substances released into the natural environment. Fundamentals of advection, dispersion, and reaction. Aggregation and parameterization of various mixing processes leading to dispersion at larger spatial and temporal scales. Importance of inhomogeneity, anisotropy, and stratification in natural media. Basic principles are illustrated by application to atmospheric, ground water, river, estuarine, coastal, and oceanic pollution problems. Case studies include urban smog, acid rain, Chernobyl fall-out, and stratospheric ozone depletion.

Prerequisite: MATH 13; ENGS 37 or permission

Cross-Listed as: EARS 66.01

Degree Requirement Attributes: Dist:TAS

ENGS 44 - Sustainable Design

Instructor: Kawiaka

An interdisciplinary introduction to the principles of design for sustainability, with emphasis on the built environment. Through lectures, readings, discussions, and a major design project, students will learn to design buildings and other infrastructure with low to no impact on the environment. Emphasis is on creative thinking, strategies for managing the complexity of the product life-cycle of the infrastructure, and the thorough integration of human and economic aspects in the design. Homework and project activities provide practice in relevant engineering analyses. Enrollment is limited to 20 students

Prerequisite: ENGS 21 and ENGS 22 or SART 65

Degree Requirement Attributes: TAS

ENGS 45 - Sustainable Urban Systems (Berlin)

Today, more than 50% of the world population lives in cities on less than 2% of the planetary surface. This urbanization is expected to remain a megatrend for the next decades. The resulting concentration of infrastructure and activities has created human ecosystems distinct from natural ecosystems, and their future depends not only on their internal sustainability but also on symbiotic interactions with the natural ecosystems on which they ultimately depend. This engineering course addresses the technological aspects of urban sustainability, including energy procurement, energy consumption and green energy, air quality, water supply, use and treatment, building infrastructure, transportation, resource conservation, decarbonization, city planning and the role of automation and information technology in modern sustainable cities. In the context of the triple bottom line (the framework that considers financial, social and environmental impacts), the course further addresses, but to a lesser extent, the aspects of sustainable economics,

socio-ethical aspects of urban sustainability and cities as a hub for innovation.

Prerequisite: MATH 3 or MATH 8; PHYS 13; and ENGS 37 (ENGS 37 may be taken concurrently)

Degree Requirement Attributes: Dist:TAS

ENGS 46 - Advanced Hydrology

Instructor: Renshaw

A survey of advanced methods used to analyze the occurrence and movement of water in the natural environment. The watershed processes controlling the generation of runoff and streamflow are highlighted, and used to explore the transport and fate sediment and contaminants in watersheds. Throughout the course the ideas and concepts are explored through the primary literature, with emphasis given to methods of observation, measurement, data analysis, and prediction.

Prerequisite: MATH 3 and EARS 16 or EARS 33 or BIOL 53 or ENGS 43 or permission of instructor

Cross-Listed as: EARS 76

Degree Requirement Attributes: TAS

ENGS 50 - Software Design and Implementation

Instructor: S. Taylor

Techniques for building large, reliable, maintainable, and understandable software systems. Topics include UNIX tools and filters, programming in C, software testing, debugging, and teamwork in software development. Concepts are reinforced through a small number of medium-scale programs and one team programming project.

Prerequisite: COSC 10 or equivalent.

Cross-Listed as: COSC 050

Degree Requirement Attributes: Dist:TLA

ENGS 52 - Introduction to Operations Research

Instructor: Santos

Basic concepts of optimization are introduced as aids in systematic decision-making in engineering contexts. Deterministic optimization is developed in the form of linear and integer programming and their extensions. Probabilistic models are introduced in terms of Markov chains, queuing and inventory theory, and stochastic simulation. The course emphasizes the application of these methods to the design, planning, and operation of complex industrial and public systems.

Prerequisite: MATH 8 and MATH 22 or equivalent

Degree Requirement Attributes: TAS

ENGS 53 - Intro to Quantum Technologies

In the early 1900s, quantum mechanics replaced the classical understanding of physics, leading to the first quantum revolution that harnessed quantum mechanical phenomena to create innovative new technologies like transistors and lasers. Today, we are witnessing the second quantum revolution, which requires exploiting quantum mechanics fully by isolating and controlling quantum systems. This course aims to prepare students for this second revolution and the transformative technologies that will be developed, which will significantly impact the future of electrical engineering, materials science, and computation. Through hands-on experience with actual quantum systems, we will explore the use of quantum mechanics in sensing, communication, and computation to develop an intuition for the subject and its applications.

Prerequisite: MATH 22 or ENGS 23 or PHYS 22

ENGS 56 - Introduction to Biomedical Engineering

This course will survey applications of engineering principles to medical diagnosis/treatment of disease, monitoring/measurement of physiological function, and rehabilitation/replacement of body dysfunction. Case studies will be used to highlight how engineering has advanced medical practice and understanding. Examples will be drawn from bioinstrumentation, bioelectricity, biotransport, biomaterials, and biomechanics. While investigations will focus primarily on the engineering aspects of related topics, issues surrounding patient safety, public policy and regulation, animal experimentation, etc. will be discussed as appropriate.

Prerequisite: ENGS 22, PHYS 13 and PHYS 14 (PHYS 14 may be taken concurrently)

Degree Requirement Attributes: Dist:TAS

ENGS 57 - Intermediate Biomedical Engineering

Instructor: Halter

The basic biomedical engineering concepts introduced in ENGS 56 will serve as the foundation for exploring technology in a clinical environment. The specific clinical setting to be explored will be the operating room (OR). This course will introduce a variety of surgical procedures and technologies from an engineering perspective. Areas of focus will include patient monitoring, biophysical tissue properties, general surgical instrumentation, tissue cutting and binding technologies, and optical visualization technologies. In addition, state-of-the-art procedures employing image-guided, minimally invasive, laparoscopic, and robot-assisted surgical technologies will be discussed. The first half of the term will include weekly seminars presented by surgeons describing a particular surgical procedure, the technologies currently used and a surgeon's "wish-list". During the second half of the term, students will undertake a design project aimed at

developing a technology that addresses a specific need within the OR. Enrollment is limited to 18 students.

Prerequisite: ENGS 23 and ENGS 56 or equivalent

Degree Requirement Attributes: TAS

ENGS 58 - Introduction to Protein Engineering

Engineered biomolecules are powering an array of innovations in biotechnology, and this course will familiarize students with key developments in the field. An overview of foundational principles will cover concepts such as the central dogma of biology, atomic scale forces in protein structures, and protein structure-function relationships. Strategies for modifying protein structures will be surveyed, with a particular emphasis on genetic techniques. The development of proteins with practical utility will be highlighted using case studies.

Prerequisite: ENGS 35 or CHEM 41

Degree Requirement Attributes: DIST: TAS

ENGS 59 - Basic Biological Circuit Engineering

Instructor: Sarpeshkar

This course will provide a comprehensive introduction to the design, modeling, and experimental implementation of synthetic bio-molecular circuits in living cells at an undergraduate level. Simple but sophisticated synthetic biological circuits will be implemented and tested in microbial cells in the laboratory including those involving molecular amplification, regulatory feedback loops with biological nonlinearities, and robust analog circuits. Computer aided design, modeling, and simulation will use CADENCE, an industry standard electronic circuit design laboratory tool. It will show them how to design, model, and fit actual experimental biological data such that engineering circuit theory and biological experiment agree.

Prerequisite: ENGS 22 or permission of instructor. Experience in Molecular Biology is useful (e.g. ENGS 35, BIOL 45, & BIOL 46 or equivalent) but not necessary.

Degree Requirement Attributes: Dist:TLA

ENGS 60 - Introduction to Solid-State Electronic Devices

In this course the physical and operational principles behind important electronic devices such as the solar cell and transistor are introduced. Semiconductor electron and hole concentrations and carrier transport are discussed. Carrier generation and recombination including optical absorption and light emission are covered. P-N junction operation and its application to diodes, solar cells, LEDs, and photodiodes is developed. The field-effect transistor (FET) and bipolar junction transistor (BJT) are then

discussed and their terminal operation developed. Application of transistors to bipolar and CMOS analog and digital circuits is introduced. The course is primarily intended for students interested in electronics, including digital, analog, power and energy, both at component and integrated circuit levels. The course may also be useful to students interested in electronic materials, device microfabrication and communications.

Prerequisite: ENGS 23

Degree Requirement Attributes: TLA

ENGS 61 - Intermediate Electrical Circuits

Instructor: Stauth

This course will build on ENGS 32, providing a foundation for transistor-level analog and digital circuit design. The course will start with an introduction to the semiconductor industry and how it has dramatically altered the modern way of life, resulting in diverse technologies such as telecommunications, lighting and transportation. This will lead into basic semiconductor theory and CMOS device models, two-port linearized models, and finally single- and multi-stage amplifiers with applications motivated by wireless communications and biomedical instrumentation. The second half of the class will focus on digital circuits. Topics will include designing and optimizing complex static CMOS devices in terms of energy, delay, and area of computational blocks and memory arrays. The class will have weekly labs and a final project that will utilize modern computer-aided tools. The course will prepare the student for advanced study of highly-integrated electrical circuits.

Prerequisite: ENGS 32

Degree Requirement Attributes: TLA

ENGS 62 - Microprocessors in Engineered Systems

Instructor: S. Taylor

Microprocessors and microcomputers are central components in an ever-increasing number of consumer, industrial, and scientific products. This course extends the experimental design methodology developed in Eng 50 to state-of-the-art System-on-Chip (SoC) architectures and explores the principles behind advanced embedded systems. SoC devices are highly-integrated components that combine high-performance multi-core processors, with Field Programmable Gate Array (FPGA), and a broad selection of industry standard peripheral interfaces -- all within a single chip. Students are introduced to concepts of event-driven finite state machines, peripheral interfacing via the processor and the FPGA fabric, and advanced hardware-software co-design tools that speed the design process. The course is based on a sequence of laboratory projects that incorporate SoC programming practices and debugging strategies, interrupt handling, FPGA and bus interfaces, and attached peripheral devices.

Prerequisite: ENGS 50

Degree Requirement Attributes: Dist:TLA

ENGS 63 - Electric Energy

Electric energy sources, systems, and applications are essential for reducing climate impacts of energy and for engineering high-performance systems and products. This course builds skills for designing and working with electric energy, including AC and DC electrical power and energy calculations; an overview of power systems; electric motor fundamentals and applications; electric power applications and opportunities for electrifications; electrical safety; and power distribution in buildings. Several laboratory exercises are included. Not open to students who have received credit for ENGS 85.12.

Degree Requirement Attributes: Dist:TAS

ENGS 64 - Engineering Electromagnetics

Instructor: Shubitidze

Conceptual development, techniques and engineering applications in electrostatics, magnetostatics and magnetic induction; displacement current and Maxwell's equations; transmission line analysis; propagation, reflection, refraction and dispersion of electromagnetic waves.

Prerequisite: ENGS 23

Degree Requirement Attributes: TAS

ENGS 65 - Engineering Software Design

Instructor: Santos

As a successor to ENGS 20, this course covers intermediate topics in programming and software design with an emphasis on engineering applications. Students will learn software design principles and basic data structures. Topics covered will include object-oriented design, user interface design, lists, stacks, queues, binary trees, hash tables, and simulation. Students will learn techniques for developing maintainable, extensible, and understandable software.

Prerequisite: ENGS 20 or COSC 1 and COSC 10

Degree Requirement Attributes: TAS

ENGS 66 - Discrete Mathematics in Computer Science

This course develops the mathematical foundations of computer science that are not calculus-based. It covers basic set theory, logic, mathematical proof techniques, and a selection of discrete mathematics topics such as combinatorics (counting), discrete probability, number theory, and graph theory. The mathematics is frequently motivated using computer science applications.

Prerequisite: COSC 1, ENGS 20, or placement through the Advanced Placement exam

Cross-Listed as: COSC 030

Degree Requirement Attributes: Dist:QDS

ENGS 67 - Programming Parallel Systems

Multi-core processors are now ubiquitous in most personal computers. These are the fundamental computer-engineering building blocks for high-performance servers, blade farms, and cloud computing. In order to utilize these devices in large systems they must be interconnected through networking and collectively programmed. This hands-on system-engineering course offers students the opportunity to explore problem-solving techniques on a high-performance multi-computer containing quad-core processors. The course involves weekly programming laboratories that teach POSIX thread, UDP and TCP network, and MPI style programming techniques. These techniques are explored in the context of scalable problem solving methods applied to typical problems in science and engineering ranging from client-server sensing and data repositories, to numerical methods, gaming and decision support. All laboratories will be conducted in the C programming language and proficiency in C is required. Enrollment is limited to 30 students.

Prerequisite: ENGS 20 or COSC 50 (formerly COSC 23)

Cross-Listed as: COSC 63

Degree Requirement Attributes: TLA

ENGS 68 - Introduction to Communication Systems

Instructor: Testorf

This course provides an introduction to communication systems. The focus is on the deterministic aspects of analog and digital systems. The student is introduced to modeling and analyzing signals in the time and frequency domains. Modulation techniques are addressed as well as, sampling, multiplexing, line coding, pulse shaping. Recent developments in communication systems are briefly discussed.

Prerequisite: ENGS 22, ENGS 27 and ENGS 92 strongly recommended.

Degree Requirement Attributes: Dist:TAS

ENGS 69 - Smartphone Programming

Instructor: Yang

This course teaches students how to design, implement, test, debug and publish smartphone applications. Topics include development environment, phone emulator, key programming paradigms, UI design including views and activities, data persistence, messaging and networking, embedded sensors, location based services (e.g., Google Maps), cloud programming, and publishing applications. Concepts are reinforced through a set of weekly programming assignments and group projects. Enrollment is limited to 50 students.

Prerequisite: COSC 10

Cross-Listed as: COSC 65, COSC 165

Degree Requirement Attributes: TAS

ENGS 71 - Structural Analysis

Instructor: May

An introduction to the behavior of structural systems (including examples of buildings, space structures, and mechanical systems), with an emphasis on modeling and approximating behavior. Classical and computational analysis methods for structural load flow through basic three-dimensional structures; methods of approximating the response of planar structures; methods of determining deformations in planar, statically determinate structure; actions and deformations in statically indeterminate structures, using both flexibility/compatibility methods and stiffness/equilibrium methods (including an introduction to matrix methods). A structural system of choice will be redesigned to improve performance.

Prerequisite: ENGS 20 or COSC 1 and COSC 10 and ENGS 33

Degree Requirement Attributes: TAS

ENGS 72 - Applied Mechanics: Dynamics

Instructor: Kokko

The fundamentals of dynamics with emphasis on their application to engineering problems. Newtonian mechanics including kinematics and kinetics of particles and rigid bodies, work, energy, impulse, and momentum. Intermediate topics will include Lagrange's equations, energy methods, Euler's equations, rigid body dynamics, and the theory of small oscillations.

Prerequisite: ENGS 22

Degree Requirement Attributes: TAS

ENGS 73 - Materials Processing and Selection

In this course the basic concepts of materials science introduced in ENGS 24 are applied to a variety of materials problems and processes. The course will treat processes and principles relevant to both mechanical and electrical engineering applications. Topics include solidification and crystal growth, joining and bonding techniques, deformation processing, surface coatings and thin film deposition, polymer processing, composite materials, magnetic and dielectric materials, powder metallurgy and ceramics processing, materials selection, failure processes, and quality control. The course will involve laboratory exercises and field trips to local industry. Materials applications will be considered on a case study basis, including aerospace and automotive structures, consumer goods, and high performance sports equipment, electric components, VLSI circuit fabrication and packaging.

Prerequisite: ENGS 24 and ENGS 33 or equivalent

Degree Requirement Attributes: TLA

ENGS 75 - Physical Product Design and Development: Prototype to Production

ENGS 75 is a blended laboratory and lecture course on the practices and analyses that guide the design and development of physical, engineered products. The scope addresses consumer and industrial mechanical and electro-mechanical products, including those with embedded electronics, biomedical instruments and devices (including drug delivery systems), chemical processing equipment, and more. Lectures will introduce engineering design and development practices, methods, and tools that are relevant from product inception, through prototyping, and into eventual production. Emphasis is placed on design for manufacturing, robustness, and environmental impact. Students will be challenged to synthesize creative and disciplined strategies that apply these practices and methods in each of two design projects. Working in a team-based environment they will identify needs and value, then plan, design, develop, and test prototypes. SolidWorks will be used extensively for models of individual components and assemblies. Students will prepare presentations and written reports of progress and deliverables at key milestones. Readings from texts and case studies, along with several guest lectures from visiting professionals, are included as well.

Prerequisite: ENGS 21 plus one of the following: ENGS 31, ENGS 32, ENGS 33, ENGS 35, ENGS 36, ENGS 37, or ENGS 56. Experience with SolidWorks is helpful but not required.

Degree Requirement Attributes: Dist:TAS

ENGS 76 - Machine Engineering

Instructor: Halter

An introduction to the analysis and synthesis of mechanical components and systems. Lecture topics focus on design and analysis of mechanical components subject to static and fatigue loading conditions, deformation, and buckling. Power transmission shafting, bearings, and gears will be studied in detail. A survey of design requirements for other components - springs, screws, belts, clutches, brakes, roller chains, and welded and riveted connections - will be provided. The class includes laboratory sessions for developing practical skills in design fabrication. A term project emphasizes the synthesis of a working machine to complete a specified task. The project involves the design or selection of components studied, and includes fabrication and demonstration of the machine. Solid modeling software is used as a design tool. Enrollment is limited to 25 students.

Prerequisite: ENGS 21, ENGS 33, and proficiency with solid modeling software

Degree Requirement Attributes: TAS

ENGS 84 - Reading Course

Advanced undergraduates occasionally arrange with a Thayer faculty member a reading course in a subject not occurring in the regularly scheduled curriculum. ENGS 84 may typically only be elected once and either ENGS 84 or ENGS 85 may be used toward the Engineering Sciences major, but not both. However, under extenuating circumstances a student may request approval from the Engineering Sciences Department Chair to take ENGS 84 up to three times and have more than one ENGS 84 courses count toward the Engineering Sciences major.

Prerequisite: Permission of the department chair. (Proposed courses should include a full syllabus, resources and student evaluation methods and must be submitted for approval prior to the end of the term preceding the term in which the course will be taken.)

ENGS 85.04 - Hybrid Powertrain System Design

The course involves a term-long project designing components and subsystems for a hybrid powertrain system. With information sessions and interactive brainstorming meetings, the students will gain practical understanding of the iterative design process, including prototyping and testing. In the second part of the course, this knowledge will be sequentially applied to design components of three specific subsystems of the powertrain, viz. the engine power block, the transmission system, and the engine management system. The design process will incorporate constraints such as cost, manufacturability, and compatibility with other system components (mechanical, electrical, thermal, and fluid interactions).

Degree Requirement Attributes: TAS

ENGS 85.05 - Biological Circuit Engg I

This course will provide a comprehensive introduction to the design, modeling, and experimental implementation of synthetic bio-molecular circuits in living cells. Simple synthetic biological circuits will be implemented and tested in microbial cells in the laboratory including those involving regulatory feedback loops and robust analog circuits. Computer aided design, modeling, and simulation will use CADENCE, an industry standard electronic circuit design tool.

ENGS 85.06 - Biological Circuit Engg II

This course will provide advanced techniques for the design, modeling, and experimental implementation of complex synthetic biological circuits. Advanced & complex synthetic circuits will be designed and tested in bacteria in the laboratory. Computer aided design, modeling, and simulation will use CADENCE, an industry standard electronic circuit design tool. Applications of synthetic biology to medicine and biotechnology will be discussed. In addition, the students will be expected to

design a synthetic biological circuit with feedback and control techniques for a class project.

ENGS 85.07 - Practical Electrified Vehicle Engineering

Implementation of electric vehicles, including hybrid-electric vehicles (HEVs), battery electric vehicles (BEVs), and plug-in hybrid electric vehicles (PHEVs) requires a wide range of engineering skills. This course focuses on practical aspects of this challenge that are rarely addressed in standard engineering curricula, including high-power wiring, circuit protection, electrical safety, and battery system safety. The course is designed to be accessible to both electrical and mechanical engineers. It draws on principles from both fields and fills in some of the gaps between the usual fields of expertise of each group, enabling them to work together more effectively.

Degree Requirement Attributes: Dist:TAS

ENGS 85.09 - Introduction to Computational Materials Science and Engineering

Instructor: Hautier

Computational modeling in materials science is a powerful tool that allows discovery of new materials and exploration of materials theory. This course introduces the use of computational modeling to understand and predict materials behavior, properties and processes. The course will introduce a series of common materials modeling approaches from molecular dynamics to Monte-Carlo simulations and Density Functional Theory. All methods will be illustrated using use cases from various fields of materials science (e.g., Li-ion batteries, structural alloys, ...). The students will learn to apply these methods hands-on on specific problems writing code and using open-source codes. A strong emphasis will be on the critical assessment of the limits of the models.

Prerequisite: ENGS 24, ENGS 20, and working knowledge of ordinary and partial differential equations. Students not meeting the prerequisites and non-engineering majors may seek instructor permission.

ENGS 85.11 - Computer-Aided Design and Kinematics

This course introduces computer-aided design and kinematics applied to study the geometry of motion in linkage systems that are components of machines ranging from vehicle suspensions to robotic arms. The principles and methods introduced include capturing design intent in parametric models, design communication with mechanical drawings, computer-based kinematic design, and design validation with rapid prototyping. A series of project-based learning activities focus on the design of linkage mechanisms to control the leg movements of walking machines where the objective is to transform the rotation of an input crank into a desired walking movement for the legs. The course aims to develop spatial and geometric thinking abilities while practicing

mechanical design within constraints and building prototypes of increasingly complicated walking mechanisms. The lessons and projects examine technologies that surround us and art that explores the boundary of mechanical animals and life.

Prerequisite: ENGS 21

ENGS 85.12 - Electric Energy

Electric energy sources, systems, and applications are essential for reducing climate impacts of energy and for engineering high-performance systems and products. This course builds skills for designing and working with electric energy, including AC and DC electrical power and energy calculations; an overview of power systems; electric motor fundamentals and applications; electric power applications and opportunities for electrifications; electrical safety; and power distribution in building. Several laboratory exercises are included.

Prerequisite: ENGS 22 and ENGS 32 or instructor permission

ENGS 85.13 - Fundamentals of Additive Manufacturing from Processing to Design

This course is a blended laboratory and lecture course that builds foundational knowledge of processing methodology, design, and materials selection. The course introduces the wide scope of additive manufacturing (AM) techniques and contextualizes their unique opportunities and considerations within the broader manufacturing space. Emphasis is placed on connecting fundamental processing concepts to both structural and materials engineering aspects of design with AM. Topics will include extrusion-, laser-, binder-, and synthesis-based methods for various material classes ranging from polymers to glasses, biomaterials, alloys, functional ceramics, composites, and more. Labs focus on the demonstration of lectured concepts through hands-on printing experience, characterization of AM components, and a team-based design challenge. Students will also apply their knowledge in a team-based project to analyze, assess, and pitch a new implementation of AM for an industrial application.

ENGS 85.14 - Principles of Causality

Helmets increase head injuries. The fastest people are the latest. Hospital patients are less likely to have cancer when their bones are broken. But don't throw out your helmet, break your leg, or invest in transportation inefficiency just yet... Causality is the beacon of science and foundation of policy, but causal relationships can be lost in a labyrinth of correlation. Instead of caveating correlative studies, this course establishes the principles on which scientists and engineers can answer true causal questions. At the core of this pursuit is experimentation. We will build a formal understanding of randomized control trials that allows us to generalize these principles to observational (i.e. non-experimental) data. These generalizations will give rise to

mathematical tools for learning (causal or non-causal) relationships when experiments aren't quite what we would want them to be.

ENGS 85.15 - Acoustic Waves and Devices

This course introduces the physical principles, mathematical modeling, and device engineering applications of acoustic wave propagation. Topics include bulk and surface acoustic waves, piezoelectric transduction, impedance, resonance, and wave-material interactions. Students will explore how acoustic waves are used in devices for sensing, imaging, signal processing, and energy harvesting, with an emphasis on biomedical and microelectromechanical system (MEMS) applications.

ENGS 86 - Independent Project

An individual research or design project carried out under the supervision of a member of the staff. Students electing this course will be expected to carry out preliminary reading during the preceding term. A major written report and oral presentation will be submitted at the completion of the course. ENGS 86 may be counted as an elective in the major if ENGS 89 is taken as the culminating experience. Only one of either ENGS 86 or 88 may be used in satisfaction of the combined A.B. major and B.E. degree requirements.

Prerequisite: Senior standing in the engineering sciences major or Bachelor of Engineering standing and permission of the department chair is required. (One-page proposal submission required and must be submitted for approval prior to the end of the term preceding the term in which the course will be taken.)

ENGS 87 - Undergraduate Investigations

An original investigation in a phase of science or engineering under the supervision of a Thayer School faculty member. Students electing the course will be expected to carry out preliminary reading during the preceding term and to meet weekly with the individual supervising the investigation. The course is open to qualified students intending to complete ENGS 86 or 88 and who have three or fewer terms remaining in their undergraduate (AB) program. Instructor and faculty advisor permissions are required, and it may be elected only once. A report describing the details of the investigation must be filed with the instructor and approved at the completion of the course. Grading is CT/NC and the course does not fulfill any major requirements, BE requirements, nor distributive requirements. A proposal is required. The template is available on the Engineering website and must be submitted for approval prior to the end of the term preceding the term in which the course will be taken.

Prerequisite: Permission of the department chair. (One-page proposal submission required and must be submitted

for approval prior to the end of the term preceding the term in which the course will be taken.)

ENGS 88 - Honors Thesis

Honors version of ENGS 86. A course normally elected by honors students in one term of the senior year. The student will conduct a creative investigation suitable to the major subject under the supervision and guidance of a member of the staff. Students electing this course will be expected to begin the project work at least one term prior to electing ENGS 88 and may choose to conduct the preliminary investigation under ENGS 87. A major written report and oral presentation will be submitted at the completion of the course. ENGS 88 may be counted as an elective in the major if ENGS 89 is taken as the culminating experience. Only one of either ENGS 86 or 88 may be used in satisfaction of the combined A.B. major and B.E. degree requirements.

Prerequisite: permission of the chair of the Honors program

ENGS 89 - Engineering Design Methodology and Project Initiation

Instructor: Diamond

This course explores elements of the engineering design process as a means of enhancing student ability in problem definition; development and evaluation of creative alternatives, application and methods of technical and economic analysis, identification and application of ethical and legal constraints, and effective presentation of technical information. Design projects are developed from specifications submitted by industry and other organizations and are pursued over the course of two quarters as a team project, 89/90. Written and oral proposal and progress report are required for the design project during the term. A project advisor is required for each design team to serve as consultant to the team's efforts. ENGS 89, is the first unit of a two-term course sequence 89/90 that must be taken consecutively.

Prerequisite: ENGS 21 plus five additional engineering sciences courses numbered 22 to 76 and 91 and above.

ENGS 90 - Engineering Design Methodology and Project Completion

Instructor: Diamond

This course is the second unit in the two-course, team engineering design sequence 89/90. The objective of the course is to develop the student's professional abilities by providing a realistic project experience in engineering analysis, design, and development. Students continue with the design teams formed in ENGS 89 to complete their projects. Design teams are responsible for all aspects of their respective projects, which involve science, innovation, analysis, experimentation, economic decisions and business operations, planning of projects, patents, and

relationships with clients. Mid-term and final oral presentations and written reports are required. A faculty member is assigned to each design team to serve as consultant to the team's efforts.

\f

Students register for ENGS-090 and typically receive a final letter grade at the end of the term. Students who wish to take the FE Exam in the spring as part of their coursework receive a grade of "ON" (ongoing) at the end of the term. These students do not register for the subsequent term. A final grade will replace the "ON" once the FE Exam is completed.

Prerequisite: ENGS 89

ENGS 91 - Numerical Methods in Computation

Instructor: Shepherd

A study and analysis of important numerical and computational methods for solving engineering and scientific problems. The course will include methods for solving linear and nonlinear equations, doing polynomial interpolation, evaluating integrals, solving ordinary differential equations, and determining eigenvalues and eigenvectors of matrices. The student will be required to write and run computer programs.

Prerequisite: ENGS 20 or COSC 1 and COSC 10; ENGS 22 or MATH 23, or equivalent.

Cross-Listed as: COSC 71

Degree Requirement Attributes: QDS

ENGS 92 - Fourier Transforms and Complex Variables

Instructor: Testorf

Survey of a number of mathematical methods of importance in Engineering and Physics with particular emphasis on the Fourier transform as a tool for modeling and analysis. Orthogonal function expansions, Fourier series, discrete and continuous Fourier transforms, generalized functions and sampling theory, complex functions and complex integration, Laplace, Z, and Hilbert transforms. Computational Fourier analysis. Applications to linear systems, waves, and signal processing.

Prerequisite: MATH 46 or ENGS 22 and ENGS 23 or the equivalent

Cross-Listed as: PHYS 70

Degree Requirement Attributes: QDS

ENGS 93 - Statistical Methods in Engineering

The application of statistical techniques and concepts to maximize the amount and quality of information resulting from experiments. After a brief introductory summary of fundamental concepts in probability and statistics, topics considered will include probability distributions, sampling

distributions, estimation and confidence intervals for parameters of statistical distributions, hypothesis testing, design and analysis of variance for single and multiple-factor experiments, regression analysis, estimation and confidence intervals for parameters of non-statistical models, and statistical quality control.

Prerequisite: MATH 13 or equivalent

Degree Requirement Attributes: QDS

ENGS 96 - Mathematical Foundations for Machine Learning

Mathematics for Machine Learning aims to lay the mathematical foundation that are key to understanding the motivations and the implementation ML algorithms. This course will cover the following four broad topics; namely, vector calculus, probability theory, matrix algebra and optimization, in so far as they are used in ML algorithms. The course will conclude with application of these topics to four prototypical ML tasks/algorithms – two in supervised learning (regression using linear models and classification using support vector machine), and two in unsupervised learning (clustering using expectation maximization (EM) and dimensionality reduction using Principal Component Analysis (PCA). Programming at the level of Python and ML software packages (PyTorch, Tensorflow, etc.) will be used to supplement the understanding of the mathematics and algorithms, though the focus of the course will be on developing mathematical foundations and intuitions for the ML algorithms, rather than on developing large-scale applications of ML algorithms.

Prerequisite: ENGS 20 or COSC 10, and MATH 8. MATH 20 and MATH 22 are recommended but not mandatory.

Degree Requirement Attributes: Dist:QDS

English and Creative Writing

Chair: Peter Orner (July 1 - December 31, 2025), George Edmondson (January 1 - June 30, 2026)

Vice Chair: Patricia Stuelke

Director of Creative Writing: Thomas O'Malley

Professors C. G. Boggs, M. A. Chaney, A. S. H. Chee, C. M. Dever, G. Edmondson, V. E. Francis, J. S. Kim, A. L. McCann, P. M. Orner, D. E. Pease, J. Sharlet, M. B. Taylor, B. E. Will; Associate Professors K. J. Brown, J. E. Dobson, A. L. Evens, S. A. Moodie, T. O'Malley, A. Raza Kolb, P. R. Stuelke, M. F. Zeiger; Assistant Professors J. C. Beckman, S. E. Dirks, A. Garrison, M. S. Olzmann, M. P. Ritger, N. Tanoukhi; Senior Lecturers W. H. Craig, K. A. Crouch, C. L. Harner; Lecturers R. Clark, S. Crane, J. Godley

To view English and Creative Writing courses, click here (p. 314).

The English Major

Requirements: The Major in English requires the successful completion of eleven major courses. Major courses, unless otherwise stated, are all courses with the ENGL (English) or the CRWT (Creative Writing) course code. These courses must meet the following distributive requirements:

1. Two courses from Group I (p. 313); two courses from Group II (p. 313); one course from Group III (p. 313); one course from Group IV (p. 313).
2. Two courses from the Literary History sequence (ENGL 1 (p. 314), ENGL 2 (p. 314), ENGL 3) (p. 314). These courses may also satisfy Course Group requirements.
3. One Junior Colloquium (p. 343) (ENGL 61 – ENGL 65). This course may also satisfy a Course Group requirement.
4. One Senior Seminar (p. 352) (ENGL 71 – ENGL 75, ENGL 97, CRWT 60, 61, or 62). This course may also satisfy a Course Group requirement.
5. One course designated as a Culminating Experience. For students seeking a degree with Honors, this will be ENGL 98 or CRWT 98. All other students will count a Senior Seminar (ENGL 71– ENGL 75, ENGL 97, CRWT 60, 61, or 62) in satisfaction of the Culminating Experience requirement.

Students electing the major in English should also note the following:

1. Transfer credits can be used in the major only with approval from the Department Vice Chair. Transfer credits normally do not satisfy any of the English major distributive requirements.
2. Two substitute courses (relevant courses from other Dartmouth departments) are permitted within the major, replacing two elective English classes. Substitute courses cannot satisfy English major distributive requirements. The Department Vice Chair, in consultation with the Committee on Departmental Curriculum (CDC), decides which courses are appropriate substitutes in the English major.
3. Students are encouraged to seek out a faculty advisor to consult about major planning prior to declaring the major. Any non-visiting English faculty member at the Assistant, Associate, or Professor level may serve as advisor. English majors should meet with a major advisor regularly, especially if they deviate from their original major plan.
4. Students formally elect the major in English by submitting a proposed plan of major courses through DartWorks (on DartHub), filling out a major planning worksheet (available in the English and Creative Writing Department offices as well as on the Department website),

and meeting with a faculty advisor to get approval. Once approved by the advisor, the signed worksheet must be submitted in the Department offices.

Concentration in Creative Writing

The Creative Writing Program's sequential course of study and small workshops allow students to pursue and develop their craft from the introductory level to the advanced. The creative writing experience at Dartmouth combines intensive writing workshops with the study of literature from a writer's perspective. The concentration in Creative Writing does not change graduating requirements for students majoring in English, but it is a prerequisite for honors with a focus in Creative Writing.

For students in the Class of 2023 and beyond, the Concentration consists of four courses taken as part of an English major plan of study as follows:

1. One introductory course, CRWT 10 (p. 359), CRWT 11 (p. 359), or CRWT 12 (p. 359). (Only one introductory creative writing course may count toward the Concentration in Creative Writing.)
2. One intermediate course, CRWT 20 (p. 360), CRWT 21 (p. 360), or CRWT 22 (p. 360).
3. One course from the range of creative writing special topics seminars, CRWT 40 and CRWT 41. (Substitute courses with a focus on creative writing from other departments may be considered. Please consult with the Director of Creative Writing.)
4. One advanced workshop, CRWT 60 (p. 360), CRWT 61 (p. 360), or CRWT 62 (p. 361). (The advanced workshop is a requirement for the completion of the Concentration in Creative Writing.)

All intermediate and senior workshop courses (CRWT 20, 21, or 22) and CRWT 60, 61, or 62) require application and permission of the instructor.

Students who wish to elect the Creative Writing concentration should contact a Creative Writing faculty advisor and request a meeting to plan their course of study. Students are encouraged to select an advisor based on the area of creative interest.

Modified Majors

Students may propose a modified major in English by designing a program of study in consultation with an English and Creative Writing faculty advisor. One may modify the major with a selection of courses from other departments and programs, or one may modify a major in another department or program with a selection of English and Creative Writing courses. In both cases the modifying courses must qualify for major credit in their home department or program. The Culminating Experience requirement should be satisfied according to the primary

department's rules. Proposals for modifying the major in English should explain the rationale for modifying the standard major.

A formal proposal for a modified major must be submitted to the Vice Chair of the Department of English and Creative Writing. Proposals to modify another major with English and Creative Writing courses must be approved by the Vice Chair of English and Creative Writing before going to the primary department or program for final approval as a major program. Proposals to modify the major in English with other courses must be submitted, along with an authorizing signature from the secondary department or program, to the Vice Chair of English and Creative Writing and the CDC. The Vice Chair's signature signifies final approval of a modified major in English.

Modified major in which English is the primary subject:

This major requires the successful completion of eleven major courses, including seven courses in the Department of English and Creative Writing. All of the distributive requirements governing the regular English major, as outlined above, apply to the modified major. Along with the English and Creative Writing courses taken in satisfaction of the major distributive requirements, a modified major includes four courses from the modifying department or program (or from multiple departments and programs), which substitute for four elective English and Creative Writing courses in the eleven-course major.

Major in another department or program modified with English:

To modify another major with English, a student must take four English and Creative Writing courses that count towards the major in English. These four substitute for four courses from the primary department or program, and cannot include transfer credits.

The Minor in English

The minor in English requires the successful completion of six courses in the Department of English and Creative Writing, selected from all English and Creative Writing courses qualifying for major credit. No substitutions and no more than one transfer credit will be permitted.

The Major in English with Honors

There are two Honors tracks within the English Major: Literary and Cultural Studies, and Creative Writing.

The Major in English with Honors – Literary and Cultural Studies

English majors who have completed at least six major courses by the end of their junior year and have a grade

point average (GPA) in the major of 3.5 or higher and an overall college GPA of 3.0 or higher may apply for the Honors program in literary and cultural studies. Eligible students should meet with their prospective thesis advisors and apply by submitting to the Committee on Departmental Curriculum (CDC) their record in the major along with a formal proposal of an Honors thesis in the spring term of their junior year.

The Honors Program in English in literary and cultural studies consists of the successful completion of the following requirements. Students who do not meet requirements 1, 2, and 3 will not be allowed to advance to ENGL 99.

- 1) Honors majors writing a thesis in literary and cultural studies must complete the Honors Seminar, ENGL 97, in the fall term of their senior year.
- 2) Students must complete a Senior Seminar in English (ENGL 70 – ENGL 75) in addition to ENGL 97 prior to or concurrent with enrollment in ENGL 98.
- 3) The Course Group IV requirement should be satisfied *before* the term in which the candidate completes the Honors thesis and submits it for evaluation.
- 4) The thesis is to be completed during two terms of ENGL 98 and ENGL 99. For students who satisfied their senior seminar requirement before their junior year, ENGL 97 or ENGL 98 may count as their Culminating Experience in the major. ENGL 99 constitutes a twelfth course in the major program, separate from all other requirements outlined above.

The Major in English with Honors – Creative Writing

English majors who have completed at least four courses in the creative writing concentration and six major courses by the end of their junior year and have a grade point average (GPA) in the major of 3.5 or higher and an overall college GPA of 3.0 or higher may apply for the Honors program in Creative Writing. Eligible students should apply by submitting their record in the major to the Creative Writing Honors Director along with a formal proposal of an Honors thesis and a writing sample in the fall term of their senior year.

The Honors Program in English in Creative Writing consists of the successful completion of the following requirements:

1. Students must complete an advanced workshop in CW (CRWT 60, CRWT 61, or CRWT 62) prior to enrolling in CWRT 98.
1. The Course Group IV requirement should be satisfied before the term in which the candidate completes the Honors thesis and submits it for evaluation.

2. The thesis is to be completed during two terms of CWRT 98 and CWRT 99. CWRT 99 constitutes a twelfth course in the major program, separate from all other requirements outlined above.

For complete information about the Honors Programs in Literary Studies and Creative Writing, including further regulations, deadlines, and advice, please consult the English Honors Director or the Director of Creative Writing.

English Study Abroad

The Department of English and Creative Writing offers one Foreign Study Program (FSP), offered bi-annually at Queen Mary University of London. The English and Creative Writing FSP takes place during the fall academic term. Participation in the FSP is open to all sophomores, juniors, and seniors. To participate in the program, students must have completed all first-year requirements and one English course (other than ENGL 7) with a grade of B or better. Students wanting to study creative writing in London must also complete an introductory creative writing course in the relevant genre (CRWT 10, CRWT 11, or CRWT 12) with a grade of B or better. In rare circumstances, the director of the FSP can authorize exceptions to these prerequisites.

Students enrolled in the English and Creative Writing FSP register for ENGL 90, ENGL 91, and ENGL 92, and those three courses will appear on the student's transcript when the FSP is completed successfully. ENGL 90 and ENGL 91 carry major and minor credit and may be used to satisfy Course Group requirements in the major; ENGL 92 carries one non-major college credit. A student may petition the Vice Chair to receive three major or minor credits in English for work completed during an English and Creative Writing FSP. The Course Group requirements satisfied by ENGL 90 and ENGL 91 depend on the particular courses taken at the FSP host institution and should be determined in consultation with the Department Vice Chair. For specific information on FSPs and major requirements please consult the FSP directors and the English and Creative Writing Department's website at <https://english.dartmouth.edu>.

The Department of English and Creative Writing website and the Registrar's Timetable of Class Meetings also have up-to-date information on course offerings.

COURSE GROUPS

Course Groups

I. Literature before the mid-seventeenth century (2 courses required for the major):

ENGL 1, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 51, 61, 71.

II. Literature from the mid-seventeenth century to the end of the nineteenth century (2 courses required for the major):

ENGL 2, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 52, 62, 72.

III. Literature from the start of the twentieth century to the present (1 course required for the major):

ENGL 3, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 53, 63, 73, CRWT 40, 41.

IV. Criticism and Theory (1 course required for the major):

ENGL 44, 45, 46, 47, 48, 54, 64, 74.

Courses with a variable Course Group:

ENGL 90, 91.

Courses with no Course Group Assignment:

ENGL 5, 6, 7, 55, 65, 75, 96, 97, 98, 99, CRWT 10, 11, 12, 20, 21, 22, 60, 61, 62, 89, 98, 99.

Courses that do not count for major credit:

WRIT 2, 3, 5, ENGL 7, 92, 99, CRWT 99.

Courses that count for major credit if approved by the Vice-Chair

ENGL 6, 96

ENGL and CRWT - English and Creative Writing Courses

To view *English and Creative Writing requirements*, click [here](#) (p. 311).

Section I - Non-Major Courses

ENGL 6 - Narrative Journalism: Literature and Practice

This course will explore the role of print journalism in shaping the modern American literary, cultural and political landscape--from Nellie Bly's late 19th century undercover exposure to Seymour Hersh's coverage of the Iraq War. Students will also participate in an intensive weekly workshop on reporting and writing, with a short unit on radio commentary.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 7 - First-Year Seminars in English

Consult special listings

Offered: Spring, Winter.

Section II - Major Courses

ENGL 1 - Literary History I: Literature up to the mid-Seventeenth Century

This course will provide an overview of English literature from the Anglo-Saxon period through the Middle Ages and into the seventeenth century.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 2 - Literary History II: Literature from the mid-Seventeenth Century through the Nineteenth Century

This course will provide an overview of British and American Literature during the seventeenth, eighteenth and nineteenth centuries.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 3 - Literary History III: Literature in the Twentieth and Twenty-First Centuries

This course will provide an overview of literature in the Anglophone world from the beginning of the twentieth century to the present.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 5 - Reading with Attitude

This course introduces students to methods for reading literature and culture critically, including close reading, literary theory, and creative writing. Students will study traditional literary works, such as poetry and fiction, but they will also examine video games, graphic novels/comics, and genre fiction. Assignments will include traditional essays and creative projects. The course brings together considerations of art, philosophy, society, and politics in order to consider issues that range from identity in a globalized world to the pains and pleasures of romantic love.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 10 - Old English and Scandinavian Epic and Saga

An introduction both to Old English literature and to Old Norse sagas, setting "Beowulf" and poems like "The Wanderer" and "The Wife's Lament" in their North Sea/North Atlantic context. We will learn just enough Old English to enable us to read, translate, and savor some of the original poetry and to become savvy readers of the modern translations. Sagas will include "Völsunga," "The Saga of the People of Laxardal," and "Hrolf Kraki" (in translation).

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 11 - Chaucer: "The Canterbury Tales"

An introduction to Chaucer, concentrating on ten of the *Canterbury Tales*, and studying him as a social critic and literary artist. Special attention will be paid to Chaucer's language, the sounds of Middle English, and the implications of verse written for the ear.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 12 - Chaucer's "Troilus and Criseyde" and Other Poems

A study of Chaucer's major works other than the *Canterbury Tales*, focusing on some of the early dream visions (*Book of the Duchess*, *House of Fame*) and *Troilus and Criseyde*, which many consider to be the greatest love epic in the English language. Some attention will be given to the French and Italian context of these works (in translation). No familiarity with Middle English is required.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 13 - Medieval English Literature

An introduction to the literature of the "Middle English" period (ca. 1100 - ca. 1500), concentrating on the emergence of English as a literary language in the twelfth and early thirteenth centuries and on some of the great masterworks of the late fourteenth century. Readings will include early texts on King Arthur, the *Lais of Marie de France*, the satirical poem *The Owl and the Nightingale*, the romance *Sir Orfeo*, *Pearl*, and *Sir Gawain and the Green Knight*, the *Book of Margery Kempe*, and *The York Cycle*. Most readings in modern English translation, with some explorations into the original language.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 15 - Shakespeare

A study of about ten plays spanning Shakespeare's career, including comedies, histories, tragedies, and romances. Attention will be paid to Shakespeare's language; to his dramatic practices and theatrical milieu; and to the social, political, and philosophical issues raised by the action of the plays. Videotapes will supplement the reading. Exercises in close reading and interpretative papers.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 16 - Renaissance Drama

A study of commercial theater in London from about 1570 until the closing of the theaters in 1642. Anonymous and collaborative plays will be read as well as those by such playwrights as Kyd, Marlowe, Dekker, Jonson, Webster, and Ford. The course will focus on the economic, social,

political, intellectual, and theatrical conditions in which the plays were originally produced, on their continuing performance, and on their status as literary texts. Research into the performance history of a play or participation in a scene production is required.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 17 - Milton

A study of most of Milton's poetry and of important selections from his prose against the background of political and religious crises in seventeenth-century England.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 18 - Poetry, Prose, and Drama of the English Restoration, 1660-1689

Together, we shall study poetry, prose and drama written and performed during the reign of the last two Stuart kings, Charles II and James II. No period of English literature is so deeply and even obsessively concerned with both politics and religion. This makes the verse, drama and prose of John Dryden, Andrew Marvell, John Milton and John Bunyan particularly interesting. We will also take time for some comedies typical of the period by William Wycherly and William Congreve, and study Aphra Behn's masterpiece, *Oroonoko*. There will be two areas of special attention: the theater and the literary responses to public events, such as the Great Plague and Fire of 1666, the Popish Plot, and the Exclusion Crisis.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 19 - Writing, Resistance, and (digital) Revolution

This course explores a multicultural history of the technologies of "writing" in North America from 1500-1800. We study three strands of that history (the pre-Columbian world; conquest and religion; European settler colonialism and the Atlantic slave trade) by focusing on four figures: Benjamin Franklin, Thomas Jefferson, Samson Occom, and Phillis Wheatley. All used writing in different ways to make "revolutions." Finally, we consider and contribute to the recent turn to digital archives of Early America.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 21 - Reason and Revolution

Was there a British Enlightenment? In the age of the American and French Revolutions Britain seemed to hold steady. But in the literature of the period there are many social and literary struggles which took their tolls in the madness and suicide of writers such as Smart and Chatterton, the difficulties of attaining creative freedom, and the emergence of new literary forms such as the Gothic. This course will trace the fortunes of writers such as Samuel Johnson, James Boswell, Oliver Goldsmith, and

Edmund Burke as they grapple with the anxieties of their time. We will also consider how women thinkers and novelists such as Charlotte Lennox and Mary Wollstonecraft forged new roles for themselves, and we may include studies of the novel of political paranoia such as *Caleb Williams*, written by Wollstonecraft's husband, William Godwin.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 22 - The Rise of the Novel

A study of the eighteenth- and early nineteenth-century English novel, from Daniel Defoe to Jane Austen. The course will look at the major sub-genres of the period, including criminal biography, scandalous memoirs, epistolary fiction and the Gothic novel. It will also explore the relationship between narrative fiction and the changing cultural landscape of a period defined by commercial uncertainty, imperial expansion, and the threat of revolution. Finally, and most importantly, the course will ask why the novel became so central to modern conceptions of subjectivity, sexuality, social cohesion and transgression. Readings may include work by Daniel Defoe, John Cleland, Jonathan Swift, Henry Fielding, Samuel Richardson, Laurence Sterne, Fanny Burney, Ann Radcliffe, Matthew Lewis, Charlotte Dacre, Maria Edgeworth, and Jane Austen.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 23 - Romantic Literature: Aesthetics and Ideology from the French Revolution to Frankenstein

The modern conception of the imagination as a force for radical social change emerged, in large part, thanks to the aesthetic innovations of Romantic writers working in the wake of the French Revolution. At the same time, however, the prospect of revolutionary violence made the imagination a dangerous, and intensely debated faculty, as promising as it was potentially pathological, and as likely to produce a Gothic nightmare as a pastoral utopia. This course will examine the richly varied forms of literary and political experience that emerge out of this moment, and that continue to shape modern conceptions of creativity, sexuality, ecology and social transformation. Readings include works by William Blake, William Wordsworth, Percy and Mary Shelley, John Keats, and Thomas de Quincey.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 24 - Victorian Literature and Culture, 1837-1859

This course examines early Victorian poetry, prose and fiction in the context of cultural practices and social institutions of the time. We will locate cultural concerns

among, for example, those of capitalism, political reform, scientific knowledge, nation and empire. And we will consider revisions of space, time, gender, sexuality, class, and public and private life that characterized formations of British identity during this period. Texts may include work by Charles Dickens, Thomas Carlyle, Elizabeth Barrett Browning, Charlotte Bronte, John Ruskin, and Charles Darwin. We will also read selections from recent criticism of Victorian culture.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 26 - Social Justice and the Victorian Novel

The British novel achieved great popularity during the nineteenth century as it became a realist form with increasing complexities of plot and character. During a period of imperial and economic expansion, too, great works of fiction participated in widespread debates about progress, empire, Englishness, and evolutionary thought. We will look at fiction's contributions to such cultural debates, considering the novel's powerful critique of empire and dreams of progress; the importance of formations of English identity to plot and character; reactions in fiction to evolutionary revisions of history; and how Victorian fiction signals the importance of class, gender, and race to character development. Readings may include Charlotte Brontë's *Jane Eyre*, Charles Dickens's *Great Expectations*, Wilkie Collins's *The Moonstone*, George Eliot's *Middlemarch*, Thomas Hardy's *Tess of the d'Urbervilles*, and Oscar Wilde's *The Picture of Dorian Gray*.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 27 - Tell It Slant: Female, Black, Queer Readings of Early American Poetry

This course is an introduction to reading poetry and also a survey of the early period of American poetry from 1650-1900. Although often seen as a tradition dominated by white men, this course emphasizes aspects of American poetry rooted in the "queer" sensibility of Puritan Edward Taylor, the female consciousness of Anne Bradstreet, the Black and female consciousness of Lucy Terry and Phillis Wheatley, the Puritan/queer inheritors Walt Whitman and Emily Dickinson, and the early modernism of Stephen Crane. Emphasizing close readings as well as historical and cultural contexts, this course examines the often obscured aspects of the American poetic tradition.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 28 - Making Americans: Hipsters, Tricksters and Geniuses

A survey of American non-fiction narrative and other prose from the early republic to the rise of modernism. The course examines how autobiographies (Franklin, Douglass, Larcom, Thoreau, Stein) and other prose genres construct individual selves and national belonging while negotiating

the pressures of transcendentalism, abolitionism, feminism, and class consciousness by means of aesthetic experimentation. Additional authors vary but often include Jefferson, Apess, Fuller, Hemingway, Adams, Hurston, Kerouac, and Agee.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 29 - American Fiction to 1900

A survey of the first century of U.S. fiction, this course focuses on historical contexts as well as social and material conditions of the production of narrative as cultural myth. The course is designed to provide an overview of the literary history of the United States novel from the National Period to the threshold of the Modern (1845-1900). To do justice to the range of works under discussion, the lectures will call attention to the heterogeneous cultural contexts out of which these works have emerged as well as the formal and structural components of the different works under discussion. In keeping with this intention, the lectures include the so-called classic texts in American literature, *The Last of the Mohicans*, *Moby Dick*, *The Scarlet Letter*, and *The Narrative of the Life of Frederick Douglass*, but also the newly canonized *Uncle Tom's Cabin*, *Incidents in the Life of a Slave Girl*, *Life in the Iron Mills*, and *Hope Leslie*. The configuration of these works will result in an understanding of the remarkable complexity of United States literary culture.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 30 - Early Black American Literature

A study of the foundations of Black American literature and thought, from the colonial period through the era of Booker T. Washington. The course will concentrate on the way in which developing Afro-American literature met the challenges posed successively by slavery, abolition, emancipation, and the struggle to determine directions for the twentieth century. Selections will include: Wheatley, *Life and Works*; Brown, *Clotel*; Douglass, *Narrative*; Washington, *Up from Slavery*; DuBois, *Souls of Black Folk*; Dunbar, *Sport of the Gods*; Chestnut, *House Behind the Cedars*; Harriet Wilson, *Our Nig*; Johnson, *The Autobiography of an Ex-Coloured Man*; and poems by F. W. Harper, Paul L. Dunbar and Ann Spencer.

Cross-Listed as: AAAS 34

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 31 - Asian American Literature and Culture

This course examines narratives of migration to, from, and between the Americas by groups from East, South, and Southeast Asia. We will analyze novels, short fiction, poetry, and films by twentieth-century artists (Joy Kogawa, Theresa Cha, Shani Mootoo, Jhumpa Lahiri, Bienvenido Santos, Wayne Wang) against the historical backdrop of imperialism in Asia and the Americas; periods of exclusion

and internment; and social movements that coalesce around intersections of race, class, gender, sexuality, and citizenship.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 32 - Native American Literature

Published Native American writing has always incorporated a cross-cultural perspective that mediates among traditions. The novels, short stories, and essays that constitute the Native American contribution to the American literary tradition reveal the literary potential of diverse aesthetic traditions. This course will study representative authors with particular emphasis on contemporary writers.

Cross-Listed as: NAIS 035

Offered: Summer.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ENGL 33 - Modern Black American Literature

A study of African American literature from the Harlem Renaissance to the present, this course will focus on emerging and diverging traditions of writing by African Americans. We shall also investigate the changing forms and contexts of 'racial representation' in the United States. Works may include those by Hurston, Hughes, Wright, Ellison, Morrison, Schuyler, West, Murray, Gates, Parks.

Cross-Listed as: AAAS 35

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 34 - From Anna Christie to Hamilton (and Donald Trump): Modern American Drama

In this course we'll take up iconic plays in modern and contemporary American Drama -- Eugene O'Neill's *Anna Christie* and *Long Day's Journey into Night*, Arthur Miller's *All My Sons* and *Death of a Salesman*, Lorraine Hansberry's *A Raisin in the Sun*, Tennessee Williams' *A Streetcar Named Desire* and *Cat on a Hot Tin Roof*, August Wilson's *Fences*, Tony Kushner's *Angels in America*, Suzan Lori-Parks' *Topdog/Underdog*, Lin-Manuel Miranda's *Hamilton* -- and consider the ways in which they were shaped by historical events even as they helped to shape (and in some cases reform) U.S. culture and politics. In the final week, the class will analyze the theatrical design, dramatic structure, and cultural efficacy of a Donald Trump rally.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 35 - American Fiction: 1900 to World War II

A study of major American fiction in the first half of the twentieth century. Works by Dreiser, Stein, Fitzgerald, Cather, Larsen and Faulkner, and a changing list of others.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 36 - Contemporary American Fiction

This course introduces students to the study of contemporary American fiction. How do writers and artists use fictional forms to participate in the urgent conversations of the present? How do we analyze and historicize literature and culture of the present and the recent past? To answer these questions, this course focuses on the last fifteen years (or so) of American literary and cultural production. We'll examine how American novels, short stories, television, and film from this period represent war, migration, financial crises, ecological disaster, pandemics, and racial violence; how they think about gender, sex, race, work, family, and money; how they play with form and popular genres; and how they are shaped by institutions such as the publishing industry and the university, as well as by digital platforms. Alongside our discussion of this fiction, we will explore related criticism and theory, and experiment with writing both literary criticism and fiction. Authors from recent iterations of the course have included Colson Whitehead, Tommy Orange, Raven Leilani, Ottessa Moshfegh, Ling Ma, Mohsin Hamid, Valeria Luiselli, Gillian Flynn, Carmen Maria Machado, Jesmyn Ward, and Jeff Vandermeer.

Offered: Summer.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 37 - Contemporary American Poetry

This course explores the most exciting developments in American poetry from 1960 until the present. We will consider a wide array of poetic movements—the Beats, the New York School, the Confessionals, the Black Mountain group, the Black Arts Movement, Language poets, performance and conceptual poetry, rap and spoken word—in order to understand the aesthetic tendencies that inform American poetries being written today. In particular, we will examine key individual poets through close readings of their most exemplary work.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 38 - American and British Poetry: 1900-1960

A survey of modern American and British poetry since the First World War, with particular emphasis on the aesthetics, philosophy and politics of modernism. The course covers such canonical and non-canonical poets as Yeats, Pound, HD, Lawrence, Eliot, Stevens, Frost, Williams, Crane, Moore, Millay, Auden, and the Harlem Renaissance.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 39 - American Fiction: 1950 to 1990

This course examines movements in American literature from 1950-1990 as the United States was solidifying itself as a world power. These movements correspond to historical events that have shaped the world of contemporary fiction (the end of WWII, the civil rights movement, the fight for gender equity and gay rights, etc.), and have permanently marked the literary landscape. We will thus explore the varied nature of racial, ethnic, and gender identity through the writers who have shaped the vision of the nation and its different inhabitants. We will focus on iterations of American ideology (individuality, self-discovery, patriotism, opportunity), their detractors and believers, and the writers who have presented these concepts to us in prose meant to interrogate rather than celebrate. Our interest for the duration of the term is in the (real or imagined) hyphenated American, and the national imperatives that challenge literary production.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 41 - British Fiction: World War II to the Present

A study of the multiple currents within British fiction in a period characterized by major literary, cultural, and social transitions in Britain, including the emergence of a “post” (-war, -empire, -modern) sensibility. Writers may include Amis, Sillitoe, Greene, Golding, Burgess, Lessing, Wilson, Carter, Swift, Atkinson, MacLaverty, Ishiguro, Barker, Barnes, McKewan, Smith.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 42 - Introduction to Postcolonial Literature

An introduction to the themes and foundational texts of postcolonial literature in English. We will read and discuss novels by writers from former British colonies in Africa, South Asia, the Caribbean, and the postcolonial diaspora, with attention to the particularities of their diverse cultures and colonial histories. Our study of the literary texts will incorporate critical and theoretical essays, oral presentations, and brief background lectures. Authors may include Chinua Achebe, Ngugi wa Thiong'o, V.S. Naipaul, Merle Hodge, Anita Desai, Bessie Head, Nadine Gordimer, Paule Marshall, Tsitsi Dangarembga, Salman Rushdie, Earl Lovelace, Arundhati Roy.

Cross-Listed as: AAAS 65

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

ENGL 44 - Introduction to Digital Studies

This course introduces digital studies, the scholarly engagement with digital technologies and the cultures that have risen alongside them. It is a commonplace to note that the digital is pervasive in our lives, and it therefore plays at least some role in almost every human activity, from the

mundane to the exotic. This course will chart the development of the digital from its growth in the twentieth century to its current hegemony, and will consider its relationship to communication, sociality, identity, media, arts, recreation, politics, the future, and more. Class meetings will focus on scholarly articles and book chapters, supplemented by some film, and by artifacts of digital technology and culture. Students will collectively shape the syllabus, aligning our readings with the interests of the class.

Degree Requirement Attributes: Dist:ART

ENGL 45 - Introduction to Literary Theory

The course will introduce students to some of the leading texts, concepts, and practices of what has come to be known as theoretical criticism. Topics to be considered may include some of the following: structuralism, deconstruction, psychoanalysis, feminism, new historicism, post-colonialism, post-modernism, queer theory, and cultural studies. Attention will also be given to historical and institutional contexts of this criticism. Intended to provide a basic, historically informed, knowledge of theoretical terms and practices, this course should enable students to read contemporary criticism with understanding and attempt theoretically informed criticism themselves.

Offered: Summer, Winter.

Degree Requirement Attributes: Dist:LIT

ENGL 46 - Old and New Media

A survey of the historical, formal, and theoretical issues that arise from the materiality and technology of communication, representation, and textuality. The course will address topics in and between different media, which may include oral, scribal, print, and digital media. Readings and materials will be drawn from appropriate theorists, historians, and practitioners, and students may be asked not only to analyze old and new media, but also create with them.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 47 - History of the English Language

This course traces the development of English as a spoken and written language belonging to the Indo-European language family. We will work forward from Proto-Indo-European through Old English (Beowulf), Middle English (Chaucer), and Early Modern English (Shakespeare), up to contemporary American English. Our focus will be on the structural history of the language, especially changes in pronunciation and grammar, and the implications of those changes for English as spoken and written today. Open to all classes.

Cross-Listed as: LING 018

Degree Requirement Attributes: Dist:QDS; WCult:W; Lang:LRP. This course has been renumbered to ENGL 55.24.

ENGL 48 - Critical Issues in Postcolonial Studies

This course charts one genealogy of postcolonial theory as it developed in the Anglo-American academy in the 1980s. Drawing on the two internationalist traditions of the late nineteenth and twentieth century, Marxism and Psychoanalysis, this course examines the ways in which these two theoretical frameworks helped construct postcolonial thinking while at the same time becoming the sites of its most rigorous critique. The course will begin with an introduction to some of the key concepts in Marxist and psychoanalytic thought, specifically as these two traditions understand colonialism. Then, we will read the work of postcolonial thinkers, such as Frantz Fanon, Edward Said, Gayatri Spivak, and Homi Bhabha, to consider their critiques of colonial thought and practices. Throughout the course, we will attend to the way in which racial and sexual difference is considered in the readings. The theoretical material for the course will be supplemented with our engagement with four films: *Xala* (Dir. Ousmane Sembène, 1975); *The Battle of Algiers* (Dir. Gillo Pontecorvo, 1966); *Fire* (Dir. Deepa Mehta, 1996); *Frantz Fanon: Black Skin, White Mask* (Dir. Isaac Julien, 1996).

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

Section III - Special Topics Courses

Special topics courses in Creative Writing (CRWT) are offered periodically, concentrating on particular issues in one or more fields of poetry, fiction, and creative nonfiction. Courses may require creative and critical papers and include workshops. Enrollment is limited to 18.

Special topics courses in English (ENGL) are offered periodically with varying content; one or more individual writers, a genre, or an approach to the literature of this historical period not otherwise provided in the English curriculum. Requirements will include papers and, at the discretion of the instructor, examinations. Enrollment is generally limited to 30.

CRWT 040 - Special Topics in Creative Writing

These courses are offered periodically, concentrating on particular issues in one or more of the fields of poetry, fiction, and creative nonfiction. Courses may require creative and critical papers and include workshops.

CRWT 40.01 - Imaginary Countries

This course introduces the techniques used in speculative fiction—literary novels and stories using either science fiction, magical realism, or myth, or a mix of these, so the author can reinvent a country’s history, the country itself—even the world. We will read for technique, and discuss the effects these fictions achieve with their structures and the narrative and aesthetic strategies deployed. Students will write and workshop two stories. Readings may include: Virginia Woolf’s *Orlando*, Andrew Sean Greer’s “Darkness”, Kazuo Ishiguro’s *Never Let Me Go*, Chris Adrian’s “Every Night For A Thousand Years”, Anne Carson’s *Autobiography of Red*, Yiyun Li’s “Immortality”, Jan Morris’ *Hav*, Toni Morrison’s *Sula*, and Carmen Machado’s “The Husband Stitch.”

Offered: Fall.

Degree Requirement Attributes: Dist:ART

CRWT 40.03 - Raising the Dead

How can we practice "immersion journalism," as creative nonfiction is sometimes described, when writing about people and events of the past? In this creative nonfiction writing course, we'll immerse ourselves in the kind of research that will allow us to recreate moments and moods for which we couldn't be present. We'll become witnesses at a remove; and, through careful attention to our own roles in the construction of our stories, participant-observers, as well. We'll learn how to use archives; make creative use of documents and artifacts; engage with scholarly historical writing as a source for creative writing; and interrogate our assumptions about research and representation, all in the service of character-driven narratives as vivid, nuanced, and dramatic as writing based on contemporary fieldwork. This course is an attempt to raise the dead, to resurrect truths from dormant facts, to find stories of the present within the past. You'll write two short nonfiction stories, of a person and a place, based on secondary sources, and one long narrative based on original research. The texts we'll be reading, by Lauren Redniss, John D'Agata, Svetlana Alexievitch, Joe Sacco, Maggie Nelson, and Michael Lesy, among others, vary radically in form and medium, as may your own experimental nonfictions

Degree Requirement Attributes: Dist:ART

CRWT 40.04 - Remains, Ruin, Repair, and Rapture: Trends in Urban Poetics

In the center of Detroit, Michigan sits the completely enclosed, far smaller city of Hamtramck, with its own mayor, police department, fire department and history of generations of Polish immigrants. Two urban centers connected by borders and across borders by rich poetics that place pressure upon stereotypes of the "urban."

In this course, we will consider essays, poetry and interviews that dare interrogate and upturn common

assumptions around the demographics and expectations of urban centers and the arts and letters that rise from them. We will write critical as well as creative responses to the readings. We will resist "outside" definitions and privilege the self-defining texts of the authors we study who are writing from their experiences within these sites of growth and failings, allegiances and loss, flight and fury. Readings will include work by: Jacek Dehnel, Francine Harris, Jamaal May, Matthew Olzmann, and Adam Zagajewski among others

Offered: Winter.

Degree Requirement Attributes: Dist:ART; WCult:W

CRWT 40.05 - Engaging Hybridity: Race, Gender, Genre

This course explores hybrid genres such as the prose poem, the lyric essay, and the graphic memoir, as well as other sites of artistic production that involve intersection, exchange, conflict, inhabitation, resistance, and cultural address. Students will consider the diverse and provocative creative work of Mat Johnson (*Incognegro*), Maggie Nelson (*Bluets*), Sebastian Matthews (*Beginner's Guide to A Head On Collision*), Claudia Rankine (*Citizen*), Tyehimba Jess (*Olio*), Kwame Dawes (*Duppy Conqueror*), A. Van Jordan (*The Cineaste*) and Dee Matthews (*Simulacra*), and based on these readings they will develop their own creative work in hybrid genres. The class will utilize both seminar and workshop formats, but the emphasis will be on the practice of writing as a way of thinking through forms of social, political and cultural engagement with this anxious moment in history, and of asking what kind of parameters, if any, art, particularly literature, truly requires? Are they porous enough? And what role does identity play in the choice to cross such borders?

Degree Requirement Attributes: Dist:ART

CRWT 40.06 - Uses of Fact: True Source Material in Prose, Poetry, & Film

This class will examine how a diverse group of artists work with factual material. One sometimes hears this sensible phrase: "You aren't entitled to your own facts." But the truth is artists do frequently work with what one might call their own facts. We'll look at what certain writers (Anna Deavere Smith, Eudora Welty, Joseph Brodsky), poets (Pedro Pietri, Elizabeth Robinson, Van Jordan) and filmmakers (Sarah Polley, Charles Burnett, and Earl Morris) do with true source material that interests, compels, perhaps repulses, above all, inspires them. Weekly writing exercises and workshops will help you develop our own ideas inspired by the works under discussion. The course will culminate in a final project where students will share own new work in prose, fiction or non-fiction.

Degree Requirement Attributes: Dist:ART

CRWT 40.07 - The Craft of Fiction: A Masterclass with Alaa Al Aswany

Fiction presents an abundance of rich and creative possibilities. Through the magic of imagination, fiction takes us deep inside worlds and into the lives of characters. This course trains students to recognize the qualities that make for spellbinding fiction, including the natural rhythm and tone, mapping the structure, and shaping the content. The Art of Fiction course teaches the essential elements of sketching a story, creating a great opening, devising structure and plot twists, incorporating tension, implementing flashback and viewpoint, and mastering the art of dialogue. Students learn techniques of crafting a story, originating colorful characters, and developing ways of bringing imagination and intrigue into a literary work. They will learn how their stories can be woven into unforgettable narratives by mastering rhythm, tempo, tone, and brevity. Students will explore the process of developing lively characters, mapping out a plot, describing realistic settings, adding subtext and layers of meaning, and penning captivating fiction.

Cross-Listed as: MES 15.01

Degree Requirement Attributes: Dist:LIT; WCult:NW

CRWT 40.08 - Dystopian Visions: Exploring the Fiction of Catastrophe and Apocalypse

What do dystopian fictions say about our world, our place in it, and the future before us? Are they merely reactions to damaging contemporary trends or richly imaginative, fully realized conceptions of what is to come? Via intensive reading, discussion of work in the genre in combination with contemporary essays, newspaper accounts, film and documentary, we will consider the power of fiction to shape and draw attention to the dilemmas that face humankind in the 21st century and beyond. We will touch upon and reference those earlier works that have shaped the genre, such as *We* by Yevgeny Zamyatin, Aldous Huxley's *Brave New World* and *1984* by George Orwell, but our primary focus will be on those fictions of the last forty years that ring prophetically and frighteningly true vis-à-vis events in our current world. We'll be reading a wide variety of authors, which may include, Harlan Ellison, Philip K. Dick, Cormac McCarthy, J.G. Ballard, John Wyndham, Richard Matheson, and Anthony Burgess. Students will write two short stories that extend a particular author's dystopian vision, and a longer fiction originating from their own imaginings.

Degree Requirement Attributes: Dist:ART; WCult:W

CRWT 40.09 - Obsessive Affinities Contemporary French & American poetry

This deeply experiential course examines the rich history of transatlantic desire, negotiated over the love of poetry. The United States has always figured heavily in the collective French imaginary ever since the American

Revolution, for instance in the works of Tocqueville and Chateaubriand. American literature, however, gains particular prominence toward the mid-twentieth century with the transatlantic travels of Simone de Beauvoir, André Breton, Jean-Paul Sartre, and Philippe Sollers among authors, to the point that French writers began wondering how one can even be French in the first place. The course explores this crisis in national identity through a series of important poetic Franco-American friendships and collaborations: Edmond Jabès and Rosmarie Waldrop; Emmanuel Hocquard and Michael Palmer; Serge Pey and Allen Ginsberg; the Fondation Royaumont; the poetry collective *double change*; among others.

Degree Requirement Attributes: Dist:LIT; WCult:W

CRWT 40.10 - James Joyce's Ulysses

This is a class for creative writers *and* creative readers interested in studying, and more importantly enjoying, James Joyce, the storyteller. No previous experience with Joyce is required. Though the class will begin with an intensive examination of Joyce's seminal long story, "The Dead," our focus during the term will be an intensive, close reading of his second novel, *Ulysses*, a book that, generally speaking, is more famous than actually read. A colossal influence on generations of writers, and readers, including T.S. Eliot, Derek Wolcott, Edna O'Brien and countless others, *Ulysses* is, among many other things, challenging, irreverent, thought-provoking, political, technically virtuosic, and above all wildly entertaining. Students will read some outside sources on Joyce but for the most part our primary text will be Joyce's own words – wherever they lead us. Prepare to meet a fascinating and chaotic cast of characters featuring – Lilly, Kate and Julia Morkan, Gabriel Conroy, Stephan Dedalus, Leopold and Molly Bloom, and many others. Assignments will include critical and creative responses to both "The Dead" and *Ulysses*, as well as a final essay.

Degree Requirement Attributes: Dist:LIT; WCult:W

CRWT 40.11 - Nature Writing

This writing workshop provides an interdisciplinary exploration of literary works operating within the realm of Black environmental thought. Following Ed Roberson's claim that "the world does not run the earth, but the earth does run the world" we will linger with the writings of those who have been forced to theorize from the underside of modernity, those who view black literary studies not only as an institutional enterprise, but as planetary thinking, as a commitment to *care for the earth*. Together, we will think critically about what it means to write at the intersection of race and environment in a social and political moment marked by climate catastrophe, and what's more, put that thinking into practice within the workshop space by creating works of poetry and criticism in ensemble. All toward the aim of collaboratively

engaging in what we might call—in keeping with the Combahee River Collective, Sylvia Wynter, Fred Moten and others—theory in black, black thought, *black study*.

Degree Requirement Attributes: Dist:LIT; WCult:W

CRWT 40.12 - The Novels of Virginia Woolf:Radical Innovator

This is a class for creative writers and creative readers interested in reading and above all, enjoying, the strange, beautiful novels of Virginia Woolf, a radical innovator of English prose whose work, since the moment it first appeared – through to today – has opened up new, and fascinating storytelling possibilities for writers (and readers) ever since. Woolf’s singular work has inspired countless writers, including Eudora Welty, W.H. Auden, Toni Morrison (who wrote her master’s thesis on Woolf), Edna O’Brien, Michael Cunningham, Jhumpa Lahiri, and Zadie Smith, among many, many others. Woolf’s great subjects were memory and time and we’ll be examining, through close reading, the many technical innovations Woolf developed, as well as the emotional risks she took, in order to capture memory and time on the page, such as her use of a unique combination of interiority and lyrical intensity. The class will begin with a look at Woolf’s landmark, book-length essay on the women’s struggle for independence and creative opportunity, *A Room of One’s Own*. We’ll be also be reading excerpts from a creative biography of Woolf and various essays by and about Woolf that concern, directly, her development as a writer who challenged much of what had come before. In order to trace, through three pivotal novels, Woolf’s creative development, our primary texts will be: *Mrs. Dalloway*, where Woolf breaks away from the constraints of traditional narrative, *To The Lighthouse*, perhaps her most beloved and most autobiographical book, and *The Waves*, arguably the most poetic, resonant, and challenging of her later works. Written work will be a combination of critical and creative responses to Woolf’s fiction.

Degree Requirement Attributes: Dist:LIT; WCult:W

CRWT 40.13 - Contemporary Queer and Trans Asian American Poetry

Amidst grief and inheritance, migration and abandonment, is a name one gives oneself. In this poetry workshop, we will examine poetry collections by queer and trans Asian Americans from the late twentieth century to the present, discussing questions of translation, borders, crossings, and reconstructions of the self through second languages and first histories. What are the silences of queer futures? What does it mean to write from or of an identity? How does one write while disowned from one or more identities? Participants will be asked to contemplate these questions in a creative and analytical writing practice culminating in critique workshops and a final poetry portfolio. (Non-exhaustive) readings may include works by Ching-In

Chen, Leah Lakshmi Piepzna-Samarasinha, Pamela Lu, Kazim Ali, and Nhu Xuan Nguyen, among others.

Degree Requirement Attributes: Dist:ART; WCult:CI

CRWT 40.14 - Black and Latino Poets Creative Writing Course

This course is designed to help you improve your ear and eye for writing poetry, your skill in discussing poetry, and your ability to read poetry as a writer. To that end, the course will alternate between reading and discussing the craft of published poets and workshopping your own thoughtful creations.

Great writers are also great readers. For this reason, we will read with care various styles of accomplished poets. Exploring the ways that certain writers simultaneously negotiate/live in multiple worlds, we will focus on the poems of several critically acclaimed and innovative Black (African, Afro-Caribbean, African American) and Latino (Puerto Rican, Cuban, Dominican, Mexican) poets. We will repeatedly ask, how they represent multilayered experiences and complex realities. Yet in moving beyond the tendency to *focus* on the “politics” and “polemics” in Black and Latino writers’ work, we will pay particular attention to these poets’ craft, to their unique approaches, formal innovations, and skill. How do they put their poems together? What poetic and other literary devices are in use, and how are they suited to the poem in question, to the world(s), in question? What makes the particular poem powerful? What makes it memorable?

Throughout the course, we will alternate between reading and discussing these poets work and workshopping students’ original work.

Degree Requirement Attributes: Dist:INT or ART; WCult:CI

CRWT 40.15 - Tell Me A Story: Introduction to Nonfiction Radio and Podcasting

This hands-on workshop in audio storytelling will prepare students to create broadcast quality radio stories and podcasts. It will cover all the steps of narrative journalism, including story development, research & reporting, interviewing, writing and editing for the ear, and, of course, production. Special attention will be paid to how the limitations and strengths of the audio medium guide story choice, story structure, and interviewing.

Offered: Winter.

Degree Requirement Attributes: Dist:ART

CRWT 40.17 - Workshop in Literary Translation

The course will function as a specialized workshop for students who would like to explore the craft of literary translation. In addition to opportunity to hone their translation skill by practicing the craft, students will get the chance to take part in discussions about the merit and

quality of works of literary translation by studying and providing feedback on translations prepared by their peers. Occasionally, the instructor will distribute short samples of published translations or selections of texts of translation theory for consideration, to complement questions that emerge from classroom discussion

Cross-Listed as: COLT 19.05

Offered: Summer.

Degree Requirement Attributes: Lang:LRP; Dist:INT or LIT

CRWT 40.18 - Writing Love Poems: Bewilderment, Anxiety, and the Art of Wonder

This writing workshop will study the craft techniques used by poets to heighten and/or make tangible a specific emotion. To study this, we'll focus our attention on the contemporary love poem. To develop an understanding of this unique artform, we'll consider the numerous traditions that writing in this mode extends from, embraces, and/or challenges. We'll also be asking questions about poem's broader intentions. For context, we'll study it in relation to two other traditional types of lyric poetry—the elegy and the ode—to see what these approaches have in common. In examining these poems, we'll be paying close attention to the strategies used by their authors that can be applied to your own creative work. This is a creative writing course, but no prior experience is necessary.

Degree Requirement Attributes: Dist:ART

CRWT 40.19 - Developing The Novel

Ever thought of writing a novel? Many of us have. But deciding how to start—and how to keep going—can be daunting. In this class, you will start a novel from scratch and learn the practice of writing “long” while wrapping your brain around a large story. We will be reading and studying great novels, as those are our most useful tools. Readings will include short novels by James Cain, Ocean Vuong, Jean Rhys, Chinua Achebe, and others. Class will consist of workshops and in-depth craft discussions plot, structure, characterization, point-of-view, sense of place, and voice. By the end of the class, you should have a polished Chapter One, as well as rough drafts of Chapters Two and Three and an outline.

Offered: Spring.

Degree Requirement Attributes: Dist:ART

CRWT 40.20 - Writing the Young Adult Novel

This is an intensive reading and writing workshop for students interested in writing a novel aimed at young adult or middle grade readers.

During the term, we will discuss what the term “Young Adult” means in terms of literature. Are standards different for books for children and teens, as opposed to those

written for adults? In fact, are we, as writers, charged with aiming our work at a certain audience in the first place? And if we are, do certain responsibilities come with that effort?

Degree Requirement Attributes: Dist:ART

CRWT 41.01 - Writing for Television

This workshop course introduces students to the art and craft of writing for television. We're living in the midst of the (second) Golden Age of Television. More and more Americans are turning away from the traditional movie theater experience and embracing long form, character driven, small screen stories. In the film world, directors are king, but in television, the writers reign. It is their vision that gets put on the screen. Throughout the course, each student will workshop and develop a thirty minute pilot script and Show Bible, as well as read and analyze contemporary pilot scripts to see what exactly makes a pilot

Cross-Listed as: FILM 44.10

Degree Requirement Attributes: Dist:ART

ENGL 51.01 - Plays, Playing, and Publicity

We will read plays by Shakespeare and his contemporaries including Marlowe, Dekker, Heywood, Jonson and others. Rather than considering them primarily as authored, literary texts, however, we will investigate them as products of a professional and commercial system—not unlike Hollywood—and as popular media in an age without journalism. Plays will be grouped in clusters that foreground roughly contemporary texts and/or performances in dialogue and competition with each other. Readings will also address the physical and social spaces of performance and the controversies about theater. Students interested in twentieth century productions of early modern plays or more general twentieth century issues of media and performance are welcome.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 51.02 - Shakespeare's King Lear and Macbeth: Text and Film

This course offers students the luxury of focusing exclusively on just two of Shakespeare's tragedies--*King Lear* and *Macbeth*--which constitute the final two of Shakespeare's most famous four tragedies. Over the past 10 years, there have been no fewer than three major films made of each play, the latest being the brand new *Macbeth*, starring Michael Fassbinder. That each play still invites yet another way of imagining the play suggests both the suspicion that maybe the play hasn't yet been done right, and simultaneously the sense that these two plays offer some kind of especially important statement for audiences in 2015. This class will focus on all such issues, textual and film production-oriented. There will be two papers and one final project.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 51.04 - Stories At the Edge of the World: Conquest and Contact in the Age of Shakespeare

When did the world become global? Living an age of commerce and contact, the writers of Shakespeare's England were also diplomats, explorers, soldiers, colonizers, and cosmopolitans. They composed poems and plays with one hand and foreign dispatches with the other, each time wondering at the encounters and tensions of a rapidly expanding world. In this course, we'll explore stories of borderlands, wildernesses, colonies, voyages, and migration. As we read widely in literature and travel narratives—including Shakespeare's defense of refugees from the forgotten play, *Sir Thomas More*—we'll consider what these borderlands and exchanges offer the early modern imagination and what they looked like in reality. Along the way, we'll be challenged to consider how we tell stories about marginalized people and contested spaces in our own rapidly globalizing time.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 51.13 - Gender and Power in Shakespeare

The course will begin by defining the varieties of power inscribed in Shakespeare's plays, and proceed to explore the following questions. Is language gender-inflected? Do men and women speak "different" languages? How do power and gender affect each other? How do women negotiate power among themselves? How do men? How is power exerted and controlled in sexual relationships? How do unspoken social definitions exert their power over the politics of gender? Possible works studied will be drawn from *The Rape of Lucrece*, *A Midsummer Night's Dream*, *The Taming of the Shrew*, *The Merchant of Venice*, *Much Ado About Nothing*, *As You Like It*, *All's Well That Ends Well*, *Othello*, *Macbeth*, *Troilus and Cressida*, *Coriolanus*, *Antony and Cleopatra*, and *The Winter's Tale*.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 52.02 - The Civil War in Literature

Surveys in American literature often omit the Civil War. Yet the war called forth a vast range of literary responses, in genres as diverse as poetry, popular song, novels, and other prose genres. This course will examine how literature depicts the war, and where the limits of that depiction lie. Readings include Walt Whitman's *Drum Taps*, Herman Melville's *Battle Pieces* and *Aspects of the War* (1866), Louisa May Alcott's "Hospital Sketches," Stephen Crane's *Red Badge of Courage*.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 52.03 - Dave the Potter: Slavery Between Pots and Poems

This course examines the work of David Drake, a South Carolinian slave who made some of the largest ceramic

storage vessels in America during the 1850s, signing them and etching sayings and poems onto them as well. This seminar engages with Drake's poetry-pottery through critical and historical research, interpretive writing, and our own creative adventures in ceramic handicrafts. In addition to writing your own updated imitations of Dave Drake's poetry and attempting ceramic facsimiles of his earthenware, students will also spend time in the letterpress studio as a means of acquiring a deeper historical and aesthetic appreciation of Dave's life and work; it was while working as a typesetter for a regional newspaper that Dave acquired literacy. As a culminating assignment, students will contribute chapters to a scholarly book on Drake, which the instructor will edit.

Degree Requirement Attributes: Dist:ART

ENGL 52.04 - The American Renaissance at Dartmouth

F. O. Matthiessen coined the term "American Renaissance" in his groundbreaking book, *The American Renaissance: Art and Expression in the Age of Emerson and Whitman* (1941). At the outset of the nineteenth century American writers struggled with a sense of cultural inferiority and artistic belatedness. The "American Renaissance" demarcates a period as well as a cultural movement marked by intense literary activity between the 1830s and 1860s that aimed at the formation of a distinctively *American* literature. Matthiessen restricted the American Renaissance to the years between 1850 and 1855, an "extraordinarily concentrated moment of literary expression" (vii) that saw the publication of Nathaniel Hawthorne's *The Scarlet Letter*, *House of the Seven Gables*, and *The Blithedale Romance*; Ralph Waldo Emerson's *Representative Men*; Herman Melville's *Moby-Dick*; Henry David Thoreau's *Walden*; and Walt Whitman's *Leaves of Grass*. In the years since the publication of Matthiessen's important work, teachers and scholars in American literature have extended the American Renaissance's chronological provenance at least as far back as the anti-slavery debates in the 1830s and as far forward as the termination of the Civil War. In the past several decades, Matthiessen's argument has been challenged for its exaggeration of the originality of his coterie of male authors, for the exclusion of women and African-American and popular authors from his account of the United States during a period of remarkable social and cultural transformation, and for its seemingly uncritical acceptance of the doctrine of American exceptionalism. In light of these criticisms, scholars have added Emily Dickinson, Frederick Douglass, Margaret Fuller, Harriet Beecher Stowe, and Mark Twain (among others) to Matthiessen's American Renaissance pantheon.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 52.05 - Desire and Difference in 19th Century British Fiction

This course will examine the phenomenon of moral panic in nineteenth-century British literature and culture through two linked but distinctive forms of sexual subjectivity: female heterosexuality and male homosexuality, connected forever in the 1885 Criminal Law Amendment Act that set the stage for the imprisonment of Oscar Wilde. We will consider the relationship between realist and sensationalist literary forms to trace the emergence and regulation of distinctly modern sexual subjectivities in mid- and late-nineteenth-century Britain.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 52.06 - Media & Monstrosity

The vampire, the doppelganger, the automaton, the femme fatale, the serial killer, even the city itself as a pathological public space: these figures inhabit popular fiction at the end of the nineteenth century, expressionist cinema at the start of the twentieth century, and have been staples of mass culture ever since. Focusing on the relationship between fin-de-siècle Gothic fiction and its early cinematic adaptation, this course will explore the images of monstrosity that embody anxieties about changing media landscapes, emerging media forms, and the increasingly mediated character of human relationships between the 1880s and the 1920s. Primary texts and films will include R.L. Stevenson's *The Strange Case of Dr. Jekyll and Mr. Hyde*, Bram Stoker's *Dracula*, F.W. Murnau's *Nosferatu*, and Fritz Lang's *Metropolis*. We will also read theoretical work by Hugo Münsterberg, Laura Mulvey, Otto Rank, Siegfried Kracauer, Walter Benjamin, and Friedrich Kittler.

ENGL 52.10 - Vox Clamantis: Wilderness in 19thC American Literature

Inspired by the motto of Dartmouth College, this course examines tropes of wilderness in nineteenth-century American literature and the types of voices that cry out within them. While helping to establish a national literary tradition, the American 'deserto' or wilderness has also functioned as a kind of rhetorical staging area, in which various (often competing) notions of individualism, community, and political philosophy emerge. As a result, the novels, poems, slave narratives, and short stories of nineteenth-century American literature abound with landscapes as social and psychological as they are physical. Authors will include Nathaniel Hawthorne, Edgar Allan Poe, Frederick Douglass, Emily Dickinson, Herman Melville, Henry David Thoreau, Charles Chesnut,

Mark Twain, and Willa Cather. Dist: LIT; WCult: W. Course Group II.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 52.11 - Daniel Webster and the Dartmouth College Case

Two hundred years ago, in 1819, Daniel Webster argued a case in front of the Supreme Court defending his alma mater, Dartmouth College, against the predations of the State of New Hampshire. The Court found in favor of Dartmouth, which preserved the College as a private entity. Perhaps more importantly, it also laid the legal foundation for the modern economy, where corporate firms are to some extent free of state control. This course aims for a comprehensive understanding of the Dartmouth College Case and Daniel Webster by integrating the perspectives of American studies, history, political theory, and law.

ENGL 52.15 - Transatlantic Gothic

From crumbling monasteries and crafty priests, to bleeding nuns and fake hauntings, gothic novels exploded in popularity in late eighteenth century British print culture. But what happens when the strange tropes, figures, and rhetorical techniques of the gothic travel across the Atlantic to adapt to the dark pathologies and monstrous histories of the Americas? This course will expand notions of the gothic to frameworks that understand late eighteenth to early nineteenth century gothic literature as a transatlantic phenomenon.

Degree Requirement Attributes: Dist:LIT

ENGL 52.16 - God, Darwin, and the Literary Imagination

The publication of Charles Darwin's *The Origin of Species* in 1859 caused a crisis in religious faith. Evolution brought God to his knees, or so the story goes. Yet this claim oversimplifies the situation. It underestimates how the Christian God and evolutionary theory both shaped debates and structures of thought in the nineteenth century. How did these "divergent" systems of belief shape how people understood the world and their place in it? How did writers use religious faith and/or scientific evidence to structure narrative and tell new types of stories? How did Darwin and other scientists use literary techniques to convey their ideas to a widespread audience? This course emphasizes close reading as well as historical and scientific context, focusing on five themes that arose from the juxtaposition of God and Darwin in nineteenth-century British literature and culture: Creation and Design, Selection and Extinction, Heredity and Development, Time and Progress, and Human/Animal.

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 52.17 - Victorian Children's Literature: Fairytale and Fantasy

It is said that the Victorians “invented” childhood: a state of freedom, play, creativity, and innocence. The orphans, adventurers, tricksters, and runaways in Victorian children’s books make friends with pirates, talk to animals, fly through the sky, and fall down rabbit holes. What made these stories so popular in the nineteenth century, and why do they continue to enchant readers? This course explores the genre of Victorian children’s literature in relation to such themes as Romantic innocence, nature and animal studies, climate change, sexuality and queerness, evolution, colonialism and race, disability studies, global economics, and play. Throughout the course, we’ll think about how stories for children are constructed and how writers and artists have adapted these Victorian texts for later audiences (e.g. through film, graphic novels, and fan fiction). The course will include both critical and creative assignments. Texts may include: *Alice’s Adventures in Wonderland* and *Through the Looking Glass* (Lewis Carroll), *Treasure Island* (Robert Louis Stevenson), *The Jungle Books* (Rudyard Kipling), *Peter Pan* (J. M. Barrie), *The Secret Garden* (Frances Hodgson Burnett), and fairytales by Oscar Wilde.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 52.18 - Netflix and the Victorian Serial Novel

How does the shape of a narrative change the way we experience it? Beginning in 1836 with Charles Dickens’ first novel, Victorian audiences often read texts as weekly and monthly ‘parts’ rather than as literary ‘wholes’. In 2007, Netflix introduced streaming, and in 2013, the company began producing original content. Instead of waiting a week for the next television episode, audiences could binge watch entire seasons (or more). Both the serial and digital streaming have been called revolutionary, but what does this mean? This course pairs Victorian serial novels and Netflix original series in order to think critically about structure and form. How does the play between serial part and whole necessitate new temporalities, strategies of characterization and narration, and types of suspense? How does binge-watching disrupt or reshape narrative time and sequencing? How have both new forms altered cultural discourses on gender, social consciousness, crime, and politics? How do narratives intersect with other types of seriality, including evolution, reproduction and inheritance, election cycles, and the #MeToo movement? This course emphasizes close reading and watching as well as narrative theory and reception and moves between nineteenth-century novels and twenty-first century series.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 52.19 - Poverty in American Literature, 1861-1925

From accounts about the streets being paved with gold to tales that take characters from rags to riches, success stories form an important part of American literary and national identity. Some eras especially seem to embrace such narratives, such as the “Gilded Age” which owes its name to Mark Twain. Yet the term itself was tongue-in-cheek, and many of the works produced in that “age” are as -- if not more -- concerned with rags than riches. Taking material possessions – or their absence – as a lens through which to examine economic and cultural conditions, these texts don’t work from as much as they work towards a definition of what poverty is and what it does – to individual people and whole classes (with gender and race as salient categories). In this class, we will read key literary works, especially in the genres of Realism and Naturalism, alongside theoretical texts to shed new light on the way in which American Literature portrays, critiques, embraces as well as reimagines the material and cultural conditions of Americans’ lives and livelihoods.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 52.20 - Reading Between the Color Lines in 19th-Century American Literature

How are persons racialized as both Black and White portrayed in nineteenth-century American literature? What cultural or political meanings do interracial experiences convey? And what hopes and fears are aroused by stories of people whose lives straddle a color line defined by slavery, racial capitalism, anti-blackness, border war, indigenous dispossession and genocide? Informed by Black Studies approaches to literary representations, this course examines life writing, short stories, poems, and novels about mixed-race, interracial, and biracial subjects of the nineteenth century, a period of tumultuous change for those misnamed by the racializing logics of the time as mulatto/mulatta, metis, mestiza/mestizo, quadroon, or octoroon. Assignments and readings in the course are designed to inspire students to question how these identities were central in shaping American racial imaginaries, cultural ideologies, material realities, and political possibilities.

Cross-Listed as: AAAS 82.11

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 52.21 - Popular Fiction and the Culture of Empire

The nineteenth century saw an explosion in the diversity and commercial potential of popular fiction. Detective fiction, science fiction, and the Gothic novel are a few of the genres that came into their own during this period, partly as a result of their ability to evoke the fantasies and anxieties of Victorian Britain and its empire. In this course we will think about the relationship of popular texts to

imperial visions of race, sexuality, exploration, evolution, extinction, and invasion. We will also look at the relationship between fiction, the commercialization of publishing and the emergence of new media technologies like photography and film. Writers may include Mary Braddon, H. Rider Haggard, Bram Stoker, H.G. Wells, Robert Louis Stevenson, Arthur Machen, Arthur Conan Doyle, and Marie Corelli.

Degree Requirement Attributes: LIT

ENGL 52.22 - The Last Man: Race, Empire, Disease

What do race and empire have to do with disease? We may have intuitive answers, especially about how xenophobia, anti-Asian racism, and anti-Black policies in the US impacted the spread and severity of the COVID-19 pandemic. In this course we'll encounter the weird and wild literary-historical foundations that will help us explore and support our intuitions. This class is centered around a deep and careful reading of Mary Shelley's apocalypse novel *The Last Man*, in which a world-destroying plague emerges, serpent headed, from the shores of the Nile, and wends its way through Asia and eventually to Europe. Together we will think about how this book reflects and shapes ideas about race and disease in the age of empire, and how these ideas resonate in the present—including how we have lived through, explained, and understood the pandemic. We will punctuate our reading of Shelley with very recent literature by a diverse slate of authors, including Ling Ma's New York pandemic thriller *Severance*, Ilya Kaminsky's long poem of disability subterfuge *Deaf Republic*, and Colson Whitehead's putatively "postracial" zombie novel *Zone One*. Mid-quarter, we'll also do a zombie/pandemic/apocalypse film fest with panel discussions. Main questions will include how stories determine actual outcomes of natural phenomena like disease; the shift from a Romantic to a Victorian sense of self and social connection; contagion as a material and discursive phenomenon; and the roles of labor, class, and global trade in the creation of modern epidemiology. This course may be particularly interesting to pre-medical students.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53 - Topics in Course Group III: Literature of the Nineteenth Century

These courses are offered periodically with varying content: one or more individual writers, a genre, or an approach to the literature of this historical period not otherwise provided in the English curriculum. Requirements will include papers and, at the discretion of the instructor, examinations.

ENGL 53.01 - The Black Arts Movement

This course explores the literature, art, and criticism of the Black Arts Movement. The artistic corollary to the Black Power movement, the Black Arts Movement flourished in the 1960s and 1970s as artists/activists sought to put a revolutionary cultural politics into practice around the country. The Black Arts Movement had far-reaching implications for the way artists and writers think about race, history, authorship, and the relationship between artistic production and political liberation. We'll explore these issues in work by Amiri Baraka, Sonia Sanchez, Larry Neal, and others who forged the traditionally-defined Black Arts Movement in Harlem. We'll also trace the movement's flowering around country, where local political struggles and artistic traditions in Chicago, Newark, Los Angeles, and Detroit shaped distinctive regional variations of the Black Arts Movement. We'll consider how the literature of the Black Arts Movement intersected with other cultural currents of the time, its critics, and the persistence of its themes in contemporary culture.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.04 - Telling Stories for Social Change

Telling My Story for Social Change uses readings in theory and practice (journals, exercises, performance) to explore the difficult themes of Race, Class, and Gender. By practicing listening, speaking and withholding judgment in a group, we build relations based on trust, communication, and dialogue. To do this, we must first identify and dismantle the visible and invisible walls of preconception and bias that surround us, which many times we actively help to create and maintain.

Degree Requirement Attributes: Dist:ART; WCult:CI

ENGL 53.05 - Writing Dublin: On Saints, Sinners, and Rebels

Joyce famously asserted that should Dublin burn to the ground future planners and architects would be able to rebuild it perfectly through the blueprint of the city described in his novel *Ulysses*. In this course we will, via the close reading of its literature and its history, create our own distinct blueprint of Dublin, and attempt to write our own narratives of the city. We will study the ways in which literature contributes to a particular imagined cosmopolitan that is not only necessary to the vital life of the city but also to the cultural identity of its people. Some of the writers to be considered include: James Joyce, Sean O'Casey, Samuel Beckett, Flann O'Brien, Aiden Higgins, Brendan Behan, Patrick Kavanagh, Emma Donoghue, Claire Keegan, Roddy Doyle, Colm Tóibín, John Banville, Eavan Boland, Anne Hartigan, Kevin Barry, Bernard

McLavery, Patrick McGabe, Neil Jordan, Edna O'Brien, Sebastian Barry, Colum McCann, Eilís Ní Dhuibne and Anne Enright. Students planning to enroll in the Dublin FSP are especially encouraged to take this course; all students are welcome.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.06 - Women's Literature and Technologies of Transmission from the Long Nineteenth Century to the Present

In this course, we will explore women's writing and different technologies that transmit those texts from the long nineteenth-century to the present. Our goal is to think about how these works - their genres, forms, circulation, and content - shape impressions of and access to women's writing. Our analyses will traverse a range of works and media from nineteenth-century poetry and serial novels to contemporary electronic editions.

Cross-Listed as: COLT 18.01

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.07 - Black Noir

In this course, we will study black American literature that focuses the noir genre on black people themselves. We will read gritty, urban crime novels that attempt to expose inequities in black American lives and dispel the notion that a descent from whiteness results in blackness. Rather, the black people in these texts exist in darkness because they are living in alienated communities. We shall investigate how the noir genre is altered when "noirs" are the subjects and the authors. In addition to primary texts, the course will engage critical responses to these works.

Cross-Listed as: AAAS 81.07 FILM 47.25

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.08 - Weird Fiction and the Limits of the Human

What makes the dark so terrifying? Why do humans use fiction to invent strange creatures and supernatural threats? How does horror contribute to what it means to be human? What does the weird or the strange tell us about society? This course examines the literary, philosophical, and social aspects of weird fiction, a tradition of literature and genre fiction running from the early nineteenth century up to the present. It examines the most well-known writer of the weird, H.P. Lovecraft, but it also looks at work by Mary Shelley, Edgar Allan Poe, Octavia Butler, Victor LaValle, Kelly Link, Jeff VanderMeer, and others. The course introduces students to the study of genre fiction, theoretical approaches to literature (including posthumanism, psychoanalysis, and ecocriticism), and cultural studies (including critical race theory and feminism). It asks students to consider how weird fiction challenges racism, misogyny, homophobia, and colonialism. While no prior

training in critical theory is necessary, students are encouraged to have some familiarity in analyzing and writing on literature. The class will also offer opportunities for creative efforts and experimental writing.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.10 - Immigrant Women Writing in America

In responding to the obstacles facing America's immigrants -- problems of xenophobia, dislocation, split identity, family disunity and claustrophobia, culture shock, language barriers, economic marginality, and racial and national oppression -- women often assume special burdens and find themselves having to invent new roles. They often bring powerful bicultural perspectives to their tasks of survival and opportunity seeking, however, and are increasingly active in struggles for cultural expression and social and economic justice. We will examine the different conditions for women in a variety of immigrant groups in America, reading in several histories, anthologies of feminist criticism, interdisciplinary surveys, and relevant texts in critical theory, and on the words, in autobiography, poetry, and fiction, of foreign-born women writers. We will read such works as Maxine Hong Kingston's *The Woman Warrior*; Bharati Mukerjee's *Darkness*; Marilyn Chin's *The Phoenix Gone*; Jamaica Kincaid's *Lucy*; and Shelly Oria's *New York 1, Tel Aviv 0*.

Cross-Listed as: WGSS 47.01

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.16 - African Literatures: Masterpieces of Literature from Africa

This course is designed to provide students with a specific and global view of the diversity of literatures from the African continent. We will read texts written in English or translated from French, Portuguese, Arabic and African languages. Through novels, short stories, poetry, and drama, we will explore such topics as the colonial encounter, the conflict between tradition and modernity, the negotiation of African identities, post-independence disillusion, gender issues, apartheid and post-apartheid. In discussing this variety of literatures from a comparative context, we will assess the similarities and the differences apparent in the cultures and historical contexts from which they emerge. Readings include Chinua Achebe's *Things Fall Apart*, Naguib Mahfouz's *Midaq Alley*, Calixthe Beyala's *The Sun Hath Looked Upon Me*, Camara Laye's *The African Child*, and Luandino Vieira's *Luanda*.

Cross-Listed as: AAAS 051 COLT 51.01

Offered: Summer.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

ENGL 53.17 - The Graphic Novel

What happens when normally separate symbol systems like pictures and words converge? This course investigates that question by examining graphic novels and the theoretical insights they have elicited. Discussions will explore issues of autobiography, counterculture, parody, and fantasy. Typical authors include Art Spiegelman, Alan Moore, Chris Ware, Marjane Satrapi, Daniel Clowes, Alison Bechdel and several others. In addition to a presentation, students will write two formal essays and several short responses.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.19 - Faulkner

The course will focus on Faulkner's fiction of the American South: its haunted culture, its racism, its legends. We will read *The Sound and the Fury*, *As I Lay Dying*, *Absalom Absalom!*, *Light in August*, selections from *Go Down, Moses*, and *The Hamlet*. Faulkner's place in the history of modernism will be a continuing concern, as will important critical readings of the novels.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.20 - Indian Killers: Murder and Mystery in Native Literature and Film

This course explores the abundant crime fiction and murder mysteries by contemporary Native American artists. These works imagine a democratized space where colonial violence is avenged, American law is malleable, and intellect triumphs over racism. While most critics applaud such decolonizing efforts, we will ask more difficult questions: do these sensational narratives do real cultural work? Do they suggest that colonial violence begets only more violence? And in the end, who are its true victims?

Cross-Listed as: NAIS 032

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.22 - Science Fiction Studies

This class will examine the development of science fiction as literature, considering the distinctive characteristics of the genre. We will read critical perspectives on scifi that connect it to both modern and postmodern themes; we will think through the politics of scifi, focusing especially on its utopian and dystopian elements; we will articulate the many subgenres of scifi; we will investigate the unusually strong influence of the community of readers on the published texts in scifi. But primarily we will read representative examples, novels, stories, and even some films, from well-known classics to little-known and marginal texts. Authors may include John Campbell, Isaac Asimov, Ursula Le Guin, Arthur Clark, Philip Dick, Octavia Butler, William Gibson, James Tiptree, Jr.,

Stanislaw Lem, Yevgeny Zamyatin, Samuel Delaney, Bruce Sterling, Neal Stephenson, Greg Egan, Ted Chiang, and still others. The class will have an opportunity to shape the syllabus somewhat according to the preferences of enrolled students.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT

ENGL 53.23 - Caribbean Lyric and Literature

This course will examine the work of a variety of Caribbean writers from former British colonies. We will look at several issues that reappear throughout the work of these authors. The class will move from early twentieth century writers like Claude McKay to the important contributions of later writers such as Kamau Brathwaite, Jamaica Kincaid, George Lamming, V.S. Naipaul, Sam Selvon, Olive Senior and Derek Walcott. We will examine the more recent innovations in form, as musical elements are introduced by writers such as Mikey Smith and Kwame Dawes. Each week's readings will be supplemented with seminal critical writings including excerpts from the text *The Empire Writes Back*.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.25 - Contemporary Native American Poetry

Muscogee poet, Joy Harjo has stated that Native Peoples are "...still dealing with a holocaust of outrageous proportion in these lands...Many of us...are using the 'enemy language' with which to tell our truths, to sing, to remember ourselves during these troubled times." This course examines the ways contemporary American Indian and other indigenous poets employ literary gestures of resistance and creativity to outlive the ongoing effects of colonialism. We explore how their poetry contributes to the reclamation and continuity of tribal memory and the regeneration of tribal traditions and communities. Our course includes lyric voices from the reservation, from the city, and from indigenous spaces in diasporic and global contexts. We will examine the combined influences that oral tradition, ritual life, and tribal values have on these contemporary poets. The indigenous poetic voice occupies a unique position in contemporary American poetry, but also in the discourse of settler colonialism. This course traces how the themes of these poetic voices bring forward images of past and contemporary experience, to craft a poetic tradition that is distinctly indigenous. Open to all classes.

Cross-Listed as: NAIS 047

Offered: Summer.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.26 - From More Fun to Fun Home: A History of the U.S. Comic Book

This course examines the development of the American comic book in its historical, cultural, and political contexts. Key topics include: pre-comics visual storytelling and the conceptual problems with seeking such precedents; the explosion of the American comic strip during the Yellow Journalism period; the formats, forms, and genres of the early comic book industry; the rise of DC Comics, home to Superman; artist-run “shops” and the development of romance and horror comics; the 1950s Kefauver hearings and the introduction of the Comics Code; the “Silver Age,” the decline of DC and the rise of Marvel Comics; Underground Comix and Sixties counterculture; censorship and creative rights skirmishes of the 1980s and 90s; and the legitimization of comics as “graphic novels.” Along the way, we will read historical comics (in reprint anthologies) to explore the comics form: visual narration, the development and assignment of distinct styles to different genres, and the historical import of individual creators from Jerry Siegel and Will Eisner to Alison Bechdel and the Hernandez Brothers.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.27 - The African American 1960s

The decade of the 1960’s brought the Voting Rights and Civil Rights Acts to American politics. What did it bring to African American literature and culture? This course will take a year-by-year approach to understanding the artistic and cultural transformations of Black culture during this turbulent decade. Beginning with Lorraine Hansberry’s play *A Raisin in the Sun*, we will examine major social and artistic issues of the decade by reading a variety of fiction, poetry and memoir. Writers we will study may include Amiri Baraka, Robert Hayden, James Baldwin, Dick Gregory, John Williams, Lucille Clifton, Sonia Sanchez and Eldridge Cleaver. Topics may include the rise of African American popular culture (such as Motown and Stax Records), Vietnam, the Civil Rights Movement, feminism and Black nationalism.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.28 - James Baldwin: From the Civil Rights Movement to Black Lives Matter

The 2016 film *I Am Not Your Negro* encourages a new generation to explore the life and work of James Baldwin (1924-1987). Directed by Haitian-born filmmaker Raoul Peck, *I Am Not Your Negro* is a provocative documentary that envisions a book Baldwin never finished by providing insight into Baldwin's relationship with three men who were assassinated before their fortieth birthdays—Medgar Evers, Malcolm X, and Martin Luther King, Jr.

In this course we will interrogate questions of race, sexuality, violence, and migration. Our current political moment encourages the examination of these issues while

Baldwin's life and work provides the ideal vantage point for their investigation. Using *I Am Not Your Negro* as our starting point, Baldwin's life and work will allow us the opportunity to explore transatlantic discourses on nationality, sexuality, race, gender, and religion. We will also explore the work of other writers including Richard Wright, Frantz Fanon, Audre Lorde, and Ta-Nehisi Coates.

Cross-Listed as: AAAS 81.10

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

ENGL 53.29 - Introduction to African American Environmental Thought: The Black Outdoors

The persistence of black life, and blackness as a way of thinking about the organization of both human and nonhuman forms of life, has been absolutely central to the story of the United States and the Americas more broadly. This course provides an interdisciplinary exploration of the writing of thinkers from across the African diaspora, with special emphasis on literary works and criticism centrally concerned with the intersections of black literary studies and African American environmental thought. We will draw on a range of texts in order to wrestle with some of the key concerns of African American writers from the 19th century through the present. Students will be introduced

to a range of methods and approaches to the meta-disciplinary work of black literary studies. By the end of the course, students will be expected to possess a working knowledge of several major themes, figures and moments within the black expressive tradition.

Cross-Listed as: AAAS 35.50

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.30 - Women Writing Memoir

This course examines the autobiographical writing of a variety of women from across the globe. Paying attention to the socio-political contexts within which these women write, we will discuss the ways in which these authors negotiate different worlds while being marginalized along vectors such as race, class, and gender. For this reason, the class is inherently interdisciplinary. Most of the works we will examine have achieved significant critical acclaim, and we will also examine the artistic innovations in these narratives. Texts will include works such as Staceyann Chinn’s *The Other Side of Paradise*, Jackie Kay’s *Red Dust Road*, Julie Marie Wade’s *Wishbone*, Jesmyn Ward’s *Men We Reaped*, Jeanette Winters’ *Why Be Happy When You Could Be Normal?*, Malala Yousafzai’s *I am Malala*, Janet Mock’s *Redefining Realness* and Dorothy Allison’s *Bastard out of Carolina* Dist: LIT. Offered: Fall.

Degree Requirement Attributes: Dist:INT or LIT;
WCult:W

ENGL 53.33 - Gender and Sexuality in Asian American Literature

Focusing on contemporary Asian American literature, film, and popular culture, this course emphasizes a diverse range of engagements with gender and sexuality that disrupts binary thinking on the topic. Through close analysis of cultural texts, students will examine the formation of Asian American genders and sexualities alongside histories of racialization, migration, and labor. Texts may include: Monique Truong's *The Book of Salt*, David Henry Hwang's *M. Butterfly*, R. Zamora Linmark's *Rolling the R's*, Justin Lin's *Better Luck Tomorrow*, as well as episodes of *Battlestar Galactica* and *24*. We will also read critical essays by Gayatri Gopinath, David Eng, Yen Le Espiritu, Karen Tongson, Lisa Nakamura, and Martin Manalansan.

Cross-Listed as: WGSS 36.06

Degree Requirement Attributes: Dist:LIT

ENGL 53.34 - The Wire

Though David Simon's Baltimore cop drama was not the popular sensation when it aired (2002-2008) that "Breaking Bad" or "Game of Thrones" are today, it is widely considered one of the best shows in television history. Over sixty episodes the fascinating and often disturbing series explores a range of social and political issues familiar in contemporary American cities, but it does so with unusual literary ambition and success. In the course, we'll treat the series as a work of literature—asking how its use of plot, narrative, character, conflict, etc. recalls the artistry of Sophocles, Shakespeare and, especially, Dickens. Readings will include texts from each of these authors and all five seasons of the show, as well as analyses of individual episodes.

Degree Requirement Attributes: Dist:LIT

ENGL 53.35 - From Diaspora Practices to Theory

What is an epic and how do its imaginary, cultural, and rhetorical impulses of displacement, unknown cartographies, madness, new identities, conceptual crossroads and translation lead to an eventual theorization of diaspora? The course has three inter-related goals: to study six examples of epic in the Black Diaspora moving from West Africa to the Anglo-Franco-Hispano-phone Caribbean; 2. to relate these texts to diaspora pathogen and food-ways, spiritual practices and converging African and New World histories; and 3. to consider diaspora and chaos theory.

Cross-Listed as: AAAS 88.12

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.36 - Game of Thrones: Re-Imagining Medieval History as an Allegory of the Present

This course is scheduled to coincide with the airing of the eighth (and final) season of *Game of Thrones*, and with Dartmouth Alumnus David Benioff's tenure as Montgomery Fellow. Class participants will devote scrupulous interpretive attention to the six published works in *A Song of Ice and Fire -- A Game of Thrones: A Clash of Kings, A Storm of Swords, A Feast for Crows, A Dance with Dragons, The Winds of Winter*. During the first five weeks of the course, students will be asked to explain what elements of the first of George R.R. Martin's medieval romance, *A Game of Thrones*, Benioff and Weiss revised, or deleted in adapting it to each of the ten episodes in first season of *Game of Thrones*. The second five weeks will be devoted to discussions of each of the ten episodes of the eighth and final season of *Game of Thrones*. In conducting these investigations, students will draw on a trove of library documents -- sagas, medieval romances, travel narratives, histories, legal documents, hagiographies, political tracts, philosophical discourses -- and learn how the aforementioned disciplinary perspectives alter and enrich their understanding of these artifacts.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.37 - Global Comic Strip

The course focuses on comic strips from around the globe as a means of studying critical and literary theory, problems in visual translation, and a range of conventions for expressing caricature and visual humor. Topics will move from classic American comic strips to the Franco-Belgian and Japanese Manga traditions; thereafter, students will examine other traditions both collaboratively and independently.

Cross-Listed as: COLT 40.06

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.38 - Narratives of Un-belonging: Bad Asians, Queer Texts

What makes an Asian/American “bad” and what makes a text “queer”? How does one shed light and offer insight on the other? How might the “bad” and the “queer” name the refusal and failure to assimilate and align oneself with racial capital, settler colonial logics, and reproductive futurity? How might both terms require us to rethink what narratives of belonging look, feel, and sound like and in turn, become the grounds for alternative solidarities, affiliations, and intimacies across lines of minority difference? To answer these questions, we will engage with primarily contemporary Asian/American works of literature, poetry, film, performance, and art that alters, disrupts, and varies Asian/American narratives of migration, assimilation, and upward mobility. Through these works, we will address historical processes of Asian/American racial, gender, and sexual formation by way of the “bad” and the “queer,” as transformative political and aesthetic categories of inquiry that risk failing to fit in, being wrong, and not belonging.

Cross-Listed as: WGSS 51.10

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.39 - Haunted Houses in American Literature

This course takes a tour of haunted houses in American literature and film. What happens when the specter-filled estates of the European Gothic novel are transposed from the wild and windy moors of England into the corn fields of middle America? Or the hallways of the apartment building? Or the bungalows of suburbia? What does it mean to be haunted? What does it mean to be a house? Visiting mansions and plantations, churches and asylums, apartments and cabins, wombs and spaceships, we will consider who—and what—has been haunting the dwelling places of the 20th century and contemporary American imaginary. Authors will include William Faulkner, Toni Morrison, Edgar Allan Poe, and Shirley Jackson.

Offered: Summer.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.40 - The Historical Philosophy of W.E.B. DuBois

This course will examine the historical philosophy of the towering Black scholar and great freedom fighter of the 20th Century. We shall engage in close readings of Du Bois’ classic work, *The Souls of Black Folk* (1903) as well as subsequent essays in his magisterial corpus, especially his classic autobiography, *Dusk of Dawn* (1940).

Cross-Listed as: AAAS 80.10 PHIL 01.13

ENGL 53.41 - Black Love & Its Discontents: Barry Jenkins

How might we think about the shape, tenor, and texture of something like black love, its core principles and practices, in a world where anti-black sentiment serves as a structural logic? In the midst of such unrelenting violence, how have black people managed to love each other, love themselves, love living? What language have they crafted, historically, to describe such an expansive, radical project? For the purposes of this course, we will linger with a wide range of cinematic and literary moments with the aim of framing a much larger conversation about the uses of black art-making as a means through which we might access a critical vocabulary for black feeling; might assert the breaking into the world of a black love that is both resistance and that which exceeds it, love as a sort of black operation, black love as an act of *marronage*. Towards that end, this course will employ the films of contemporary writer and director Barry Jenkins, and place them in direct conversation with a larger constellation of writings within the African American literary tradition. Through our collective investigation of these texts, we will work together toward the elaboration of an aesthetics of black love.

Degree Requirement Attributes: Dist:ART

ENGL 53.42 - Postmodern" Britain: Fictions of Pluralism, Dystopia (and Brexit)

Contemporary Britain can be seen as a divided state: leave versus remain, cosmopolitan urbanism against conservative rural communities, post-imperial malaise and the rise of global Anglophone influence. Britain is also a literary hotbed, home to the Man Booker Prize for Fiction and an arena in which cultural production (and social debates) still take the form of narrative. What is “Britain” at the start of the twenty-first century, in what is ostensibly a post-war, post-imperial, and post-modern era? How do fiction writers respond to the twin pulls of national nostalgia and multicultural, intersectional identities? How do experiments in narrative form and genre speak to the emergence of new social and political formations? How does contemporary British fiction adapt or respond to a longer (and well-established) lineage of UK novelists (from Austen and Dickens to Virginia Woolf)? This course focuses on British fiction published after 1980, including works by authors who identify as Black British, queer, feminist, Muslim, and immigrant. Possible authors include Zadie Smith, A. S. Byatt, Ian McEwan, Sarah Waters, Kazuo Ishiguro, Jeanette Winterson, and Hanif Kureishi.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.43 - Race and Modernity: W.E.B. DuBois, James Baldwin, Lorraine Hansberry

This course will examine the classical works of three towering modern intellectuals: W.E.B. Du Bois, James

Baldwin, and Lorraine Hansberry. We will wrestle with the rich formulations, subtle arguments, and courageous visions of three Black thinkers who continue to speak with power and passion to our turbulent times.

Cross-Listed as: AAAS 21.10 PHIL 01.17

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.44 - Indians in American Literature

Indians are uncanny absences in the American narrative and yet persistent fixtures in our national literature from its origins to the present day. This course examines the pervasive appearance of the seductive, strange, and evolving Indian figure in works by prominent American authors such as Nathaniel Hawthorne, Herman Melville, James Fenimore Cooper, William Faulkner, Ernest Hemingway, Willa Cather, and Toni Morrison. We will explore the shifting and ideological role of the Indian as tragic emblem, savage defender, spiritual ally, and modern foil. We will explore the complicated ways that the literary Indian has served to both authenticate and trouble the nation's founding narratives and desires, and more recently, to stand as a mythical antidote to postmodern crises of value, economics, ecology, and spirituality. We will consider the appeal of such tropes in particular regional and historical contexts, such as the Reconstruction South, as well as racial or ethnic ones, such as the African American appropriation of Indian resistance, nobility, and genealogies.

Cross-Listed as: NAIS 031

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.45 - Storytelling in Novels and Community

This course will focus on the role of storytelling and its importance to community in works of literature and anthropology. Rather than study short stories, we will consider why novels, as longer forms of fiction, nevertheless include storytelling by characters. How does such storytelling work? We will read several twentieth-century novels in which characters telling stories function as means of reforming community. In novels and anthropological study, we will pay particular attention to the ways that storytelling can reconceive identities of individuals and of history, at times opening up both so that persons and history become diverse and extensive. The boundaries of community may also become extensive, resisting containment and refusing to conform to a common cultural identity. We will read Walter Benjamin's essay "The Storyteller" as well as several critical essays focusing on storytelling. Novels will include William Faulkner's *The Hamlet* and *Absalom, Absalom*, Michael Ondaatje's *The English Patient*, and Toni Morrison's *Paradise*. Works of anthropology will include Kathleen Stewart's *A Space on the Side of the Road: Cultural Poetics in an "Other" America*.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.46 - New York and the Metropolitan Imagination in Twentieth-Century American Jewish Literature

This course will offer an introduction to American Jewish culture by focusing on the perception of New York City among successive generations of Jewish writers, performers, and cultural activists. Although our focus will be primarily on literary sources, in English and translated from Yiddish, we will also consider memoirs, political documents, journalism, music, and film. The topics we will consider include: How are the ambivalences of immigration expressed among Jewish immigrants writing, alternately, in English or in Yiddish?

\f

How does the city provide new modes of expression for Yiddish writers?

How does music offer a venue for Jewish performers to enter an American "mainstream" while preserving an audible sense of Jewish difference?

How do Yiddish writers address the Holocaust, and what challenges emerge when translating Yiddish into English after the Holocaust?

How do post-War Jewish intellectuals, the children of immigrants, critique their society and influence the development, and denouement, of American liberalism? How does the "sexual revolution" challenge notions of a distinct Jewish ethnicity and ethos, and what strategies do Jewish authors develop to critique changing mores and morals from a specifically Jewish perspective?

How does an avant-garde Jewish theatre contribute to a contemporary understanding of American culture as multi-cultural, hybrid, and hyphenated?

Cross-Listed as: JWST 021

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.47 - African Diaspora Women Writers

This course will be organized around four themes prevalent in contemporary portrayals of Black women across the African diaspora. The themes, *Body*, *Voice*, *Memory*, and *Movement* provide a center from which discussions of agency, representation and counter-narrative can be situated within a larger discourse of canon formation. We will explore various parts of the United States and the Caribbean through analyses of literature and visual culture, paying particular attention to shifting dialogues of culture and identity. Among the central questions posed will be: What constitutes a feminist ideology in black women's literature? How are images of subjection and victimization re-appropriated by Black women writers and image-makers and utilized for their own empowerment? What are the penalties inherent when a Black woman "comes to voice" in the arena of self-representation?

Cross-Listed as: AAAS 67.06 WGSS 66.07

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.48 - Poetry for the People

The central concern of this class is the historical relationship between the social lives of everyday people and U.S. American poetics, with a special emphasis on what June Jordan once termed the “difficult miracle of Black poetry in America.” How does poetry help us to know one another? And how might we better understand the particular role of poetry, of *poesis*, for those historically barred from the very practice of reading or writing, from ownership (even of one’s own body), and various generally recognized forms of belonging? For the purposes of this course, these will be some of our animating questions.

As a group, we will study the works of Audre Lorde, Toni Morrison, Tongo Eisen-Martin, Jericho Brown, and Claudia Rankine, among others. Largely toward the end of elaborating, in concert, a working theory of social poetics, a poetics of sociality, a new way for us to be together in a cultural moment marked by distance, as well as the disintegration of the public commons. In the midst of this ongoing catastrophe, this state of emergency and emergence, this course will seek to chart a way forward using the instruments left to us by luminaries both dead and living, a cloud of witnesses beckoning us toward a future with room enough for all of us to flourish.

Cross-Listed as: AAAS 35.60

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.49 - Graphic Medicine

What does sickness look like? What do personal picture-stories of illness and recovery tell us that traditional medical narratives cannot? In this course, students will read graphic narratives depicting first-hand experiences of physical (dis)ability, mental illness, disease, and neurodivergence. Discussion and readings will explore autobiography, word-image theories and comics analysis, as well as competing conceptions of illness and recovery within and across primary texts. Other readings will include scholarship on the ethics of storytelling and patient-centered perspectives on medicine. Authors may include David B., Ellen Forney, Art Spiegelman, Cece Bell, Harvey Pekar, Frank Miller, and others.

Cross-Listed as: COLT 49.09

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.50 - Black Testimony

This lecture course surveys testimonial forms produced throughout the African diaspora. Along the way, we will

ask a number of questions: What constitutes an act of witness? Who are its addressees, and to what does it testify? On whose behalf might it speak? We will encounter diverse examples of Black testimonial expression, including works of autobiography, fiction, ethnography, legal theory, literary criticism, visual art, film, and musical performance. These works will be drawn from the United States, Canada, Brazil, Haiti, South Africa, Senegal, and Sudan. Students will also have the opportunity to produce a creative testimonial project.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.51 - The Idea of Black Culture

The Idea of Black Culture offers a reading of conceptualizations of the subject of black culture across a historical time line that begins with W.E.B. DuBois’s *Souls of Black Folk* (1903) and proceeds through successive periods of black cultural apprenticeship in the geopolitical context of the Americas. Those eras may be characterized according to four broad rubrics or temporal themes as follows: 1) the Pan-African movement, pursued as a practice by black activists at the turn of the twentieth century and after the end of WWI; 2) the era of decolonization and the mounting of the Civil and human rights campaigns in the United States, the Caribbean, and independence movements on the Sub-Saharan African Continent, which events share the global context of the “Cold War” (from the Marshall Plan to the collapse of the Berlin Wall, 1989, and the dismantling of the Soviet Union, 1991); 3) the birth of the Black Studies movement (alongside the resurgence of black nationalism) and the development of the new epistemologies of the post-‘sixties and beyond, and finally 4) the emergence of the concept of the African Diaspora and the post-race/post-colonial thematics of the late twentieth-early twenty-first century, marked by the presidency of Barack Obama. Each of these eras of human and social engagement has engendered its own distinctive work on the idea of black culture. This seminar will examine some of those ideas by analyzing selective texts by W.E.B. DuBois, C.L.R. James, Aimé Césaire, and Frantz Fanon. The course will be taught in two halves, beginning with the seminal texts of canonical figures like Du Bois, and proceeding to a critical inquiry into the projects of contemporary scholars and theorists that will include selective work by Saidiya Hartmann, Fred Moten, Nahum Chandler, Denise da Silva, and Frank Wilderson, as well as other representative figures of the schools of Afro-Pessimism and Critical Race Theory.

Cross-Listed as: AAAS 35.03

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.52 - Living a Feminist Life: Archive, Text, Action

This class will examine how “knowledge” about women’s, femmes’ and non-binary people’s lives have been constructed in text, and how this knowledge determines

and impacts the choices we have and make about loving, working, thinking, and living. Over the first six weeks we'll do a deep reading of Sara Ahmed's book, *Living a Feminist Life*, putting her ideas in conversation with thinkers like Jamaica Kincaid, Audre Lorde, Gayatri Spivak, Valerie Solanas, Angela Davis, Jose Muñoz, and bell hooks. In the second half of the course, we'll work together *through discussion and student suggestions to construct a corpus of women's and femmes' life "writing"*—TV, poetry, music, journalism, memes, theory, and memoir—to discover how image and the written word continue to shape feminist lives, and how femmes' and non-binary people's lived experience in turn shapes feminist, pro-femme, and queer discourse. Through weekly short writing exercises, students will consider how their own intimate relationships—with parents, partners, children, neighbors, or friends—can become sites of intersectional feminist activism, and sources of strength and knowledge to be carried into the broader world of public engagement and intervention. In the final weeks of the course, we will think seriously about the relationship between learning and living, and collectively interrogate the boundary between writing and living as modes of feminist praxis.

Cross-Listed as: WGSS 66.35

Offered: Summer.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.53 - Modern American Women Poets

This course focuses on the emerging counter-tradition, within American modernism and within the larger tradition of poetry in English, of American women poets in the twentieth century. Taking our cue from Adrienne Rich, who ambiguously titles one book of essays *On Lies, Secrets and Silences* (is she for or against?), we will follow debates about what makes it possible to break previous silences—and to what degree and in what ways it is useful or satisfying to do so. Topics within this discussion will include sexuality, race, illness, literary modes, female literary succession, and relations with the literary tradition. We will read in the work of eight or nine poets and recent critical and theoretical writings, with some attention in the first weeks to important female and male precursors. The syllabus will include such writers as Edna St. Vincent Millay, HD, Gertrude Stein, Elizabeth Bishop, Gwendolyn Brooks, Sylvia Plath, Anne Sexton, Audre Lorde, Adrienne Rich, Marilyn Hacker, Louise Gluck, Rita Dove.

Not open to students who have received credit for ENGL 55.01.

Cross-Listed as: WGSS 47.03

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.54 - Disability and Madness in African American Literature and Film

Disability and madness are often overlooked analytic and lived experience in African American Studies and African American criticism, though recent work in Black disability studies is shifting this. The goal of this course is to pull disability and madness to the center of course readings to understand the complexities of Black life, such as: grief, sexuality and gender identity, geography, and the impact of incarceration and institutionalization. Students will be asked to approach canonical texts and less familiar texts for messier readings, unraveling(s) and ravings that complicate Black life. Likewise, we will watch film adaptations that also represent disability and madness on screen. Because disability and madness are recurrently represented visually, as is race, this course will trace representation from the page to the screen as part of a deeper understanding of how disability and race become co-constituted in American culture. Lastly, we will ask, again and again: what does disability and madness look like in literature? What images, language, etc., are used to represent disability and madness as it intersects with Blackness? And finally, what things are made possible through a disabled and mad lens? How are freedom, injury (and healing), and salvation better imagined through disability and madness?

Cross-Listed as: AAAS 35.02 WGSS 66.27

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 53.55 - Theater in the Barrio: Introduction to Chicano Theater

Arising from a climate of progressive social movements during the 1960s and 1970s, such as protests against the Vietnam War, the United Farm Workers (UFW) mobilizations, the Chicana/o Movement, Civil Rights Movements in the US, and liberation movements in Latin America, there came a need for a uniquely Chicana/o artistic expression. Teatro Chicano [Chicano Theater] would serve as a tool to vindicate the cultural identity of the agricultural Chicana/o workers, challenge power relationships, and unite and mobilize its working-class audience. El Teatro Chicano's capacity to be in direct contact with its audience, speaking in the people's language, its accessibility to artists and audiences who could quickly set up and dismantle the stage and scenery on a truck's flatbed, and the performers' ability to shape their acting and dialogue in response to the audience's reaction/interaction made it the quintessential artistic expression of the Chicana/o movement.

This course begins by analyzing how elements of the European popular theater tradition, such as *Commedia dell'arte* and *agitprop*, were reimagined by the Teatro Chicano artists while emphasizing the influence of the Mesoamerican oral tradition in their artistic philosophy, playwrighting, and performance. In learning about the

historical background of the Teatro Chicano, we will discuss how the plays of the TENAZ (Teatro Nacional de Aztlán) companies interrogate the role of art in the US and international class struggle, how Indigenist philosophy and decolonial frameworks inform Chicana/o esthetics, and how plays perpetuate *machista* (male supremacist) tropes or defy them through Chicana feminist outlooks. Through the analysis of selected works that represent the cultural production and philosophies of Teatro Chicano, such as plays, *teatro* memoirs, music, ephemera, and film, we will explore the themes of Chicana/o subjectivity, aesthetics, performance, decolonization, feminism, class politics, and anti-imperialism.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.56 - Female Monstrosities

This course will explore how the concept of the female monster has been foundational to the construction of gender as well as of race, class, and sexuality. We will begin in Ancient Greece by analyzing female monstrosities like Medusa and Medea, as well as the Lilith figure from the Hebraic tradition, in order to then explore Black feminist reworkings of these figures. Particular attention will be paid to the figure of the witch and to the female vampire, as these figures travel from the heart of Europe to its peripheries in the modern world, to what Katherine McKittrick has termed the “demonic grounds.” The course will cover texts by authors that include Maryse Condé, Toni Morrison, Jewelle Gomez, and Octavia Butler. We will explore how these authors offer a feminist embrace of monsters as an imaginative way to combat heteropatriarchy as well as white supremacy.

Cross-Listed as: WGSS 37.01

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 53.57 - Black Speculative Worlds

This course will explore futuristic speculative worlds as they are imagined by major Black women writers in the field of science fiction and fantasy, specifically focusing on works by Octavia Butler, Nalo Hopkinson, and N.K. Jemisin. We will explore utopias/dystopias and post-apocalyptic alien worlds in order to interrogate the ways in which they reflect and comment on our own human condition. Understanding each literary text as a thought experiment in its own right, we will unpack various themes associated with the reconfiguring of the constructs of race, class, gender and sexuality as well as Black women’s reproductive rights and politics. We will closely analyze alien invasion contagion narratives that comment on the histories of slavery, settler colonialism, and imperialism, and that speak to the operations of white supremacy. Lastly, we will examine how a revisionist mode of writing functions as an essential part of Black feminist speculative thought.

Cross-Listed as: AAAS 35.05 WGSS 66.31

ENGL 54 - Topics in Theory in Course Group IV: Criticism and Theory

Special topics classes in course group IV.

ENGL 54.01 - Shakespeare Adaptations

What happens when movie writers and directors adapt Shakespeare’s plays for the screen? How does an audience’s awareness of a literary precedent influence reception? What kinds of adaptations do we value and what role does their faithfulness to originals play? This course will look at twelve adaptations of major plays that most consider somewhat radical (e.g. *Chicken Rice War*; *Omkara*, *Ran*, *Forbidden Planet*, *Scotland, P.A.*) exploring the conceptual and cinematic strengths of the adaptations, as well as what their attempts to preserve or recast elements of Shakespeare’s plays reveals about the energies of the originals. Each film should thus prove a site of discussion in its own right, as well as an interpretive text that both critiques and argues the merits of the source text. Students can expect to read seven plays and see at least two adaptations of each, writing short responses to each play and film on canvas. Course Group IV

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 54.02 - Arts of Laughter: Comedy and Criticism

What makes us laugh? Does laughter have the power to change the world? Can comedy transform society? These are only some of the questions that this course addresses. This course examines literary works, stand-up comedy, rom-coms and classic Hollywood comedy, and sit-com television (among other comedic forms) in order to consider the capacity for comedy to criticize the status quo and effect social change. It also investigates theoretical approaches to comedy and laughter, such as Sigmund Freud’s psychoanalytic interpretation of jokes and Henri Bergson’s philosophy of laughter, which ask why we laugh in the first place. Literary works and films may include Shakespeare’s *Twelfth Night*, Samuel Beckett’s *Waiting For Godot*, Charlie Chaplin’s *Modern Times*, and Judd Apatow and Amy Schumer’s *Trainwreck*. We will also discuss stand-up performances by the likes of Aziz Ansari, Louis C. K., and Margaret Cho; sit-com programs including *I Love Lucy*, *Blackish*, and *Fresh Off The Boat*; and skit shows such as *Saturday Night Live* and *Chappelle’s Show*. Students will have the opportunity to not only write about comedy but also produce and perform comedy. *Enrollment limited to 30.*

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 54.03 - Young Adult Literature

This course explores the genre of young adult fiction in the 20th and 21st centuries. While the course will begin with a brief consideration of the conventions and early history of the genre, most of the course will examine post-1970s (mostly American) young adult novels. We’ll trace the

evolution of the genre in relation to ideas of racial innocence, sentimentality, consent, queer childhood, and revolutionary girlhood, and position the novels within historical contexts such as the rise of mass incarceration, settler colonialism, fantasies of post-racial politics, and environmental disaster. At the end of the course, we'll consider how young adult novels have created not just reading but creative communities, and explore the kinds of fan productions that have emerged in relation to young adult novels. The course will include critical and creative assignments. Texts may include *The Hunger Games*; the *Harry Potter* series; *Are You There God? It's Me Margaret*; *The Outsiders*; *The Astonishing Life of Octavian Nothing*; *Vivian Apple at the End of the World*; *Fangirl*; *Aristotle and Dante Discover the Secrets of the Universe*; *Absolutely True Diary of a Part-Time Indian*; *The Fault in Our Stars*; *Ship Breaker*; *Long Division*; *Monster*; *Akata Witch*; *Make Your Home Among Strangers*.

Cross-Listed as: WGSS 51.09

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 54.04 - Beautiful, Ugly, Cute, Dumpty: An Introduction to Aesthetics

This course is an introduction to literary aesthetics, beginning with Immanuel Kant's *The Critique of Judgment* (1790), a foundational text of Western aesthetics which provocatively and systematically explains how people enjoy and judge art, and why they discuss it together. Careful analysis of Kant's *Critique* will be followed by revisions and extensions of his theory of taste in 20th and 21st century aesthetics and literary theory. This includes Austin, Genette, Adorno, Zangwill, Ngai, among others.

Offered: Summer.

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 54.05 - Animal Studies: Theory, Literature, Politics

The emergent field of animal studies tackles pressing philosophical and ethical questions about who we are as a species. How are the distinctions between "animal" and "human" understood, destabilized, and/or deconstructed? What does it mean to recognize animals as sentient beings endowed with their own agencies rather than objects for use by humans? This course provides an introduction to animal studies, including such questions as inter-species communication, extinction, animal rights, ecologies, and species identities. Students will study texts across the interdisciplinary field by such authors as Lacan, Derrida, Deleuze, Haraway, Wolfe, Chen, and Moore, as well as foundational texts by Darwin, Montaigne, and Freud. As a class, we will discuss how theoretical perspectives on animals alter our readings of literary texts—including fiction by such authors as Rudyard Kipling, J. M. Coetzee, Karen Joy Fowler, Virginia Woolf, Yann Martel, and

Franz Kafka—even as we raise contemporary concerns about climate change, extinction, and species justice.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 54.11 - Poetry and Poetic Theory

In this course, we will primarily examine theories of poetry, relying mainly on *The Norton Anthology of Criticism and Theory and Poetry in Theory, 1900-2000* (Blackwell). These volumes provide a rich, comprehensive overview of poetic theory from its beginnings in Greek antiquity virtually to the present, covering Anglo-American, Continental, and other theorists. No single poetry anthology will be used, but poetic examples will be studied at every stage, generally posted on Blackboard. We will consider the "philosophy" of poetic composition in different historical periods and contexts, and will examine the continuing interplay between poetic theory and practice. The point of the course will be to get a grip on ways in which people have thought about poetry from the earliest times to the present, and to consider the sometimes antagonistic interplay between theorizing about poetry and writing it.

Degree Requirement Attributes: Dist:LIT

ENGL 54.13 - Digital Game Studies

This course explores digital gaming. Reading academic and popular texts, we will situate digital gaming in relation to new media, visual, and literary studies. Class discussion will focus on outstanding problems in digital game studies: Where do the histories of technology and gaming meet? How do games change players and how do games shape culture? What about designers and programmers? In what ways are digital games playful and what aspects of them are expressive? What is the future of gaming? Of course this class will also study particular games, and, in addition to writing academic essays, students will invent individual and group projects in the game domain.

Degree Requirement Attributes: Dist:TAS

ENGL 54.15 - History of the Book

This course examines the book as a material and cultural object. We'll consider various practical and theoretical models for understanding the book form and investigating the materials, technologies, institutions, and practices of its production, dissemination, and reception. We'll focus primarily on the printed book in Western Europe and North America, but we'll also discuss the emergence of the codex (book), medieval manuscript books, twentieth and twenty-first century artist's books and the challenges posed by digitality to the book form. The readings for the course will be balanced by frequent use of exemplars drawn from Rauner Library and practical experience setting type in the Book Arts workshop.

Cross-Listed as: COLT 40.01

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 54.16 - Literary Classics

Hamlet, Paradise Lost, Pride and Prejudice, Wuthering Heights, The Waste Land: These texts are among the cornerstones of a literary canon that still exerts enormous influence even as it is intensely contested. How does a play, a novel, or a poem become a “literary classic”? In this course, we will read a series of indisputably “great” texts in order to understand the complex forms of evaluation (aesthetic, political, moral, and commercial) that both underpin and revise notions of canonicity. Drawing on theoretical work by Gauri Viswanathan, Pierre Bourdieu, Theodor Adorno, and Pascale Casanova, we will also consider the varied institutional contexts (from the colonial civil service to the liberal arts classroom, from small presses to multinational publishers, from *Masterpiece Theatre* to contemporary Bollywood) that govern these processes.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 54.17 - Psychoanalysis and Philosophy

This class will stage an encounter between psychoanalysis and philosophy, introducing students to both fields by placing them side by side. Drawing on the complementary expertises of the two-person teaching team, weekly readings will pair at least two texts, including one from each primary field, to illuminate similarities and differences between psychoanalytic theory on the one hand and philosophical concepts on the other, noting where appropriate the mutual influence of the two fields. Because psychoanalysis is also a clinical practice, this interdisciplinary encounter raises the question of the practical dimension of philosophical thought, and we will ask about philosophy’s potential impact on lived experience, as well as whether the practice of psychoanalysis remains a valuable mode of treatment or an aid to everyday living. To help organize the broad questions at the intersections of psychoanalysis and philosophy, we will divide the class loosely into four thematic units, the unconscious, Oedipus, interpretation, and transference. Class will proceed mostly through guided discussion; assignments will include reading responses plus midterm and final papers, with opportunities for additional credit so that students might pursue their own interests within the course subject matters.

Cross-Listed as: COCO 034

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 54.40 - Literary Culture in an Age of Digital Distraction

This course is organized around two main projects that will investigate the interesting and compelling ways that “traditional” forms of literacy are evolving to coexist with

digital and social media. First, students will choose a contemporary practice, tool, or genre in which print and digital media have converged (e.g. book lists on Goodreads, e-book hardware, “Twitter fiction”), exploring what if anything is “new” about it. Next, student groups will design and prototype a digital technology that reimagines the ways that literature is produced or consumed in the context of digital media. This project will accommodate students with varying levels of technical expertise, though no programming experience is presumed. Throughout the course, readings on the history of media, the ethnography of literacy, and human-computer interaction will guide both our writing and production.

Degree Requirement Attributes: Dist:ART

ENGL 54.41 - Critical AI

While the rapid improvement in generative AI over the past two years, especially as seen in interactive tools like OpenAI’s ChatGPT and Google’s Bard, caught many people by surprise, these technologies have a long history. The course takes up artificial intelligence as not a single technology or even a class of technologies, but rather a discourse concerned with the automation of perception (image, sound, text) originating in the mid-twentieth century. Critical AI examines the beliefs, theories, methods, and practices of machine learning as well as the social and cultural significance of these transformative technologies. Giving special attention to the intersection of humans and AI, we will examine the inputs and outputs of machine learning and the ethical issues related to training and using these tools. The large-scale AI projects of the present would not be possible without what critics have called digital dispossession and the extractive function of new forms of capital. In this course we will apply cultural critique to artificial intelligence while learning the fundamentals of how these technologies work and how they fail.

Offered: Winter.

Degree Requirement Attributes: Dist:TAS

ENGL 54.42 - Literature and Theory of the Supernatural

The wager of this class is that telepathy, ghosts, the afterlife, and even gods are real. That is, when people speak of these things, what they are describing is not strictly speaking imaginary, nor only metaphorical, conventional, rhetorical, or illusory. Something happens—to a body, to a community, or to an entire society—that cannot be explained by the preexisting frames of reference of human experience. In other words, the real of the supernatural is not intelligible just like that; hence, it is not a matter of naively “proving” the existence of ghosts, etc (though we will consult the work of psychical researchers). Instead, the occurrence of the supernatural requires us to more carefully define what it means to exist in the first place.

Degree Requirement Attributes: Dist:LIT

ENGL 55 - Special Topics Classes with No Course Group

Special topics classes with no course group.

ENGL 55.01 - Modern American Women Poets

This course focuses on the emerging counter-tradition, within American modernism and within the larger tradition of poetry in English, of American women poets in the twentieth century. Taking our cue from Adrienne Rich, who ambiguously titles one book of essays *On Lies, Secrets and Silences* (is she for or against?), we will follow debates about what makes it possible to break previous silences--and to what degree and in what ways it is useful or satisfying to do so. Topics within this discussion will include sexuality, race, illness, literary modes, female literary succession, and relations with the literary tradition. We will read in the work of eight or nine poets and recent critical and theoretical writings, with some attention in the first weeks to important female and male precursors. The syllabus will include such writers as Edna St. Vincent Millay, HD, Gertrude Stein, Elizabeth Bishop, Gwendolyn Brooks, Sylvia Plath, Anne Sexton, Audre Lorde, Adrienne Rich, Marilyn Hacker, Louise Gluck, Rita Dove.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 55.05 - Book Arts Studio Seminar

A studio-based seminar in which students explore the relationship between text, image, and form through letterpress relief printing techniques and the creation of book structures. Lectures and readings will familiarize students with historic and contemporary literature on the book form. Students will study exemplars from the extensive holdings of Rauner Special Collections and the Sherman Art Library in historical hand press and contemporary artist books. Limited enrollment. Supplemental Course Fee.

Degree Requirement Attributes: Dist:ART

ENGL 55.06 - Reading and Publishing the Literary Magazine

The course offers students instruction and opportunities in literary journal operations from the editorial process to defining and maintaining the journal and its agenda. Ethical questions of blind review and the diversity of contributors will also be discussed, as well as issues of promotion and social media and the use of other digital tools. Students will gain invaluable experience in publication systems, copy editing, professional communications, and marketing. Field trips to other campuses or events to meet with representatives of similar student-run publications will be a means of cultivating not only new ideas but also a developing sense in the students

of professionalism and community. Enrollment is limited to 15.

Degree Requirement Attributes: Dist:ART

ENGL 55.07 - The Arts of War

Walt Whitman said of the American Civil War: "the real war will never get in the books." This course will raise core questions about how war is remembered and represented through text, performance, and visual culture. Our questions will be anchored in concrete case studies but will also raise far-ranging philosophical, ethical, and historical questions that examine instances of war in relation to the aesthetics of war.

Degree Requirement Attributes: Dist:INT or ART

ENGL 55.08 - Neuroscience and the Novel

Over the past few years it has been suggested that since the 1990s there has been a major shift in how novels represent characters and consciousness. This new type of novel has been called the "neuronovel." This course takes up questions at the intersection of psychology, neuroscience, and literary studies to explore this thesis. We'll read contemporary work by neurologists and psychologists (Damasio, Sacks, Gazzaniga, Schacter) as well as their late-nineteenth and early-twentieth century precursors (Freud, James, Brentano, Beard) alongside a wide range of literature that allows us to think about the intersection of race, gender, and sexuality with the universalist claims of various scientific and pseudoscientific accounts of the self. Key literary texts include Shelley, McEwan, Lethem, James, Poe, Woolf, Roth, and Wright.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 55.09 - Hope? How Feelings Shape American Culture

Barack Obama defined hope as a culturally transformative feeling that required "audacity." Yet scholars have questioned hope's ability to bring about change, leading Lauren Berlant to speak of "Cruel Optimism." Hope, Optimism, Audacity, Cruelty: how does affect impact American culture? We will develop frames for thinking historically and analytically about feeling's influence on class, gender and ethnicity. Students will develop final projects that integrate imagination into an analysis of the questions hope raises.

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 55.11 - Hamilton: The Revolution as a Work of Art

In *Hamilton: The Revolution* (the book of annotated lyrics and account of the musical's production), Lin-Manuel Miranda and his collaborators create two frames for their work's significance. One is the historical American Revolution of the 18th century, which the musical rereads via the figure of the orphan-immigrant; the other references

their own musical, which they describe as an act of cultural revolution in its engagement with the racial politics of the early millennium. What does it mean to read revolution as a work of art, and *Hamilton* as its artistic reinterpretation? In this course, we will develop frames for thinking analytically about *Hamilton's* artistic engagement with class, gender and ethnicity in the historic past as well as our own moment.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ENGL 55.12 - Dartmouth Fictions

This is a course about the campus novel and literary representations of Dartmouth College. Dartmouth, as both a setting and object of analysis, has appeared in numerous cultural objects as alumni, students, and those looking in from the outside have reflected on the intellectual and social life of the College. Many major cultural works—from Ralph Waldo Emerson’s “Literary Ethics” to August Wilson’s *King Hedley II*—were written or first performed at Dartmouth. But the College’s campus and its students have also inspired countless fictional and autobiographical works. Throughout the term, we’ll examine the myriad ways in which Dartmouth has been represented by reading a selection of novels and memoirs set on our campus. We will also read a selection of poetry and examine digital productions depicting Dartmouth and Dartmouth students, including memes and textual forms of social media. Finally, we will visit Rauner’s special collections to examine primary materials, including artifacts and texts from the College’s past, to produce a research paper that locates a text within its historical context.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 55.13 - South African Literature in English

This course will examine works by South African men and women of various ethnicities who have chosen to write in English since the publication of Olive Schreiner's *Story of an African Farm* in 1883. This richly diverse literature will be tracked through the cultural and political history of South Africa with primary emphasis on the twentieth and twenty-first centuries before and after the fall of Apartheid. Confrontation between black militancy and white oppression characterizes much writing and social interaction in South Africa before the fall of Apartheid, but complex forms of multi-ethnic coexistence and interchange have also been evident since the first white settlement of the country in 1652. Recent work by J.M. Coetzee and Zakes Mda among others explores the difficult, unmapped terrain of post-Apartheid South Africa. Works by the following writers may be included in the course: Olive Schreiner, Solomon Plaatje, Bessie Head, Nadine Gordimer, Zoe Wicomb, Alan Paton, J.M Coetzee, Njabulo Ndebele, Athol Fugard, Nelson Mandela.

ENGL 55.14 - Native American Oral Traditional Literatures

Native American oral tradition constitutes a rich and complex dimension of the American literary heritage. This course will examine a range of oral genres from several time periods and tribal sources. Oral traditions and the textual sources into which they are anthologized provide valuable insights into the nature of human creativity. They are also full of unique hermeneutical challenges. This course will include some contemporary theoretical approaches to orality and the metaphysics of the voice to unpack some of these questions.

Degree Requirement Attributes: LIT

ENGL 55.15 - The Merchant of Venice: The Jew in the Protestant Imagination

This seminar is an interdisciplinary study of Shakespeare's *The Merchant of Venice* that will examine the history of Christianity's attitudes toward Judaism, the fate of Jews within Christian Europe, especially in England prior to the expulsion of the Jews in 1290, and the effect of these histories on the composition of the play, the representations of its main characters, particularly Shylock and Portia, and its reception through the centuries, with attention to its role in modern attitudes toward Jews and toward anti-Semitism. We will approach the material as scholars of history, literature, and religion. We expect to attend closely to the gendered and racialized representations of Jewishness and Christianness in the play and in English culture more generally. The impact of the play will be examined with particular reference to modern German and English literary traditions. We will also examine some major developments in the staging of the play, with particular attention to Yiddish versions, Israeli productions, and Nazi-era German stagings, as well as several film versions. A selection from the major critical literature on the play will be studied.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 55.16 - Prehistoric Worlds: Science Fiction and Geological Time

Ever since natural historians like Charles Lyell and Charles Darwin radically expanded the time scale of Earth’s history, modern writers and filmmakers have looked for new ways to mediate “deep time.” This course is an introduction to their work. During the semester, we discuss the techniques they use to portray the passage of geological time. We also question the political implications of these representations—what they tell us about society in the present. Finally, we consider deep time as an inspiration for new philosophical concepts. The course has three sections: “Deep Time and Early Science Fiction”; “Cold

War Countercultures”; and “The Anthropocene.” In addition to essays and exams, we complete a field project about the Harvard Museum of Natural History.

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 55.17 - Disability and Literature

This course introduces students to an emerging canon of literary autobiography and criticism devoted to the experience of disability. Critical works read in this course will cover such issues as physical access, ableism, neurotypicality, deaf political activism, and intersections of disability and other categories of identity such as race, class, gender, and sexuality. Major authors and texts to be read include Temple Grandin, Oliver Sacks, Thomas Couser, Simi Linton, Rosemarie Garland Thomson, *Bartleby*, *Of Mice and Men*, *Autobiography of a Face*, and *Curious Incident of the Dog in the Night*.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 55.18 - Research As Picture Books

In this course, students will convert cutting-edge scholarship by a select group of participating Dartmouth researchers into picture books for children, complete with characters and stories (even when the research primarily involves scientific data). Students will learn the basics of picture book composition and design by analyzing classics in relevant sub-genres (there’s a bird laboratory at Cornell that puts out a regular series of picture books that will also be useful as models). In collaborative teams and working closely with the professor and their assigned researcher, students will pitch and defend their ideas, produce mock-up picture books, and present other documents simulating the professional experience of seeking publication for their projects.

Degree Requirement Attributes: Dist:ART

ENGL 55.19 - Maroons to Marley: Jamaica's Role in Worldwide Revolutions from Slavery to the Present Day

In 1738, a hundred years before legal emancipation came to England’s New World slave colonies, Jamaica’s Maroons forced the colonial power to sign a treaty granting sovereignty to Maroon communities across the Caribbean island. As the first Africans in the New World to achieve this feat, Maroon warriors directly and indirectly influenced abolitionist and revolutionary movements throughout the Americas—including, of course, revolts in Haiti and the United States. These warriors continued to inspire the revolutionary actions of other oppressed and/or enslaved individuals for generations, and indeed, a revolutionary ethos pervades Jamaican culture and artistic production from the colonial period to the present moment. This course traces the impact of “Jamaican” revolutionary figures on other revolutionary figures and events worldwide. Moving chronologically, from colonialism to

the present day, the course examines influences such as African/Jamaican Maroon *leaders* direct impact on other revolutions throughout the Americas; Mary Seacole’s exchanges with and impact on Florence Nightingale during the Crimean War; Marcus Garvey’s impact on the Harlem Renaissance and the Rastafari religion; Claude McKay’s revolutionary impact on vernacular poetics and on the “Red Scare;” Louise Bennett’s mid-twentieth century revolutionary, feminist, vernacular poetics and her impact on female performers in the Americas, Europe, and Africa; Bob Marley and Damian Marley’s impact on politics and revolutionary movements in Liberia and Ghana; and finally, the impact of Staceyann Chin’s outspoken poetics on LGBTQ rights in the Caribbean and in other marginalized African diasporic communities.

ENGL 55.20 - The Case Study: Crime, Medicine, and Modern Society

What does Sherlock Holmes have in common with Sigmund Freud? What unites binge-worthy Netflix fare with Charles Dickens? The course investigates the case study, which plays a crucial role in criminal, legal, and medical contexts alike. While case studies are certainly familiar from tv series or podcasts, the form has a rich literary history. We will survey works from a range of national traditions, examining the features of the case that enable it to operate in and across multiple genres and fields. Our discussions will center on questions of epistemology and form, as we ask *what kind* of knowledge cases transmit and *how* they transmit it. Do they depict exceptional phenomena, or do they seek to delineate the qualities that are representative of a given phenomenon? Who has the authority to tell stories about whom? Why are cases so often relayed in serial form?

Cross-Listed as: COLT 39.04

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 55.21 - Epidemics: Vortex of Fear and Wisdom

This course will focus on learning difficult lessons of experiential wisdom from global Infectious Disease Epidemics 1982-2020, including through on-the-ground experiences, literature, and documentaries. Students will reflect and write about insights that may apply to their own lives.

Epidemics are characterized by fear. Fighting epidemics requires the courage to act in the face of that vortex of uncertainty and fear, the empathy and compassion to understand and feel motivated to alleviate suffering, the imagination to figure out the possible paths of action, and the cognitive and emotional skills need to actually take action. The experiential wisdom it takes to act well in such fearful and uncertain circumstances is the *framework* of

this course. The Smithsonian Museum Exhibition on Epidemics will be presented.

As the faculty of this course we believe that each generation should help transmit the experiential wisdom to the next generation to help fight the fear linked with all types of epidemics near and far, large and small.

Degree Requirement Attributes: Dist:LIT

ENGL 55.22 - Socio/Poetics: Sociological Method and Literary Form

This course introduces students to a cultural history of the relationship between Sociology and Literature in America from the early twentieth century to the present. Taking inspiration from recent scholarly approaches to literary interpretation that draw on sociological methods for interpreting texts quantitatively, relationally, and descriptively, we will also examine the ways in which sociology has long been occupied by phenomena often associated with literature: subjectivity, uncertainty, and linguistic form. Beginning with the institutionalization of sociology in the 1920s and 1930s, we will explore aesthetic texts alongside sociological works and other cultural documents. In doing so we will situate ourselves in a historical milieu and reconsider conventional literary categories and lineages such as documentary and docupoetry, the photo-essay, and New Journalism through the lens of their response to and use of sociological methods and tropes.

Cross-Listed as: SOCY 79.13

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 55.23 - Analyzing Content: From Tik Toks to Tweets

The internet is awash with new popular cultural forms, from listicles and lolcats to Ted Talks and makeup tutorials. And yet scholars have only just begun to analyze this new digital “content”: what makes it unique, and how it is reshaping our culture. In this course, we’ll look at new forms of popular digital content in detail—reading tweets as closely as if they were poems, or exploring the substance of 100,000 Instagram images. We’ll survey the methods that have been developed, in different disciplines (media theory, art criticism, sociology), for analyzing content in this way, as well as those that have yet to be attempted (questions that haven’t been asked; material that hasn’t been addressed). To put theory into practice, students will develop 10-12 page research projects on popular digital artifacts of their choosing. They will also be introduced to computational methods of analyzing content, and have the opportunity to pursue these methods further.

Cross-Listed as: FILM 48.07

Degree Requirement Attributes: Dist:LIT

ENGL 55.24 - History of the English Language

This course traces the development of English as a spoken and written language belonging to the Indo-European language family. We will work forward from Proto-Indo-European through Old English (Beowulf), Middle English (Chaucer), and Early Modern English (Shakespeare), up to contemporary American English. Our focus will be on the structural history of the language, especially changes in pronunciation and grammar, and the implications of those changes for English as spoken and written today. Open to all classes.

Not open to students who have received credit for ENGL 047.

Offered: Summer.

Degree Requirement Attributes: Lang:LRP; Dist:QDS; WCult:W

ENGL 55.25 - Friends, Enemies, Lovers: Civil War and Revolution (in English)

Equality, freedom, justice—we tend to think of these values as bringing about reconciliation and unity, as foundational to political communities. But surprisingly, the most canonical thinkers in political theory have favored a different set of concepts: strife and civil war. For Plato, Hobbes, Marx, Arendt, Freud, Lenin, Schmitt, and many others, it is not the social contracts of government and laws that hold people together, but *love* and *hate*, the most intense passions of our closest human relationships. Of course, these passions are highly unstable, which leads us to many of the most profound paradoxes of philosophy and art: Why are tragedies dangerous to public morale and yet indispensable for public education? What do we do when families are torn apart by unreconcilable beliefs? How can a foe be a better friend than your friends? Similarly, the idea of “fraternity,” so central for modern revolutions and the birth of the nation, is fraught with enmity and quarrel. This course will pursue these problematics in key texts of philosophy, literature, and contemporary critical theory, and bring the philosophical paradigm of civil war to bear in relation to US and German culture.

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 55.26 - Sufism as World Literature

In his book, *What is World literature?*, David Damroch argues that world literature is not a canon of texts but rather a mode of circulation and reading that gains in translation. Sufism, often referred to in English as “Islamic mysticism”, has long appealed to many literary traditions and informed multiple aesthetic projects around the globe—evolving in significance as it circulated through translation. This course offers an introduction to Sufism as

world literature. It explores its universal appeal (in such languages as Arabic, English, Persian, Spanish, Turkish, Urdu etc.) and its many aesthetic manifestations and transformations around the world. In addition to the thematic, the course offers an extensive and diverse (but not exhaustive) survey of Sufism's impact on literary genres.

Advanced reading ability in a second language is preferred but not required as all class materials are available in English.

Degree Requirement Attributes: Dist:INT or LIT;
WCult:NW

ENGL 55.27 - Introduction to Literature and Medicine

This course will introduce you to the many ways that medicine and literature shape each other, both historically and in our present. In class, we will discuss classic works of history and fiction that are considered foundational in how Western culture imagines and interprets disease. Our reading list, however, will be centered on a *new* canon of literature and medicine, beginning, as we must, with intersectional and social justice concerns: chiefly how race, class, gender, sexuality, and disability determine health outcomes and our broader understanding of health and disease in a global context.

Offered: Summer.

Degree Requirement Attributes: Dist:LIT

ENGL 55.28 - Digital Language Theory

It has long been a goal to merge computation with natural language, and by many measures the latest AI systems seem to have achieved this. But how do models like ChatGPT enable us to talk with our computers? While this is partly a technical question, AI's facility with natural language also presupposes a broader theory about what language is—and what, therefore, terms like “writing,” “communication,” and “understanding” (among others) mean. This course will survey various attempts to make language computable over the past two hundred years. We will consider the above terms as we sample from the history of natural language processing, various literary theorists and linguists, as well as artistic uses of language modeling. Readings range from semiotics and post-structuralism to computer science and language art, language models from Markov chains to GPT.

Degree Requirement Attributes: Dist:QDS

Section IV-Junior Colloquia

Limited to 20 students, these courses will vary in content. They are intended to introduce students to advanced research and prepare them for their senior seminars and

honors theses. Coursework and instruction will build toward a substantial paper of 12-15 pages of sustained inquiry with a research component. Recommended: two completed major courses or permission of the instructor.
Dist: LIT.

ENGL 61.01 - Chaucer: Dream Poems and Troilus

Chaucer's *Canterbury Tales* get all the hype, but his other works are every bit as exciting. From a gorgeously beautiful elegy (*Book of the Duchess*) to a biting satire (on fake news, no less—the *House of Fame*) to the engaging-but-problematic romance of *Troilus and Criseyde*, we will have multiple encounters with Chaucer's voice, his thought, his wit and humor. We will think about the intriguing genres of the Dream Poem and the Romance, both of which Chaucer complicates in interesting ways. We will also hone our research skills and talk about the conception and execution of a major literary paper. Prior knowledge of Middle English is not required.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 61.02 - Sound, Music, Literature in Medieval England

In this course, we will consider various ways of approaching medieval literature as an acoustic event, and embedded in everyday soundscapes. We will introduce ourselves to the theory contemporary sound studies, and its practical and theoretical study in a medieval context. We will explore the connections between music, poetry, and oral performance of literary texts. Readings will range widely from Old English poems and epics to Middle English poems, plays, and romances. Our investigation will culminate in two of Chaucer's shorter poems, in which he specifically (and ironically) investigates the nature of sound and its social functions. At the same time, we will hone our research and paper-writing skills; each student will plan and execute an individual research project and present it to the class.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 61.03 - Early Modern Literature and the History of Sexuality

Throughout the twentieth century and especially since the 1970s, the literature and drama of the English Renaissance has provided a crucial archive for scholars studying the historical formation of sexuality, sex practices, and gender in pre-modern society. Shakespeare's sonnets, for example, with their erotic address to both a "sweet boy" (or "master-mistress of my passion") and the so-called Dark Lady, remain a flashpoint. On the English stage, cross-gender identification and same-gender romance was a constant presence, while in the streets of London, "catamites," "tribades," or acts of "sodomy" were supposed to be completely absent—from the eyes of the law, at least. What can the poetry and plays of William Shakespeare, Amelia Lanyer, Christopher Marlowe, Margaret

Cavendish, John Donne, or Katherine Phillips teach us, not only about the historically-distant practices of the past, but about our methods, theories, terms and changing paradigms for studying such topics today? What does it mean to read imaginative literature as an archive within an historically contingent body of knowledge? Students should prepare to engage with significant primary and secondary historical readings as well as the social theories of Michel Foucault, Eve Sedgwick, and others.

Cross-Listed as: WGSS 66.20

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 61.04 - Madness, Magic, Metamorphosis: Unstable Character in Early Modern Drama

"Fair is foul and foul is fair," chant the witches of Shakespeare's *MacBeth*. Following their ominous words, this course explores how physical and psychic transformations reflect the uneasy coexistence of religion, myth, science, and the supernatural in Shakespeare's England. We begin with a slow reading of *King Lear*, in which a monarch's stormy madness destabilizes the natural world. Each week thereafter, we'll explore how playwrights use altered bodies and states of consciousness to reflect competing views of justice, truth, authority, and embodiment. As we test various critical approaches to the idea of literary character, we will weigh how well they account for the figures before us, who are defined by the mystical, the metaliterary, and the unnatural.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 61.05 - The Faerie Queene: Speculative Fiction circa 1590

This course will read Edmund Spenser's 16th century poem, *The Faerie Queene*, through the lens of the modern practices of speculative fiction, that is, fiction that explores or created alternative worlds. Despite the title of the poem, the queen never appears. Instead there are knights, ladies, magicians, mythic and fantastic beings, human-animal hybrids and robots (for starters) in a landscape that features a wide range of social relations and conditions. Shakespeare, Milton, James Joyce, Monty Python, Neil Gaiman, and Angela Carter are on the long list of the poem's keen readers. In addition to *The Faerie Queene*, we'll read short essays on speculative fiction and brief extracts from 16th-18th century discussions of poetry as a way of writing and thinking. Spenser's language is deliberately archaic, but it is not difficult for modern readers. Experience with sixteenth century literature is not necessary.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 61.11 - Reel Imaginary: Early American Literature in Film

Walter Benjamin argues that we can only awaken from "that dream we name the past" by passing through it, looking simultaneously at both past and future. We can attempt this by reading historical literature, but in the last few decades, film has become a major mediator of our experiences of the past. This course encourages us to think critically about how films represent our past to us in forms that shape our experience of our present identity and influence the future. To think dialectically, we will read primary source material from 1000 AD to 1757 and see what some of the major American filmmakers do with it and why.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 62.01 - British Fictions of Revolution

The year 1848 was, for most of Western Europe, a year of revolution. In England, one of the few countries to escape widespread violence, 1848 was a year of rampant publication. The texts published in the UK, ranging from Marx and Engels' *The Communist Manifesto* to Gothic novels and Pre-Raphaelite poems, do not always seem obviously radical or even similar to one another in theme and mood. Are these texts in fact revolutionary? Are any of the texts politically or socially conservative, or do they represent conservative characters or perspectives? Do they take revolutionary forms or structures? To what extent are the texts participating in the same public sphere and historical moment? In responding to these questions, this colloquium will read literary texts (by Gaskell, Dickens, Emily Bronte, Christina Rossetti, Browning, and Tennyson) alongside artistic and political manifestos, popular political poetry, visual images, scientific and critical prose, and contemporary literary criticism (feminist, Marxist, psychoanalytic, poststructuralist). Students will work toward a substantial research project (12-15 pages) focused on a topic related to the course and of their choosing.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 62.02 - The New Emily Dickinson: After the Digital Turn

This colloquium offers an in-depth study of the poetry of Emily Dickinson with a particular focus on how the tools of the digital humanities have renovated our views, including unsettling just what a Dickinson poem is. Since her death in 1886, rival editors have fought over Dickinson's canon, producing *their* versions of her poetry. Likewise, biographers have romanticized her life, characterizing her as "The Belle of Amherst," eccentric, reclusive and even a bit mad. This colloquium will introduce students to the "new" Dickinson that is emerging from the plethora of materialist, feminist, post-modernist, and cultural studies approaches. We will use digital archives to *reread* and *reconsider* Dickinson's work and

life. Finally, we will study the year 1862, an immensely productive time for Dickinson and the height of the Civil War, also the focus of an annual daily blog I am preparing. For their final projects, students will examine one week of poetry in this tumultuous year, producing research that will be vetted for inclusion on the blog.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 62.03 - Nineteenth-Century British Women Writers

For the first time in literary history, women writers found commercial and critical success in England during the nineteenth century. Women writers of this time were keen observers of the social codes that formed—and constrained—their identities. Though women wrote in many genres in this period, this course will focus on major novels of the nineteenth century because of the particular strategies female novelists used to open up hard questions about social identity, and particularly social possibilities for women. Questions about gender clearly implicate sexuality, class, ethnicity, race, and power, as well, in complex, compelling, and unexpected ways. We will read works by Jane Austen, Mary Shelley, Emily Brontë, Charlotte Brontë, Elizabeth Gaskell, and George Eliot, and we will end the class by reading substantial excerpts from the private, unpublished diaries of the women writers who published as “Michael Field.”

Cross-Listed as: WGSS 48.09

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 62.04 - Trauma and Enjoyment in Early American Literature

Trauma is omnipresent today, but so is confusion about its signs, symptomatology, and long-term effects. Is trauma an event, a process, or a condition of being? Is sex or power more predominant in human relations? Why do we put ourselves in harm’s way despite our better intentions? Are life’s worst experiences always inimitable injustices, or are they potentially transformative? Early American literature might seem an unlikely guide here, but the distinction between violence and pleasurable excitement was crucial to the way American settlers encountered natives, how slavery became a definitive moral issue, and how literary history evolved from cautionary narratives of seduction to intensified engagements with reality. This dual survey course examines classic works of American literature from the first encounter to the Civil War, alongside pivotal works in trauma theory.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 62.05 - The Horrors of Survival: American Literatures of Modernity

There is a significant period of modernization in US culture from about 1850-1920—a decade before the Civil War to the aftermath of World War I, encompassing

Reconstruction, the Gilded Age, the devastating relocation of indigenous Americans, and the development of film and photography—which coincides with one of the most definitive and transformative passages in American self-identity, yet which is under-studied compared to the antebellum period (late 18th-early 19th century) and the period of “high modernism” (1920s-40s). Perhaps part of the reason is that what counts as *modernity* in these years is not yet *modernism*, but a process (always debatable) of “becoming-modern,” as if half the time there is a lingering preoccupation with pre-Civil War modes of life and the other half looks forward to a period of explosive economic growth and cultural change. Notably, this transitional period is when philosophical and scientific theories of survival, evolution, and inheritance of various sorts became predominant, alongside experiences of renewed racial violence, horrific catastrophes, economic turbulence, and political (dis)enfranchisement. By the early twentieth century, the psychiatric language of “trauma” dominated the understanding of subjectivity and the language of survival accordingly expands to include various forms of lingering, shock, strangeness, and disturbance that would soon take their place as hallmarks of the aesthetics of modernism. Tracking these currents, this course investigates episodes of survival from the personal (war, sexual assault, grief), the institutional (Jim Crow, Social Darwinism), historical (survivals of the Civil War, slavery) and media-technological (photography and film), in search of a definition of US modernity as a mode of transitional experience.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 62.06 - Dickens and Narrative Theory

Bleak House, *David Copperfield*, *Great Expectations*, *A Tale of Two Cities*, etc. Charles Dickens’s novels are “classics” today but were popular, experimental fictions in the middle decades of the nineteenth century, playing with literary form and distribution models. This colloquium reads Dickens’s work slowly, serially, as a way to understand and analyze key concepts in narrative theory, including narrative time and space, causality, characterization, focalization, diegesis, emplotment, narrative voice, and paratextuality. Alongside analyzing one of Dickens’s major novels, we will read texts by thinkers such as Mieke Bal, Roland Barthes, Peter Brooks, Dorrit Cohn, Gérard Genette, Caroline Levine, James Phelan, and Alex Woloch. We will also use case studies from film and television, including adaptations and streaming services, to better unpack narrative forms across media.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 62.12 - Jane Austen

As novels, and translated into film and television, Jane Austen's fiction has recently achieved extraordinary

popularity, much greater than she experienced in her lifetime. In this course, discussions will focus on the times and the culture in which she wrote and on her more recent popularity. Topics will include Austen's reactions against Romanticism; her continuing exploration of the moral and emotional dynamics of domestic life; her concern with the freedom of middle-class women; her use of history; her innovations in fictional narrative; and translations of her fiction into film. We will read *Northanger Abbey* (written 1797, published 1818), *Sense and Sensibility* (1811), *Pride and Prejudice* (1813), *Mansfield Park* (1814), *Emma* (1816), and *Persuasion*, (written 1816, published 1818), and view film versions of *Pride and Prejudice*, *Emma*, and *Persuasion*. Dist: LIT; WCult: W Course Group II

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 62.16 - Victorian Faces/Facial Politics

In Victorian England, a person's face was his or her calling card: a clue to social identity, a signifier of inner personality, or a mask, a socially-constructed and performed persona. The period witnessed the expansion of photography, the popularity of pseudo-sciences such as physiognomy and phrenology, and the "scientific" study of race—disciplines that focused on the policing of a material body. At the same time, the Victorian period witnessed the emergence of an alternative vector of realism that rejected an emphasis on the "seen" and expanded the categories of who and what could be represented: women, industrial workers, and people of color. In analyzing these competing fields of realism, this colloquium will read literary texts alongside artistic manifestos, scientific and pseudo-scientific prose, visual images, and contemporary literary criticism (poststructuralist, psychoanalytic, feminist, queer, performance theory, critical race). Possible authors include Mary Elizabeth Braddon, Elizabeth Gaskell, Charlotte Bronte, George Eliot, Amy Levy, and Bram Stoker.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 62.22 - Atlantic Slavery/Atlantic Freedom

When does slavery find itself chiasmatically mirrored in freedom? From the recent Hollywood blockbuster *12 Years a Slave* (2013) to the streets of Ferguson and Baltimore, the legacies of slavery and racial violence continue to cast their shadow over horizons of emancipationist history even as America commemorates the sesquicentennial of the U.S. Civil War. In this course we will revisit the literatures of slavery and antislavery in the Atlantic world from the eighteenth century to the present. Our novels and stories imagine episodes of slavery, slave rebellion, and fugitive flights to freedom across two centuries: from early transatlantic crossings of slaves and servants to the New World; to Tacky's Revolt and its place in what Vincent Brown has recently called the "Coromantee Archipelago" in eighteenth century slave rebellion; to the spectacular soundings of the Haiti Revolution in the Age of

Revolutions; to the messianic prophecies of Nat Turner in the early nineteenth century; to slave rebellions at sea; and finally to fugitive slave fictions in the abolitionist decade leading up to the Civil War.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ENGL 63.01 - Modern Jewish American Women Writers

This course will explore the literature of Jewish American women from the late nineteenth century to the present; topics for discussion will include feminism, sexuality, identity politics, activism, and literary transmission. Among the readings will be poetry, fiction, memoir, and essays by such writers as Lazarus, Antin, Yeziarska, Stock, Stein, Olsen, Rukeyser, Paley, Ozick, Rich, Piercy, Levertov, Gluck, Goldstein, Wasserstein, Goodman, Klepfisz, Feinberg, Chernin. *Enrollment limited to 20.*

Cross-Listed as: WGSS 66.24

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 63.02 - Toni Morrison

This course is an in-depth study of Toni Morrison's major fictional works. We will also read critical responses by and about the author. We will examine Morrison's earliest and arguably most foundational and influential works. Required texts will include, *The Bluest Eye*, *Sula*, *Song of Solomon*, *Tar Baby*, *Beloved*, *A Mercy*, and *Conversations with Toni Morrison*. Central to our exploration will be an analysis of Morrison's observation that "the past affects the present." Therefore, we will explore the social and historical factors that contribute to Morrison's artistic constructions. Some of the issues we will examine include, alternative constructions of female community and genealogy, and representations of race, class, nationhood, and identity.

Offered: Winter.

Degree Requirement Attributes: Dist:INT or LIT; WCult:CI

ENGL 63.03 - Fictions of Finance: For Love or Money

Love or money? It is difficult to decide which of these forces influences our lives more greatly. While money may not buy happiness, love seldom manages to put food on the table. This course examines literary texts, films, and other kinds of cultural objects in which romance and finance overlap and come into conflict. It examines the ways in which both finance (especially speculation) and literature believe in the reality of fiction. The course broadly considers the social ramifications of the financialization of daily life, drawing on anthropology, sociology, political economy, and cultural studies to thicken our understanding

of what it means to live in a world where finance determines so much. Students will have the opportunity to design a project dealing with issues of financial literacy. Possible readings/viewings include: Theodore Dreiser's *The Financier*, Gary Shteyngart's *Super Sad True Love Story*, William Gibson's *Peripheral*, *The Big Short* (dir. Adam McKay), *The Wolf of Wall Street* (dir. Martin Scorsese), and Alissa Quart's *Monetized*.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 63.04 - Arts Against Empire: Fictions of Revolution and Solidarity in the Americas

Anticolonial struggle and movements for social justice have always been accompanied by a range of cultural practices, including fiction, art, music, film, murals, theater, graffiti, and theory. This course explores that tradition of cultural activism, considering attempts to narrate revolutionary formation, imagine solidarity, and write decolonial theory. We will begin by examining revolutionary nationalist and anti-imperialist culture in the Americas—ranging from the memoirs of Che Guevara and Malcolm X to Nuyorican and Chicano Movement literature—in order to consider the formation of revolutionary subjects, and how 20th century ideas of revolution were raced and gendered. We will then consider how novelists, artists, photographers, filmmakers, and activists attempted to imagine solidarity with revolutionary movements and suffering others in the Americas, from Central America solidarity photography to performance art in solidarity with Guantanamo Bay prisoners. We will pay special attention to the work of feminist and queer solidarity artists, writers, and performers. Finally, we will examine contemporary activist cultural projects, such as PanAmerican public art road trips and hashtag-activism. Students will have the opportunity to produce a creative or multimedia final project.

ENGL 63.05 - Nobel Prize Writers

A study of Nobel Prize writers from various Anglophone countries, this course examines authors' aesthetic innovations alongside their engagement in cultural, socio-political, and national discourses. Although the focus will be on poetry, the course will also explore the relationship between different genres (including essays, plays, and novels) and various socio-historical moments. Authors will include William Faulkner, Nadine Gordimer, Seamus Heaney, Wole Soyinka, Rabindranath Tagore, Derek Walcott, Patrick White, and W.B. Yeats.

∨f

Degree Requirement Attributes: Dist:LIT

ENGL 63.06 - The Undead South: Horror and Haunting in U.S. Southern Literature

This course explores the many forms of horror and haunting—racial, cultural, historic, economic, political—in the region known as the U.S. South, a national space where the possibilities of regeneration are continually thwarted by the aftershocks of a harrowing past. “Undead” tropes encompass numerous varieties of posthumous horror: the dead rising from graves; mourning and funerary practices; the glorification of lost causes and heroes; the excavation of unsuccessfully repressed crimes and bodies. We will consider both traditional forms of Gothic representation (in works by Poe, O'Connor, Faulkner, etc.) as well as contemporary resurgences in the vampires, zombies, and other necrotic forms of recent literature, television, film, and other media. Along the way, we will seek to identify the disturbing ways that the U.S. South has served—both consensually and coercively—as a kind of purgatorial space for America's most haunting histories.

Cross-Listed as: NAIS 036

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 63.07 - Cosmopolitanism and the Fictions of Exchange

What forms of exchange are possible in a world fast integrating, but increasingly uneven and unequal? What motivates “give and take” between individuals culturally or geographically distant, or separated by wealth? World fiction that grapples with these questions will provide queues for reflection on the ethics and pragmatics of cosmopolitanism. The readings imagine forms of friendship, dialogue, love, and goodwill which will be assessed against Enlightenment, Post-Enlightenment, and Democratic conceptions of rights, property, and community.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

ENGL 63.08 - Electronic Literature

This course examines the burgeoning field of electronic literature, including electronic prose, poetry, and many non-traditional literary artifacts. We will look at the antecedents of electronic literature, culturally specific subgenres, technical and material underpinnings, and the relationship between electronic literature and other literary forms. Assignments will include close reading, critical examination of e-lit as a genre, and opportunities to author electronic literature.

Degree Requirement Attributes: LIT

ENGL 63.09 - Queer Literatures of Slavery

This junior colloquium asks how and why we might bring the perspectives and methods of queer studies to bear upon

the history of slavery—and vice versa. We will examine questions of gender and sexuality, kinship and belonging, desire and the erotic, and history and futurity through readings in fiction, poetry, and drama alongside key works in the history of gender and sexuality, queer theory, and queer of color critique. Students will also develop critical skills and strategies for producing scholarship in literary and cultural studies, culminating in an original research paper.

Cross-Listed as: AAAS 82.10

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 63.10 - Contemporary Science Fiction

In this course, students will read a wide selection of speculative fiction written since the 1980s, and mostly in the past decade. These texts imagine the births of artificial minds and bodies and the deaths of natural worlds, voyages through outer space and travels through time. We will think about the relationship between sex, race, gender, technology, and power both within the pages of these books and in the ongoing creation and disputation of science fiction canons. Authors will include Octavia Butler, Ursula Le Guin, NK Jemisin, Jeff VanderMeer, and Ling Ma.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 63.11 - Race, Sex, Sensation

This course engages with theories of race, sex, and sensation in critical race and ethnic studies, black and women of color feminism, and postcolonial studies. How does the violence enacted on racialized, sexed, gendered subjects exclude such subjects from the category of the individual, rights-bearing human cemented in Western philosophy? How is this exclusion enacted on the very surface of the skin and distinctly felt on one's body? Who gets to claim humanity and subjecthood, and who has never been able to make such a claim? The readings in this course give an account of how racialized, sexed, gendered subjects are made to bear histories of enslavement, dispossession, genocide, and colonialism in ways that might not always be visible, but instead are sensed, felt, and embodied. We will work with literature, performance, and art that elucidates the political, social, and aesthetic possibilities found in the nonhuman, animality, objecthood, flesh, viscera, and touch.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 63.12 - Labors of Love: Mothering in Chicana/Latina and Asian American Communities

The practice of mothering is too often deemed a universal, innate experience that binds women together across time and space. Yet motherhood shares an intimate relationship with shifting, culturally specific histories of colonialism, nationalism, militarism, and more recently, globalization. Motherhood, and social reproduction more broadly, has

served as a critical domain of power and knowledge production in these contexts. Because the experience of mothering connects the intimate experiences of individuals to larger structures and forces, and because reproduction is such a fundamental (if varied) biological and social experience, the topic lends its especially well to comparative analysis.

This specific course employs the framework of mothering to compare the experiences of two communities constructed as “foreign” to the United States: Chicana/Latina and Asian Americans. In situating motherhood as an ideological and cultural construction rather than a universal or natural phenomenon, we will compare closely affiliated histories of miscegenation, transracial adoption, domestic migrant labor, and assisted reproduction across the Americas and the Asian diaspora. How are these phenomena given especially potent life in Chicana/Latina, Asian American, and Asian diasporic cultural representations such as literature, documentary film, and television? In analyzing major scholarship and theories about mothering alongside these cultural texts, we will learn how differing notions of motherhood have been constructed, contested, and negotiated.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

ENGL 63.28 - Rethinking Frost: Robert Frost in a Declining Landscape

In a famous exchange, long-time “frenemies” Wallace Stevens and Robert Frost traded barbs:

“The trouble with you, Robert, is that you write about – subjects.”

“The trouble with you, Wallace, is that you write about – bric-a-brac.”

Neither man was correct, but their characterizations hit a nerve, honing in on the kinds of superficial attributes that may render a first impression lasting. And while no one reads Stevens for his “bric-a-brac” many readers come to Frost for his subjects, which have been misunderstood and sentimentalized over time. It is important to remember, reading him now, that Frost's New England was no Transcendental retreat, and no rural paradise; poor, depopulated by western expansion on the one hand, and the industrialization of mill towns on the other, it was a landscape of failed and abandoned farmsteads, old people and misfits left to fend on their own, worn-out fields, harsh climate, intellectually moribund and spiritually enervated. Frost came to this “subject” without illusions or bitterness and it is through this subject that we will begin to rethink his poetics and ideas. Using the extensive Frost archives in Rauner, students will be encouraged to undertake primary research alongside their reading of poems and criticism. The course will culminate in a substantial research paper or

project, individually designed in consultation with the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 63.29 - Self, Subject, Photography

Before the oft-reproduced social-media mechanism of the selfie, there existed (and still does) the artistic self-portrait. Utilized in the creative realm to create a representation of the artist as both subject and object, self-portraits can be whimsical, grim, tantalizing, performative, or combative. In this course we will examine gendered constructions of self-portraiture as they exist in poetry, memoir, and photography. Specifically, our task will be to examine the registers of possibility present when women use their bodies and stories to claim authorial space. Our goal during the term will be to think through all of the mechanisms of the self that are deployed in the context of artistic practice. Students will produce their own photographic self-portraits and write an analytical paper on a contemporary writer or visual artist.

Cross-Listed as: AAAS 67.09 WGSS 66.08

Degree Requirement Attributes: Dist:ART; WCult:CI

ENGL 63.30 - Trans Gender Literatures

Is there such a thing as trans literature? If so, what makes literature “trans”? Is there a way to theorize distinctions between trans literature and non-trans literature? From queer literature? This class will consider various incursions into United States trans literature, from mid-century pulp and sleaze, to documentary film, to recent popular novels and small press poetry to collectively theorize what, if anything, we might say about trans literature and its aesthetics influences, interventions, and possibilities.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 63.31 - Big Game: Adventure, Empire, Ecology

This course asks how the era of imperial expansion and the study of “natural history” feeds our contemporary ecological crisis. We will begin with readings of influential colonial travel and adventure narratives like *Robinson Crusoe*, the captivity narrative of Mary Rowlandson, sections of Darwin and Captain Cook’s travel journals, and in-class work with archival materials like the Indian Botanical Survey Flora. In the first weeks, we will consider how the aesthetics of adventure circulated throughout the British empire in both the East Indies and India, and ramified elsewhere in the Dutch, French, Spanish, Portuguese, and Belgian holdings. We’ll end with a suite of readings and films that help us locate productive intersections between ecocriticism and postcolonial studies, drawing together sensationalist disaster journalism with environmental activism emerging from the Global South. This course will be especially of interest to students with a focus in environmental studies, nineteenth century

history and literature, history of science, or environmental activism.

Offered: Summer.

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

ENGL 63.32 - Fictions of Indigeneity

Indians are tragic footnotes in the American narrative and yet persistent fixtures in its literature. Largely anachronistic, indelibly other, and conceptually unstable, Indigenous representations convey complex attitudes of guilt, fear, repression, and desire. These “Indians” surface vividly at times of cultural, economic, and ecological crisis; they are not “real,” but they profoundly alter reality, even for Indians themselves. Readings will include works by William Faulkner, Ernest Hemingway, Willa Cather, Cormac McCarthy, Toni Morrison, and others.

Cross-Listed as: NAIS 81.06

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 64 - Junior Colloquia in Course Group IV

Limited to 20 students, these courses will vary in content. They are intended to introduce students to advanced research and prepare them for their senior seminars and honors theses. Coursework and instruction will build toward a substantial paper of 12-15 pages, of sustained inquiry and with a research component. Prerequisites: two completed major courses, or permission of the instructor. .

ENGL 64.01 - Hysteria, Paranoia, Schizophrenia: The Case Study as Literary Genre

Dora, Schreber, the Wolf Man: Freud’s famous psychoanalytic case studies are organized around his patient’s words and symptoms, and yet they all have the narrative complexity and lurid family drama of the greatest nineteenth-century and early twentieth-century novels. This course explores the psychoanalytic case study as a unique literary genre in its own right, one that falls between the medical case history and the novel proper. We will read Sigmund Freud’s case studies through three modes of reading: psychoanalytic feminist criticism; paranoid and reparative reading from queer critique; and, symptomatic reading from Marxist criticism. The readings of the cases will therefore be supplemented by texts in queer and feminist theory, continental philosophy, and literary criticism. Throughout the quarter, we will use the cases to explore questions of racial and sexual difference, the body, trauma, the psyche, and memory.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 64.02 - Garden Politics: Literature, Theory, Practice

What do gardens have to do with sexuality, empire, race, class, environmental degradation, the history of poetry, the social role of religion, and the future of art? In discussion of various literary, critical, theoretical, and eco-critical texts, we will attempt to answer this question over the course of the term. While based in literary readings, the course supplements and contextualizes these with other readings and websites. We will also consider broader issues and discourses connecting humans and the environment. Authors may include Jamaica Kincaid, Olive Senior, T.S. Eliot, Derek Jarman, Francis Hodgson Burnett, Paul Fleischman, Willa Cather, and Kage Baker.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 64.03 - Deconstruction: An Introduction to the Work of Jacques Derrida

This course is an introduction to the work of Jacques Derrida, an Algerian-French philosopher, whose thought has been important for a number of disciplinary formations, including the study of literature. In the course, we will engage with Derrida's archive by reading some of the interviews that he gave over the course of his life, from the very early interviews on philosophy, philosophical heritage, and the status of writing in western thought to his late interviews, which focus more on ethics, the political, sexual difference, the animal, and the death penalty. Throughout the course of the term, we will study the method of deconstruction, placing Derrida's thought within a philosophical and literary archive and exploring the potentiality of deconstruction towards an ethical and political project. Readings will oftentimes be supplemented with filmic texts.

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 64.04 - Jacques Lacan and Psychoanalytic Thought

This course is an introduction to the teachings of Jacques Lacan, a French psychoanalyst who turned to the texts of Sigmund Freud in order to bring back to psychoanalysis the radicality of its intervention. In the course, we will read some of the key texts in Lacan's *Ecrits* alongside excerpts from his seminars as well as commentaries on his writings by prominent Lacanians, including but not limited to, Jacques-Alain Miller and Slavoj Žižek. The course is located at the intersection of literature, psychoanalysis, and critical theory and will act both as introduction to psychoanalytic thought as well as its unique development by Lacan. The psychoanalytic texts will be supplemented by reference to filmic texts, including: *Psycho* (dir. Hitchcock, 1960), *Shame* (dir. McQueen, 2011), and *Black Swan* (dir. Aronofsky, 2010).

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 64.05 - Cultural Analytics

This course is an introductory course and assumes no prior knowledge of literary studies, critical approaches, statistics, or data analysis. It provides an overview of emergent quantitative methods and theories used by humanists to study data in text and text as data. As we examine these objects, we'll ask questions about the differences, in terms of methodology and interpretive practices, between the social sciences and the humanities. In developing answers to these questions, we will explore recent quantitative methods alongside traditional methods of humanistic inquiry. The goal of the course is to enable students to evaluate data, methods, and interpretations produced from quantitative research in the humanities and to conduct their own research.

Cross-Listed as: QSS 30.16

Degree Requirement Attributes: Dist:QDS

ENGL 64.06 - Animal, Vegetable, Medium: Writing Nonhuman Sentience and Communication

What do animals see, hear, and smell with their different senses? Through what media do they communicate? Do plants have a kind of sentience? Given that we can never get inside the head (or leaf) of another species, can we really know anything about their consciousness? Writers and theorists have been asking these questions for centuries, often in dialogue with the science of animal behavior. This course looks at a contemporary multidisciplinary tradition that attributes sentience and communication to animals, plants, and fungi. Over the course of the term, we address three interlocking problems as they appear in a varied archive of print and visual media 1) the problem of accessing the subjective experience of other species 2) the problem of communicating with other species, and the question in what media it might be possible 3) the problem of communicating with other human beings about 1 and 2, and the question of what media best serve this purpose. We also ask what these aesthetic and theoretical traditions offer us now, during the "Anthropocene" or the current epoch when humans have become a geological force shaping the Earth. We ask whether or not they have the potential to interpret it from a different perspective, whether or not they can inform environmentalist politics, and what their implications might be for social justice. This advanced course in environmental media studies also incorporates readings that reflect on the field's particular theories and practices.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 64.07 - Theory Before "Theory"

The twentieth century saw the rise of what has come to be called "literary theory"; but people have been writing theories about literature — about its purpose, its effects, its

operations and mechanisms, even its very existence — for as long as other people have been writing literature. Students in this class will study the works of some of the canonical figures in that centuries-old tradition — Plato, Aristotle, St. Augustine, Kant, Schiller, Hegel, Nietzsche — alongside some other figures, such as Matthew Arnold, T. S. Eliot, and Erich Auerbach, who fall just outside the literary-theoretical canon but whose influence on literary studies has nonetheless been profound. Ideally, students will take this class as a complement to English 45: Introduction to Literary Theory rather than as an alternative to it.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 64.08 - Matters of Life and Death: A Theory Course

The universal right to live is one of the basic precepts of modern morality. But everyone knows that this sole declaration guarantees nothing, that too often this principle, and the idea that life is inherently valuable, has been made into an alibi behind which atrocities are committed, such as murderous colonial practices, racially motivated executions, human bondage, cultures of rape, and war profiteering. But hypocrisy or faithlessness aside, is it possible that we have never really understood what we mean when we speak of an entitlement to life, or even the *value* of life such? If life is valuable, and supremely significant, could it be because we think nonliving matter is *without* value? And yet, no living being is entirely independent of the nonliving—we are composed as much of nonliving matter as of thriving communities of microorganisms. Moreover, as subjects of law, institutions, and culture, we regularly invest ourselves in non-vital symbolic systems that will outlive us, like building a future for others or leaving a legacy behind. And just as often, these symbolic forms of life can be used *against* the living and decide the conditions of what *counts* as life. In this course, we will rigorously inquire about the hidden processes behind the "mattering" of lives (and deaths) in different contexts. Consulting works of philosophy and theory, as well as a few literary "cases," we will explore topics such as nihilism, the impact of capital on the "worth" of existence, the value of nonwhite lives, the death drive, suicide, the politics of grieving, and the pursuit of death as a way of life.

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 64.09 - The Frankfurt School: An Introduction to Critical Theory

From its origins in the Weimar Republic through to the present day, the thinkers associated with the Frankfurt School of critical theory have been central to our understanding the relationship between authoritarian political structures, industrial capitalism, aesthetic experience, and the mass media. This course situates the work of these thinkers in the arc between the rise of

fascism in the 1920s and the revival of fascist structures of thought and feeling in the 2020s. We will focus on work by Theodor Adorno, Max Horkheimer, Walter Benjamin, Siegfried Kracauer, Ernst Bloch and Herbert Marcuse, with the goal of approaching the forms of cultural critique that can help us conceptualize and navigate the often catastrophic experience of modernity.

Cross-Listed as: COLT 73.05

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 64.10 - Heidegger's Being and Time

Martin Heidegger's most significant contribution to philosophy is his great 1927 book, *Being and Time*, among the twentieth century's most influential and controversial philosophical works. This junior colloquium will primarily undertake a term-long reading of this book (in English), supplementing that text, according to the interests of the class, with other writing by Heidegger, secondary commentary on *Being and Time*, and works by authors influenced by or critical of Heidegger.

Offered: Fall.

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 65.01 - Walking

Students in this course will circle around a set of deceptively simple questions, all of them framed by an overarching question: What does it mean to walk? Should walking be regarded as a fundamental human activity or as a literary convention carried over into everyday life? Why has walking long been regarded as a vehicle for thought and discourse: a privileged mechanism of knowledge production? Is there a difference between a country walk and a city walk? What is the relationship between walking and time, walking and place? Why should walking have emerged, in certain works of contemporary literature, as a principled rejection of mechanization, modernity, and the capitalist mode of production? And what does walking mean for those who cannot walk? To address these questions, students will read texts by such practitioners and theorists of walking as Thoreau, Walter Benjamin, W. G. Sebald, Rebecca Solnit, Simon Armitage, Robert MacFarlane, Geoff Nicholson, and others. Students will also use their own walks as opportunities for composing works of critical self-reflection, observation, and world-making.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 65.02 - Writing with Algorithms: A Literary Computation Workshop

Since the mid-20th century, writers have programmed computers to generate literary works, mimicking old forms and inventing new ones. This course, both a creative writing workshop and a computational lab, will introduce the basics of creative text processing and generation.

Making literature through computational techniques opens up a range of expressive possibilities and encourages us to refine our intuitions about style and form. This activity—at minimum, a collaboration between one human and one machine—also invites us to imagine increasingly diverse and complex ways of dividing the labor of literary production. Throughout the course, we will consider examples of computer-generated poems and fiction as well as literary bots and interfaces. No programming experience is expected, though seasoned programmers are welcome.

Degree Requirement Attributes: Dist:TLA

ENGL 65.03 - Summer Tomes

Long reads for long days! The English Department's annual "Summer Tomes" class will offer rising juniors at Dartmouth the opportunity to dive deeply into a single work that would otherwise be prohibitively long for inclusion on a quarter-long syllabus. Together, we will spend our summer reading a celebrate tome of English-language literature, immersing ourselves in its language while also placing it within relevant historical, cultural, and theoretical contexts. Students will be asked to apply numerous theoretical and methodological lenses to the text, and to compose their own creative reinterpretations and adaptations of the text.

Offered: Summer.

Degree Requirement Attributes: Dist:LIT

ENGL 65.06 - The Poetry and Rhetoric of Love, from Petrarch to Social Media

What we call "love poetry" has generally been a way of expressing much more than the emotional and erotic fascination of one person with another. Often it seems to bypass the love-object altogether, and focuses instead on power relations or poetic achievement. Beginning with early examples, and moving on to contemporary and modern poems, our course will place love poems by men and women in the context of an ongoing poetic tradition, recent feminist criticism and theory, and talk about love and sex in recent popular culture. This last will include: excerpts from recent books about dating and seduction, film, contemporary song lyrics, dating websites, and campus culture.

Cross-Listed as: WGSS 53.05

Degree Requirement Attributes: Dist:LIT; WCult:W

Section V - Senior Seminars

Senior Seminars, limited to 12 seniors and juniors, will vary in content. They will focus students on concentrated discussions and on a final research project of 20-25 pages. Recommended: four completed major courses or permission of the instructor. *Dist: LIT.*

ENGL 71 - Senior Seminar in Course Group I

Senior Seminars, limited to 12 seniors and juniors, will vary in content. They will focus students on concentrated discussions and on a final research project of 20-25 pages. Prerequisites: four completed major courses or permission of the instructor.

ENGL 71.01 - Celtic Fringes: Medieval English Literature in Dialogue with Irish, Welsh, and Breton Traditions

From Arthur and Merlin to prophecy, poetry, and song, the literatures of medieval England drew heavily on the lively, imaginative, and sophisticated traditions of their Celtic neighbors, their musical styles and the particular aesthetic they brought to their poetry and narrative. In this course we will study some pairings of connected Celtic and English/Anglo-Norman texts, as well as contemporary writing about the Celtic connection. The politics of these exchanges are not easy. There were wars and border skirmishes; the Norman and Angevin kings of England sought to subdue the Celtic kingdoms and extend their political influence by diplomacy, coercion and conquest, creating a dynamic that is in some ways parallel to, but also interestingly different from a modern Colonial/Postcolonial situation. Readings may include early Arthurian material; *Diarmaid and Grainne* and the Anglo-French Tristan romances; Geoffrey of Monmouth's *Life of Merlin* and Merlinesque prophecies; the Welsh *Mabinogi*; lais by Marie de France and other writers; the borderland romance "Fulk Fitz Warren"; the anecdotes, satires and short romances of Walter Map; Gerald of Wales's ethnographic descriptions/ travelogues of Wales and Ireland. All non-English texts will be read in translation, although students with some knowledge of French, Latin, or a Celtic language may wish to explore some readings in the original.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 71.02 - Ovid in England

Englising Ovid was something every advanced schoolboy in the 16th century did: translating passages; composing speeches for characters from the poems; dramatizing and performing (in Latin, in England) Ovidian scenes. In this seminar we'll read Ovid's *Heroides* and *Metamorphoses* in the sixteenth and early seventeenth century print translations alongside a modern English edition. (Students competent in Latin may use the Loeb as well as or instead of the modern English.) We'll consider the forms, themes, and predicaments Ovid's great mythographic poems offered to the English literary imagination. Some attention will be paid to late 20th century performative and poetic "englishings" of Ovid.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 71.03 - The Faerie Queene

We'll spend the term reading Spenser's great epic romance, *The Faerie Queene*. It's a wonderful poem, deeply engaged with philosophical, poetic, ethical, and political issues via compelling stories, fantastic settings, and provocative descriptions. Shakespeare, Milton, James Joyce, Monty Python and Neil Gaiman are on the long list of the poem's keen readers. Experience with sixteenth century literature is not required. Spenser's language is deliberately archaic at times, but it is not difficult for modern readers. Discussion, informal writing, short papers (2-3pp), oral presentations, and an open topic essay leading to a final paper.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 71.05 - Romance in Medieval England

This course explores the diverse and elusive genre we now call "romance," a capacious term that covers anything from chivalric adventures and love stories to quasi-hagiographic and pseudo-historical narratives, from a variety of historical and theoretical perspectives. Readings may include Middle English and Anglo-Norman romances such as *Tristan*, *Havelock* and *Sir Gawain and the Green Knight*, and selections from later Arthurian narratives.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 71.06 - Milton

This course is an advanced seminar in the study of John Milton's poetry and prose, undertaken with attention to the context of Milton's life and times and current critical discussion and debate about all of these matters.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 71.13 - Gender and Power in Shakespeare

The course will begin by defining the varieties of power inscribed in Shakespeare's plays, and proceed to explore the following questions. Is language gender-inflected? Do men and women speak "different" languages? How do power and gender affect each other? How do women negotiate power among themselves? How do men? How is power exerted and controlled in sexual relationships? How do unspoken social definitions exert their power over the politics of gender? Possible works studied will be drawn from *The Rape of Lucrece*, *A Midsummer Night's Dream*, *The Taming of the Shrew*, *The Merchant of Venice*, *Much Ado About Nothing*, *As You Like It*, *All's Well That Ends Well*, *Othello*, *Macbeth*, *Troilus and Cressida*, *Coriolanus*, *Antony and Cleopatra*, and *The Winter's Tale*.

Degree Requirement Attributes: LIT

ENGL 71.14 - Knights, Camelot, Action!

This course will introduce students to medieval romance, one of the most popular genres of medieval literature and one that gives us some of the best-loved literary characters of all time. We will study the genre of romance, including Arthurian romance and other varieties, from the genre's inception. We will pay particular attention to the form of story-telling that it popularizes, the concept of love that it systematizes, and the notion of heroism on which it depends. We will privilege English romance and will therefore read many texts in their original Middle English.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 71.15 - Poetics of the Supernatural

"The instruments of darkness tell us truths," warns Shakespeare's *Macbeth*. While the sixteenth and seventeenth centuries took a complex view of the occult—witch-hunts spawned widescale bloodshed while alchemy paved the way for modern chemistry—this senior seminar examines how Renaissance writers used supernatural events to interrogate social structures of power and identity. Closely reading poetry and drama by Shakespeare and his contemporaries, we will ask how transformations, hauntings, and spells productively trouble categories of gender, temporality, ecology, and the human. Working with early modern historical archives and literary experiments, from week to week we will be challenged to consider how imaginative fiction, perhaps even more than realism, captures the tension and possibility that define eras of radical cultural change.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 71.16 - Shakespeare and the Problem of Forgiveness: Late Plays & Problem Plays

This course will study the aesthetic phenomenon and social ritual of forgiveness through readings from the second half of Shakespeare's career. In early modern England, the Protestant reformation had radically reshaped the dominant religious rituals of penance, confession, and absolution. Scholars have often argued that some of the traditions abolished, such as the richly imagined world of purgatory or the importance of intercessory forms of forgiveness, were sublimated into the secular drama of Shakespeare's stage. Our syllabus will test this argument by following Shakespeare's turn from revenge toward romance, "problem plays" and dark comedies. Readings in history, critical theory (Foucault on man as "confessing animal"), language philosophy (including J.L. Austin's *How to Do Things with Words*), and forays into contemporary fiction (including Miriam Toews' *Women Talking*) will inform and broaden our discussions. Is forgiveness differently satisfying or unsatisfying in life or in art? How do aesthetic experiences of reconciliation affect society? Ultimately our goal will be to track the alternative norms and sources of

normativity revealed by a philological inquiry into cultural and literary texts as well as socio-linguistic practices whose contemporary analogues might include the confession booth, the rhetoric of the public apology, or the discourse of restorative justice today.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 72 - Senior Seminars in Course Group II

Senior Seminars, limited to 12 seniors and juniors, will vary in content. They will focus students on concentrated discussions and on a final research project of 20-25 pages. Prerequisites: four completed major courses or permission of the instructor.

ENGL 72.02 - Decadence, Degeneration and the Fin de Siecle

The end of the nineteenth century saw the emergence of genuinely mass readerships, but it also saw the development of literary forms that pitted themselves against the commercialization and homogenization of literary culture. In this course we will look at so-called decadent writers and artists who imagined heightened forms of aesthetic experience in order to displace the political and sexual norms of their societies. We will also examine the controversies their work evoked and the theories of degeneration, deviance and abnormality that were frequently deployed to explain their excesses. Texts will include Oscar Wilde's *The Picture of Dorian Gray*, J.K. Huysmans's *Against Nature*, Marie Corelli's *Wormwood*, and Bram Stoker's *Dracula*.

Cross-Listed as: COLT 49.05

Degree Requirement Attributes: Dist:LIT

ENGL 72.03 - Bohemia: Glamorous Outcasts & the Nineteenth-Century Novel

Bohemia - an urban underworld of social outcasts, struggling artists, and political conspirators - is one of the most enduring fantasies to emerge out of the nineteenth century. By the 1890s, the figure of the Bohemian had become central to a cosmopolitan literary culture eager to assert its autonomy from the marketplace and restrictive notions of nationality. It had also become bound up with a range of anxieties fixated on cultural decadence, racial degeneration, transgressive sexuality, political revolution and the occult. This course will study a series of novels that foreground these issues, including Oscar Wilde's *The Picture of Dorian Gray*, George Gissing's *New Grub Street*, George Du Maurier's *Trilby* and Joseph Conrad's *The Secret Agent*. We will also glance ahead to early twentieth-century texts like Henry Miller's *The Tropic of Cancer*.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 72.05 - 1850s America

What can the literature of a single decade tell us? From *The Scarlet Letter* (1850) and *Uncle Tom's Cabin* (1851-52) to *Leaves of Grass* (1855) and Lincoln's "House Divided" Speech of 1858, the literary output of America in the 1850s provides us with a snapshot of a turbulent culture amidst unprecedented growth and crisis. Slavery and xenophobia, minstrelsy and mass entertainments, crowds, consumerism, and cities, the "woman question," labor rights, economic panics, and the secularization of Christian sentiment—these are just some of the issues that clamor in the literature of the decade. Our texts shall represent the gorgeous miscellany that is the 1850s, drawing from both high and low culture, canonical and forgotten authors, and from both established genres and media like novels and slave narratives to more ephemeral ones like newspapers, almanacs, caricatures, and inscribed material objects. Classes will meet in Rauner so that we may use these and other period rarities to spawn discussion and topics for original, independent research. In addition to the rich content of the texts themselves (their historical contexts and theoretical possibilities), another object of inquiry shall be the nature of literary history itself.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 72.06 - Dickens in Context

This class will focus on the work of Charles Dickens in two distinct contexts. First, we will spend the term engaging in an intensive, deliberately slow reading of Dickens's *Bleak House*, which was published from March, 1852 to September, 1853, in 20 monthly parts. By spreading our reading of this long, complex novel over the span of the fall term, we will gain access to something like the experience of its first readers, who encountered the text in units of several chapters, separated by time. Second, we will put Dickens and *Bleak House* in conversation with three other novelists and novels that shared the moment in the marketplace: Elizabeth Gaskell's *Cranford*, published serially and edited by Dickens in 1851-52, Charlotte Brontë's *Villette*, published in 1853, and Anthony Trollope's *Barchester Towers*, published in 1855. Through work in Rauner Library, we will learn about the material history of literary production in the mid-Victorian period, and through engagement with contemporary critical and theoretical texts, we will learn about the implications of the narrative experiments Dickens, Gaskell, Brontë, and Trollope undertook in the 1850s. Though reading for the course will be demanding, keeping up will be rewarded with ample room for lively in-class discussions.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 72.09 - Ecocriticism

Recent critics have argued that our image of "nature" as static and separate from humans is our chief stumbling block in cultivating ecological thought. In this course, we will read literature from the eighteenth century to track the

emergence and environmental legacy of developments such as the Industrial Revolution and the Anthropocene, the geological epoch in which humans became the primary driver of climate change. Topics will include the vogue for georgic poetry, the aesthetics of the sublime, colonial expansion, the rise of natural history, it-narratives and thing theory, and questions of the animal. We will read contemporary theory about ecology and object-oriented ontology in the context of the eighteenth century and twenty-first century environmental concerns.

Degree Requirement Attributes: LIT

ENGL 72.13 - The Brontës

Who were the Brontës and why have their novels remained so popular? What do their texts tell us about Victorian discourses on childhood, gender, space and psycho-geographies, class discontent, empire and globalization, labor and industry, religion, creativity, and language? What do we gain or lose by studying their biographies: tales of four siblings living in isolation on the Yorkshire moors, publishing pseudonymously, and dying young? In this course, we will look closely at the literary production of the Brontës, beginning with the fantastical tales and poetry they wrote as young adults. Topics will include female labor, evangelicalism, the Victorian Gothic, marriage and women's legal rights, storytelling and myth, colonialism, feminized and racialized madness, and the physical and psychological contours of domestic and foreign space.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 72.14 - From Riches to Rags: Poverty in American Literature, 1861-1925

From accounts about the streets being paved with gold to tales that take characters from rags to riches, success stories form an important part of American literary and national identity. Some eras especially seem to embrace such narratives, such as the "Gilded Age" which owes its name to Mark Twain. Yet the term itself was tongue-in-cheek, and many of the works produced in that "age" are as -- if not more -- concerned with rags than riches. Taking material possessions -- or their absence -- as a lens through which to examine economic and cultural conditions, these texts don't work from as much as they work towards a definition of what poverty is and what it does -- to individual people and whole classes (with gender and race as salient categories). In this class, we will read key literary works, especially in the genres of Realism and Naturalism, alongside theoretical texts to shed new light on the way in which American Literature portrays, critiques, embraces as well as reimagines the material and cultural conditions of Americans' lives and livelihoods.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 72.15 - Walter Benjamin's The Arcades Project: Reading Nineteenth-Century Material Culture

Walter Benjamin's *The Arcades Project* is a vast compendium of textual fragments that recreates the phantasmagoria of nineteenth century Paris and the figures who inhabited it: the flâneur, the ragpicker, the poet, the prostitute, the revolutionary, the gambler, and the collector. Moving from sewers and catacombs to department stores and covered arcades, it explores the most innocuous aspects of everyday life in order to excavate high capitalism's deepest and most resonant dreams about itself. In this course we will contextualize *The Arcades Project* in the development of Benjamin's thought more generally, and read it alongside a range of representative nineteenth-century writers such as Charles Dickens, Edgar Allan Poe, Karl Marx, Heinrich Heine, Charles Baudelaire, Mary Braddon, Émile Zola and others, the better to understand it as a radically experimental form of cultural theory and creative practice. Additional reading in critical theory will include essays by Theodor Adorno, Siegfried Kracauer, Christine Buci-Glucksmann, Susan Buck-Morss and Carole Pateman.

Junior Colloquium: Course Group II and Course Group IV

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 73.01 - In the Image: Photography, Writing, and the Documentary Turn

In 1942, the literary critic Alfred Kazin dismissed the documentary movement of the 1930s as a "sub-literature," a "vast granary of facts" from which poets and fiction writers might extract the raw material of true literature. Just a year before, though, James Agee and Walker Evans -- a journalist and photographer -- had published *Let Us Now Praise Famous Men*, a vast book, indeed, sprawling in its feverish devotion to the experimentation Agee and Evans believed necessary to even come close to telling a true story. Agee and Evans wanted it to be an object as much as a book, a challenge to literary culture; whatever it was, it wasn't "sub" anything. In this course we'll use the question of just what Agee's and Evan's combination of pictures and words might be as the heart of our exploration of the documentary sphere as encountered through the conjunction of text and image. In the first half of the course, we'll be guided by critical thinkers as we look at creative works and write our own critical essays; in the second, we'll be guided by creative work as we attempt our own even while we continue our conversations with more contemporary critical thinkers. Besides Agee and Evans, we'll be encountering among others, photographers Robert Frank, Sally Mann, Stephen Shore, Helen Levitt, Wendy Ewald, Teju Cole, Jean Mohr, Tanja Hollander, and Roy DeCarava; literary journalists Leslie Jamison, Michael Lesy, John Jeremiah Sullivan, John Berger, and Charles Bowden; critics Susan Sontag, Roland Barthes, John Szarkowski, Jerry Thompson, Susie Linfield, Jeff Allred, and bell hooks; and poets Claudia Rankine, Marianne

Moore, Langston Hughes, Donald Justice, and Kevin Young.

Offered: Spring.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 73.02 - Toni Morrison Senior Seminar

This course is an in-depth study of Toni Morrison's major fictional works. We will examine Morrison's earliest and arguably most foundational and influential novels. We will also read critical responses to Morrison's works. Required texts will include, *The Bluest Eye*, *Sula*, *Song of Solomon*, *Tar Baby*, *Beloved*, *A Mercy*, *Conversations with Toni Morrison*, and selected essays. Central to our exploration will be an analysis of Morrison's observation that "the past affects the present." Therefore, we will explore the social and historical factors that contribute to Morrison's artistic constructions. Some of the issues we will examine include, alternative constructions of female community and genealogy, and representations of race, class, nationhood, and identity.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 73.03 - Black Elegies

This course is structured around iterations of black grief within, but mostly beyond the genre of poetry. What curator Okwui Enwezor calls the contemporary "emergency of black grief" is over four centuries old. We will explore modes of release from black cultural producers who attend to the multiple losses sustained by black subjects. The resulting productions span the range of representation from dance, painting, photography, music, film, and craftwork. The course will be organized around three parts, each focusing on the sensorial: *Sight*, *Sound*, and *Touch*. Together we will consider what it means to mourn in an antiblack world resistant to acknowledging the violences endured by black subjects in the United States and beyond its borders.

Cross-Listed as: AAAS 35.01 WGSS 66.11

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 73.05 - Nobel Prize Authors Writing in English

A study of Nobel Prize writers writing in English from various countries, this course examines authors' aesthetic innovations alongside their engagement in cultural, socio-political, and national discourses. Although the focus will be on poetry, the course will also explore the relationship between different genres (including essays, plays, and novels) and various socio-historical moments. Authors will include William Faulkner, Nadine Gordimer, Seamus Heaney, Wole Soyinka, Rabindranath Tagore, Derek Walcott, Patrick White, and W.B. Yeats.

Degree Requirement Attributes: Dist:LIT

ENGL 73.07 - Poetry of Elizabeth Bishop

An orphan, a female poet, a lesbian, a long-term expatriate in Brazil, Elizabeth Bishop is nowhere definitively at home; for a long time, literary criticism had trouble accommodating her as well. Recently, queer, feminist, and postcolonial analyses have provided a new critical context for this elusive poet; we will read widely in this work, while focusing on Bishop's poems, drafts, and letters. We will also consider her relationships with contemporaries like Moore and Lowell.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 73.13 - James Joyce

This seminar will be devoted to the study of Joyce's *Ulysses*. After some discussion of Joyce's *Portrait* and *Dubliners* -- both of which students are urged to read before the course begins--we will focus on the text of Joyce's *Ulysses*, with an emphasis on close reading and an examination of Joyce's experiments in prose and his place in modern literature.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 73.19 - Faulkner

Although he never received a college degree and lived most of his life in a small town in one of the most impoverished states in the nation, William Faulkner is now acclaimed throughout the world as one of the greatest modern writers. In this seminar, we will focus on Faulkner's fiction and on its place in the history of modernism. Particular attention will be given to the importance of Southern history and Southern legends, which are inseparable in the fiction from the experiences of individual and family life. We will read *The Sound and the Fury*, *As I Lay Dying*, *Absalom Absalom!*, *Light in August*, *Go Down, Moses*, and *The Hamlet* and study the work of critics who have debated the meanings of Faulkner's art, especially, for recent critics, the importance of race to the stories he tells.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 73.28 - How We Live Now: Contemporary Hemispheric Fictions

This course explores contemporary hemispheric fiction and film's attempts to represent how we live now: to map the economic and cultural changes of the last forty years, including the death of 1960s social movements and the shift to a new form of global capitalism. Throughout the course, we will consider the inter-Americanism of these works, exploring how these authors grapple with parallel and overlapping historical conditions, and attend particularly to questions of form and genre. We will consider how genres like chick lit and detective fiction might solicit readers to think and feel in ways that are in line with national and multinational economic imperatives,

but also how authors have attempted to create new forms to describe and challenge contemporary conditions of work, war, debt, and depression. Authors may include Roberto Bolaño, Terry McMillan, Junot Diaz, Claudia Rankine, Alicia Gaspar de Alba, Karen Russell, Eden Robinson, and César Aira.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 73.30 - 20th Century Protest Poetry

In light of recent protest movements that target issues of race and gender, the prescient words of numerous artists continue to be evoked and volleyed about in contemporary media outlets. Yet the contexts of many of these utterances are largely ignored. Delving into some of these contexts and engaging many of these artists' larger oeuvre, this course is a multidisciplinary investigation of major protest poets of the twentieth century. It explores the ways in which poets living in the United States, and particularly members of historically marginalized communities, not only pushed back at the powers-that-be, but continuously saw and articulated themselves as simultaneously a part of and a part from larger "American" society. The course wrestles with the well-known and often contentious topics: race, class, and gender. Starting with turn-of-the-century writers like Claude McKay—whose words have become synonymous with outspoken critiques of World War I and the "Red Scare"—and ending with contemporary writers like Balakian and Chin, the course moves chronologically. Some of the writers it examines include, Peter Balakian, Amiri Baraka, Staceyann Chin, Lucille Clifton, Mayda Del Valle, Karen Garrabrant, Allen Ginsberg, Zbigniew Herbert, Robert Lowell, Juan Felipe Herrera, Langston Hughes, Etheridge Knight, Denise Levertov, Haki Madhubuti, Jill McDonough, Claude McKay, Alice Notley, Emmy Perez, Adrienne Rich, Sylvia Plath, Sonia Sanchez, and Dorothy Tse.

Cross-Listed as: AAAS 91.02

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 74.01 - Reading Freud

Why read Freud? Many of his most famous ideas (the Oedipus Complex, for example) have been discredited, disparaged, devalued, decried. So why read Freud? Using that question — a question that, in its very persistence, already crystalizes all that is most troubling, provocative, and intriguing about the Freudian text — students in this class will read Freud for his enduring value as the inventor, in psychoanalysis, of one of modernity's most disturbing art forms, as an influential theorist of figuration and representation, as a fearless inquirer into the mysteries of gender and sexuality, and as a speculative thinker who continues to have a hold on our imagination precisely because he could never quite come to grips with all that had a hold on his imagination. Above all, we shall read Freud for what he has to teach us about the importance of risking failure and embarrassment, of remaining restless

and uncertain in respect to one's own thinking, of finding oneself in over one's head. The texts we shall use to pursue this line of inquiry may or may not include any of the following: *Studies on Hysteria*, *The Interpretation of Dreams*, *Three Essays on Sexuality*, the case histories of Dora and the Wolf Man, *Papers on Metapsychology* and on *Technique*, *Introductory Lectures on Psychoanalysis*, *Beyond the Pleasure Principle*, *Inhibitions, Symptoms and Anxiety*, *Civilization and Its Discontents*, and essays such as "Project for a Scientific Psychology," "Screen Memories," "The Uncanny," "The Moses of Michelangelo," "On Narcissism," "Two Principles of Mental Functioning," "A Child Is Being Beaten," "The Economic Problem of Masochism," "Constructions in Analysis," "Analysis Terminal and Interminable," and "Humor."

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 74.02 - Understanding Biopolitics

Biopolitics, loosely defined as the reciprocal incorporation of politics and life, describes not merely the dominant form that politics takes today but also, arguably, the form that politics has always taken. Healthcare, reproduction, immigration, security, racialization, risk management, emotional wellbeing, property and the common: There is no aspect of embodied existence that has not been affected, if not created (or at least grasped), by biopolitics. Nevertheless, the concept of biopolitics itself, introduced into the critical lexicon by Foucault and still subject to revision and working-through, remains far from settled. Accordingly, students in this seminar will read foundational texts of the burgeoning biopolitical canon — texts by Foucault, Arendt, Agamben, Esposito, Hardt and Negri, to name but a few — as a way of understanding biopolitics not as the basis for a new epistemology but as the term we accord a set of predicaments that emerge at the point where politics and life intercept one another. To facilitate that understanding, students will rely on the texts collected in *Biopolitics: A Reader*, supplemented by Esposito's *Terms of the Political* and Melinda Cooper's *Life as Surplus*. For their final paper, students will have the option of writing either an essay assessing the treatment of a biopolitical predicament across a range of texts or a biopolitical case study.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 74.03 - On Cruelty

What is cruelty? How can we understand the relation between cruelty and other forms of violence, such as sadism, masochism, and terrorism, all of which straddle the difficult boundary between pleasure and displeasure, enjoyment and pain. In this course, we will explore the concept of cruelty through a study of literary, filmic, psychoanalytic, and philosophical texts. We will also interrogate how appeals to cruelty underwrite various rights discourses, including debates on the death penalty,

human and animal rights, and various international treatises that put a limit on the violence of war. Authors will include: Marquis de Sade, Antonin Artaud, Richard von Krafft-Ebing, Sigmund Freud, Jacques Lacan, Jacques Derrida, Gilles Deleuze and Felix Guattari. Films might include: *Salo, or the 120 Days of Sodom* (Dir. Pasolini), *The Piano Teacher* (Dir. Haneke), and *Antichrist* (Dir. von Trier).

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

ENGL 74.04 - Postcolonial Bildungsroman: Youth and Happiness in the Global Novel

How does one grow up to find happiness? The “bildungsroman,” or novel of “coming to age,” is a novelistic genre that arose in the late 18th century to answer precisely that question, by using stories of young protagonists to imagine the optimal path to happiness. In this class, we will familiarize ourselves with texts considered “exemplary” of the bildungsroman in the Western tradition, then turn to non-Western narratives of youth to compare different conceptions of the link between youth and happy living. Primary texts include: J. W. Goethe, *Wilhelm Meister*; Jane Austen, *Pride and Prejudice*; Olive Schreiner, *Story of an African Farm*; Emily Brontë, *Wuthering Heights*; Tawfiq al-Hakim, *Bird of the East*; Hahya Haqqi, *The Saint’s Lamp*; Chinua Achebe, *No Longer at Ease*; Cheikh Hamidou Kane, *Ambiguous Adventure*; Tayyeb Saleh, *Season of Migration to the North*; Ama Ata Aidoo, *Our Sister Killjoy*. Secondary texts include criticism by Mikhail Bakhtin, Franco Moretti, Jed Esty, and Joseph Slaughter.

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:CI

ENGL 74.05 - Word-Image Theory

Words in dialogue with images pervade our textual landscape in the form of advertisements, comics, instructional diagrams, and photo essays, and the entanglement of symbol systems once thought of as separate has become routine in digital display. Word-image theory seeks to understand these entanglements, analyzing the conceptual intersections of the literary and the visual. In this seminar, students will be invited to re-conceptualize those intersections by becoming familiar with the core arguments of word-image studies, iconology, picture theory, and visual culture studies. Creative authors may include Chris Ware, Claudia Rankine, and W.G. Sebald, and critical authors may include Panofsky, Barthes, Foucault, Mitchell, and Bal.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 74.06 - Frantz Fanon: Colonial War and Mental Disorders

This course is an introduction to postcolonial theory through an exploration of the writings of Frantz Fanon, a Martiniquan psychiatrist and anticolonial thinker, who wrote extensively on the political and psychological impact of colonization on both the colonizers and the colonized. In the course, we will read Fanon’s early essays on black subjectivity in *Black Skin, White Masks*; his more overtly political writings on violence and revolution in *Wretched of the Earth*; and, his clinical writings on madness, institutionalization, and psychotherapy, collected in the newly translated *Alienation and Freedom*. Throughout the course of the term, we will pay close attention to questions of racial and sexual difference in Fanon’s work as well as the way his writing remains critical for postcolonial political thought.

Degree Requirement Attributes: Dist:LIT; WCult:NW

ENGL 74.11 - High Theory

This seminar for advanced students undertakes a close reading of difficult texts in philosophy and in literary and cultural theory. We will include secondary literature to help contextualize the primary texts under study, but the emphasis is on close reading to develop original and critical approaches to these challenging works. Class will be based largely around group discussion, with lectures and prepared student presentations to help stimulate conversation. Students can help to shape the syllabus by proposing texts they wish to work on together. Representative authors we might read in this class include Deleuze, Derrida, Badiou, Agamben, Heidegger, Virilio, Zizek, Lyotard, and others

Offered: Winter.

Degree Requirement Attributes: TMV

ENGL 74.12 - Garden Politics

This will be a senior seminar based on discussion of various literary, popular, critical, theoretical, and eco-critical texts related to gardens; we will consider issues of power involved in an apparently apolitical leisure activity. Students will be encouraged to find their own topics of interest for discussion and for a final paper modeled on journal articles. We begin where much of English-language culture begins, with the “Book of Genesis.” In that text, the Garden of Eden is the site of creation, and its story suggests questions about who owns a garden, what it means, whom it is for, and what can disrupt or destroy it. We will then move on to other questions of meaning and belonging suggested by gardens as topic and trope, beginning with some postcolonial gardens and critiques that explicitly comment upon the politics, ethics, and power relations encoded in these topics. We will also consider a broad range of related issues and discourses connecting humans and the environment. Literary authors

will include Francis Hodgson Burnett, H.D., T.S. Eliot, Ross Gay, Derek Jarman, Jamaica Kincaid, Andrew Marvell, John Milton, Olive Senior.

Not open to students who have received credit for ENGL 64.02.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 74.13 - Jacques Lacan and Psychoanalytic Thought

This course is an introduction to the teachings of Jacques Lacan, a French psychoanalyst who turned to the texts of Sigmund Freud in order to bring back to psychoanalysis the radicality of its intervention. In the course, we will read some of the key texts in Lacan's *Ecrits* alongside excerpts from his seminars as well as commentaries on his writings by prominent Lacanians, including but not limited to, Jacques-Alain Miller and Slavoj Žižek. The course is located at the intersection of literature, psychoanalysis, and critical theory and will act both as introduction to psychoanalytic thought as well as its unique development by Lacan. The psychoanalytic texts will be supplemented by reference to filmic texts, including: *Psycho* (dir. Hitchcock, 1960), *Shame* (dir. McQueen, 2011), and *Black Swan* (dir. Aronofsky, 2010).

Not open to students who have received credit for ENGL 64.04.

Degree Requirement Attributes: Dist:TMV; WCult:W

ENGL 75.02 - Climate Fiction

The 21st century drumbeat of climate doomsday has ushered in a new speculative genre of planetary crisis dubbed climate fiction or "cli-fi," the science fiction of the late Anthropocene. But how is this genre new, and why limit such queries to fiction? How does the specter of species death and global pandemonium have a literary and cultural history as well as a geophysical, earth systems one? This seminar, through historical and contemporary critique, read transversally across an array of media from novels to theory and film, will situate where we are now with literature from the past about the emergence of steam power, land enclosures, energy systems, and Arctic exploration to account for how we might secure the future. Topics include entanglements of anthropogenic processes with other planetary effects in theories of Capitalocene, Plantationocene, and Chthulucene from the conquest of the Americas to the untimely present. Readings include eighteenth century and romantic natural history, bad weather, contemporary "cli-fi," ecological theory, and at least one film, such as Steven Spielberg's blockbuster *Ready Player One* (2018).

Offered: Winter.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 75.03 - Beyond the Prison: Premodern Carceral Studies

What came before the prison, and what could come after? This course will serve as an introduction to some of the methods and concerns of contemporary Critical Prison Studies, as well as a deep dive into the historical rise of carceral institutions in England and the United States, as seen from the perspective of incarcerated writers, and as reimagined in literary texts. Famous examples such as the prison epistles of Oscar Wilde will be set alongside more recent rediscoveries, such as the manuscripts of Austin Reed. Readings from Angela Davis, Michel Foucault, and Nicole Fleetwood (among others) will frame our comparative inquiry; classics such as *Robinson Crusoe* will be cast in a different light. Recurring topics will include writings from confinement as genre; the importance of print culture inside and outside the prison; the relation between carceral institutions and literary genres such as the convict narrative, epistle, early realist novel, and lyric poem. Throughout we will pay particular attention to how literary writing has been a recurring means for thinking outside the confines of a given political discourse, while we also reconsider the links between confinement and imagination, rehabilitation and subjectivity, art and liberation, then and now.

Degree Requirement Attributes: Dist:LIT; WCult:W

Section VI - Creative Writing

Introductory Creative Writing Courses

CRWT 10 - Introduction to Fiction

An introductory workshop and reading course in fiction, designed to allow students to work in all fictive modes. Each week students will consider different aspects of writing, and the various elements integral to the genre. Seminar-sized classes meet for discussion and include individual conferences.

Offered: Fall, Spring, Summer, Winter.

Degree Requirement Attributes: Dist:ART

CRWT 11 - Introduction to Creative Nonfiction

An introductory workshop and reading course in creative nonfiction—a hybrid genre of journalism, memoir, and fictional and poetic techniques, also known as the art of fact. Each week students will consider different aspects of writing, and the various elements integral to the genre. Seminar-sized classes meet for discussion and include individual conferences.

Offered: Fall, Summer, Winter.

Degree Requirement Attributes: Dist:ART

CRWT 12 - Introduction to Poetry

An introductory workshop and reading course in poetry. Each week students will consider different aspects of

writing, and the various elements integral to the genre. Seminar-sized classes meet for discussion, and include individual conferences

Offered: Fall.

Degree Requirement Attributes: Dist:ART
Intermediate Creative Writing Courses

CRWT 20 - Intermediate Workshop: Fiction

Continued work in the writing of fiction. The class proceeds by means of group workshops, individual conferences with the instructor, and reading across the genre. The process of revision is emphasized. Topics and emphases may vary from term to term. Please refer to "How To Apply to CRWT 20, 21, or 22" on the department website and answer all of the questions listed in a cover letter. Students must submit a 5-8 page sample of their writing along with the cover letter by the last day of classes of the term preceding the term in which they wish to enroll. These materials should be submitted electronically to the instructor. (Formerly ENGL 83)

Prerequisite: CRWT 10 and permission of the instructor. Please read the "How To Apply To CRWT 20, 21, or 22" document available on the Department of English and Creative Writing website. Students should submit, to the instructor electronically, a five – eight page writing sample of their fiction. Deadline for equal consideration for admittance is the last day of classes in the term preceding the course. Late applications will be accepted, but held until the add/drop period and reviewed if vacancies occur.

Offered: Fall.

Degree Requirement Attributes: Dist:ART

CRWT 21 - Intermediate Creative Non Fiction I

Continued work in the writing of creative nonfiction, including literary journalism, investigative memoir, the lyric essay, and documentary. The class proceeds by means of group workshops, individual conferences with the instructor, and reading across the genre. The processes of research and revision are emphasized. Topics and emphases may vary from term to term. Please refer to "How To Apply to CRWT 20, 21, or 22" on the department website and answer all of the questions listed in a cover letter. Students must submit a 5-8 page sample of their writing along with the cover letter by the last day of classes of the term preceding the term in which they wish to enroll. These materials should be submitted electronically to the instructor. (Formerly ENGL 84)

This workshop is currently taught as 40 Towns.

Prerequisite: CRWT 11 and permission of the instructor. Please read the "How To Apply To CRWT 20, 21, or 22" document available on the Department of English and Creative Writing website. Students should submit, to the

instructor electronically, a five – eight page writing sample of their fiction. Deadline for equal consideration for admittance is the last day of classes in the term preceding the course. Late applications will be accepted, but held until the add/drop period and reviewed if vacancies occur.

Degree Requirement Attributes: Dist:ART

CRWT 22 - Intermediate Workshop: Poetry

Continued work in the writing of poetry, focusing on the development of craft, image and voice. The class proceeds by means of group workshops on student writing, individual conferences with the instructor and reading across the genre. The process of revision is emphasized. Topics and emphases may vary from term to term. Please refer to "How To Apply to CRWT 20, 21, or 22" on the department website and answer all of the questions listed in a cover letter. Students must submit a 5-8 page sample of their writing along with the cover letter by the last day of classes of the term preceding the term in which they wish to enroll. These materials should be submitted electronically to the instructor. (Formerly ENGL 85)

Prerequisite: CRWT 12 and permission of the instructor. Please read the "How To Apply To CRWT 20, 21, or 22" document available on the Department of English and Creative Writing website. Students should submit, to the instructor electronically, a five – eight page writing sample of their fiction. Deadline for equal consideration for admittance is the last day of classes in the term preceding the course. Late applications will be accepted, but held until the add/drop period and reviewed if vacancies occur.

Offered: Spring.

Degree Requirement Attributes: Dist:ART
Advanced Creative Writing Courses

CRWT 60 - Advanced Workshop: Fiction

An advanced workshop for seniors who wish to undertake a manuscript of fiction. Students must submit an 8-12 page writing sample to the instructor by the LAST DAY OF CLASSES of the term preceding the term in which they wish to enroll. These materials should be submitted electronically to the instructor.

Prerequisite: CRWT 20 or permission of the instructor.

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:ART

CRWT 61 - Advanced Workshop: Creative Nonfiction

An advanced workshop for seniors who wish to undertake a manuscript of creative nonfiction. Students must submit an 8-12 page writing sample to the instructor by the LAST DAY OF CLASSES of the term preceding the term in which they wish to enroll. These materials should be submitted electronically to the instructor

Prerequisite: CRWT 21 or permission of the instructor.

Offered: Fall.

Degree Requirement Attributes: Dist:ART

CRWT 62 - Advanced Workshop: Poetry

An advanced workshop for seniors who wish to undertake a manuscript of poetry. Students must submit an 8-12 page writing sample to the instructor by the LAST DAY OF CLASSES of the term preceding the term in which they wish to enroll. These materials should be submitted electronically to the instructor.

Prerequisite: CRWT 22 or permission of the instructor.

Offered: Fall.

Degree Requirement Attributes: Dist:ART

Section VII - Foreign Study Courses

ENGL 90 - English Study Abroad I

In this class we will read a range of literary texts about London in order to think about and model our own critical and creative explorations of one of the planet's most culturally diverse and historically layered urban environments. The emphasis of the class is two-fold: we will use texts as a way into the city, and the material spaces and histories of the city itself as a way of constructing our own texts. Readings will include works focused on London by writers such as Charles Dickens, Robert Louis Stevenson, Virginia Woolf, T.S. Eliot, Zadie Smith, Bernadine Evaristo, Alan Moore and others. We will also pay attention to the larger national, imperial and global contexts in which London and its literature have been situated and with which they continue to engage.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT; WCult:W

ENGL 91 - English Study Abroad II

Major credit for this course is awarded to students who satisfactorily complete a course of study elected as part of the department's Foreign Study Program (FSPs) at Queen Mary University of London. Course group credit towards the requirements of the English major will be determined by the program director and will vary depending on the specifics of the QMUL course syllabus. Students are advised to consult with the program director as they make their enrollment choices.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT

ENGL 92 - English Study Abroad III

Major credit for this course is awarded to students who satisfactorily complete a course of study elected as part of the department's Foreign Study Program (FSPs) at Queen Mary University of London. Course group credit towards the requirements of the English major will be determined

by the program director and will vary depending on the specifics of the QMUL course syllabus. Students are advised to consult with the program director as they make their enrollment choices.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT

Section VII - Independent Study and Honors

CRWT 89 - Creative Writing Project

Instructor: Creative Writing Director

A tutorial course to be designed by the student with the assistance of a faculty supervisor. This course is intended for the purpose of producing a manuscript of fiction, creative nonfiction or poetry.

Offered: Fall, Spring, Winter.

Degree Requirement Attributes: Dist:ART

CRWT 98 - Honors Course I

Independent study under the direction of a faculty adviser. Honors majors elect this course in the first term in which they are pursuing creative writing honors projects. For more information, see English Honors Program above, and consult the Guide to Honors booklet available in the English Department.

Students are awarded one course credit for successful completion of this course upon completion of CRWT-099. Students register for CRWT-098 and receive a grade of "ON" (ongoing) at the end of the term. Students then register for CRWT-099 the subsequent term to complete the coursework. A final grade will replace the "ON" in CRWT-098 upon completion of CRWT-099.

Offered: Winter.

CRWT 99 - Honors Course II

Independent study under the direction of a faculty adviser. Honors majors elect this course in the second term in which they are pursuing creative writing honors projects. For more information, see English Honors Program above, and consult the Guide to Honors booklet available in the English Department.

Students are awarded one course credit for successful completion of this course. Students who have registered for CRWT-098 register for CRWT-099 to complete the coursework. A final grade will replace the "ON" for CRWT-098 upon completion of this course for a total of 2 credits for CRWT-098 and CRWT-099.

Offered: Spring.

ENGL 96 - Reading Course

A tutorial course to be designed by the student with the assistance of a member of the English Department willing

to supervise it. This course is available, as an occasional privilege, to upperclassmen who have demonstrated their ability to do independent work. During the term prior to taking the course, applicants must consult the Department Vice Chair to make arrangements for approval of the project. (Note: ENGL 96 does not normally count towards the English major or minor, though in special circumstances the C.D.C. may approve occasional exceptions to that rule. Students seeking such an exception are asked to petition the C.D.C. before taking ENGL 96. ENGL 96 may not be used to satisfy course group requirements.)

Offered: Fall, Spring, Winter.

ENGL 97 - Introduction to Honors

The aim of this seminar is not only to foster a sense of community and common purpose among the members of the English honors program to offer students further instruction in the protocols and techniques of serious scholarly writing. To that end, we will devote most of our meetings to the nuts and bolts of research and writing, aided and abetted by Eric Hayot's *Elements of Academic Style: Writing for the Humanities*. By the end of the term, students in this seminar should be prepared to write a well-developed proposal for their honors thesis. More, they should be on their way to mastering the skills necessary to help them research, write, and complete the thesis itself.

Offered: Fall.

Degree Requirement Attributes: Dist:LIT

ENGL 98 - Honors Course I

Independent study under the direction of a faculty adviser. Honors majors elect this course during the first term in which they are pursuing honors projects. For more information, see "English Honors Program," and consult the "Guide to Honors" booklet in the English and Creative Writing Department.

Students are awarded one course credit for successful completion of this course at the end of the second term of study. Students subsequently register for ENGL 99, and continue with their coursework into a second term. A final grade will replace the "ON" for this course upon completion of ENGL 99.

Offered: Winter.

ENGL 99 - Honors Course II

Independent study under the direction of a faculty adviser. Honors majors elect this course during the second term in which they are pursuing honors projects. For more information, see "English Honors Program," and consult the "Guide to Honors" booklet available in the English and Creative Writing Department.

Students are awarded one course credit for successful completion of this course. Students who have registered for ENGL 98 register for this course to continue their coursework. Students do not register for a third term. A final grade will replace the "ON" for ENGL 98 upon completion of this course.

Offered: Spring.

Environmental Studies

Chair: Michael E. Cox

Professors D. T. Bolger, M. E. Cox, R. B. Howarth, C. S. Sneddon, E. J. Wilson; Associate Professors V. B. Chaudhary, D. G. Webster; Assistant Professors L. L. Jennings, T. W. Y. Ong, S. J. Tumber-Dávila; Professors Emeritus A. J. Friedland, R. A. Virginia; Research Associate Professor L. E. Culler; Adjunct Professor M. B. Burkins; Visiting Professor B. D. Roebuck; Senior Lecturers R. T. Jones, S. B. Smith; Lecturers J. T. Erbaugh, F. E. Krivak-Tetley, M. E. Peach.

To view Environmental Studies courses, [click here](#).

In the Department of Environmental Studies (ENVS) we seek to motivate and prepare students to rise to the challenges and opportunities associated with human-environment interactions. Environmental degradation is an escalating problem from local to global scales. Training students to understand and address these environmental problems is our core mission and is why we believe that environmental studies is an essential component of a modern liberal arts education.

The field of Environmental Studies views the earth, and our place in it, as a set of complex, interacting socio-ecological systems. To understand this complexity, ENVS draws on concepts and methods from the natural sciences, social sciences and humanities, as complementary lenses through which to view these systems. But we also seek to overcome the limitations of any one of these perspectives by applying innovative approaches that integrate the traditional disciplines in new and productive ways. Research and teaching strengths in the program include environmental governance, ecosystem science, environmental and ecological economics, biodiversity conservation, climate change, and sustainable food systems.

A defining element of environmental studies is active engagement with real-world environmental problems. One contemporary concept we employ to frame this practical engagement is sustainability. The quest for sustainability asks the difficult question, how can humans live well on the planet without compromising the ability of current and future generations to do the same? A number of our

courses have a specific focus on “hands-on” engagement with sustainability (ENVS 3: Environment and Society, ENVS 50: Environmental Problem Analysis and the Africa Foreign Study Program).

To meet the needs of our students, we offer a major in Environmental Studies and two minors: Environmental Studies (tracks available in Environmental Studies, Sustainability or Sustainable Energy) and Environmental Science. We also offer the Africa Foreign Study Program that travels to Namibia where we explore the themes of environmental studies within the particular environment, culture and history of the southern Africa region.

Requirements for the Major, Modified Major, and Minor

The Environmental Studies Major

Prerequisites (3 courses): (a) Math 3, Math 10, ENVS 10 or the equivalent statistics course; (b) Chemistry 3 or 5 or Physics 3 or Biology 16 or Earth Sciences 1; (c) Economics 1 or Economics 2

Requirements (2 courses): (a) ENVS 2 or the equivalent (It is possible to substitute other course combinations for ENVS 2 on a two-for-one basis. The following may be combined with Biology 16: EARS 1, 6, ENVS 12 or GEOG 3. If BIOL 16 is taken as a partial substitute for ENVS 2, it may not be used as a prerequisite.); (b) ENVS 3 (It is possible to substitute other course combinations for ENVS 3 on a two-for-one basis.)

Core Courses (3 courses): Please choose three, including at least one from each of the two groups

(a) Natural Sciences for Environmental Governance: ENVS 20, ENVS 22, ENVS 25, ENVS 26 or ENVS 31;

(b) Social Sciences for Environmental Governance: ENVS 55, ENVS 56, ENVS 61, ENVS 65 or ENVS 67

Critical Issues in Environmental Studies (1 course): ENVS 12; ENVS 14; ENVS 15; ENVS 17; ENVS 18; ENVS 28.

Elective Focus Courses (3 courses): Three related and relevant non-introductory (i.e., 10 or above) courses, at least one from ENVS.

Culminating Experience: ENVS 50, ENVS 84, or ENVS 91

The Environmental Studies Honors Program

A senior honors thesis is a year-long commitment, however students in the program may receive credit for up to two courses, Environmental Studies 91 and 92 (Thesis Research). ENVS 91/92 may be taken in fall/winter, fall/spring or winter/spring, both for credit, but only ENVS 91 will count in the major. The minimum requirement for admission is a grade point average of 3.0 in the major and a 3.0 general College average at the beginning of the senior year or at any other time that an application for admission

is made. Those students who satisfactorily complete the Honors Program with a ‘B+’ average or better will earn Honors recognition in their major or, in appropriate cases, High Honors. High Honors will be granted only by vote of the ENVS faculty on the basis of outstanding independent work. An interim evaluation of honors students will be made after one term and continuation recommended for those students whose work demonstrates the capacity for satisfactory (B+) work. Enrollment in Environmental Studies 91 does not imply admissions into the Honors Program nor does completion of a senior thesis require the awarding of Honors in the major.

The Culminating Experience

The culminating experience requirement for the major in Environmental Studies may be met by completing either ENVS 50, ENVS 84, or conducting Honors Research (ENVS 91).

The Environmental Studies Minor

Prerequisites (1): ENVS 2 or ENVS 3

Requirements: And five other related non-introductory courses, numbered 10 and above, including at least three from Environmental Studies. Up to two courses from outside Environmental Studies may be used with permission of the Chair. (Exception: ENVS 2 or ENVS 3 can also be among these five if not taken as a prerequisite.)

The Environmental Science Minor

Prerequisites: (a) ENVS 2 or equivalent; (b) CHEM 3 or 5 or PHYS 3 or BIOL 16 or EARS 1

Requirements: (a) ENVS 3 or 11 or 42, (b) ENVS 20 or 25 or 28 or 30

Three other related non-introductory Environmental Studies science courses (numbered 10 and above). One class from outside ENVS may be used if from an approved list or with permission of the Chair.

Another Major Modified with Environmental Studies

Prerequisites: none

Requirements (2): ENVS 2 or 3; ENVS 50

Three additional Environmental Studies non-introductory courses, not including 2, 3, or 7. One of these may be substituted by an appropriate course from another department, with permission from the ENVS Chair.

Africa Foreign Study Program

Prerequisites: There are few formal prerequisites to participate in the ENVS Africa FSP. The program benefits from having diverse perspectives among the student participants, and all majors are welcome to apply. What we do look for is individuals who are prepared to engage in a

rigorous field-based educational experience. We do ask that you take one of the following courses in preparation.

AAAS 11/ANTH 12.23: Intro to African Studies

AAAS 14 /HIST 5.01: Pre-Colonial African History

AAAS 15/HIST 66: History of Africa since 1800

AAAS 19/HIST 5.08: Africa and the World

AAAS 40/WGSS 34.02: Gender Identities and Politics in Africa

AAAS 42/REL 66/WGSS 44.03: Women, Religion and Social Change in Africa

AAAS 44/ANTH 36: Anthropology and Contemporary Africa: Exploring Myths, Engaging Realities

AAAS 46/HIST 67: History of Modern South Africa

AAAS 50/ENVS 45/HIST 75: Colonialism, Development, and the Environment in Africa and Asia

AAAS 51/COLT 51: African Literatures: Masterpieces of Literatures from Africa

AAAS 54/THEA 23: Topics in African Theater and Performance

AAAS 83.02/GEOG 80: Food and the African World

AAAS 87.05/GOVT 42: Politics of Africa

AAAS 87.09/ANTH 12.14: African Popular Culture

AAAS 87.12/ANTH 12.24: Africa's Time

AAAS 88.17/ANTH 50.21: Filmmaking and Visual Culture

GEOG 6/INTS 16: Introduction to International Development

ENVS - Environmental Studies Courses

ENVS - Environmental Studies Courses

To view Environmental Studies requirements, click here (p. 362).

ENVS 2 - Introduction to Environmental Science

Instructor: Chaudhary/Peach

To understand current environmental problems, we need to study the physical, biological, chemical and social processes that are often the basis of those problems. This course will give the skills necessary to ask intelligent questions about - and perhaps obtain answers to - some of the environmental problems our planet is facing today by

examining scientific principles and the application of those principles to environmental issues. This course will survey a variety of topics including pollution, biodiversity, energy use, recycling, land degradation, and human population dynamics. It is designed to introduce environmental science and environmental issues, topics which are explored in greater depth in other Environmental Studies courses.

Offered: Fall, Spring, Winter.

Degree Requirement Attributes: SCI

ENVS 3 - Environment and Society

Instructor: Cox/Erbaugh

The relationship between humans and the environment is mediated by the consumption of natural resources, the discharge of pollution and waste, and the transformation of landscapes and ecosystems. Unsustainable outcomes arise because individuals and organizations have incentives to undertake actions that degrade environmental quality, often in the context of markets. As a result, achieving sustainability requires laws, public policies, social norms, and shared understandings that align individual action with collective well-being. This course analyzes the causes and solutions of environmental problems through the integration of concepts from a variety of social science disciplines. In addition, it explores the central role that ecology and ecosystem science play in understanding and responding to sustainability challenges.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

ENVS 7 - First-Year Seminars in Environmental Studies

ENVS 10 - Introduction to Environmental Statistics

Instructor: Chaudhary

This course is designed to introduce students to the basic statistical methods necessary to conduct and understand statistical analyses of environmental issues and problems. Methods and subjects include: measurement, descriptive statistics, graphs, basic probability, correlation and regression, and basic inferential statistics (hypothesis testing, confidence interval construction, effect size calculation). There is a strong emphasis on the application of these and other techniques to socio-environmental datasets that describe current environmental problems and issues. No previous experience with mathematics or particular software is required. Students will be required to complete a final project in which they use statistical techniques to address an environmental research question.

\f

Because of the large overlap in material covered, no student may receive credit for more than one of the

following courses: ECON 10, ENVS 10, GOVT 10, LING 010, MATH 10, PSYC 10, QSS 15 or SOCY 10.

Prerequisite: ENVS 2 or ENVS 3 or permission of the instructor

Offered: Winter.

Degree Requirement Attributes: Dist:QDS

ENVS 12 - Energy and the Environment

Instructor: Wilson

Energy, in a variety of forms, is a fundamental need of all societies. This course explores the scientific concepts and applications to society of the issues regarding energy extraction, conversions and use. It will examine the scientific basis for environmental and social concerns about our present energy mix including global climate change, toxic emissions and wastes from energy combustion, and nuclear proliferation. We will also consider choices that are made in the development and utilization of energy resources and the role of public policy.

Prerequisite: ENVS 2 or permission of the instructor.

Offered: Winter.

Degree Requirement Attributes: TAS

ENVS 14 - Sustainable Food Systems

Instructor: Ong

Sustainable food systems demand an answer to the question, what is sustainable? This course will explore the many names and faces of food, asking students to critically evaluate sustainability from scientific, social and political perspectives. The course is organized into three modules: 1) food, 2) energy & ecology and 3) environmental justice. The first module provides an overview to food systems, taking a look various management styles and their environmental consequences. We will pull examples from historical times to the present, from the precursors of the Dust Bowl to concentrated animal feed operations (CAFOs). The second module will provide a scientific understanding of the key energetic and ecological components that contribute to the sustainability of food systems including its contribution to climate change and global deforestation. In the third module we will examine the social injustices of food systems, from its twin roles in obesity and hunger to the development of key social movements striving for a new but old "peasant-way of life".

Offered: Spring, Winter.

Degree Requirement Attributes: Dist:TAS

ENVS 15 - Environmental Issues of the Earth's Cold Regions

This course examines the major physical, ecological and human systems of high latitudes, including the circumpolar northern Arctic regions and the continent of Antarctica. Using an interdisciplinary perspective the course explores the science of polar environmental change and applies this information to understand the connections of the polar regions to global processes and international issues (climate change, biodiversity, indigenous rights).

Prerequisite: ENVS 2 or ENVS 3 or permission of the instructor.

Degree Requirement Attributes: TAS

ENVS 17 - Marine Policy

Instructor: Webster

People use the oceans for transportation, recreation, food, mineral wealth, waste disposal, military defense, and many other important things. This course explores the most significant human-ocean interactions known today from two perspectives: science and policy. From the scientific literature, students will learn about issues ranging from the physical effects of sea level rise to the biological impacts of pollution to the bioeconomic repercussions of overfishing. For each of the problems that are revealed by science, we will also critically evaluate relevant policy solutions to understand how institutional design can (or can't) enhance human interactions with the oceans. This includes insights into the politics surrounding oceans issues in the US and around the world.

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

ENVS 18 - Indigenous Environmental Studies

Instructor: Ferguson

In this course, we examine Indigenous worldviews, environmental values and everyday life through the lens of environmental issues facing Indigenous nations and communities. Our geographic focus is on North America and the Pacific, with limited examples from other places and peoples globally. Through course materials, discussions, and assignments, students gain exposure to varied Indigenous perspectives and Indigenous knowledges expressed and enacted by scholars, Elders, community people, political leaders, and activists. Key concepts in Indigenous environmental studies will be discussed including Indigenous rights and responsibilities, Indigenous environmental stewardship, energy and development, land-language linkages, tribal sovereignty and self-determination, empowerment and resurgence.

Prerequisite: NAIS 8 or NAIS 10 or NAIS 25 or ENVS 11 or ENVS 2 or ENVS 3; or permission of instructor

Cross-Listed as: NAIS 018

Offered: Fall.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ENVS 20 - Conservation of Biodiversity

Instructor: Tumber-Dávila

On a global scale we are witnessing an unprecedented decline in what has come to be called Biodiversity. Human population growth and increasing rates of material consumption and technological development have increased the rate and scale at which we impact populations of native animals and plants. One goal of the course will be to address the biological aspects of this issue. What is Biodiversity? How is Biodiversity distributed geographically and taxonomically? What does humankind do to cause animal and plant extinctions? Is there a Biodiversity crisis? What is the current rate of extinction and what is the natural extinction rate? What properties of individual species make them vulnerable to extinction? What are the major threats to Biodiversity? The second objective is to examine the social dimensions of Biodiversity. How do our cultural and political perceptions and institutions contribute to the loss of Biodiversity? What value is Biodiversity to humankind? What is being done to preserve Biodiversity in the realms of science, technology, and policy? These questions will be addressed through lecture material, course readings, and writing assignments.

Prerequisite: ENVS 2 or BIOL 16, or permission of the instructor.

Offered: Spring.

Degree Requirement Attributes: TAS

ENVS 21 - Transforming the Energy System: Keeping the Lights on While Saving the Planet

This course will explore how transitioning to renewable energy systems is a necessary leverage point for addressing human-caused climate change, with a specific focus on how energy for electricity and heat is generated and used in New England. Through the collaboration of instructors from the Environmental Studies Program, the Irving Institute for Energy and Society, the Department of Earth Sciences and the Sustainability Office, students will gain an interdisciplinary perspective on New England energy systems and human-caused climate change, including 1) the economic, policy, and regulatory management and distribution of energy, 2) the environmental and societal benefits and impacts of these systems on people and the environment, 3) a scientific understanding of fossil fuel resource formation, extraction, refining and use, and 4) climate change attribution and predictions of future human-caused climate change. The course will culminate in a discussion of Dartmouth's own energy transition as well as regional- and national scale solutions for resolving

the urgency of climate action with the current political, economic, and technological constraints governing the renewable energy transition.

Prerequisite: ENVS 2, 3, 12 or any one class EARS 1-9

Cross-Listed as: COCO 038 EARS 021

Degree Requirement Attributes: Dist:TLA

ENVS 22 - Coupled Human-Natural Systems: Theory and Practice

Instructor: Ong

This course is an introduction to coupled human-natural systems, exploring how social, ecological, and environmental systems are linked and feedback to influence each other. Increasing human demand for Earth's limited resources has resulted in a plethora of hazards to the natural world; problems which are unlikely to be solved without understanding the links between human and natural systems. Here, we will explore some of the complex, sometimes non-intuitive behavior that results from coupling these systems. The primary objective is to introduce students to the tools and techniques of complex systems science used for researching coupled human-natural systems. In a series of lectures and computer laboratory modules, students will be introduced to significant areas of research in the field and learn how to analyze and leverage basic continuous and discrete time differential models and spatiotemporal statistics to address socio-ecological problems. The course will provide basic coding instruction, as necessary. No prior experience in coding is needed. In a final project, students will work in groups to develop or adapt an existing socio-ecological model, gather and analyze existing data, as well as interpret the implications of their results for human management. Not open to students who have received credit for ENVS 80.10.

Prerequisite: MATH 3 or MATH 10, an equivalent statistics course or permission from instructor

Offered: Winter.

Degree Requirement Attributes: Dist:QDS

ENVS 23 - Arctic Environmental Change

Instructor: Culler

This course examines the connections between science and the human dimensions of rapid environmental change. Environmental responses to climate change and resource development will be introduced from a scientific perspective. In addition, we will explore how this science is framed in policy documents such as reports from the Intergovernmental Panel on Climate Change. The course will emphasize the importance of science communication and will culminate with a collaborative project that integrates climate change, resource development, and

social issues. Not open to students who have received credit for ENVS 80.01.

Degree Requirement Attributes: Dist:TAS

ENVS 25 - Agroecology

Instructor: Ong

This course will introduce the principles of agroecology. Students will learn how classic ecological theories are applied to agricultural settings emphasizing biodiversity, plant-soil and biological control systems through group and independent project work at the Dartmouth Organic Farm. This course is intended to mimic real agroecological research. Thus, students will engage in question and methods development with multiple stakeholders (farm managers, other students and faculty), scientific collaboration, data collection, analysis, presentation, and peer review.

Prerequisite: ENVS 2 or BIOL 16, and MATH 3 or 10 or equivalent stats course, or permission of the instructor.

Offered: Summer.

Degree Requirement Attributes: Dist:SLA

ENVS 26 - Soil Ecological Systems

Instructor: Chaudhary

Soil is the living breathing skin of the Earth, supporting the ecosystem services and biogeochemical cycles that are critical to the maintenance of human societies and all life. Soil is also a complex ecological system that hosts the majority of biodiversity on Earth including millions of species of plants, animals, bacteria, and fungi. From farms to forests to cities, soil conservation, management, and restoration is a key component to addressing the climate crisis and environmental justice. Through lectures, field trips, and course-based soil ecological research, this course explores novel solutions to modern challenges in sustainable soil management.

Prerequisite: ENVS 2 or BIOL 16 or permission of the instructor.

Degree Requirement Attributes: Dist:SCI

ENVS 28 - Global Environmental Health

Instructor: Roebuck

This course will focus upon the scientific and public health principles that govern environmental health outcomes at the individual to the global scale. Case studies will be used to illustrate the principles. Some of the issues that will be discussed include lead poisoning, mercury in the food web, the epidemic of tobacco use that is sweeping the world, the global movement of persistent organic pollutants, and natural contaminants in the human supply. These cases will increase in complexity with regards to causative agents and health outcomes. Lastly, trends of environmental diseases

coupled with the prevention of these diseases will be emphasized.

Prerequisite: ENVS 2 or BIOL 16 or permission of the instructor.

Offered: Winter.

Degree Requirement Attributes: TAS

ENVS 31 - Forest Ecology and Management

Instructor: Joseph Tumber-Dávila

ENVS 31 introduces students to fundamental ecological concepts essential for comprehending forest ecology and management practices. With a focus on experiential learning, students will engage in immersive field trips, tree identification exercises, and forest inventory techniques. By the course's conclusion, students will emerge equipped with a deep appreciation for the complexities of forest ecosystems and the practical knowledge needed to contribute meaningfully to their conservation, sustainable management, and climate change mitigation in New England and beyond.

Prerequisite: ENVS 2 or 3, or permission of the instructor

Offered: Fall.

Degree Requirement Attributes: Dist:SLA

ENVS 40 - Foreign Study in Environmental Problems I

Instructor: Bolger

Natural Resources and Environmental Issues in Southern Africa. This course will examine the natural resource constraints and policy dilemmas faced by developing countries and the impacts of people on the environment. Topics will include land and water use, biodiversity and wildlife management, population and environmental health, agricultural practices and community dynamics, and development economics. These topics will be illustrated through field work at National Parks and safari areas, farming areas, and at community-based development projects.

Offered: Fall.

Degree Requirement Attributes: SOC

ENVS 42 - Foreign Study in Environmental Problems II

Instructor: Webster

Social and Political Aspects of Development and Conservation in Southern Africa. This course will examine the historical, social, and political context of the interplay between resource use, economic development and environmental conservation in southern Africa. The impact of colonial and ethnic traditions and international institutions, on strategies for economic development, urban growth, wildlife management, ecotourism, resource

conservation (especially water and soil) and land use will be discussed. Issues of gender in agricultural development and environmental protection will be considered.

Offered: Fall.

Degree Requirement Attributes: INT

ENVS 44 - Environment and Politics in Southeast Asia

Instructor: Sneddon

Over the past several decades, the people and environments of Southeast Asia have confronted a host of political, economic and cultural processes commonly grouped together under the heading "development". As witnessed by recent media reports detailing massive forest fires in Indonesia and dam controversies in Malaysia and Thailand, these development processes have resulted in drastic transformations in the landscapes, forests, and river systems of the region. These processes have likewise produced dramatic alterations in the livelihoods of the people who depend on and interact with the region's ecological systems.

Cross-Listed as: GEOG 044

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ENVS 45 - Colonialism, Development, and the Environment in Africa and Asia

Instructor: Zeinstra

This course examines the environmental history of Africa and Asia, focusing on the period of European colonialism and its aftermath. Topics include deforestation and desertification under colonial rule; imperialism and conservation; the consequences of environmental change for rural Africans and Asians; irrigation, big dams and transformations in water landscapes; the development of national parks and their impact on wildlife and humans; the environmentalism of the poor; urbanization and pollution; and global climate change in Africa and Asia. Open to all classes.

Cross-Listed as: AAAS 050 HIST 075 ASCL 54.07

Offered: Spring.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

ENVS 50 - Environmental Problem Analysis and Policy Formulation

Instructor: Cox/Ong

Students working together in groups will formulate and justify policy measures that they think would be appropriate to deal with a local environmental problem. The purposes of this coordinating course are to (1) give students an opportunity to see how the disciplinary knowledge acquired in their various courses and

departmental major programs can be integrated in a synthetic manner; (2) provide a forum for an in-depth evaluation of a significant environmental policy problem; and (3) give students the experience of working as a project team toward the solution of a real-world problem. Considerable field work may be involved, and the final examination will consist of a public presentation and defense of student-generated policy recommendations. Open only to seniors or to other classes with permission of the instructor. Satisfies the Culminating Experience requirement.

Prerequisite: ENVS 11, ENVS 2 or ENVS 3, and at least one upper-level Environmental Studies course, or permission of the instructor. Open only to seniors or to other classes with permission of the instructor. Satisfies the Culminating Experience requirement.

Offered: Spring.

Degree Requirement Attributes: Dist:SOC

ENVS 55 - Ecological Economics

Instructor: Howarth

This course examines the links between economic and ecological systems with an emphasis on the interplay between values and institutions in environmental problem-solving. Concepts pertaining to welfare economics, common pool resources, ecosystem valuation, and environmental ethics are developed and applied to problems such as fisheries and forest management, biodiversity conservation, and global environmental change. The course emphasizes the relationship between economic growth, ecosystem services, and human flourishing in the definition and pursuit of sustainable development.

Prerequisite: ECON 1 or ECON 2; MATH 3 or the equivalent; ENVS 2 or ENVS 3; or permission of the instructor.

Offered: Spring.

Degree Requirement Attributes: SOC

ENVS 56 - Political Economy of US Environmental Policy

Instructor: Webster

This course uses tools and concepts from political economy to explore the evolution of US environmental governance from colonial times to the present day. Classroom activities and assignments are designed to foster critical thinking about the interplay between economic and political forces in social-ecological systems. We will cover fundamental theories in political economy along with other conceptual narratives and ideologies that influenced US environmental history. We will also consider endogenous and exogenous sources of change, with particular focus on how the distribution of resources, understanding, and

incentives shaped patterns of governance across a broad range of domestic and international environmental issues (e.g., forestry, fisheries, agriculture, pollution, energy, climate change, etc.). Power disconnects and related issues from the literature on environmental justice are also incorporated throughout the course.

Prerequisite: ECON 1 or ECON 2 and MATH 3, or the equivalent, or permission of the instructor.

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

ENVS 60 - Environmental Law

Instructor: Jones

Environmental Law deals with the laws and policies used to protect the natural environment and human health from pollution and development. This course focuses on how U.S. and international environmental law and policy succeeds, and fails, to promote environmental justice (the fair sharing of benefits and harms of environmental regulation), mitigate and adapt to climate change, conserve natural resources, and protect biodiversity. Legal tools will be learned and applied to real-world environmental problems.

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

ENVS 61 - Community, Society and the Commons

Instructor: Cox

In this course we study local governance of environmental commons through a range of case studies, including fisheries in the Dominican Republic, forestry and water management in the United States, and Balinese agriculture. We will explore how communities manage their shared environmental commons through a variety of topics. These include the tragedy of the commons, environmental property rights, the role of reciprocity and kinship with nature to motivate environmental stewardship, and the possibility for effective co-management arrangements between communities and governments. Students conduct their own case studies and learn about the challenges of local governance through ongoing, in-class activities.

Prerequisite: ENVS 2 or ENVS 3 or permission of instructor

Degree Requirement Attributes: Dist:SOC

ENVS 62 - The Practice of Science Policy & Diplomacy

Instructor: Burkins

How can the best, most current, and most credible scientific knowledge more actively inform global debates and policy advancing the Sustainable Development Goals (SDGs), climate change mitigation strategies, international security, global health, poverty alleviation,

and peace building? And how can our existing science and policy systems become more inclusive, more equitable, and more informed by the next generation of young leaders? This course introduces students to emerging opportunities for engagement and action at the intersection of science, technology, policy, and diplomacy, by developing the “boundary spanning” skills critical for more science-informed, equitable, and inclusive policy solutions. Coursework will be highly interactive and multidisciplinary, including negotiation simulations, policy brief development, social impact work with local organizations, and seminars discussing current issues with invited leaders in science policy and science diplomacy. Not open to students who have received credit for ENVS 80.08.

Prerequisite: ENVS 2 or 3 or permission of the instructor

Offered: Fall.

Degree Requirement Attributes: Dist:SOC

ENVS 65 - Global Environmental Politics

Instructor: Webster

This course will examine the global politics associated with environmental issues such as desertification, wildlife management, biodiversity conservation, oceans and fisheries, shared water resources, and climate change. Specifically, we will engage these topics using theories from international relations and comparative politics. A major goal of the course is to give students a firm understanding of the linkages between the policy preferences of governments and the outcomes of international negotiations regarding the global environment.

Prerequisite: ENVS 2 or ENVS 3 or permission of instructor

Degree Requirement Attributes: INT

ENVS 67 - Political Ecology

Instructor: Sneddon

Political ecology is an approach to human-environment relations that links a broad understanding of biophysical systems (e.g., tropical forests, coastal ecosystems, river basins) to knowledge regarding the political and economic forces that drive ecological change. Drawing on examples from North America, Southeast Asia, Africa and other regions, this course employs a political ecology framework to examine contemporary debates over urbanization, water resources, the role of science in environmental conflicts and the cultural landscape.

Prerequisite: ENVS 3 or GEOG 1 or permission of instructor

Cross-Listed as: GEOG 47.01

Offered: Fall.

Degree Requirement Attributes: Dist:INT or SOC

ENVS 79 - The Soil Resource

Instructor: Jackson

Soils are a critical natural resource; feeding our growing population depends fundamentally on soils; in fact, soils provide nutrients to all ecosystems. Agriculture and land management has increased soil erosion around the world, potentially influencing the history and fate of civilizations. In the modern era, this use is not sustainable; the physical and chemical degradation of soils far outpaces soil production. This course will explore the nature and properties of soils and examine how these processes occur in natural and human-influenced soils, and identify reasonable limits on what can influence the sustainable utilization of soils as a resource. We will begin by developing an understanding of the geologic, biologic, and chemical processes that lead to soil formation and the development of specific soil properties. The second portion of the course will examine the relationship between soils and underlying bedrock and overlying vegetation and the role of soils in ecosystems. The final section of the course will examine the situations in which soils are used to reduce the impact of human activities and the way in which humans can reduce their impact on soils: the importance of soils in septic tanks and leach fields; the use of soils as solid waste landfill caps and liners; the use of soils in the storage of hazardous wastes; and the conservation and management of soils.

Prerequisite: ENVS 2 or one course from EARS 1, EARS 2, EARS 3, EARS 4, EARS 5, EARS 6, EARS 8, EARS 9, or CHEM 5 and an advanced course from the environmental sciences or Earth Sciences; or permission of the instructor.

Cross-Listed as: Identical to EARS 35

Offered: Fall.

Degree Requirement Attributes: SLA

ENVS 80.03 - Regenerative Design of the Built Environment

Instructor: Kawiaka

This class will examine current trends in ‘regenerative design’ of the built environment that includes buildings, infrastructure, and manmade landscapes that interact with the natural environment and its potential to improve our lives and the planet. Regenerative design is a systems-theory based approach to design. “Regenerative” processes restore energy used and materials consumed through a closed loop model where the outputs are equal to the inputs where waste=resources. Through this process, social needs are addressed while diminishing ecological impact, and usable energy, food and additional materials are created instead of waste and the designed system can actually improve the natural environment over time.

ENVS 80.11 - Social Ecological Systems: Theory and Methods

Instructor: Krivak-Tetley

The concept of social ecological systems (SES) provides a useful theoretical framework for confronting modern environmental challenges. This course uses the SES model to explore natural resource and conservation challenges across a range of historical, social, and political contexts. Case studies will compare and contrast the Global North and South, with special emphasis on the Upper Valley and sub-Saharan Africa. Through discussions, lectures, field activities and independent projects, students will develop a multidisciplinary skills “toolbox” for SES research.

Prerequisite: ENVS 2 or ENVS 3 or permission of instructor

Degree Requirement Attributes: Dist:TAS

ENVS 80.17 - Advanced Topics in Environmental Economics

Instructor: Howarth

This course develops advanced concepts and methods from environmental economics to prepare students to engage with current research and its applications in environmental policy and management. Topics may include welfare economics, nonmarket valuation, common pool resources, bioeconomic modeling, forest resource management, decision-making under uncertainty, and the links between climate change and the economy. Students develop skills in applying economic concepts and methods in the analysis of environmental problems.

Prerequisite: The course is aimed at students who have some prior knowledge of environmental economics (Environmental Studies 55 or 56 equivalent) or microeconomics (Econ 21). In addition, students should have a working knowledge of first-year differential calculus (Math 3 or above).

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

ENVS 80.18 - The Control of Nature

Instructor: Tumber-Davila

Embark on a journey that explores the convergence of speculative fiction and cutting-edge scientific advancements. This course delves into the realm of geoengineering technologies, designer genes, carbon removal technologies, renewable energy, and various transformational technologies that shape our understanding of society, the environment, and the climate. Contrary to its portrayal in cinematic works such as *Dune*, *Jurassic World*, and *Snowpiercer*, controlling the earth's climate is not mere science fiction. With a focus on ethical considerations and governance, this discussion-based

course critically examines the potential consequences, both positive and negative, of manipulating the environment.

Prerequisite: ENVS 2 or 3, or permission of the instructor

Offered: Spring.

Degree Requirement Attributes: Dist:TAS

ENVS 80.19 - Resource Extraction and Indigenous Led Solutions

Instructor: Jennings

This course is a brief survey of resource/natural relative extraction (depending on your world view) and ongoing solutions Indigenous People are leading in the management of our natural world. This is illustrated by several major environmental issues: water, mining, oil, natural gas, hunting and fishing, outdoor recreation, data access and agriculture.

Cross-Listed as: NAIS 023

Offered: Spring, Summer.

Degree Requirement Attributes: Dist:TMV; WCult:NW

ENVS 80.20 - Offshore Wind Power: The Promise, Policies, and Practice of Developing Renewable Energy

Instructor: Wilson

Students will take a deep dive into the global development of Offshore Wind power, a clean energy resource with the technical potential to supply the world's electricity demand eleven times over. We will explore the creation of a new renewable energy sector around the globe, paying particular attention to how the sector is evolving within the US, with a focus on the history and intertwined roles of federal and state governments, private developers, and communities.

Prerequisite: ENVS 2 or ENVS 3 or permission of the instructor

Offered: Winter.

Degree Requirement Attributes: Dist:SOC

ENVS 84 - Seminar on Environmental Issues of Southern Africa

Instructor: Krivak-Tetley

This seminar will coordinate and supplement the material in courses and field work of the program, using guest speakers and student presentations. Students, working in small sub-groups, will undertake multidisciplinary studies of specific regional environmental issues in southern Africa. These projects will lead to a single major paper produced by the group on an environmental topic selected in consultation with the instructor. The paper will be printed in a volume for use by future students and by

interested individuals in the U.S. and in southern Africa. Satisfies the Culminating Experience requirement.

Offered: Fall.

Degree Requirement Attributes: WCult: NW

ENVS 90 - Independent Study and Research

Instructor: Cox

Permission is required from the faculty advisor and the program chair.

Offered: Fall, Spring, Summer, Winter.

ENVS 91 - Thesis Research in Environmental Studies I

Instructor: Cox

Independent study of an environmental problem or issue under the supervision of a member of our staff. Open only to Environmental Studies majors. Only one term of either ENVS 91 or ENVS 92 can count toward the major. Credit requires completion of a suitable report. See description of the Honors Program in Environmental Studies.

Students are awarded one course credit for successful completion of this course at the end of the third term of study. Students subsequently register for ENVS 92, and continue with their coursework into a third term. Students do not register for a third term. A final grade will replace the "ON" for both this course and ENVS 92 upon completion of ENVS 92 at the end of the third term of coursework.

Prerequisite: Permission is required from the faculty advisor and the program chair.

Offered: Fall, Spring, Summer, Winter.

ENVS 92 - Thesis Research in Environmental Studies II

Instructor: Cox

Independent study of an environmental problem or issue under the supervision of a member of our staff. Open only to Environmental Studies majors. Only one term of either ENVS 91 or ENVS 92 can count toward the major. Credit requires completion of a suitable report. See description of the Honors Program in Environmental Studies.

Students are awarded one course credit for successful completion of this course. Students who have registered for ENVS 91 register for this course and continue with their coursework into a third term. Students do not register for a third term. A final grade will replace the "ON" for both ENVS 91 and this course upon completion of this course at the end of the third term of coursework.

Offered: Fall, Spring, Summer, Winter.

Ethics Institute

Director: Julie Rose

2024-2025 Advisory Board Members: S. Brison, M. Clarke, R. Muirhead, H. Payson, D. Plunkett, J. Rose, T. Rosenkoetter, L. Swaine.

The Ethics Institute was established in 1982 by a group of Dartmouth faculty who were concerned about issues in applied and professional ethics. The Institute exists to foster the study and teaching of ethics, broadly construed, across the Dartmouth community through various public programming, workshops, fellowships, and funding for research and teaching.

Campus services include: the Burt Dorsett and Roger S. Aaron lecture series; an annual moral and political philosophy workshop; an undergraduate law and ethics fellowship program, a faculty manuscript review; research grant opportunities for faculty and students; the Phillips Family Professional Development Internships, and the Phillips undergraduate essay contest. Please visit our website, <http://www.dartmouth.edu/~ethics/>, for further details and instructions as well as a full listing of our offerings.

The Ethics Institute's administrative offices and seminar room are located in Blunt Alumni Center, 20 N. Main Street, Suite 201, Hanover, NH 03755.

Film and Media Studies

Chair: Roopika Risam

Professors M. Flanagan, J. Mack; Associate Professors R. Risam, J. K. Ruoff, M. J. Williams, P. Young, J. D. Wernimont; Assistant Professor I. Kwayana; Visiting Professor J. Rapf; Visiting Associate Professor W. F. Phillips; Affiliated Faculty G. Gemünden, D. Washburn, M. White Ndounou, T. Keaton, D. Garcia; Lecturers J. Bell, J. D. Chamberlain, E.G. Carabatsos; Fellows T. Jeffay, A. Cisco

To view Film and Media Studies courses, click here (p. 377).

Requirements for the Major in Film and Media Studies

The Film and Media Studies Department at Dartmouth College offers a wide range of courses in the theory, history, and criticism of film and television as well as a number of courses in film and video production, animation, game design, digital media, data studies, and screenwriting. The major provides a common basis for all students in the theory, history, and criticism of film,

television and new media, games, and digital humanities, and requires at least one course with a production component. Beyond this, the major allows students to shape their own emphasis (for instance, history and criticism, or screenwriting). The major requirements are as follows:

Two Prerequisites

1. One introductory course: FILM 1 Introduction to Film: From Script to Screen; or FILM 2 Introduction to Television; or FILM 3 Introduction to Digital Arts and Culture
2. FILM 20 Film History I (Silent to Sound)

Nine Required Courses

1. One film history course from the following:
 - FILM 21 Film History II (1930-1960)
 - FILM 22 Film History III (1960-1990)
 - FILM 23 Film History IV (1990-present)
2. One additional film or media history course from among the following:
 - FILM 21 Film History II (1930-1960)
 - FILM 22 Film History III (1960-1990)
 - FILM 23 Film History IV (1990-present)
 - FILM 45 U.S. Television History
 - FILM 42's National Cinema

Students may also petition to the Chair to count specific offerings of the following topics classes for credit in this requirement:

 - FILM 41's (such as FILM 41.09 History of Animation)
 - FILM 46's (such as FILM 46.01 TV and Histories of Gender)
 - FILM 47's (such as FILM 47.05 History of Documentary)
3. FILM 40 Theories and Methodologies of Film and Media Studies
4. One television studies course from among the following:
 - FILM 45 U.S. Television History
 - FILM 46's Topics in Television/Broadcast Media
5. and 6. Two additional studies courses from among the following:
 - FILM 41's Genre
 - FILM 42's National Cinema
 - FILM 43's Film Creator

- FILM 44's Theory Meets Practice
 - FILM 45 U.S. Television History
 - FILM 46's Topics in Television/Broadcast Media
 - FILM 47's Topics in Film
 - FILM 48's Topics in Digital Culture and New Technologies
 - FILM 50's Topics in Media Theory
7. One production course from among the following:
- FILM 30 Documentary Videomaking
 - FILM 31 Filmmaking I: Basic Elements of Film
 - FILM 33 Writing for the Screen I
 - FILM 35 Animation: Principles and Practice
 - FILM 36's Videomaking
 - FILM 37 Directing for the Camera
 - FILM 51 Game Design Studio
8. and 9. Two courses at an advanced level, one of which must be the Culminating Experience:
- FILM 32 Filmmaking II
 - FILM 34 Writing for the Screen II
 - FILM 38 Advanced Animation
 - FILM 39's Advanced Videomaking
 - Any courses between FILM 41's—FILM 48's
 - FILM 49's Practicum in Digital Culture and New Technologies
 - FILM 50's Topics in Media Theory
 - FILM 80 Independent Study
 - FILM 93 Major Project
 - FILM 95 Honors Project I

Modified Major in Film and Media Studies

Students may modify Film and Media Studies with another related discipline with the permission of the Chair of Film and Media Studies and that of the Chair of the related department. Film and Media Studies can be either the major or the minor part of a modified major.

When Film and Media Studies is the major part of the modified major the requirements are as follows:

Two Prerequisites

1. One introductory course: FILM 1 Introduction to Film: From Script to Screen; or FILM 2 Introduction to

Television; or FILM 3 Introduction to Digital Arts and Culture

2. FILM 20 Film History 1 (Silent to Sound)

Six Required Courses

1. One film or media history course from the following:

- FILM 21 Film History II (1930-1960)
- FILM 22 Film History III (1960-1990)
- FILM 23 Film History IV (1990-present)
- FILM 45 U.S. Television History
- FILM 42's National Cinema

Students may also petition to the Chair to count specific offerings of the following topics classes for credit in this requirement:

- FILM 41's (such as FILM 41.09 History of Animation)
- FILM 46's (such as FILM 46.01 TV and Histories of Gender)
- FILM 47's (such as FILM 47.05 History of Documentary)

2. FILM 40 Theories and Methodologies of Film and Media Studies

3. One studies course from among the following:

- FILM 41's Genre
- FILM 42's National Cinema
- FILM 43's Film Creator
- FILM 44's Theory Meets Practice
- FILM 45 U.S. Television History
- FILM 46's Topics in Television/Broadcast Media
- FILM 47's Topics in Film
- FILM 48's Topics in Digital Culture and New Technologies
- FILM 50's Topics in Media Theory

4. One production course form among the following:

- FILM 30 Documentary Videomaking
- FILM 31 Filmmaking I: Basic Elements of Film
- FILM 33 Writing for the Screen I
- FILM 35 Animation: Principles and Practice
- FILM 36's Videomaking
- FILM 37 Directing for the Camera
- FILM 51 Game Design Studio

5. and 6. Two courses at an advanced level, one of which must be the Culminating Experience:

- FILM 32 Filmmaking II
- FILM 34 Writing for the Screen II
- FILM 38 Advanced Animation
- FILM 39's Advanced Videomaking
- Any courses between FILM 41's—FILM 48's
- FILM 49's Practicum in Digital Culture and New Technologies
- FILM 50's Topics in Media Theory
- FILM 80 Independent Study
- FILM 93 Major Project
- FILM 95 Honors Project I

Modifying another Major with Film and Media Studies

If Film and Media Studies is the minor part of the modified major, the requirements are as follows:

One Prerequisite

1. One introductory course: FILM 1 Introduction to Film: From Script to Screen; or FILM 2 Introduction to Television; or FILM 3 Introduction to Digital Arts and Culture

Four Required Courses

1., 2., 3., and 4. Four film and media Studies courses from any category

Minor in Film and Media Studies

The minor requirements are as follows:

One Prerequisite

1. One introductory course: FILM 1 Introduction to Film: From Script to Screen; or FILM 2 Introduction to Television; or FILM 3 Introduction to Digital Arts and Culture.

Six Required Courses

1. One film history course from among the following:
 - FILM 20 Film History I (Silent to Sound)
 - FILM 21 Film History II (1930-1960)
 - FILM 22 Film History III (1960-1990)

- FILM 23 Film History IV (1990-present)

2. One television studies course from among the following:

- FILM 45 U.S. Television History
- FILM 46's Topics in Television/Broadcast Media

3. and 4. Two additional studies courses from among the following:

- FILM 41's Genre
- FILM 42's National Cinema
- FILM 43's Film Creator
- FILM 44's Theory Meets Practice
- FILM 45 U.S. Television History
- FILM 46's Topics in Television/Broadcast Media
- FILM 47's Topics in Film
- FILM 48's Topics in Digital Culture and New Technologies
- FILM 50's Topics in Media Theory

5. One production course among the following:

- FILM 30 Documentary Videomaking
- FILM 31 Filmmaking I: Basic Elements of Film
- FILM 33 Writing for the Screen I
- FILM 35 Animation: Principles and Practice
- FILM 36's Videomaking
- FILM 37 Directing for the Camera
- FILM 51 Game Design Studio

Or one theory course among the following:

- FILM 40 Theories and Methodologies of Film and Media Studies

- FILM 50's Topics in Media Theory

6. One other production, screenwriting, or studies course (any additional course from FILM 20 and above) in line with the area of major interest.

Culminating Experience

The Culminating Experience requirement is designed to offer each student an opportunity to fulfill an enhanced and focused project related directly to their emphasis within the major. It is required of both Majors and Modified Majors. This course will be selected and declared by each individual student, but must meet department requirements and schedules.

Students may propose one of the following options to count as the Culminating Experience:

1.

FILM 93 Major Project

-

A two-term commitment that can be pursued in studies, creation, or production.

-

Must attend the C.E. Seminar. The seminar instructor is the official advisor for all projects.

-

Available only in winter and spring terms.

2.

FILM 95 and FILM 96 Honors Project I and II (See the Honors Program section below)

-

A more ambitious and higher caliber two-term commitment that can be pursued in studies, creation, or production. Must have an average in the major of 3.4 or higher (and a college average of 3.0 or higher).

-

Must attend the C.E. Seminar. The seminar instructor is the advisor for all projects.

-

Available only in winter and spring terms.

3.

“extra work” in an offered advanced F&MS course

-

One-term commitment.

-

The F&MS course must be taught by a F&MS faculty member.

-

The instructor of the course grants permission and is considered the project advisor.

-

The course cannot fulfill another requirement for the major.

-

This option may be pursued in any term.

Culminating Experience Seminar (Winter And Spring)

-

Two-term project students are required to attend the C.E. Seminar, taught by a F&MS faculty member.

-

Seminar attendance is recommended but not required for students pursuing their Culminating Experience Project as "extra work" in an offered F&MS advanced course during winter and spring terms.

-

All students crafting Culminating Experience Projects are required to make brief presentations of their projects at the Senior Showcase held on week 8 of the spring term.

Project Advisors

Students for FILM 93 and FILM 95-96 don't need to seek advisors. The advisor will be the faculty assigned to the Culminating Experience Seminar for either winter or spring term.

-

Students may seek out faculty subject-matter experts across the department, but these mentoring sessions are limited to regular office hours from those faculty, or up to 2 special meetings a term.

-

Students choosing the option "extra work" in an advanced F&MS course must contact the F&MS faculty member and receive permission to do "extra work" for the Culminating Experience Project within their class. The course's instructor will be considered the advisor for the project.

Requirements

BEFORE students propose or enroll for a Culminating Experience Project, they need to have taken:

[FILM 1](#), [2](#), or [3](#)

[FILM 20](#)

[FILM 40](#)

Note: If students are planning on taking FILM 40 in winter term of their senior year, they may only do a one-term culminating project.

Deadlines

Mid April:

Mid September:

Required Department Info Meeting for one-term summer and fall projects

15th May:
Proposals due to Department

Required Department Info Meeting for one- and two-term winter and spring projects

15th October:
Proposals due to Department

Spring Term (Week 8)
SENIOR SHOWCASE
Final Culminating Experience
Projects Presentations

Proposals for summer or fall term Culminating Experience Projects "extra work" in an offered F&MS advanced course are due by May 15th of junior year. Proposals for winter or spring terms are due by October 15th of senior year.

Attendance at the semi-annual Major's Meeting is required.

Proposal

All Culminating Experience Projects, whether one-term projects "extra work" in an offered F&MS advance course or two-term projects, must be proposed to the faculty and approved. The proposal template can be found on: <https://film-media.dartmouth.edu/menueature/undergraduate/major/culminating-experience>

1. Write a description of the proposed culminating experience project (2-5 pages).

2. Briefly describe the format and goals of the project and how it represents the culmination of your major. Please be specific.

Does it extend work and interests developed in other classes?

Does it allow you to synthesize or isolate issues and ideas introduced in your major coursework?

Does it allow you to combine goals of the major with goals of your career or post-graduate academic work?

3. Indicate how long the project will be (in pages, minutes, etc.)

4. Indicate how long you expect it will take you to complete it

5. Indicate a budget if applicable.

For the option "extra work" in an offered F&MS advanced course, the course's instructor needs to assign the percentage of the course's final grade that the "extra work" would count for and sign the end of the Culminating Experience Cover Sheet form.

Reminders

- Production projects will be assessed in relation to the probability of their completion and to the rest of the production curriculum. Regularly scheduled courses will have priority regarding equipment demands.
- Under extreme circumstances (such as medical leave), students may petition to alter or change their culminating projects, but approval is not guaranteed.
- Note that FILM 80 Independent Study is not an option for a Culminating Experience Project

Honors Program

Students who have an average in the major of 3.4 or higher (and a College average of 3.0 or higher) are eligible to pursue Honors in an ambitious two-term Culminating Experience Project. Students pursuing honors follow the same steps as detailed above. The rules for Culminating Experience Project Proposals apply.

Students with modified as well as standard majors may pursue Honors by enrolling in the FILM 95/96 sequence. An Honors project may only be pursued in winter and spring terms and students receive two major credits. If the finished project does not achieve a grade of 3.3 (B+) or higher, the FILM 95 Honors status will revert to FILM 93 (Major Project). An 4 (A) grade in FILM 95 and FILM 96 may earn High Honors. For additional information, students should consult the Department Chair.

Transfer Credit

Permission of the Chair and a detailed description of the course is required for provisional approval for transfer credit. Final approval will be granted on the basis of the Chair's review of the syllabus and evidence of the student's work in the course for which transfer credit has been requested. Three courses taken at other institutions may be substituted in fulfillment of the major requirements, provided that the program as a whole is consistent with the intent of the major. Of the three transferred courses, no more than two may be in film theory, history, and criticism, and no more than two may be in production.

FILM - Film and Media Studies Courses

To view Film and Media Studies requirements, click here (p. 372).

FILM 1 - Introduction to Film: From Script to Screen

Instructor: M. Williams; P. Young

This course examines all the processes which go into the creation of a film, from its inception as a treatment and screenplay to its distribution as a film. Experts (writers, directors, actors, cinematographers, and distributors) may talk on various areas of expertise. The course will offer an in-depth analysis of different kinds of films and the key technical and critical concepts used in understanding them. Open to all classes.

Offered: Fall, Summer.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 3 - Introduction to Digital Arts and Culture

Instructor: J. Bell

Digital technology is a key component of culture. Looking at popular media, science fiction, computer games, and artists' projects, students will learn important approaches to digital culture including: the history of the computer as a medium; the conceptual history of interactivity; the development of film, design, animation, and hypermedia; the history of artificial reality; and how visions of the future may change our sense of identity and what constitutes our physical bodies.

Offered: Winter.

Degree Requirement Attributes: WCult:W

FILM 7 - First-Year Seminars in Film and Media Studies

Instructor: J. Rapf, J. Bell, R. Risam

Offered: Spring, Winter.

FILM 20 - Film History I (Silent to Sound)

Instructor: J. Rapf

Detailed history of film from its origins to early sound films. Among the major topics to be addressed are: pre-cinematic devices and early cinema; the rise of the feature film; the tradition of silent comedy; the rise of the studio and star systems; European movements and their influence; the coming of sound. Prerequisite to the major in Film and Media Studies. Open to all classes.

Offered: Fall.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 21 - Film History II (1930-60)

Instructor: J. Rapf

A detailed history of film beginning with the golden age of the U.S. studio system and its major genres. Among the topics and films considered will be the rise of sound film; Hollywood in the 30s; the impact of World War II; neo-realism; film noir; the blacklist; the impact of television and the decline of the studio system; Japanese cinema; the emergence of European auteurs; beginnings of the French New Wave. Open to all classes.

Offered: Spring.

Degree Requirement Attributes: Dist:INT or ART; WCult:W

FILM 22 - Film History III (1960 to 1990)

A detailed history of film beginning with the French New Wave and its impact on American and international cinema. Among the topics and films to be considered will be the interrogation of genres in this period; the rise of alternative models of production; independent and radical film in the United States, Europe, and the Third World; new national cinemas (Eastern Europe in the 60's, Australian and New German film in the 70's, and Soviet, Chinese, and British film in the 80's). Open to all classes.

Degree Requirement Attributes: Dist:INT or ART; WCult:W

FILM 23 - Film History IV (1990-present)

This class surveys a variety of national cinemas and their artistic, social, political, and industrial contexts from the period of 1990 to the present. Focus will be on the mutual influences among cinemas during this period, international co-productions, and the ways in which specific national cinema contexts interface with globalized economies and distribution in post-colonial political environments. Some attention will be given to post-French New Wave art film movements, such as Denmark's Dogme group; to the cross-over of east Asian cinemas, such as Hong Kong cinema, to the west; to East European and German cinema since the break-up of the Soviet Union; and to the appeal of Indian cinema to diasporic communities in North America.

Degree Requirement Attributes: Dist:INT or ART;
WCult:W

FILM 30 - Documentary Videomaking

Instructor: J. Ruoff

This documentary workshop will explore in depth the rich world of nonfiction film and video production. Working in groups, students will tackle a variety of technological, aesthetic, and ethical issues intrinsic to the medium. Each group will produce one 10-minute non-fiction film. The class will utilize standard professional production models, which require intense collaborative teamwork and the distribution of tasks and responsibilities. It will culminate in a screening in Loew Auditorium in the Black Family Visual Arts Center. Open to all classes.

Offered: Spring.

Degree Requirement Attributes: Dist:ART

FILM 31 - Filmmaking I: Basic Elements of Film

An introduction to the theory and technique of film-making combining comprehensive analysis of significant works in various film styles with practical exercises in production. The course aims to provide a basic understanding of the film-making process—from script to screen. Students will work in 16mm and portable video for experience in scriptwriting, directing, cinematography, acting, and editing. Readings will include introductory film history, film theory and criticism, screenplays, and essays on new aesthetics in film and video. Limit 12

Degree Requirement Attributes: Dist:ART

FILM 32 - Filmmaking II

A workshop course in film production, with students, working alone or in collaboration, required to complete a project for showing at the end of the term. Weekly class meetings will include analysis of film classics and work in progress, as well as critical discussions with visiting professionals. Limit 12

Degree Requirement Attributes: Dist:ART

FILM 33 - Writing for the Screen I

Instructor: W. Phillips

An analysis of the creative writing process as related to film and other media. A variety of styles will be explored and the potential of specific content for a visual medium will be examined. Each student will be expected to complete a script for a work of at least twenty minutes as a term project. Permission will be granted by the instructor on the basis of material submitted before the end of fall term.

Offered: Fall, Winter.

Degree Requirement Attributes: Dist:ART

FILM 34 - Writing for the Screen II

Instructor: W. Phillips

A continuation of FILM 33 in which the student is expected to complete a full-length screenplay begun in that course. Continued work on the methods of writing, particularly on character development and plot rhythms. Permission is granted by the instructor and if you have taken Film Studies 33.

Offered: Spring.

Degree Requirement Attributes: Dist:ART

FILM 35 - Animation: Principles and Practice

Instructor: J. Mack

This studio course will introduce the expansive possibilities of the animated film through a series of exercises in drawn, cut-out, object and digital animation techniques as well as an extended final project that will screen publicly. Class screenings, critiques, and visiting artist presentations will supplement in-class demonstrations. Students should expect to devote serious time to the coursework (up to 20 hours per week). Permission of the instructor is required—granted first day of course.

Offered: Fall.

Degree Requirement Attributes: Dist:ART

FILM 36.01 - Experimental Videomaking (Autobiography)

This course covers the basics of developing a personal video from idea through realization, while emphasizing ideas outside traditional narrative or documentary forms. Students are encouraged to develop their own forms of aesthetic expression. Students show and critique their work in class in preparation for a final project and public screening.

Degree Requirement Attributes: Dist:ART

FILM 36.03 - TV Production

In this introductory course, students will learn hands-on the fundamental aspects of television production. Studying camera, sound, editing, writing, and producing techniques, students will engage in critical discussion of these techniques and will develop technical production abilities. Students will explore the culture of the media professional through a series of group assignments which stress productive collaboration, objective criticism and analysis, and professional ethics. Students will use their knowledge and skills to create several short television productions both inside and outside of the studio, culminating in a publicly presented group project. Dist: Art.

FILM 37 - Directing for the Camera

Instructor: I. Kwayana; R. Thalheim

Directing for the Camera investigates the directorial process of translating the written script to the screen. Students analyze, rehearse, shoot and edit narrative scenes from existing or original screenplays. The exercises are critiqued and comparisons are then made between the existing works and the exercises. Students work in crews rotating between the roles of director, camera, and sound. Special attention is also given to lighting, cinematography, and audio recording.

Limit 12

Offered: Spring, Winter.

Degree Requirement Attributes: Dist:ART

FILM 39 - Advanced Videomaking: Group Documentary

Degree Requirement Attributes: Dist:ART

FILM 39.01 - Advanced Videomaking: Documentary and Experimental

A workshop course in advanced digital videomaking, with students, working in pairs or groups, required to complete a short (10-minute or less) broadcast-quality documentary or experimental video for screening at the end of the term. Class meetings will focus on conceptualizing, preparing, and completing the various stages of pre-production, production, and post-production, with extensive in-class critiques.

Prerequisite: Film Studies 30, 31, 36, or significant experience shooting and editing digital video. Permission granted by the professor after the first day of class.

Prerequisite: FS 30, or FS 31, or FS 32, or FS 36, or FS 37, or FS 44.04, or FS 44.07, or FS 48.02, or FS 51, or previous digital video experience. Instructor permission required.

Degree Requirement Attributes: Dist:ART

FILM 40 - Theories and Methodologies of Film and Media Studies

Instructor: M. Williams; P. Young

This course is designed to introduce film and media studies majors to some of the field's major scholarly methodologies and their theoretical value in explaining how texts, industries, creative artists, and audiences participate in the meaning-making processes. Students will read scholarship and participate in projects that illuminate how meaning is created and negotiated at the levels of industrial production, artistic creation of texts, and audience knowledge and engagement. The screenings, readings, and assignments will ask the student to think about the relations among his/her own position as a

scholar, as an audience member, and as a creative artist. This knowledge provides a foundation for critical thinking skills necessary for the student's success in the major. The course is designed for students who have had some introductory exposure to the principles of film and/or television aesthetics and production techniques, but before they have completed their upper division major requirements. **All Film majors and Film modified majors should take this course no later than their junior year.**

Degree Requirement Attributes: Dist:ART

FILM 41.01 - Infernal Affairs: Police on Film

An examination of the concept and use of genre with focus on a particular genre. How are the genres determined and how useful structurally and historically is genre as a concept of classification? What constitutes a genre? What is the relationship between periods and genres? Between genre and the Hollywood film? This course will consider genre as both an aesthetic concept and an economic one, producing stabilization and variation in product. The roles of repetition and variation, stability and change. Genres may include the western, the crime movie, the women's film, the musical, family melodrama, the film noir or other genre-related topics such as film and literature. May be repeated for credit with a different topic.

Degree Requirement Attributes: Dist:LIT; WCult:W

FILM 41.02 - Shades of Noir: Film, Fiction, Politics

"Film Noir" evokes memories of stylish, cynical, black-and-white movies from the 1940s and 1950s—melodramas about private eyes, femmes fatales, criminal gangs, and lovers on the run. In this course, we will examine noir in relation to its many contexts: the hard-boiled fiction of Chandler and Hammett; the experience of dislocation and alienation that reflect the exile status of many central-European professionals who worked in the US film industry in the 1940s; and Hollywood blacklisting and censorship during the anti-Communist witch hunt. The course will also trace the pervasive presence of noir and its continuing appeal for artists and audiences throughout the world. Because of its artistic and political complexity, noir is a key term for the study of US postwar cultural history: noir narratives revolve around questions of racial and national identity, around the postwar crisis of masculinity, and the convergence of modernism and mass culture.

Cross-Listed as: COLT 62.02

Degree Requirement Attributes: Dist:INT or ART; WCult:W

FILM 41.04 - Ethnographic Film

Instructor: L. Ogden

Ethnographic film crosses the boundaries of academic anthropology and popular media. This course will address

the construction of meaning in ethnographic films in relation to the parallel concerns of anthropology. We will consider approaches to film style, the relation of visual media to ethnographic representation, and the challenges visual forms poses to written ethnographies. The class will appeal to anthropology and film students as well as students interested in the politics of cross-cultural representation.

Cross-Listed as: ANTH 12.01

Offered: Spring.

Degree Requirement Attributes: Dist:INT or SOC;
WCult:NW

FILM 41.06 - Bond and Beyond

This course will focus on the way changing definitions of Britishness are worked through in the espionage genre as seen in British film (James Bond, *The Spy who Came in From the Cold*) and television (*The Avengers*, *The Prisoner*) in the 1960s. Some of the topics to be discussed include the evolution of 1960s British film from the "kitchen sink" dramas of the early 60s to the Pop-stylishness of *Swinging London*; the relationship between film and novel, and between discrete texts and on-going series; the impact of Hollywood on British production and the lure of the American market.

Degree Requirement Attributes: Dist:ART

FILM 41.07 - Cinema and the Graphic Novel

Instructor: P. Young

This course will use historical case studies to examine formal, thematic, and stylistic convergences between cinema and comics. We will analyze a variety of graphic narratives that demonstrate the interdependence of the two forms throughout their histories, particularly in matters of framing, editing, lighting effects, and narrative forms. NOTE: I assign drawing homework each week; no prior drawing experience is required.

Offered: Fall.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.08 - The Cinematic City

Instructor: P. Young

This course tracks a quintessentially modern character type--the flâneur/flâneuse--as s/he navigates the cinematic metropolis. Films ranging from early actualities to science fiction, gangster films, musical comedy, and *film noir* will present the flâneur as a compromised figure who walks a fine line between resistance to the city's rhythms and complicity with its reorganization of subjectivity, affect, collective life, and the senses.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.09 - History of Animation

Instructor: J. Mack

This course is an introduction to the history and development of the field of animation. We will explore this subject from various perspectives: by chronology, from its prehistory before the invention of film to the present day; by form, including, method and medium; by culture, comparing the US to Japan, Russia, Europe and others; by subject; and by personality, concentrating on the figures who have shaped the art form and continue to influence it through their example. Students are expected to bring an enthusiastic interest in the medium, and to devote serious effort to reading about, viewing, researching and discussing animation and the artists who have created it.

Offered: Fall.

Degree Requirement Attributes: Dist:ART

FILM 41.10 - Global Gothic

Instructor: D. Washburn

The Aesthetics of Horror in Japanese and Western Cinema The Japanese tradition of stories about ghosts, spirit possession, demonic visitations and strange psychological phenomena has a rich, complex history that has intersected with Western traditions in productive ways. Beginning with a consideration of theories of the uncanny, the gothic, and the fantastic, this course will explore the techniques filmmakers in Japan and the West have used to create an aesthetics of horror. We will also examine the ideological significance of tales of the weird and supernatural – what they tell us about moral values or about personal and social conceptions of identity.

Degree Requirement Attributes: Dist:ART; WCult:NW

FILM 41.11 - Genre: History of Visual Music

Instructor: J. Mack

This course introduces the history of visual music, the exploration of the relationship between music and abstract imagery. Students will investigate this subject from its predecessors to current day--tracing the constantly expanding practices of visual music through painting, cinema, performance, and installation-form intuitive sketch films to complex algorithmic works.

Cross-Listed as: MUS 16.01

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.12 - Screwball Comedy

This course examines the rise of the classic Hollywood screwball comedy, 1934-1944, and its enduring impact. Occasionally thought of as "a sex comedy without sex," the screwball comedy blends slapstick, farce, and lunacy with sophisticated, rapid-fire dialogue and abundant wit.

Starting with the early entries like *It Happened One Night* (1934) and *My Man Godfrey* (1936), the course includes such classics as *His Girl Friday* (1940), *Ball of Fire* (1940), and *The Lady Eve* (1941). Screenings are accompanied by primary and secondary texts that focus on the wide-ranging meanings that the genre has held over time in literature, film history, and theory.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.13 - Women in Musicals

This course traces the representations of women in the American musical genre from the 1930s to the present. We will look at the presentation of singing and dancing as labor; demands made on women's bodies in the musical form (including the use of doubles to produce "ideal" bodies); ethnic heritage displayed or disguised; the way the genre can undermine or explicitly challenge normative gender expectations; the representation of historical figures in musical biographies, including those underrepresented in previous eras – for example, African American performers and non-performers (women directors, songwriters, etc.). This course is not open to students who have received credit for Film 07.12

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.14 - The Western

Instructor: M. Willilams

Explores the development of the Western genre from its beginnings in pre-cinematic culture and silent cinema through its maturation in the Classical Hollywood era (1930s to 1950s), its path toward revisionism in the 1960s and 1970s, and its fluttering obsolescence ever since. Historical analysis of this most prolific, and most "American," of Hollywood genres provides a singularly nation-centered perspective on changing U.S. culture, ideologies, and sensibilities.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.15 - 20th-Century American Film Comedy

Instructor: J. Rapf

Though tragedy is a more respected genre, comedy emanates from the same source: the recognition of a gap between what is, and what ought to be. This course will enrich our understanding of how this predicament was negotiated on American screens during the cinema's first full century, from Keaton, Normand, and Chaplin through Hepburn and Jerry Lewis. Course combines several key approaches to US comedy: its cultural/countercultural bent, its development as a Hollywood genre, and its representations of women and gender.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.16 - Space and Genre

Instructor: D. Garcia

This course explores representations of space and place in Hollywood genres. We will examine the musical, the melodrama, and film noir to discern how space informs and complicates their conventions; discuss how cinematic representation of specific spaces (the apartment, the city, the hotel) blurs genre boundaries; and consider how race, gender, and sexuality influence cinematic representations of spaces. Students will produce their own video essays to intervene in current scholarly debates on cinema, genre, and spatial representation.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.17 - Water In the Lake: Real Events for the Imagination

Instructor: J. Mack

This class, based on the book [Water in the lake: Real Events for the Imagination](#) (1979) by Kenneth Maue, fuses cinema, the studio arts, sound, and theatre with the natural landscape in an intense study of improvisation, collectivity, and collaboration in conjunction with the environment. Looking at religion, law, science, and politics as a way to consider cinema, sound, land art, site specificity, performance, and the unfolding of real time events within the artistic context, we will gain the critical capacity to understand intersections of cinema, performance art, video art, land art, and sonic practice. Through viewing films, listening to sounds, and studying works of art spanning painting, sculpture, installation, site-specific practice, and performance, we will inspire and provide critical/historical contexts for your personal work in the course.

Cross-Listed as: MUS 16.03

Degree Requirement Attributes: Dist:ART

FILM 41.18 - Latinx-ploitation

This course serves as an introduction to the history of Latinx cinema, Latinx film spectatorship, and exploitation cinema in the United States. Latinx audiences have long been an interest and target of the Hollywood studios. Since the beginning of sound in film, the studios grappled with reaching this linguistically and culturally-diverse demographic. Since the late 20th century, the studios have widely acknowledged the box office power of that group. Time and again, however, the Hollywood industry has failed to accurately identify and engage Latinx peoples on both sides of the US-Mexico border. Applying theories of racialized spectatorship and performance and film genre and authorship, we will interrogate this historically troubled relationship and grapple with its consequences for Latinx representation and inclusion in American cinema. \f

Cross-Listed as: LACS 20.08

Degree Requirement Attributes: Dist:ART; WCult:NW

FILM 41.19 - The Musical

Instructor: D. Garcia

This course introduces students to the history and evolution of the musical film. From the beginnings of sound cinema, the musical has entertained diverse audiences. While its popularity has at times waned, the musical continues to appear on 21st century movie screens. What accounts for the musical's popularity in different moments in the past? What have been its central themes and cultural preoccupations? How have filmmakers developed a cinematic language in order to lend musicals expression? And what kinds of theoretical paradigms have scholars employed in order to better understand the genre's evolution?

Offered: Winter.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.20 - Special Effects in Film History

Instructor: P. Young

"Special visual effects" has many meanings in cinema. When we use the term in the twenty-first century, we usually refer to computer-generated fantasy images of otherworldly creatures or impossible locales. However, the history of special visual effects begins with the basic technologies of photographically filmed moving pictures, and effects—whether matte shots using optical printers in post-production, rear- or front-projection process shots done live on-set, in-camera mattes and mirror shots, or "creature" effects controlled by wires, puppetry, robotics, or remotes—have served many purposes besides generating fantasy worlds. Beginning in the 1890s, the magician and filmmaker Georges Melies used editing, photographic processes, elaborate puppets, and ornate costumes and sets to take viewers up to the moon or down to the bottom of the sea. Only two decades later, however, processes similar to those utilized by Melies were primarily employed to film realistic-looking settings at a fraction of the cost of location shooting. Today, scholars of special visual effects try to answer historical as well as technical questions about what has motivated the incredible innovations of "FX," the forms they take, and the functions they perform for producers and viewers. What determines these different uses of special effects? How have these processes and practices developed in the US film industry and among independent creators? And how do the standards of realism and plausibility—the standards by which special effects are traditionally judged—change depending on the era, the technologies being employed, and the culture in and for which films are made? This course will place us in the thick of such

contemporary scholarly debates about special effects and their history. By viewing key examples of special effects cinema from the past century (primarily from US films) and reading what historians have argued about the significance of these films, students will learn to write and think in these terms and to develop their own educated stances on the topic—to participate as full partners in these scholarly debates. Students will also learn to consider such conditions as industrial history and cultural change as factors in the development of special effects as well as what these effects mean to their viewers.

Offered: Winter.

Degree Requirement Attributes: Dist:ART

FILM 41.21 - Music and Media in Everyday Life

Instructor: W. Cheng

This course lends an ear to the roles and power of musical media in the new millennium. Prominent themes include: new media's purported democratizing effects on the production, circulation, and consumption of sound; the changing roles, responsibilities, and relevance of musicians and media artists in the digital age; and the potential for musical and social media to redraw the boundaries human experience, ethics, memory, and identity at large.

Cross-Listed as: MUS 16.02

Offered: Fall, Spring.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 41.22 - Feminist and Queer Video Art: "I'm asking – does it exist? What is it? Whom is it for?"

John Perreault, the first openly gay art critic at the Village Voice, published the phrase "I'm asking – does it exist? What is it? Whom is it for?" as the subtitle of an article on "Gay Art" for Artforum in 1980. Expanding upon Perreault's nuanced consideration of how art works accumulate identities and address particular audiences, this undergraduate course will explore feminist and queer moving image-making practices in the United States between the 1950s-1990s. While eschewing a strictly chronological approach, we will consider art practices in relation to specific historical thresholds, from the intensification of nonviolent direct action in the 1950s and 1960s, to the Stonewall rebellions of 1969, to the emergence of AIDS activism in the late 1980s and 1990s. We will consider the term video expansively, inclusive of TV art, installation, and video's dialogue with film, holography, and print publications. This course leaves open what feminist and queer art practices look like and perform, and what methodologies might be most useful in writing about them. However, the course aims to challenge the ways in which art historical narratives, including alternative ones, have eclipsed the role of artists of color. Students will be required to reflect upon video footage and on readings in a series of short papers and assignments.

Shorter videos will be screened in class, but some weeks require an extra screening during the X-hour session.

Cross-Listed as: ARTH 43.01 WGSS 66.22

Degree Requirement Attributes: Dist: ART; WCult: CI

FILM 41.23 - Sport Film

This course critically examines the role of the sport film as a cinematic genre with significant social and cultural relevance. By analyzing narrative and documentary feature films exhibiting an array of sporting styles, students will explore and identify underlying themes, narrative arcs, character types, and visual aesthetics. Drawing on key concepts from film theory and cultural studies, the course asks students to critically assess how sports films reflect and refract issues of race, gender, class, nationalism, and the commodification of the athlete. Dissecting common master narratives illustrated in most sport films, students will analyze genre conventions and their evolution over time and across different filmmaking traditions. Through this exploration, students will consider the social, cultural, and historical implications of sport films on the screen and beyond. Assignments for this course consist of seminar-style in-class discussions, short paper responses, one short film exercise, and culminates with a research project.

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 42.02 - New Waves

Instructor: J. Ruoff

In the 1950s and 1960s, the French New Wave changed the course of film history. French new wave directors were mostly film critics who became filmmakers. Their films merged documentary and fiction, mixed film genres, and reveled in a profound knowledge of the history of the medium. A quintessential youth movement, the FNW inspired new waves in Hong Kong, Iran, Yugoslavia, Czechoslovakia, and the US, among other countries. We will alternate screenings, readings, and discussions of new wave films from these different countries.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 42.03 - New Latin American Cinema

With emergence of filmmakers such as Alejandro Inarritu (Mexico), Lucrecia Martel (Argentina), and Jose Padilha (Brazil), the last decade has seen a creative boom in Latin American cinema that includes art house cinema, blockbusters, documentary, and experimental film. Beginning with a quick overview of key forerunners, this course will focus on the major directors, genres and aesthetic trends that characterize the new Latin American cinema. On the one hand, we will pay special attention to the distinct national cinemas: the different historical and cultural contexts out of which they emerge; and the different aesthetics that this gives rise to.

Cross-Listed as: COLT 52.02 INTS 17.12 LACS 35.01

Degree Requirement Attributes: Dist:INT

FILM 42.08 - Asian Animation as Socio-Political Artifact

Because animated films have traditionally been targeted at children, animators in Asia have often been able to sidestep much of the political control exercised by some of their more centralized governments to create sophisticated artistic works that speak as much to educated adults as they do to children. The course will feature the most interesting of these works from China, Japan, and Korea, and students will analyze them within a socio-political and cultural context. Particular attention will be paid to the development of both originality and argumentation in student papers and class participation.

Cross-Listed as: AMES 40.04

Degree Requirement Attributes: Dist:ART; WCult:NW

FILM 42.09 - African Cinema

Instructor: A. Coly

This course focuses on the cinemas of Francophone Africa. We will examine early Western filmic representations of Africans as savages devoid of culture and history. We will then examine how African filmmakers have challenged those images by creating new depictions of their societies, offering Africa through African eyes. We will explore the social, historical, and political contexts of these films and explore their aesthetic and narrative characteristics. We will discuss issues and theories related to the definition of the so-called third world cinema, postcolonial cinema, and postmodern cinema.

Cross-Listed as: AAAS 55.01

Degree Requirement Attributes: Dist:ART; WCult:NW

FILM 42.13 - Global Documentary and Transnational Cinema

Instructor: M. Roberts

Since the Lumière Brothers first began dispatching camera operators around the world to shoot actualité films over a century ago, documentary film and video have played a major historical role in constructing and mediating popular understandings of the global. This course considers that history, from its origins in ethnographic documentary to contemporary IMAX films and YouTube videos. In assessing the wider implications of documentary's relation to the global, selected transnational fiction films will also be screened and discussed.

Degree Requirement Attributes: Dist:INT or ART

FILM 42.14 - Mexican Cinema

Instructor: D. Garcia

This course serves as an introduction to Mexican cinema and the global system of filmmaking in which it

developed. We will examine the history of Mexican film, filmmaking practices, aesthetics and business concerns, as well as audiences inside and outside of Mexico. One central point of inquiry will be the extent to which Mexican cinema was truly "national." We will question the concept of "national cinema" all the while analyzing the extent to which issues in Mexican politics, society, and culture were reflected on and influenced by the screen. The transnationality of Mexican film will be central to our investigation as we examine the influence of the United States and Hollywood during Mexican cinema's development. Students will learn about the various styles and genres of Mexican film and the theories with which film scholars have interpreted them. Among the filmmakers to be studied are Sergei Eisenstein, Fernando de Fuentes, Emilio "El Indio" Fernandez, Luis Buñuel, Alfonso Arau, Maria Novaro, Natalia Almada, Guillermo del Toro, Alfonso Cuarón, and Alejandro Gonzales-Iñárritu. Proficiency in Spanish is not required.

FILM 42.15 - Nothing is True and Everything is Possible: Politics, Media, and Religion in Post-Soviet Russia

In 1987, the Soviet Union was the largest political entity on the planet. Four years later, it had vanished from the map entirely. In this interdisciplinary course, you will learn about the 'new Russia' that has emerged in the three decades since that stunning collapse. Drawing on a wide variety of resources in English translation—from Russian films and novels to YouTube videos and social media posts—you will navigate the diverse technologies and media products that are helping to shape contemporary Russian identity. You will explore, for example, the 'violent entrepreneurship' of oil oligarchs, the cynicism of state-funded television propagandists, and the avant-garde theatrics of Moscow's feminist dissidents. Your study of Putin's Russia should also allow us to discuss some of the most pressing questions facing citizens in a democracy today: What is the nature of truth in the digital age? How do content creators and media consumers determine what is credible? What factors and forces are shaping the messages we consume through our televisions, tablets, and smartphones, and how can we learn to critically evaluate these messages in order to lead better lives?

FILM 42.16 - Cinema of Black Protest

This course considers Black histories of protest in conjunction with the history of Black representation in film. We will analyze historical documents, scholarly

articles, legal cases and historical accounts of the major moments in Black resistance in the United States. We will begin with the protests against lynching in the early twentieth century and the Civil Rights and Black power era of the 1970's Blaxploitation film genre through contemporary independent films. We will discuss issues of race and gender, racism, sexuality and homophobia as well as misogyny and sexism in Black representation. Students will be expected to watch and discuss films as well as read scholarly articles on race theory, queer theory, feminist theory and cultural criticism.

FILM 42.17 - Of Golems, Vampires, and Robots: The Haunted Screen of Weimar Cinema (in English)

Instructor: G. Gemunden

Weimar Cinema prefigures the rise of the Third Reich, but it also reacts to the trauma of the lost War, and to the fear of changes brought on by modernity: secularization, industrialization, urbanization, the rise of the "new woman," and changing forms of sexuality. In this course, we will meet the most famous of these uncanny cinematic creations and study them in the larger cultural and social context that marked the transition from the demise of the German Kaiser to the advent of the Führer.

FILM 42.19 - The Middle East in Film: Picturing the Past and Present

Instructor: Andrew Simon

How may films serve as a starting point for revisiting the past and rethinking the present? In what ways may representations of the Middle East differ over time and across places? And why do the stories told by filmmakers in documentaries, historical dramas, and other cinematic productions matter? Movies depicting the Middle East routinely draw mass audiences and consequently shape popular perceptions of the region the world over. The very same films, however, are all too often understood by many

people as mere entertainment. In this class, we will consider what movies, if treated critically, may teach us about Middle East history. Beginning with a brief introduction to film and media studies, we will contemplate where the Middle East fits into this field of inquiry. Once establishing how we will approach movies and the Middle East throughout the term, we will navigate a number of key themes together, from war, memory, and migration to (mis)information, revolution, and representation. Along the way, we will watch everything from indie films to big budget blockbusters. Regardless of the exact form these projects assume, all of the pictures we explore will generate debate and discussion around the past and present. Among the topics we will cover are the Israeli-Palestinian conflict, European colonialism, and America's legacy in the Arab world. To assist us on this journey across the Middle East and well beyond its boundaries, we will engage several primary sources, with motion pictures at the forefront. These thought-provoking items will empower us to partake in conversations that traverse languages, national borders, historical eras, and artistic genres, enabling us to view the Middle East in an entirely new way.

FILM 42.20 - The Berlin School (in English)

Instructor: G. Gemunden

This course examines the contemporary German film movement known as the "Berlin School," a group of approximately a dozen filmmakers with more than 40 features to their credit. Dissecting the everyday reality of post-wall Germany, this counter-cinema draws on Italian Neo-Realism, the New German Cinema, and contemporary international independent film to advocate radical notions of realism and narrative conventions, challenging viewers to rethink political filmmaking in a national and transnational environment. Screenings will include films by key filmmakers associated with the Berlin School as well as by Luchino Visconti, Wim Wenders, Kelly Reichardt, Apichatpong Weerasethakul, and others.

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 42.21 - Afro/Black Paris in Film and Life

Instructor: T. Keaton

This course takes students on a journey, not to an actual place per se in France, but rather through a lived experience, known as "Afro/Black Paris." Paris, an historical site of freedom from racial enslavement, has long been a contested home and homeland for Africans and

their descendants, that is, diverse people racialized as black whose presence in Paris results from colonization, exile, expatriation, and im/migration, including African Americans. The City of Light is arguably one of the most beautiful and exciting destinations in the world. However, all that glitters is not gold. Matters of race and anti-blackness co-exist with a variety of myths, narratives, and representations of Paris and France as color-blind and race-free. Through French film, students will explore these and related issues and thereby gain a broader understanding of pressing social questions, involving anti-racism, belonging, inequality, racism, and their intersections. This course follows a lecture-discussion format.

Cross-Listed as: AAAS 68.08

Offered: Winter.

Degree Requirement Attributes: Dist:INT or SOC; WCult:CI

FILM 42.22 - Moviegoing in America

Instructor: D. Garcia

This course serves as an introduction to the history of moviegoing in the United States. Students will learn about the earliest moviegoing spaces and trace the social, cultural, and technological dynamics of when and how the places of moviegoing changed over time. The course will introduce and extend discussions of various theories of spectatorship, including feminist theories and critical race theory, in order to better understand the experiences of peoples of color, immigrants, and women in this history. Students will learn how to apply these theories to the analysis of film and to their own archival and ethnographic research projects.

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 42.23 - Travelers, Tourists, and Sojourners: Mobility in the Movies

In this class, we study film as an aesthetic and political medium. Referring to works on cinematic space and spectatorship theory, we explore how directors construct and deconstruct spaces, nations, and borders in their audience's imagination. We analyze cinema spectatorship as a travel experience and investigate how geopolitical depictions rely on narratives, images, and imaginations. We study travelling as the possibility for transnational encounters of disparate groups of people and not only assess who is crossing international borders – seafarers, colonizers, immigrants, refugees, commuters, or tourists – but also examine who is welcome to cross, who is welcome to stay, who is expelled and who might have to die, according to genre conventions in global cinema. In road movies, westerns, and recent migration and tourist films, we will focus on themes of pleasure, coming-of-age, and self-fulfillment, as well as conflict, power differentials, (neo-)colonialism, and displacement. In our comparison of European and American films, we will explore similarities

and differences in debates surrounding mobility, national identity, indigeneity, film-induced tourism, and human rights.

FILM 43.01 - Women Make Movies: Women and Film Authorship

Instructor:

Women have worked in the film industry since its very beginnings, yet it is a popular conception that this is a recent phenomenon. This course will examine how women participated in the mainstream American film industry from the 1890's to the present as producers, directors, writers, photographers, fashion designers, performers, and audiences. Concept about female authorship, as well as historical questions about the cultural, social, and industrial contexts for women's power in the industry, will be explored. Films made by prominent women producers, directors, and writers will be screened.

Cross-Listed as: WGSS 56.11 WGST 56.11

FILM 43.02 - Family Matters: Pedro Almodovar, Gender Reversals, and New Communities

Pedro Almodóvar Caballero, Spain's most internationally acclaimed filmmaker will be studied in this course as representative of what critics have termed the New Spanish Cinema Movement. Almodóvar's filmmaking, both in aesthetic and cultural terms, addresses issues which will appeal to students interested in understanding how culture, politics, and aesthetics get entangled in ways that "queer" gender identity, family structures, notions of community and the societal expectations and limitations surrounding them. The course will also compare his work with other contemporary filmmakers that have reconfigured in their films the boundaries of "family."

Cross-Listed as: SPAN 63.10 WGSS 56.03

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 43.04 - Hitchcock

This course examines important Hitchcock films produced in both the UK and the US, from three perspectives:

Hitchcock as a cinematic pioneer, an innovator in film form and style;

Hitchcock as an *auteur* whose thematic and aesthetic concerns link his films in overt and covert ways; and

Hitchcock's films as cultural documents that engage deeply with questions of democracy, individual rights versus communal concerns, mass culture, sexuality, and gender.

Critical and theoretical texts on Hitchcock (including historical, feminist, and theoretical interpretations of his work) will be read and discussed along with the films. Your work will be evaluated based on your application of concepts and interpretive strategies from the readings to Hitchcock's work, your ability to develop productive research questions about his films, and your curiosity, scholarly energy, and creativity. Participation in daily discussions is mandatory.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 43.05 - Truffaut and Godard

This course will examine the films, careers, and legacies of two critics and directors who were fundamental to the French New Wave and its legacy: Francois Truffaut and Jean-Luc Godard. Each is an indelible figure in film and media history. The two were at first close colleagues and then diverged radically, both as filmmakers and as people. Considering their respective careers in relation to one another will place their films into new historical relief. We will survey the important body of film criticism that each produced before becoming a renowned director, along with historical and analytical writings about both. Most importantly, we will examine major films and other media texts (such as television programs) that each created. Our goal will be to understand the phenomena known as "Truffaut" and "Godard" in relation to the development of auteur methodologies, assumptions, and practices. We will also consider the broad international influence of both directors, especially in film form and style. In addition to in-class lectures and screenings, the course will include a range of online and reserve assignments (films, readings, discussions). Two short papers, a research paper, and a final exam will be assigned.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 44.01 - Handmade Cinema

This course will explore non-conventional, artisanal modes of experimental and avant-garde cinema that focus on the

materiality of moving image media formats. By utilizing a variety of techniques--direct image and sound manipulation on 16 mm film, hand-processing, ray-ograms, animation, special effects, and live-projector performance--students will gain total filmmaker toolsets through constructing a series of exercises that will screen publicly. In addition to producing personal projects, students will complete a series of short papers that build upon our screenings, readings, and discussions to locate handmade cinema within historical and cultural contexts.

Cross-Listed as: SART 17.17

Degree Requirement Attributes: Dist:ART

FILM 44.02 - Cut and Paste Cinema

Instructor: J. Mack

Using principles of both animation and editing, this course will explore the results of combination in cut and paste cinema in conjunction with the history of collage--from classic uses in painting, photomontage, architecture, and literature to contemporary functions via mash-ups, samples, and digital manipulation. Through producing projects, screening films, and discussing readings, we will explore the varying possibilities of forming new meanings via the pairing of found elements.

Cross-Listed as: SART 17.19

Degree Requirement Attributes: Dist:ART

FILM 44.03 - Filming the Landscape

This class will study and compare representations of the American landscape through the history of film and painting as well as the depiction of landscape and environmental issues manifested through television and video. Students will be required to complete a short film or video every two weeks referencing sites visited.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 44.04 - Sound: Practice and Theory

Instructor: J. Mack

Through the analysis of soundtracks and the creation of soundtracks, this course will explore the history of film sound and the way theories of sound reproduction continue to influence the development of sound technology and the practical choices made by sound recorders, mixers and editors. We will look at early sound films, 70s breakthroughs (Altman, Murch), and the imaginary soundscapes of science fiction and horror films.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 44.06 - Storytelling in the Digital Age

Instructor: J. Chamberlain

How can you use storytelling as a creative strategy for the digital age? Learn how to craft experiences through the

power of story across a variety of media forms. Creative assignments explore fundamental storytelling elements and tactics, and interrogate how form impacts content. In the final project, students will push the boundaries of storytelling and content creation to develop a concept pitch for a project of their own design.

Offered: Spring.

Degree Requirement Attributes: Dist:ART

FILM 44.07 - Docu-Fantasy and the Speculative Narrative in Multi-Ethnic Cinema

This course traces the evolution of the speculative narrative in non-fiction film in multi-ethnic and marginal filmmakers. We look at the work of Vietnamese, African-American, and German filmmakers in order to analyze how their works were part of a movement that affirm the validity of dreams, and function to expand the filmic imagination past traditional conceits of reality and realism. Final projects may be in any chosen genre, including, but not limited to, abstract imagery, documentary films, installations or experimental formats that invoke the theme "docu-fantasy".

Degree Requirement Attributes: Dist:ART

FILM 44.08 - The Art of Adaptation and Storytelling

This theoretical and practice-based course is a study of the conversion of oral, historical and fictional narratives into stage drama, cinema and literary texts. Special attention will be given to the cultural and political implications of cross-generic transformation, formulaic conventions and concepts of "genre," "crossover appeal" and "adaptation." Throughout the term, the intersections of race, culture and economics will be regularly questioned. Black cultural storytelling in various mediums and genres will be examined to serve as a point of entry into discussion of cultural worldview and storytelling in order to aid and encourage students to explore the theories, concepts and practice of adaptation from multiple, diverse vantage points and areas of interest. Building upon the adaptations they created in the first half of the quarter, students begin translating their stories visually in the "production" phase of the course. They assess how emotional information is translated in the original form and invent new ways of translating this content in their new visual format. Final projects can be interactive stage pieces, video installations or films.

Cross-Listed as: COCO 032

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 44.09 - Cinematography I: Lighting and Composition

Instructor: I. Kwayana

The primary focus of Cinematography I is to explore lighting and composition as an extension of cultural

identity to explore how to use the apparatus of the camera to tell a compelling story visually. In addition, we look at the elements of composition, aesthetic style, and lighting that factor into a visually compelling narrative. Whether fiction or non-fiction, or all around experimental, we ask the question- how can we use cameras to provoke emotional, visceral and even intellectual responses in the viewer. The course introduces students to the artistic and technical language used across analog and digital platforms but emphasizes experience. Students also gain practice in the following areas: Mechanical Camera Control and Operation, Lighting, Principles of Color, Exposure, Resolution/Depth of Field, Movement and Composition. Student mastery of these concepts is reinforced through dynamic class exercises and a final project. Additionally, students develop a sense of visual style and learn to interpret the appropriate application of it according to story or product.

Offered: Spring.

Degree Requirement Attributes: Dist:ART

FILM 44.10 - Writing for Television

Instructor: E. Carabatsos

This workshop course introduces students to the art and craft of writing for television. We're living in the midst of the (second) Golden Age of Television. More and more Americans are turning away from the traditional movie theater experience and embracing long form, character driven, small screen stories. In the film world, directors are king, but in television, the writers reign. It is their vision that gets put on the screen. Throughout the course, each student will workshop and develop a thirty minute pilot script and Show Bible, as well as read and analyze contemporary pilot scripts to see what exactly makes a pilot

Cross-Listed as: CRWT 41.01

Degree Requirement Attributes: Dist:ART

FILM 44.12 - The Idea of Africa: Deconstructing Race in the Iconography of a Continent

Instructor: A. Coly and M. Williams

This course will consider the mapping of race onto the idea of Africa and how Africa came to constitute a unique racial category. We will therefore conduct an "archeology of race" and engage the argument by historians of race in Africa that Africa was a major laboratory of race. Our primary material will consist of motion pictures, in an effort to reckon with the role of motion pictures as prime technologies of racial othering and their deep imbrications in colonial projects.

Cross-Listed as: AAAS 55.02

Offered: Spring.

Degree Requirement Attributes: Dist:ART; WCult:NW

FILM 44.13 - Writers' Room

Instructor: E. Carabatsos

This course is modeled after a professional TV writers' room. At the start of the course, the class will come up with a concept for a five episode television show. Then, each student will take turns fulfilling the various roles: showrunner, staff writer, and writer's assistant. The course focuses on the art of co-writing, the technique of writing for someone else's idea and in someone else's voice, and the tools to be an effective leader and delegator. Throughout the course, the students will collaborate on five short episodes, as well as an individual final portfolio. Readings will include episodic scripts from successful television shows. Feel free to reach out to me for more reading recommendations at any time.

Degree Requirement Attributes: Dist:ART

FILM 44.14 - Making Video Essays

This course introduces students to the art and scholarship of videographic criticism, the practice of using sounds and images to make arguments about film and television. We will take Latinx cinematic history as our subject and employ videographic methods in order to better understand Latinx representation, performance, stardom, and labor in Hollywood. The course will be equally split between learning this history and becoming acquainted with the theory and evolution of videographic practice. To understand how these two realms of inquiry intersect, students will create a series of video essays, workshop their creations with peers, and produce a final, sophisticated essay that demonstrates what they have learned.

"Making Video Essays" is an interactive, collaborative course in which students regularly share and receive feedback on their essays. To that end, we will work from a common body of films during the first part of the term. These will include seminal films in the history of Latinx representation in Hollywood that possess rich aesthetic potential for videographic critique. They are: the film noir, *Border Incident* (Mann, 1949); the Western, *High Noon* (Zinneman, 1952); the melodrama, *Giant* (Stevens, 1956); and the musical, *West Side Story* (Wise, 1961). After working closely with these films, students will have the opportunity to choose a different film that will form the basis of their final two essays.

Cross-Listed as: LACS 20.06

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 44.15 - SLOW Lab: Seeing, Looking, Observing, Witnessing

This humanities lab course explores the act of vision through hands-on creative and experiential projects and

theoretical and historical work. The object of study will be the practices of film and media studies. We will examine the intersection of vision with political questions of power, disability, surveillance, and digitality through encounters inside and outside the classroom. Students will produce creative media projects and critical reflections on texts and images to engage in process-based learning and risk-taking.

Degree Requirement Attributes: Dist:ART

FILM 44.16 - Does Media Die?

All media have histories. In this course, we will explore the material nature of media by asking ourselves if media technologies and practices end and exploring how they are remediated, remixed, and resurrected. Topics will include whether media actually die, how planned obsolescence affects our relationships with technology, the opportunities and challenges of digital preservation, and media reuse and disposal. Students will engage in hands-on experiences making, working with, and even destroying media to better understand the broad lifecycle of media as well as the connections between media theory and practice.

Degree Requirement Attributes: Dist:ART

FILM 44.17 - Media Entrepreneurship and Practice

Media Entrepreneurship and Practice presents a set of tools students can use to evolve their creative practice into a professional practice. There is a gap between developing and funding a single project and ensuring long-term success—for both the work and the people who make it. We will develop skills to ensure the latter. Working across media types and discussing models ranging from individual creator to social entrepreneur to business developer, students will explore how they present themselves to different audiences, how to seek out funding for projects, and how to develop plans to execute their vision. Guest speakers from industry will share their experience to help students set achievable, sustainable goals for their work and career.

Degree Requirement Attributes: Dist:ART

FILM 45 - U. S. Television History

Instructor: J. Chamberlain

This course will examine the history of television as an emerging technology; its dynamic interaction with government, private industry, and audiences; and its impact on society and culture. It will include a consideration of both pre-television media (especially radio) and new media (cyber-culture) as they inform a historical understanding of TV. The norms and practices of the network era (1955-1985) will be positioned as a functional middle-ground, much in the way that classical Hollywood Cinema (1920-1960) serves as middle-ground in motion picture history. Students will be encouraged to develop their capacity for a critical distance from

contemporary media via this historicized approach. Open to all classes. Limited to 50 students.

Offered: Fall.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 46.01 - Television and Histories of Gender

Instructor: M. Desjardins

This class examines the ways American commercial television has historically “assumed” gendered positionings of its audience, as well as operates as one of the strongest cultural touchstones of gendered identity in patriarchal, consumer society. After tracing television’s place in the construction of gendered ideals through the history of the situation comedy, we examine “gender-specific” genres, such as sports, westerns, cop shows, and soap operas. Representative programs will be screened, and feminist essays on television history/theory are among assigned readings. *Open to all students.*

Cross-Listed as: WGSS 56.01

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 46.04 - Broadcast Journalism and Electronic Journalism History

Instructor: M. Williams

The history of broadcast and electronic journalism in the United States, from telegraphy to the internet, focusing on the development of and changes to its fundamental relation to the public sphere. We will pursue a contextualized historical understanding of the formats, aesthetics, economics, and industrial organization of these media, in addition to case studies of specific debates, events, and individuals that have conditioned the impact of these media on society. We will invite speakers who have worked in these media industries and/or these histories. Students will be expected to create a digital video project and to write analytical papers, including a research paper.

Degree Requirement Attributes: Dist:SOC; WCult:W

FILM 46.06 - Topics in Television: Cop TV

Police shows have been important part of broadcasting in the US since before the beginning of television. This course explores how police shows have evolved over the last seven decades; the changing representations of police and procedures; the use of the genre to deal with “social problems”; fiction versus non-fiction programs; how these programs reflect real world controversies involving police; how the development of this genre reflects changes in the history of broadcasting. Throughout we will look at films that influenced the style and content of these programs.

Degree Requirement Attributes: WCult:W

FILM 46.07 - Television and New Media

Instructor: M. Roberts

This course examines the transformation of television in both its commercial and public-service forms by the rise of the internet as a mass medium, YouTube and participatory culture, and most recently, social networks and mobile communication. On the one hand, it will show, digital technologies and computer networks have disrupted the historical power relations between television networks and their audiences, enabling viewers to watch programming whenever and wherever they like, to avoid commercials, and to become producers themselves; yet at the same time, networks and advertisers are quickly finding new ways to adapt older business models and forms of storytelling to today's multi-platform media environment. Attention is paid to questions of agency in the control of programming flows and consumption; the shift from ratings to analytics, the emergence of transmedia storytelling as a production model; new forms of digital aesthetics (e.g., "slow TV"); and celebrity, branding, and neoliberal citizenship.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 46.08 - Television Without Borders: Local Communities, Global Audiences

Instructor: I. Kwayana

Considers television as a transnational medium from the first international broadcasts of the late 1950s to its digital descendants in the early twenty-first century. As television genres and formats continue to mutate and proliferate (digital downloads, streaming, etc.), the course addresses fundamental questions about its nature as a medium of mass communication: What is television for, today?

Offered: Spring.

Degree Requirement Attributes: Dist:INT or ART; WCult:W

FILM 46.09 - Critical Approaches to Media Production

The course analyzes and discusses various production practices in U.S. media industries. Through readings, audiovisual materials, and guest speakers from a wide array of media positions, we will explore various phases of media production in film, television, live events, journalism, and more. In particular, we will focus on dynamics involving race, gender, and sexuality in the labor of media production, as well as in the media products themselves. Overall, the course considers the ways in which media production and representations simultaneously reflect and reinforce social stratification and inequalities. Students should emerge from this course with a strong understanding of hierarchies of labor in media production, a practical sense of everyday practices in a diverse array of media production fields, as well as a firm understanding of the media's effects on and

interaction with identity politics. This course is intended to provide a 360-degree (over)view of media production.

Offered: Winter.

Degree Requirement Attributes: Dist:ART

FILM 46.10 - Transmissions: Histories and Theories of Broadcast Sound

Instructor: D. Simon

This course traces the history of broadcast sound from its inception through the golden age of radio, the use of sound and music in television and film, and into the current internet age. With its focus on sound and music, this course addresses an often-underexamined aspect of media history. We will explore a variety of different concepts and approaches used to analyze mediated music and discuss how concepts central to media studies—including text, audience, genre, industry, ideology and identity—function when applied to sound. At the end of the course, students will turn theory into practice through writing, recording and producing an episode of their own podcast.

Cross-Listed as: MUS 16.04

Degree Requirement Attributes: Dist:ART

FILM 46.11 - Introduction to Media Industries Studies

This seminar provides an in-depth look at the American media industry and Los Angeles based Production culture in particular, examining its history, theory and practice. The course investigates the collaborative creative process, its employment practices, work cultures and the mythologies that underlie them. After a brief historical and theoretical overview, the course will focus on the various media workers and their relationship to and role in the creative process. Topics are clustered around different sectors of production, past and present, to allow an exploration of the industry through the perspective of the people who have shaped it.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 47.01 - Video Mashups

Instructor: J. Ruoff

Individually, in pairs, and in groups, students edit short videos that appropriate, quote, and re-contextualize images and sounds from other sources. These collages include movie trailer mashups, political videos, supercuts, and music videos. In addition to readings, there will be screenings of avant-garde and documentary found footage films as well as a wide variety of digital video mashups. No prior editing experience required.

Offered: Summer.

Degree Requirement Attributes: Dist:ART

FILM 47.02 - Theory and Practice of Editing

This course covers formal and stylistic techniques in editing along with how to approach the overall organization of a film. Assignments include creative film exercises, film screenings and contextual readings. In addition, throughout the term students will work towards the completion of a final project that will be showcased in a public screening.

Degree Requirement Attributes: Dist:ART

FILM 47.05 - History of Documentary

Documentary film combines nonfiction with an aesthetic aspiratio. This course will explore achievement in the documentary, raising issues about the influence of documentary upon political persuasion, historical memory, the status of film as evidence and its utility as a means of investigation. We will look at film from a broad range of styles, viewpoint and eras. Documentary represents an alternative to the dominant entertainment cinema and as such, frequently addresses controversial issues directly. Students should be prepared to explore sensitive issues of race, class and gender raised by non-fiction film.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 47.06 - Audio-Vision: Film, Music, Sound

This interdisciplinary course explores the intersection of Film, Music and Sound, navigating alternatively through the history of film and music from both perspectives, proposing a dual approach to film and music, imaging and sound. The course alternates topics of cinema, music and sound and requires extensive viewing and listening, weekly readings and class discussions.

Topics ranging from sound experiments of the early avant-garde, through Visual Music, visual sound, audiovisual arts, experimental audiovisual installations and live arts practices will be studied along classic Hollywood, European and Asian films. Focusing on the connections between filmmakers, composers and artists, while tracing the evolution of audio-vision and its interconnections with music composition and sound innovation. The course structure is a double helix interconnected history of film and modern music from 1895 till today.

FILM 47.07 - Migration Stories

Instructor: G. Gemunden

With over 50 million displaced people today, migration is one of the most compelling problems of our time. Filmic and literary representations of migration focus on borders, different types of migrants, and their border crossing experiences. We will study migration from Latin America to the U.S.; from Africa and Eastern Europe to Western Europe; and internal migration within these countries. We

will also analyze how Hollywood cinema itself creates images and values that drive migration.

FILM 47.16 - Film Festivals

Instructor: J. Ruoff

Film festivals have become increasingly important institutions of film culture, even what one programmer called “an alternative distribution network.” Though invented in Europe in the 1930s, festivals are now a worldwide phenomenon encompassing art, commerce, tourism, and cultural identities. Festivals often provide meeting points for critics, directors, producers, distributors, actors, audiences, and others. Students will undertake case studies of individual film festivals from around the world.

Degree Requirement Attributes: Dist:ART

FILM 47.17 - Race and Place and Los Angeles Media

The purpose of this course is to examine the range of media produced by, for, and about the multicultural populations of Los Angeles. We will look at the film, music, television, and digital media produced by, for, and about indigenous people and people of color in the city and consider the role that racialized communities play in the circulation of images of Los Angeles in local, national, and global networks. Topics will include the following: colonialism; intersections of race, class, gender, sexuality, religion, and nation; alternative modes of production, distribution, and spectatorship.

Degree Requirement Attributes: Dist:ART

FILM 47.19 - Krieger's Virtual Girlfriend: Japanese Anime and the idea of the Post-human

Instructor: Washburn

An examination of major trends in popular visual culture in Japan since the 1980s focused on the growth in production and distribution of animated films, tv series, and video games. Screenings will include works by Miyazaki Hayao, Rintaro, Takahata Isao, and Kon Satoshi. Readings will include both critical and historical sources that will provide the social and economic contexts for the development of the anime industry, theories of animation, and the global impact of Japanese popular culture.

Cross-Listed as: AMES 43.09 ASCL 62.09

Degree Requirement Attributes: Dist:ART; WCult:NW

FILM 47.20 - Curating and Microcinema

Curating and Microcinema. This course provides an introduction to the practice of curating film and video-from shorts programs, to retrospective screenings, to moving-image installations and exhibitions of production artwork.

Through a series of on-campus presentations, readings, screenings, and discussions, the course will prepare students for final projects in which groups of students organize moving-image events for members of the community.

Degree Requirement Attributes: Dist:ART

FILM 47.21 - Scenes from the City: Urbanism and Modern American Visual Culture

Instructor: M. Desjardins, Domosh

From silent films to *Mad Men*, the American city has been the site through which “modern” identities have been imagined and created. This course draws on Cultural Geography and Film and Media Studies in order to interrogate this development. Through a variety of readings and screenings of films and TV shows, we will be examining American downtowns, suburbs, and homes as sites for the construction of classed, racialized, sexualized and gendered identities in three different time periods: the early 20th century, the post WWII era, and the contemporary period. We will interrogate such topics as: the real and imagined role of “shopping” women and gender in the shaping of modern downtowns; the relationship between the American suburb, new sexual identities and the film *Pillow Talk*; and how a particular nostalgia for the past that has led to the popularity of such shows as *Mad Men* can also be seen on the streets of Hanover (neo-traditional urbanism).

Cross-Listed as: GEOG 80.04

Degree Requirement Attributes: Dist:SOC; WCult:CI

FILM 47.22 - Buddhism and Film

“What is Buddhism?” “How can it be something expressed in and through the medium of film?” and “What actually constitutes a Buddhist film?” After an introductory survey of central topics in Buddhism, this course will explore the cinematic presentation of Buddhist religion, philosophy, practices, saints, and institutions. By learning to watch films critically from a Buddhist perspective, students will explore the process through which we create the meaning in films and everyday life. Open to all.

Cross-Listed as: REL 41.02

Degree Requirement Attributes: Dist:TMV; WCult:NW

FILM 47.23 - Berlin--New York--Hollywood: A Cultural History of Exile

This course focuses on the condition of exile. It takes as its main example “one of the largest and most dramatic mass migrations to this country in the twentieth century,” namely that of some 130,000 German-speaking refugees who arrived on these shores between 1933 and 1945. The course will examine several of the most significant areas

that were influenced by this vital cultural shift: the American academy and intellectual life; the film industry (“Weimar on the Pacific,” as Hollywood was sometimes called); and, more generally, the political and cultural debates concerning the “German Question,” i.e., what to do with Germany after the war. We will explore how the exiles viewed their role and how they viewed the interplay between American and European culture.

Degree Requirement Attributes: Dist:INT or ART; WCult:W

FILM 47.24 - Race & Gender in American Film

Instructor: D. Garcia

This course is an introduction to the history of race and gender in American film. These fundamental social constructs in American life have been central to the development of American film narrative from the beginnings of cinema at the turn of the twentieth century. In turn, American films have profoundly shaped the ways that we think about race and gender and racialized and gendered beings. We will analyze the shifting and situational meanings of race and gender throughout the twentieth century, and in particular, how they have been influenced by the forces of history, including wars, economic depressions, and social movements. While we will focus our attention on Hollywood cinema of the “golden age”, the period from the 1920s-1960, we will also spend significant time considering American independent cinema and the post-classical period of filmmaking from the 1960s to the present. In our consideration of race and racialized peoples, we will include African Americans, Native Americans, Asian Americans and Latinos. Our discussions of gender will be expansive to include not just women and femininity, but men and masculinity as well.

Cross-Listed as: AAAS 32.01 LACS 25.01 LATS 025

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 47.25 - Black Noir

In this course, we will study black American literature that focuses the noir genre on black people themselves. We will read gritty, urban crime novels that attempt to expose inequities in black American lives and dispel the notion that a descent from whiteness results in blackness. Rather, the black people in these texts exist in darkness because they are living in alienated communities. We shall investigate how the noir genre is altered when “noirs” are the subjects and the authors. In addition to primary texts, the course will engage critical responses to these works.

Cross-Listed as: AAAS 81.07 ENGL 53.07

Degree Requirement Attributes: Dist:LIT; WCult:W

FILM 47.26 - Film and Fashion: Dressing the Part

Instructor: M. Desjardins

This course examines the interrelations between film, costuming, and fashion cultures. We will look at theories of fashion, “the fashioned body,” and costume, reading them against trends in fashionable dress, body image, and fashion subcultures, as well as against histories of film costuming and spectacle. Screenings include media texts from different historical periods that reflect or have influenced fashion of their time and/or represent interesting challenges for costuming.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 47.27 - The Hollywood Studio System

Instructor: M. Desjardins

This course explores the historical foundations of the Hollywood Studio System (1925-1960) in relation to how creative decisions were made and practices of production and promotion were enacted in the business of industrial film production during that era.

FILM 47.28 - Queer Cinema

What constitutes queer aesthetics and politics today? How does it relate to fights for LGBTQ rights? And how have these questions been represented on screen? This course will address these questions by introducing students to the history and theory of “Queer Cinema” broadly construed. We will pay particular attention to the aesthetic strategies and political interventions of filmmakers who use film to address broader debates in queer theory and LGBTQ history.

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 47.29 - Latinx Stage and Screen

Instructor: D. Garcia

This course will examine the Latinx stage and screen, focusing specifically on musicals that portray Latinx lives. We will focus on canonical works—including *West Side Story*, *Zoot Suit*, and *Hamilton*—in order to deepen our knowledge of their form, production history, historical reception, and contemporary place in American culture. We will take an interdisciplinary approach, drawing our reading assignments from the fields of Ethnic Studies, American Studies, Performance Studies, and Film and Media Studies, in order to analyze these productions as they traveled from stage to screen (and sometimes, back to the stage) and the representational and cultural politics involved in that shift. Finally, we will explore not only the musicals themselves, but also the historiography that has informed our understanding of them. Writing assignments will ask the students to reflect on the evolution of scholarly arguments regarding these canonical works.

Cross-Listed as: LACS 20.07 THEA 10.27

Degree Requirement Attributes: Dist:SOC; WCult:NW

FILM 47.30 - Black Looks: A Survey of Race and Representation in Cinema and Visual Media

This course surveys the evolution of race and representation in visual media. Special attention will be given to black subjects and the socio-economic, historical and political factors that feed into depictions of black life, dominant tropes within these historic depictions, and the aesthetics of emergent voices that help to shape a new black subjectivity on screen. Students are encouraged to draw connections between discourse about black subjectivity with that of identities through doing “close readings” of screen representations and images. In their final projects, students write about and create work relating to black subjects or the broader theme of race and representation in visual media.

Cross-Listed as: WGSS 66.29

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 47.31 - Sounding Out Power and Dissent

How does authority reach the ear? What are the sonic features of speaking truth to power? Who shapes the ways we hear, and where might we learn to listen differently? This course sounds out displays of authority as well as how we can act against such structures by turning to representations of the auditory in both literature and cinema. As we consider questions of sound and its reproduction, we will work across geographical contexts to determine which concerns resonate widely and what role acoustics, or the specific properties of a space, might play. Readings will come from writers such as Valeria Luiselli, María Sonia Cristoff, Franz Kafka, Frantz Fanon, and Severo Sarduy, while films will range from *Fitzcarraldo* to *Sorry to Bother You*.

Cross-Listed as: COLT 40.08 LACS 45.04

Degree Requirement Attributes: Dist:INT

FILM 47.32 - Sounds of Totalitarianism and Resistance

Instructor: D. Simon

This course is dedicated to exploring how twentieth-century music and culture became entangled in the political and social conditions of governments. We will read foundational scholarship in Fascist Studies, musicology, media and sound studies that takes into account the multifaceted nature and deeply rooted legacy of totalitarian states. Our goal is to understand how composers, performers, filmmakers and audiences have reckoned with authoritarian politics and to develop a nuanced understanding of politics’ role in music and media, both historical and contemporary.

Cross-Listed as: MUS 40.06

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 47.33 - Performing Histories, Performing Us

Performing Histories, Performing Us is an interactive course, taught by scholar artist, Dr. Monica White Ndounou, with a residency component with actor/writer/director Roger Guenveur Smith. The course utilizes performance as a tool to interrogate, examine and explore the concept of history, particularly at the intersection of culture and performance. This course uses traditional and nontraditional archives and multiple platforms to illuminate the possibilities for performing histories; performing us.

Cross-Listed as: AAAS 31.80 THEA 10.84

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 47.34 - International Cinema and WWII

The cinema plays a pivotal role in creating and defining our understanding of the past. Through viewings and close analysis of classic international films, this course explores historical representations of the Second World War. We will consider how the war has been remembered, interpreted, and represented in the cinemas of different European, Asian, and North American countries. Note that a number of the films graphically depict violence and other upsetting topics.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 47.35 - Rita Moreno: Identity, Performance, Stardom

Rita Moreno is a Puerto Rican actress, singer, and dancer whose career has spanned the 20th and 21st centuries. She has worked across film, television, and theater, and most famously, starred in *West Side Story* (1961) for which she won an Academy Award, the first Latina to do so. The course will explore her life and career as a means of exploring broader contexts of Latinx history and culture.

Cross-Listed as: LACS 80.04

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 47.37 - Cinema and Modernism, High and Low

This course explores film history's tumultuous relationship to modernism, the twentieth-century Anglo-European aesthetic trend that irrevocably transformed global concepts of "art."

Beginning with the explosive arrival of film on the "science as entertainment" scene in the 1890s, the course will trace film's multiple identifications with modernism through the past century, from Dadaism and surrealism in the 1920s through post-World-War-II American avant-garde cinema and the French New Wave of the 1960s. To guide us through these film-modernism encounters and their consequences, we will investigate key critical and theoretical debates about the uses (and misuses) of "high" art cinema and commercial narrative film for inciting

political change, from André Breton's surrealist manifesto(es) and the studies of modernity and mass culture undertaken by the Frankfurt School in Germany to the "Screen theorists" in the French and British academies in the 1970s, right up to more current debates about the resonance between "classical" Hollywood film product and the ardently experimental, even anti-narrative ambitions of post-1968 cinematic avant-gardes.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 47.63 - Shaping Cinema's Futures with Remnants of the Past: The Film Archive as Site of Experimental History

This course builds on ongoing research projects, curatorial initiatives and the experience of training programs in film archiving in the Global South to teach students a broader understanding of film, its multiple histories across the world, and its possible futures. In the course we will discuss productive archival accidents in recent film practice and research with a focus on the legacies and futures of the so-called "Third Cinema," the militant filmmaking of the 1960s through the 1990s, as well as on archive-based film from outside of the North Atlantic realm. A practice-oriented element of the course will connect to the Media Ecology Project at Dartmouth and its digital film collections.

Degree Requirement Attributes: Dist:ART; WCult:NW

FILM 48.01 - The Map

Maps involve Purposeful omission: they require compression; they are subjective in their emphasis and purposeful omission; they require compression; they are subjective in their emphasis and perspective; they are of the imagination and create illusions of space, time, and place. The Map, the group visits map collections, reads critical and historic essays, investigates digital maps and territories, and interviews artist, cartographers, and geographers, about their practices. Weekly assignments include several maps per week-fanciful, conceptual, and practical

Cross-Listed as: SART 17.03

Degree Requirement Attributes: Dist:ART

FILM 48.02 - Video Art

Instructor: M. Flanagan

This theory/practice studio course explores the medium of video as an art form. Through a survey of historical and contemporary works, students will examine how history, access, culture and technological shifts have influenced and changed how artists work with the moving image and time-based media. From early portable video rigs and live video to the use of animation, netart, streaming video, and memes, the course will unpack role that film, video, sound, writing, performance, abstraction, installation, structure,

streaming and narrative forms have played in their work. Students create individual video projects to develop their artistic voice and point of view; they engage with properties that distinguish video art practices while completing a series of creative experiments in order to develop a personal media vocabulary. Students will use video art to expand our understanding of time, space, sound, representation, and narrative.

Cross-Listed as: SART 17.20

Degree Requirement Attributes: Dist:ART

FILM 48.03 - Data and Bodies

Instructor: J. Wernimont

In this course we will take a multi-modal approach to understanding relationships between “datafication” and human bodies. Today’s “Datafication” is a process of transforming diverse processes, qualities, actions and phenomena into forms that are machine-readable by digital technologies, but the act of turning humans and human bodies into quanta of information has a long history. We will be using art, new media, history, information science, and more to think through the impact that datafication has on how we understand ourselves and others. Particular attention will be paid to the ways in which data has historically been used in racializing and gendering ways, and the role that quantification of people has been integral to the development of the Western nation-state.

Cross-Listed as: WGSS 57.01

Degree Requirement Attributes: Dist:SOC

FILM 48.04 - Social Justice and Computing

Instructor: J. Wernimont

This course draws on feminist and queer scholarship to examine the intricate relationship between datafication, ubiquitous computing, and social justice, highlighting the politics and impacts of data-driven processes and big data on human lives. One of the key highlights of WGSS engagements with computing history is the focus on the politics and impacts of data-driven processes and big data on human lives. The course will provide a brief introduction to histories of computing and data-driven practices within the Anglo-American tradition, including discussions of the roles that ethics and biopolitics play within these histories. We will explore ways that privacy/security, algorithmic processes, computational environmental impacts, and design have exploited the most vulnerable while increasing affordances for the most privileged. We will also spend significant time learning about new data/computational justice initiatives and develop a robust understanding of how social justice issues like prison abolition, climate change, and equitable health outcomes are at the core of understanding computational cultures. No Computer Science or Data Science background is required, but the course will entail learning

about some of the technical history within both fields. Similarly, there are no WGSS prerequisites for the course but students will be responsible for learning about anti-racist feminist and queer methods and insights.

Cross-Listed as: WGSS 66.02

Degree Requirement Attributes: Dist:SOC

FILM 48.05 - Postcolonial Media

Instructor: R. Risam

How has colonialism operated — and how does it continue to operate — through media? How have colonized people used media to resist colonialism in the past and how do they continue to do so today? What role can we play in undoing the relationship between media and colonialism as readers, critics, and makers? This course draws on digital humanities, media studies, postcolonial and decolonial theory, and Native American and Indigenous studies to examine the historical and ongoing relationship between colonialism and media. We will compare multiple geographic, cultural, and linguistic contexts (e.g., British colonialism in South Asia, European colonialism on the continent of Africa, and settler colonialism in the U.S.) to explore the long relationship between media and colonialism. Through our work, we will consider how it formed the past and how it continues to shape our present. Drawing on insights gleaned from this analysis, we will engage in the creation of media to experiment with the role it can play in resisting colonialism.

Degree Requirement Attributes: Dist:INT or SOC

FILM 48.06 - Media and Migration

Instructor: R. Risam

The relationship between media and migration is a complex one. Media can, at once, facilitate migrants’ journeys and, at the same time, contribute to public discourse that aims to curtail migration. Our individual understanding of migration, personal relationships to it, and the viewpoints we have formed on immigration rights and policies are indelibly shaped by multiple forms of media, broadly construed: mainstream news media, social media, television and film, data visualization, infographics, and multimodal forms of communication. In this course, we will use the lenses of postcolonial studies and critical ethnic studies to examine the interplay of media and migration to collectively build our capacities as critical consumers of media and nuanced and empathetic thinkers about migration.

Cross-Listed as: COLT 62.09

Degree Requirement Attributes: Dist:INT or SOC

FILM 48.07 - Analyzing Content: From Tik Toks to Tweets

Instructor: T. McNulty

The internet is awash with new popular cultural forms, from listicles and lolcats to Ted Talks and makeup tutorials. And yet scholars have only just begun to analyze this new digital “content”: what makes it unique, and how it is reshaping our culture. In this course, we’ll look at new forms of popular digital content in detail—reading tweets as closely as if they were poems, or exploring the substance of 100,000 Instagram images. We’ll survey the methods that have been developed, in different disciplines (media theory, art criticism, sociology), for analyzing content in this way, as well as those that have yet to be attempted (questions that haven’t been asked; material that hasn’t been addressed). To put theory into practice, students will develop 10-12 page research projects on popular digital artifacts of their choosing. They will also be introduced to computational methods of analyzing content, and have the opportunity to pursue these methods further.

Cross-Listed as: ENGL 55.23

Degree Requirement Attributes: Dist:LIT

FILM 48.08 - Media and Environment

At a time of increasing reliance on technology to enhance and even transform the environment, how do media shape our perception of the world around us? This course introduces students to environmental media studies methods and concepts through a focus on contemporary Latin America. As we work comparatively across a range of media—including film, photography, visual art, and virtual reality—we will consider the specific ways in which each can reveal or reformulate conceptions of the environmental. Among key topics, we will discuss the stakes of defining nature as media, the ecological materiality of media formats, and the role of environmentalist media in present-day Latin America. The course culminates in a project that asks students to simultaneously analyze and create media.

Conducted in English; no previous media experience required.

Cross-Listed as: COLT 70.08 LACS 35.17 SPAN 65.17

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 49.02 - Black Theatre & Storytelling Workshop in XR: Reimagining The Purple Flower (1928)

Instructor: M. White Ndounou

Recognizing the intrinsic value of Black lives and Black storytelling across media platforms, this course will explore the staging of Black theatre texts in virtual reality (VR) and related XR technology. Participants will explore VR technology at the intersection of Black cultural storytelling through the performance of monologues and scenes as well as design/tech, music and movement culminating into a pilot production of Marita Bonner’s *The Purple Flower* (1928), a non-realistic, one-act play that

pushes the boundaries of theatrical staging. No prior experience or pre-requisites required.

Cross-Listed as: AAAS 31.90 THEA 10.51

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 50.01 - Cinematic Mirrors: Reflexivity and Authorship in Global Film History

Instructor: P. Young

This course investigates a trend in modernist and postmodernist cinema of reflexive films or *metafilms*: films foregrounding the medium through themes, techniques, style, and formal methods that call attention to the artificiality of cinema. How authorship and the concept of the “auteur” affects production and reception of these films, how different national and political contexts impact their production, and how compatible metafilms are with mainstream commercial practice, are among the questions explored in the course.

Degree Requirement Attributes: Dist:INT or ART

FILM 50.02 - Race, Media, Celebrity

Instructor: Monk-Payton

How is fame understood through racial difference? This course explores the dynamic terrain of contemporary celebrity culture as it intersects with race. Looking across a range of media formats (music, television, and digital media) we will examine the construction of black celebrity from Barack Obama to Beyonce. We will engage with the aesthetics and politics of black celebrity visibility, paying close attention to issues of gender, sexuality, and class. Topics considered include celebrity performance, scandal, and fandom in U.S. public and popular culture.

Cross-Listed as: AAAS 80.07

Degree Requirement Attributes: Dist:ART; WCult:CI

FILM 50.03 - Topics in Film Theory: Exploring the Archive

Instructor: M. Williams

This course will introduce students to new capacities for archival research and explore new directions of archival scholarship regarding film, television, and media history. Inspired by the turn to “preservation plus access” that characterizes many media archives today, this course will provide a set of perspectives from archivists, scholars, and film/video makers regarding new modalities of textual collections, availability, and delivery that promise to deepen media studies as a set of interdisciplinary research and production practices.

Degree Requirement Attributes: Dist:ART; WCult:W

FILM 50.04 - Video Games and the Meaning of Life

Instructor: W. Cheng

Video Games and the Meaning of Life is an interdisciplinary course that explores the modern human condition through the stories, designs, and soundscapes of digital games—from the perils of obedience (Hannah Arendt and *The Stanley Parable*) to the metaphors of illness (Susan Sontag and *That Dragon, Cancer*), from the deathless dreams of pacifism (*Undertale*) to the transnational rise of today's billion-dollar e-Sports industry (*League of Legends*). All students are welcome; no gaming or musical experience needed.

Cross-Listed as: COLT 40.07 MUS 046

Degree Requirement Attributes: Dist:TMV; WCult:CI

FILM 51 - Game Design Studio

Instructor: M. Flanagan

This course explores how innovative games are created and what elements go into the design of a good play experience. Games, be they console, networked, mobile, board, or pervasive, provide a versatile platform for design thinking and media practice. During the course, students create a host of game prototypes that address social issues. Students study the process of making games while developing actual game ideas, prototyping, play-testing, and documenting original, innovative game plans in a design journal.

Degree Requirement Attributes: Dist:TAS

FILM 80 - Independent Study

This course is designed to enable qualified upperclass students to engage in independent study in film under the direction of a member of the Department. A student should consult with the faculty member with whom he or she wishes to work as far in advance as possible. A proposal for any independent project must be submitted by the appropriate deadline in the term immediately preceding the term in which the independent study is to be pursued. Permission of instructor required. The staff.

FILM 93 - Major Project

This course, limited to Film and Media Studies majors or as part of a modified major, involves an individual project in some aspect of film and television history, theory or practice. The subject of the project, the term, and the hours are to be arranged. Each project must be directed by a faculty member of the Department. The approval of the faculty member and the Chair must be secured in advance, not later than the term immediately preceding the term in which the project is to be undertaken. This is a two term project.

Students are awarded one course credit for successful completion of this course at the end of the second term of work. Students register for FILM-093 and receive a grade of "ON" (ongoing) at the end of the term. Students do not

register for the subsequent term. A final grade will replace the "ON" at the end of the subsequent term at which time the coursework must be completed.

FILM 95 - Honors Project I

A thesis, screenplay, or film production written under the supervision of a member of the Film and Media Studies Department. This course must be elected by all honors candidates. Permission of the Film and Media Studies Faculty required. Honors Projects are considered to be two-term projects. Students must register for each of the two terms to receive the Honors designation.

Students are awarded one course credit for successful completion of this course at the end of the second term of study. Students subsequently register for FILM 96, and continue with their coursework into a second term. A final grade will replace the "ON" for both this course and FILM 96 upon completion FILM 96.

FILM 96 - Honors Project II

A thesis, screenplay, or film production written under the supervision of a member of the Film and Media Studies Department. This course must be elected by all honors candidates. Permission of the Film and Media Studies Faculty required. Honors Projects are considered to be two-term projects. Students must register for each of the two terms to receive the Honors designation.

Students are awarded one course credit for successful completion of this course. Students who have registered for FILM 95 register for this course and continue with their coursework. A final grade will replace the "ON" for both FILM 95 and this course upon completion of this.

French and Italian Languages and Literatures

Chair: yasser elhariry

Professors F. E. Beasley, L. D. Kritzman, D. P. LaGuardia, G. Parati; **Associate Professors** N. L. Canepa, y. elhariry, L.C. Hollister, S. M. Sanders, R.A. St. Clair, A. W. Tarnowski; **Assistant Professors** D. Callegari, M. W. Larose; **Research Assistant Professors** T. Convertini, G. Oliveira, **Senior Lecturers** M. Gilebbi, K. F. McConnell, G. Alberti, S. Mefoude-Obiono **Lecturers** M. Novak, E.K. Kane, N. Peregó.

Majors

The department offers three majors:

- French Studies
- Italian Studies
- Romance Languages

Major programs usually include at least one term of study in France or Italy—all courses on the LSA+ and FSP study abroad programs count toward departmental majors and minors.

Major in French Studies

Prerequisite: French 5 and 6

The French Studies major consists of two prerequisite courses, FREN 5 and FREN 6, followed by eight seminar courses selected by the student in consultation with the French major advisor. At least one of the eight seminar courses must be a department-designated Writing Workshop and must be taken before the senior year. A maximum of two courses may come from the roster of FREN classes offered in English, though majors who elect these must take an x-hour in French and do all reading and written work in French. Alternatively, up to two courses from other departments may be counted towards the French Studies major if the material of such courses is directly germane to the student's major plan; these must be approved by the French major advisor. All three courses taken on the French LSA+ in Toulouse (winter) or the French FSP in Paris (winter or spring) count towards the major or minor.

Honors Thesis: If a student seeks to write an honors thesis in French Studies, they should contact a potential faculty thesis advisor and submit their thesis proposal by June 1 of their junior year. The honors thesis represents two course credits in the major during the student's senior year.

Culminating experience: Majors who do not write an honors thesis will, in their senior year, select an upper-level seminar in which they will submit additional assignments to produce a sustained piece of writing (20+ pages) to fulfill the College requirement for the culminating experience.

The major plan must be approved by the French major advisor.

Major in Italian Studies

Prerequisite: Italian 3

The Italian Studies major consists of eight courses beyond the level of ITAL 3. It must include either ITAL 8 (if taken on an LSA+ program in Rome) or ITAL 9 (if taken on campus), ITAL 10, and six additional courses selected from among those offered by the department. A maximum of two courses may come from the roster of ITAL classes offered in English, though majors who elect these must take an x-hour in Italian and do all reading and written work in Italian. All three courses taken on the Italian LSA+ in Rome during winter term count towards the major

or minor. Note: ITAL 10 may only be taken once for credit.

Honors Thesis: If a student seeks to write an honors thesis in the Italian major, they should contact a potential faculty thesis advisor and submit their thesis proposal by June 1 of their junior year. The honors thesis adds one course to the major because the student is granted a course credit for conducting research and writing their thesis essay; thus, the honors major consists of a total of nine courses.

Culminating experience: Majors who do not write an honors thesis will, in their senior year, select an upper-level seminar in which they will submit additional assignments to produce a sustained piece of writing (20+ pages) to fulfill the College requirement for the culminating experience.

The major plan must be approved by the Italian major advisor.

Major in Romance Languages

French or Italian can be either the primary or secondary language in a Romance Languages major (the major can also include Spanish or Portuguese as a primary or secondary language).

French as primary language: students take FREN 5 and FREN 6 followed by four seminars in French, for a total of six courses. One course may come from the roster of FREN classes offered in English, though students who elect such a course must take an x-hour in French and do all reading and written work in French. When French is the primary language of the major, students do their culminating experience in French, either through an independent study with a professor or through additional reading and writing in an upper-level FREN seminar.

Italian as primary language: students take six courses in Italian beyond ITAL 3. These must include either ITAL 8 on the Rome LSA+ or ITAL 9 on campus, ITAL 10, and four additional courses selected from among those offered by the department. One course may come from the roster of ITAL classes offered in English, though students who elect such a course must take an x-hour in Italian and do all reading and written work in Italian. When Italian is the primary language of the major, students do their culminating experience in Italian, either through an independent study with a professor or through additional reading and writing in an upper-level ITAL seminar.

French as secondary language: students take FREN 5, FREN 6, and then an additional two seminars, for a total of four courses. As with other courses of study that include French, participation in the LSA+ in Toulouse or the FSP in Paris will give the student three courses towards the Romance Languages major.

Italian as secondary language: students take four courses in Italian beyond ITAL 3: ITAL 8 or 9, ITAL 10, and two additional seminars. As with other courses of study that include Italian, participation in the LSA+ in Rome will give the student three courses towards the Romance Languages major.

French or Italian as a Modifier

If a student wishes to modify a major in another department with French or Italian and wishes the modifying language to be entered on their permanent record, the major program must be approved by the Department of French and Italian Studies as well as by the primary department. The modifying component, which must add intellectual coherence to the primary major, must consist of major-level courses.

Minors

The department offers two minors: Italian Studies and French Studies. Minors often include at least one term of study in Italy or France; all courses on the LSA+ and FSP study abroad programs count toward departmental minors.

Italian Minor

The Italian Studies minor consists of six courses beyond the level of ITAL 3. It must include either ITAL 8 (if taken on an LSA+ program in Rome) or ITAL 9 (if taken on campus), ITAL 10, and four additional courses selected from among those offered by the department. One course may come from the roster of ITAL classes offered in English, though minors who elect such a course must take an x-hour in Italian and do all reading and written work in Italian.

All three courses taken on the Italian LSA+ in Rome during winter term count towards the minor or major.

ITAL 10 may only be taken once for credit.

French Minor

The French Studies minor consists of two prerequisite courses, FREN 5 and FREN 6, followed by four seminar courses selected by the student in consultation with the minor advisor. Among their four seminar courses, students

are strongly encouraged to take at least one department-designated Writing Workshop. One course may come from the roster of FREN classes offered in English, though minors who elect such a course must take an x-hour in French and do all reading and written work in French.

All three courses taken on the French LSA+ in Toulouse (winter) or the French FSP in Paris (winter or spring) count towards the minor or major.

Honors Thesis Program

Please refer to the ORC for general, College-wide requirements for admission to the Honors Program. Students who wish to write an honors thesis must give evidence of exceptional ability and interest in the major field by having a GPA of 3.5 or better.

Honors Thesis

The thesis topic and the individual faculty advisor for the thesis must be determined during the student's junior year, with a one-page thesis proposal due to both the advisor and the department chair by June 1st.

French Studies: If a student seeks to write an honors thesis in French Studies, they should contact a potential faculty thesis advisor and submit their thesis proposal by June 1 of their junior year. The honors thesis represents two course credits in the major during the student's senior year.

Culminating experience: Majors who do not write an honors thesis will, in their senior year, select an upper-level seminar in which they will submit additional assignments to produce a sustained piece of writing (20+ pages) to fulfill the college requirement for the culminating experience.

Italian Studies: If a student seeks to write an honors thesis in the Italian major, they should contact a potential faculty thesis advisor and submit their thesis proposal by June 1 of their junior year. The honors thesis adds one course to the major because the student is granted a course credit for conducting research and writing their thesis essay; thus, the honors major consists of a total of nine courses.

Culminating experience: Majors who do not write an honors thesis will, in their senior year, select an upper-level seminar in which they will submit additional assignments to produce a sustained piece of writing (20+ pages) to fulfill the College requirement for the culminating experience.

Upon student submission of a thesis, department faculty will determine whether the student will graduate without honors in the major, with an Honors designation, or with a designation of High Honors.

Please refer to the department's website for details on thesis writing and timelines.

FREN - French Courses

FRENCH INTRODUCTORY LANGUAGE SEQUENCE

An introduction to French as a spoken and written language. The work includes regular practice in class and scheduled drill-sessions in understanding and using the spoken language. Written exercises and elementary reading materials serve for vocabulary building and discussion.

French 1: Introductory French

This course is open to true beginners, students with one or two years of high school French or students with a score of 0-530 on the SAT II Subject Test. Emphasis will be on speaking and dialogue with your peers. You will learn to introduce your family and friends, share what your daily life looks like, talk about what you do for leisure. Your final assignment will be to do an oral presentation in French describing your hometown. Does not serve to satisfy Distributive or World Culture Requirements.

French 2: Introductory French II

This course is open to students who have completed French 1 on campus, those with three or four years of high school French, or those with a score of 540-600 on the SAT II Subject Test. You will expand your possibilities of expression by learning how to use the past and future tenses, to say where you've been and where you're going. You will share childhood memories and exchange ideas about plans for your education and career. While building your vocabulary, you will deepen your cultural knowledge with introductions to multiple francophone countries around the world. Your final assignment will be to choose a francophone country and do an oral presentation for your peers on its history, geography, architecture, art or traditions. Does not serve to satisfy Distributive or World Culture Requirements.

Prerequisites: French 1 or qualifying placement through the placement exam. Please contact Professor Oliveira for more information.

French 3: Introductory French III

This course is open to students who have completed French 2 or French 11 on campus, those with a score of 610-710 on the SAT II Subject Test or a score of 4 on the AP. You will explore several themes of contemporary life and learn to discuss travel, technology and its influence, wellness and healthcare, and social relationships. Your final assignment will be to seek out information on a current issue facing a francophone country—the environment, racism, poverty, freedom of speech, immigration, the colonial past, religious conflicts—and present it to your peers through a medium of your choice: film, interview, blog, skit, music or poster. Does not serve

to satisfy Distributive or World Culture Requirements.

Prerequisite: French 2, French 11, or placement qualifying from the placement exam. Please contact Professor Oliveira for more information.

French 11: Intensive French

This 1-credit course is designed for students with little or no knowledge of the French language, but who have a strong background in another Romance language (i.e. Spanish, Italian, Romanian, Portuguese, Catalan, Latin). It might also be suitable for students who have been exposed to French through family ties or have spent some time in a francophone environment. French 11 is an accelerated course that combines French 1 and 2 in one term, offering an exciting and fast-paced atmosphere in which to learn French. The course will have a web-based component, which, through cultural, grammar and multimedia learning activities, will complement face-to-face work and prepare students for in-class work. Students will learn to talk about familiar events in the present and the past, as well as formulate plans for the future. Weekly cultural videos will situate in context the grammatical content of the course, making it relevant and meaningful. Students will be actively engaged in a variety of creative written and oral activities that will help them develop their language skills. Upon successful completion of this course, students will be able to sign up for French 3 (remember that after French 3, you are eligible to apply for the French LSA+ in Toulouse). With the goal of facilitating the acquisition of the target language, this course will be conducted entirely in French.

Prerequisite: One year or equivalent of university level instruction in a Romance Language or Latin; or three high school years of instruction in a Romance Language or Latin; or native speaking proficiency in a Romance Language; or permission of instructor.

French Intermediate and Upper-Level Courses

Fren 5 (formerly French 8)

Conversations and Styles: A bridge course between the elementary language sequence and FREN 6, Texts and Contexts. You'll build your cultural knowledge by studying historical and contemporary French and francophone societies. Focus topics include evolving political and regional identities, literature and the expression of identity, gender relations, the role of the media, education, religion and immigration. You'll expand your active use of French, refine reading and writing strategies, and comprehensively review grammar. Course work includes active participation in class discussions, oral presentations, and regular reading/writing assignments in the areas of narrative and poetry, cinema, music, and journalism. Not open to students who have received credit for FREN 008 or FREN 09.01. Prerequisites: FREN 3, or equivalent preparation. W and SOC.

Fren 6 (formerly French 10)

Introduction to French Texts and Contexts: An introduction to French literature, culture, and media across time that provides students with the tools to read and analyze texts critically. Through a selection of literary works, films, and other cultural artifacts, this course examines how ideas, genres, and narratives develop and intersect. Topics and materials vary based on the instructor's focus, allowing for an engaging and dynamic exploration of francophone literary and cultural landscapes. Not open to students who have received credit for FREN 10.01-10.99. Prerequisites: French 5 or French 8 or the permission of the individual instructor. DIST: W and LIT.

Fren 87: Honors Thesis Reading and Research

A program of individual study directed by a faculty member. A proposal signed by the faculty advisor must be submitted to the department for approval by June 1st of the student's junior year. Open only to French Studies and Romance Language majors whose primary language is French.

Fren 88: Independent Reading and Research

Students may arrange a program of study and research with an individual faculty member. A student proposal, signed by the independent study advisor, must be submitted to the chair of the department by the fifth day of classes of the relevant term.

Fren 89: Honors Thesis

Honors students will arrange a program of study and research during the winter or spring term of the senior year with an individual faculty member. A thesis written in French and a public presentation are the standard culmination of this course. A student proposal signed by

the faculty advisor must be submitted to the department for approval by the fifth day of classes of the designated term.

[Please refer to the website for the upper-level French courses offered.](#)

FREN 1 - Introductory French I

Instructor: See department website

An introduction to French as a spoken and written language. The work includes regular practice in class and scheduled drill-sessions in understanding and using the spoken language. Written exercises and elementary reading materials serve for vocabulary building and discussion. Never serves in partial satisfaction of the Distributive or World Culture Requirements.

FREN 11 - Intensive French

Instructor: See department website

This 1-credit course is designed for students who have studied French for one to three years in high school, or those who have been exposed to French through family ties or have spent some time in a Francophone environment. It is also suitable for students with little or no knowledge of the French language, but who have a strong background in another Romance language (i.e. Spanish, Italian, Romanian, Portuguese, Catalan, and also Latin). French 11 is an accelerated course that combines French 1 and 2 in one term, offering an exciting and fast-paced atmosphere in which to learn French. The course will have a web-based component, which, through cultural, grammar and multimedia learning activities, will complement face-to-face work and prepare students for in-class work. Students will learn to talk about familiar events in the present and the past, as well as formulate plans for the future. Weekly cultural videos will situate in context the grammatical content of the course, making it relevant and meaningful. Students will be actively engaged in a variety of creative written and oral activities that will help them develop their language skills. Upon successful completion of this course, students will be able to sign up for French 3 or apply for our French LSAs in Lyon or Toulouse. With the goal of

facilitating the acquisition of the target language, this course will be conducted entirely in French.

Prerequisite: One year or equivalent of university level instruction in a Romance Language or Latin; or three high school years of instruction in a Romance Language or Latin; or native speaking proficiency in a Romance Language; or permission of instructor.

FREN 12 - Advanced Writing and Speaking in French

Instructor: See department website

In this course, students will learn to recognize and reproduce a broad range of linguistic registers and structures in order to achieve competence in French grammar, phonetics, vocabulary, and oral and written expression. Aided by the analysis of newspaper articles, letters, political orations, screenplays, interviews, and short stories, students will analyze, imitate, and produce diverse types and levels of discourse. Course work will entail intensive writing, stylistic analysis, small group discussions, dramatic presentations, and experiential exercises such as conducting interviews, writing business letters, or composing political speeches. Texts by Montesquieu, Danton, Maupassant, Zola, Ionesco, De Gaulle, Yourcenar, Kassovitz, and others.

Prerequisite: Acceptance into the Dartmouth Advanced Language Study Abroad Program.

Degree Requirement Attributes: WCult:W

FREN 14 - Dartmouth Meets the French Enlightenment

Can we trace Tri-Kap's origin to the secret societies, masonic lodges, salons and cafés that arose prior to the French Revolution? This course will trace the migration of texts from France to Dartmouth where 18th-century literary societies - Social Friends (1783), United Fraternity (1786), Phi Beta Kappa (1787), and later Tri-Kap (1842) – read French Enlightenment texts on human rights as well as on the forms of sociability recently developed in France and at Dartmouth. Not open to students who have received credit for FREN 045 or FREN 45.01.

Degree Requirement Attributes: Dist:TMV; WCult:W

FREN 15 - Paris, philosophies de l'espace

Paris has been described in numerous disciplines and media: literature, philosophy, cinema, photography, painting, sociology, geography, etc. What usage schemes characterize the city? How are often conflicting identities generated when individuals seek to inhabit and negotiate the hierarchies of its neighborhoods? How do diverse thinkers, filmmakers, and photographers describe and represent the class, ethnic, and gender clashes that play out in urban space? In what ways do affective “investments” saturate Parisian streets, buildings, and businesses? Not

open to students who have received credit for FREN 53.08.

Degree Requirement Attributes: Dist:LIT; WCult:CI

FREN 19 - Baaaaaad French! A Creative Writing Workshop

As the speaker of a foreign language in the United States, you are in a unique position to innovate, improve, and corrupt French. *Baaaaaad French!* enables you in this endeavor. It introduces you to historical precedents of bad French, and provides you with the opportunity to conceive, theorize, historicize, and execute projects in bad French. You will think and you will write with the awareness that you are in the presence of all the bad Frenches that have ever preceded you. You will read and you will write your own logics of emancipation, liberation, and disorientation out of the prison house of language. *Baaaaaad French!* ultimately resists all forms of standardization. It empowers you to harness your innate capacities to sound different, to write wrong and ungoodly, and to take pride in the innovative impulse to resist the standardizing imprint of globalizations on your accent and pronunciation.

Baaaaaad French! lies at the intersection of cultural history and the creative writing workshop. It is an invitation to read and write creatively, historically, and across genres and media. The course adopts a long historical view of the dynamic history of French as it plays out in a wide array of media. You will learn this history nonchronologically, which places different strains and genealogies of bad French into stronger relief. The material provides us with the opportunity to slowly develop together a broad collective definition of badness over the course of the term, with a particular emphasis on the distinctly sonic dimensions of our linguistic identities. You will engage in a series of class discussions, creative writing assignments, and workshops, and you will have the freedom to pursue and create a final project in any medium, produced in a bad French language of your own invention. A contest and awards ceremony for the baddest project caps the course.

The course stars readings by Monique Wittig, Rupi Kaur, Amandine André, Rim Battal, Claire Star Finch, Alpheratz, Stéphane Bouquet, Katalin Molnár (aka Kité Moi), Luc Bénazet, Loïc Demey, Ghérasim Luca, Isidore Isou, Mallarmé, Lautréamont, Verlaine, Rimbaud, Baudelaire, Lamartine; music by Rahim Redcar, Saint Levant, Aya Nakamura, PNL, Dita Von Tease and Sébastien Tellier, Jeanne Added, Camille, Françoise Hardy, Jane Birkin and Serge Gainsbourg, Claude François; films by Catherine Breillat, Mathieu Kassovitz, Stephen Spielberg, Melvin Van Peebles, François Truffaut; media by Joyce Mansour, Les Coquettes, clips from French radio and television (*Apostrophes*, *Quotidien*, *Les Marseillais*, *Brice de Nice*).

This course may only be taken once for credit.

Prerequisite: French 6 or a course in the French 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 2 - Introductory French II

Instructor: See department website

Rapid review and continued study of the fundamentals of French, with intensive work in vocabulary building. More advanced practice, in classroom and drill-sessions in the use of the spoken language. Open to students by qualifying test or to students who have passed French 1. Never serves in partial satisfaction of the Distributive or World Culture Requirements.

Prerequisite: FREN 1 or qualifying placement

FREN 20 - Interpreting French Cultures

Students will acquire the analytical skills to interpret French and Francophone cultures. To prepare students to be "culturally competent," the course will focus on how and why we read signs of culture, whether through the lenses of history, symbols, politics or class and power. We will explore a variety of cultural objects in conjunction with the writings of authors who may include Balibar, Barthes, Baudrillard, Condé, Fanon, Foucault, Le Goff, Nora and Wieviorka.

Prerequisite: A course in the FREN 10 series, or permission of the instructor.

Degree Requirement Attributes: Dist:SOC; WCult:W

FREN 20.01 - France and the Culture of Conversation

In this course we will examine the relationship between conversation and French history and culture. We will explore the role of conversation on artistic production and examine its influence on the history of ideas. Conversation was a central tenet of early modern intellectual and textual exchanges through the Enlightenment, and the French salon was the site in which conversation flourished. We will then extend our analysis to the present day. What are the forms conversation has adopted in France today, especially in digital culture? Is there anything about this art and the way that it functions that is still uniquely French?

Prerequisite: A course in the French 10 series or permission of the instructor

Degree Requirement Attributes: Dist:SOC; WCult:W

FREN 20.02 - The Locations of French Culture

Instructor: Hollister

This course proposes to consider the contexts and the constitution of French cultural identities. Specifically, it will explore the pressure points and key subjects that return time and again in discussions of what it means to be French or possess French culture: language; religious

identity, republicanism, nationalism; race, class, gender, sexuality; gastronomy; popular culture and high art.

Prerequisite: A course in the French 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:SOC; WCult:W

FREN 20.03 - Long Live the Revolution

This course is a study of the French and Haitian Revolutions through cultural artefacts: films, novels, plays, history textbooks, public debates and even video games. Ever since Revolutions ricocheted from the Americas to Europe and back, artists and writers have crafted versions of their legacy in a variety of venues and media. We will begin the term with an overview of the French and Haitian Revolutions. This course, however, is not about the history of these Revolutions. Instead, we will examine how French and Haitian cultural artefacts craft different versions of their founding moment in an attempt to construct Republican identities. During the term, we will encounter Republican identities that are nationalist, egalitarian, communitarian and post-colonial. By comparing the quantity and type of representations between the Haitian and French Revolutions, we will also interrogate how cultural artefacts are constantly re-imagining the past.

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

FREN 21 - Introduction to Francophone Literature and Culture

Instructor: See department website

This course surveys the evolution of French language (Francophone) literature of the former French colonies and examines the social, political, and cultural issues it raises: race, colonialism, decolonization, revolution, independence, neo-colonialism, Négritude, Antillanité, Créolité, écriture féminine, mimetic desire, cultural hybridity, post-independence government and society. The survey will include novels, plays, poetry, film and essays by representative writers from the principal divisions of the Francophone world: the French West Indies, the Indian Ocean, Southeast Asia, Sub-Saharan Africa, North Africa; Quebec, and Francophone Canada.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:NW

FREN 22 - Introduction to French Literature I: the Middle Ages and the Renaissance

Instructor: See department website

Medieval France - its art, architecture, technology, philosophy and literature - exerted an unparalleled influence throughout Europe. Studying the first texts written in French, as well as the manuscripts in which they

circulated, will shed light on the nature of French culture. We will examine defining issues of the period: the transition from oral to written expression, the invention of printing, debates concerning the status of women, Renaissance humanism, scientific inquiry, religious reform and conflict. Texts may include *La Chanson de Roland*, selected poetry, and works by Chrétien de Troyes, Christine de Pizan, Marguerite de Navarre, François Rabelais, and Michel de Montaigne.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 23 - Introduction to French Literature II: Neoclassicism and the Eighteenth Century

Instructor: See department website

The seventeenth and eighteenth centuries were a dynamic and volatile period characterized on the one hand by the rise to power of the most absolute of all monarchs, the Sun King Louis XIV, symbolized by Versailles, and on the other hand by the French Revolution. Fostered by royal patronage, literature and the arts flourished, yet many writers also used artistic expression to counter this royal power. The period saw the birth of the modern French novel and the development of a rich body of theatrical and philosophical literature. These centuries are recognized as major components of France's collective identity and their influence is still felt in France today. Authors may include Descartes, Corneille, Racine, Molière, Lafayette, Diderot, Rousseau, Voltaire, Graffigny, Beaumarchais and Laclos.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 24 - Introduction to French Literature and Culture III: Nineteenth Century

Instructor: See department website

This course examines the nineteenth-century renewal of literary form and vision from the French Revolution to the First World War. We will study the social and historical developments of French culture as they are reflected in various literary genres (narrative, poetry, dramatic theory and practice), literary criticism, philosophy, historiography, and the other arts. Emphasis will be placed on France's growing self-awareness as a nation and on the analysis of aesthetic and intellectual issues represented in the major literary movements of this period including romanticism, realism, symbolism, art for art's sake, naturalism, fin de siècle decadence, and modernism. Readings may include works by such authors as Chateaubriand, de Staël, Stendhal, Hugo, Musset, Sand, Balzac, Baudelaire, Flaubert, Michelet, Zola, and Huysmans.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 25 - Introduction to French Literature and Culture IV: Twentieth and Twenty-First Centuries

Instructor: See department website

This course examines the radical transformations of literary form and vision that characterize twentieth-century France with its two World Wars, its colonial conflicts, and the challenges to French identity posed by immigration and globalization. We will use lyric poetry, fiction, drama, autobiography, and film to explore literary movements such as surrealism, existentialism, the new novel, the theater of the absurd and *écriture féminine*, as well as the recent impact of immigrant and minority writers. Readings and films may include works by Proust, Breton, Colette, Beauvoir, Sartre, Camus, Robbe-Grillet, Duras, Delbo, Cixous, Sebbar, Resnais, Malle, and Kassovitz.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 29 - French Civilization: Study Abroad

Instructor: See department website

Studies in such aspects of the cultural heritage as French art, music, and history. Credit for this course is awarded students who have successfully completed the program of the Dartmouth Foreign Study Program at one of its university centers in France.

Prerequisite: acceptance into the Foreign Study Program.

Degree Requirement Attributes: Dist:ART; WCult:W

FREN 3 - Introductory French III

Instructor: See department website

Given on-campus as the final course in the required sequence and off-campus as part of the L.S.A. curriculum, this course is designed to develop reading, writing, and speaking skills, with emphasis on expansion of vocabulary and reinforcement of grammatical structures. Some discussion of texts and films of literary or cultural interest. Frequent oral and written assignments and tests, both on-campus and off, plus daily drills when taken on-campus. Open to students by qualifying test or to students who have passed French 2 or French 11. Never serves in partial satisfaction of the Distributive or World Culture Requirements.

Prerequisite: FREN 2, French 11, or qualifying placement

FREN 30 - French Literature: Study Abroad

Instructor: See department website

Credit for this course is awarded students who have successfully completed the program of the Dartmouth Foreign Study Program at one of its university centers in France.

Prerequisite: acceptance into the Foreign Study Program.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 31 - The French Language: Study Abroad

Instructor: See department website

Credit for this course is awarded students who have successfully completed the program of the Dartmouth Foreign Study Program at one of its university centers in France.

Prerequisite: acceptance into the Foreign Study Program.

Degree Requirement Attributes: WCult:W

FREN 37 - FQZ Feminist Queer Zones

FQZ Feminist Queer Zones provides in-depth study of the exceptional richness of feminist and queer traditions in global francophone cultures. From nineteenth-century revolutionaries to the mid-twentieth century's first-wave feminists; from reproductive rights and women's suffrage to the explosive intersectionality of race, capitalism, post/colonialism, and feminism; the books read in this class help us understand sexuality, gender, and identity as they evolve over time and across historical, political, and sociocultural formations. The texts open up *POROUS ZONES*—open fields and fluid sites of change, exchange, and interchange—that allow for various other forms of alternative thinking.

All readings and discussions are conducted in English. No prior knowledge or pre-requisites necessary. Readings, written assignments, and x-hours are offered in French for students seeking credit for the major or minor in French.

Cross-Listed as: FRIT 37.30 WGSS 50.01

Degree Requirement Attributes: Dist:INT or TMV; WCult:CI

FREN 4 - Afro/Black Paris Through Language: Intensive French

An intensive beginning French course, this class gives Afro/Black Paris FSP participants the linguistic tools to observe, understand and articulate multiple aspects of their time in France. The course stresses language needed by all learners for everyday communication and promotes speaking, listening, reading, and writing. During this intensive session, students will develop their knowledge of African-descended French people and diversity in mainland France while acquiring broad perspective on French, colonial and postcolonial culture.

Successful completion of French 4 will qualify you to continue to French 2. Please visit the Department of

French and Italian's website for more information about French language courses.

Degree Requirement Attributes: WCult:W

FREN 40 - Acting French

Instructor: Sanders

Acting French is a practical approach to French theater and its role in constructing French identity. Throughout the trimester, we will read, analyze, watch and then perform scenes from French plays. By the end of the trimester, we will learn how to interpret theater as a performance, and use that knowledge to perform scenes from plays. Works by Marivaux, Racine, Musset, Beckett, Mnouchkine, and others.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 40.02 - French and Francophone Poetry from Baudelaire through Césaire

Instructor: Elhariry

Charles Baudelaire, Arthur Rimbaud, Guillaume Apollinaire, Paul Eluard, André Breton, Paul Valéry, Aimé Césaire, Léon Damas, D.T. Niane and Andrée Chédid are poets of radically different backgrounds connected by abiding preoccupations of a modernist vision. These poets will be studied in order to explore the traditions and counter-traditions of French and Francophone poetry.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 40.03 - Récits méditerranéens

Instructor: See department website

In 'Récits méditerranéens, pourtours mystiques I,' we will focus on first-person narratives (fictional and non-fictional, fictive and fictionalized) from across the modern Mediterranean Francophone world: Lebanon, Egypt, Algeria, Tunisia and Morocco. We will exhaust the politics of autobiography, autofiction and autoportrait as we unravel the mystical underpinnings of texts by Tahar Ben Jelloun, Hélène Cixous, Jacques Derrida, Assia Djebar, Edmond Jabès, Abdelkébir Khatibi, Amin Maalouf, Abdelwahab Meddeb, and Salah Stétié.

Prerequisite: A course in the FREN 10 series or permission of the instructor

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 40.04 - Classical Comedy: Molière

Instructor: Beasley

In this course we will focus on the celebrated French playwright Molière. We will read his works in their seventeenth-century context, analyze how these plays were produced, and study Molière's impact on French culture today. The final project may consist of a staging of one of Molière's comedies, depending on student interest.

Prerequisite: A course in the FREN 10 series or permission of instructor

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 40.05 - Acting French

Instructor: Sanders

Acting French offers a practical approach to French theater. Throughout the trimester, we will read, analyze and then perform scenes from French plays. In this class, you will have an opportunity to bring Figaro to life, or to wait for Godot. By the end of the trimester, we will learn how to interpret theater as a performance, and use that knowledge to put on scenes from plays.

Prerequisite: A course in the French 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:ART; WCult:W

FREN 40.06 - Selfies: autobiographie, autoportrait, autofiction

Instructor: Kritzman

A study of three forms of writing about the self and their generic distinctions. Autobiography, a practice of self-understanding deals with the construction of one's life story across time; self-portraiture does not attempt to rejoin the past by the construction of a self that is temporally constructed. The autoportraitist presents a self apprehended in the present of writing through a montage of disparate images. Autofiction, on the other hand, deals with a form of fictionalized autobiography that uses fiction in the service of the search for self. Subjects to be examined include: rhetoric, politics, history, and gender. Texts: Rousseau, Chateaubriand, Sartre, Beauvoir (autobiographies); Montaigne, Sevigne, Barthes (autoportraits); Colette, Modiano, Ernaux (autofictions).

Prerequisite: A course in the French 10 sequence or permission of the instructor

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 40.09 - Classical French Comedy Made Modern; Molière Past and Present

Molière is France's best known and most universally loved playwright. Over three hundred years after his death, his plays continue to dominate the French stage and stages across the world. In this course, we will explore Molière's creative genius to understand his profound and lasting influence. The last third of the course will be devoted to

an in-depth study of "Molière in the Park," a theatre company in Brooklyn founded in 2019. Not open to students who have received credit for FREN 40.04. This course will be taught in English.

Cross-Listed as: THEA 10.72

Degree Requirement Attributes: Dist:INT or ART; WCult:W

FREN 45 - Dartmouth Meets the French Enlightenment

Instructor: Sanders

Can we trace Tri-Kap's origin to the secret societies, masonic lodges, salons and cafés that arose prior to the French Revolution? This course will trace the migration of texts from France to Dartmouth where 18th-century literary societies - Social Friends (1783), United Fraternity (1786), Phi Beta Kappa (1787), and later Tri-Kap (1842) – read French Enlightenment texts on human rights as well as on the forms of sociability recently developed in France and at Dartmouth.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:TMV; WCult:W

FREN 45.01 - Dartmouth Meets the French Enlightenment

Can we trace Tri-Kap's origin to the secret societies, masonic lodges, salons and cafés that arose prior to the French Revolution? This course will trace the migration of texts from France to Dartmouth where 18th-century literary societies - Social Friends (1783), United Fraternity (1786), Phi Beta Kappa (1787), and later Tri-Kap (1842) – read French Enlightenment texts on human rights as well as on the forms of sociability recently developed in France and at Dartmouth. Not open to students who have received credit for FREN 045.

Degree Requirement Attributes: Dist:TMV; WCult:W

FREN 45.02 - The Art and Influence of Conversation

Instructor: See department website

We will resurrect the conversations among men and women in seventeenth and eighteenth-century France. Questions include: What is the relationship between the individual and society? What roles do literature and philosophy play? What are women's and men's "natural" functions in society? What effect does contact with different cultures have on a society or the individual? Authors may include: Descartes, Corneille, Sévigné, Lafayette, Voltaire, Rousseau, Diderot, de Gouges, Montesquieu, and Graffigny, among others.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 45.03 - De la motérialité : the Body in 19th-century French Literature

Instructor: See department website

At first glance a simple thing, seen “à la loupe” the body reveals itself a complex location where our links to our selves, the world, and our unavoidable otherness are situated and complicated. This course proposes a critical study of an omnipresent object/subject in the the poetry, prose, and visual texts of nineteenth-century France to think about the sorts of claims we can make about the body, and the sorts of claims they make upon us. Readings from poetry, visual texts, prose, from Romanticism to Decadence; Manet, Courbet, Caillebotte, revolutionary caricature. Excerpts of Foucault, Marx, Freud, Merleau-Ponty, Elisabeth Grosz, Jacques Rancière, Jean-Luc Nancy, Didi-Huberman

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 45.05 - Between Revolution and Oblivion: The Politics of Literature in Nineteenth-Century France

Instructor: See department website

This course seeks to explore the hypothesis that nineteenth-century French literature and other modes of cultural and aesthetic production are situated against the backdrop of the massive political upheavals of the century, and grapple especially with the problems of contested memories and narratives of a revolutionary past that refuses to pass. In this course, then, we will link and think 19thC literature to politics and history, interpreting a variety of nineteenth-century texts, from poems to short stories, novels, paintings and revolutionary caricatures, with/against their cultural, political, historical, and esthetic contexts.

Prerequisite: A course in the French 10 series or approval of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 45.06 - Debate, Dialogue and Advice: Launching France on Rhetoric

Instructor: See department website

Discussion, whether among equals or in a hierarchical dynamic, shapes politics, culture and worldview. Questions such as the ideal form of government and the most desirable way of life are staged in early literature that uses platforms of debate, dialogue and counsel to sway listening audiences and individual readers, from powerful princes to townspeople. Readings may include works by Peter Abelard, Jean de Meun, Guillaume de Machaut, Philippe de Mézières, Christine de Pizan, and Alain Chartier.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 5 - Conversations and Style

Instructor: See department website

A bridge course between the elementary language sequence and FREN 6, Texts and Contexts. You'll build your cultural knowledge by studying historical and contemporary French and francophone societies. Focus topics include evolving political and regional identities, literature and the expression of identity, gender relations, the role of the media, education, religion and immigration. You'll expand your active use of French, refine reading and writing strategies, and comprehensively review grammar. Course work includes active participation in class discussions, oral presentations, and regular reading/writing assignments in the areas of narrative and poetry, cinema, music, and journalism. Not open to students who have received credit for FREN 008 or FREN 09.01.

Prerequisite: Acceptance into the Dartmouth Language Study Abroad Program.

Degree Requirement Attributes: Dist:SOC; WCult:W

FREN 50 - French Literature: Major Figures

Instructor: See department website

This course will be devoted to the study of a single author or to a group of authors who have exercised a decisive influence on French, European or world literature or who are deserving of concentrated attention because of the quality or originality of their literary production.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 50.05 - Montaigne and Proust

Instructor: See department website

Montaigne and Proust, two of the greatest prose writers in the French literary tradition, represent distinct historical periods (the Renaissance and early twentieth century France) in which the idea of subjectivity is a major intellectual concern. Using Montaigne and Proust's first person narratives as emblematic of their times, the course will examine how self-portraiture is manifested in time and space and reflects upon broader notions of character, sensation, gender and sexuality, history and memory. Particular attention will be paid to how writing can be viewed as a way to suspend time, delay death and prolong life and sensation. Paradoxically we shall discover in each writer the failure of "autobiographical" narrative to establish identity. Selectons will include representative Essais of Montaigne, Proust's Du coté de chez Swann and

Le temps retrouvé, and short essays by Bergson, Bersani, Deleuze, de Man, Derrida, Genette, Kristeva and Lacan.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 50.07 - Baudelaire/Flaubert: Reading Modernity for Filth

It is by a fortuitous, if strange, twist of literary fortune that two publications from the winter of 1857—both of which would later come to be regarded as uncontested masterworks of high modernism in the French literary canon—saw their authors hauled before Second Empire courts and put on trial for obscenity: Gustave Flaubert's *Madame Bovary* and Charles Baudelaire's *Les Fleurs du mal*. This course will pursue a perhaps inadvertent insight made during the trials against these two core figures in French – and world – literature: namely, that the so-called crimes (of shocking moral corruption, of prurience and obscenity, etc.) of which Baudelaire and Flaubert were accused have much to do with the formal complexity and aporias that one finds in their works. What one finds there, in other words, is less “filthy” material *per se* than a stylistics that opens up space for dangerously unruly sociocritical readings; that brings into visibility and legibility desires and subjectivities typically confined in the nineteenth century to the *grisaille silencieuse* of “History’s” margins; and that seeks to bring out into representation repressed historical and political traumas occasioned by the “shocks” of modernity (Benjamin). One finds, in other words, in Baudelaire’s poetry and in Flaubert’s novels a distinct literary politics; a critical use of literature against the abuses of the present order of things. A way of reading modernity *for filth*

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 52 - Elles viennent d’ailleurs : Women and Migration

Through a series of Francophone literary texts and films, this course examines how contemporary female writers, filmmakers and artists respond to the migration, immigration, and displacement of peoples today. From the written and the visual materials, students will consider how women such as Fatou Diome, Marie NDiaye, Kim Thúy among others address the range of critical issues and factors contributing to displacement, particularly under conditions of poverty, uneven development, competition for resources, political instability, violence, and natural disasters.

The course gives participants an opportunity to participate in current immigration debates whether it is the Syrian refugee crisis, the Mexican Border crisis, Haitian TPS status, the Haitian migrants’ mistreatment at the Texas border or the current Afghan relocation project.

Cross-Listed as: AAAS 67.07

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

FREN 53 - French Thought: Philosophical Issues

Instructor: See department website

This course will study texts which have shaped influential views of human nature, scientific knowledge, social and moral values. Its focus may be on the philosophers and moralists of the classical period (such as Pascal and La Rochefoucauld), the social and political thinkers of the Enlightenment (Diderot and Rousseau) or contemporary thinkers (Beauvoir, Foucault, Lévi-Strauss).

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:TMV; WCult:W

FREN 53.05 - French Theory

Instructor: See department website

French writers played a crucial role in the development of contemporary literary and critical theory. French theorists have analyzed subjects ranging from perception, to sexuality, gender, the unconscious, popular culture, fashion, cinema, photography, mythology, kinship, and the body. This course will examine some of the major trends and master works in this explosion of theoretical activity in France. Works by Lévi-Strauss, Lacan, Foucault, Kristeva, Irigaray, Cixous, Derrida, Deleuze, Baudrillard, and others.

Prerequisite: A course in the FREN 10 series or permission of the instructor

Degree Requirement Attributes: Dist:TMV; WCult:W

FREN 53.06 - Human Rights in France

Instructor: See department website

A wide-ranging survey of the historical and conceptual issues in human rights from the Enlightenment to the present. An examination of philosophical origins and contemporary theoretical debate on citizenship and hospitality, republicanism and universalism; death penalty, women’s and gay rights, Charlie Hebdo and freedom of the press. Essays, historical documents and literature. Authors drawn from: Voltaire, Rousseau, Gouges, Renan, Drumont, Hugo, Camus, Sartre Beauvoir, Ben Jelloun, Badinter, Derrida, Kristeva, Agacinski, Lefort, Balibar, Debray.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:TMV; WCult:W

FREN 53.07 - Confrontations with Death in the French Tradition

Instructor: See department website

Through readings of essays, plays, poetry and fiction, we will examine the relationship of death to the history of French culture and the philosophical traditions it embodies, from the medieval *danse macabre* to the present. Issues to be discussed include separation and loss, mourning and melancholia, violence, eroticism and sexual difference. Texts will include Villon, Montaigne, Bossuet, Pascal, Flaubert, Baudelaire, Sartre, Beckett, Beauvoir, Derrida, Blanchot and Barthes.

Prerequisite: A course in the FREN 10 series or permission of the instructor

Degree Requirement Attributes: Dist:TMV; WCult:W

FREN 53.08 - Paris, philosophies de l'espace

Instructor: See department website

Paris has been described in numerous disciplines and media: literature, philosophy, cinema, photography, painting, sociology, geography, etc. What usage schemes characterize the city? How are often conflicting identities generated when individuals seek to inhabit and negotiate the hierarchies of its neighborhoods? How do diverse thinkers, filmmakers, and photographers describe and represent the class, ethnic, and gender clashes that play out in urban space? In what ways do affective “investments” saturate Parisian streets, buildings, and businesses?

Prerequisite: A course in the French 10 series or permission of the instructor

Degree Requirement Attributes: Dist:LIT; WCult:CI

FREN 53.09 - Literary Theory in French (Semiotics and Reading)

How can we describe the nature of the relation binding a word to a thing, languages to worlds? How do we know that a word “stands for” (or, represents) an idea, an emotion, a thing, a place, or a person? How do we know what a thing like a stoplight is telling us, that it is standing in for not merely an idea but a system? In what way are the apparently most unassuming things—our clothing, our vacation plans, our hometowns or the food we eat—“saying” things about us and the world, and how might the different answers to such questions change the ways in which we think about ourselves, others, our world(s)? Such questions are the domain of what we call *semiotics* (or: the general science of signs, as Ferdinand de Saussure famously put it) and in this course, we will study some of the core theoretical formations from the twentieth century which allow us not only to ask “what do signs do and how?,” but to grapple with what “the stake of signs” (what they are, how they function) may entail for us linguistically, aesthetically, philosophically, and politically. Along with texts ranging from de Saussure to Derrida, we will also seek to bridge the gap not merely between text (i.e., signs) and context (the social-historical situations in which they get produced and produce meaning), but between theory and literature as well.

Degree Requirement Attributes: Dist:LIT; Lang:LRP; WCult:CI

FREN 55 - French Culture and Politics

Instructor: See department website

This course will study the broad field of French civilization with a variety of approaches. Literary texts may be studied for their political influence; literature may be seen as a way of changing history or a reflection of history. Writings on cultural or political issues, by such figures as Montaigne, Diderot or de Staël, may also be included as may more current works from the field of cultural criticism.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:SOC; WCult:W

FREN 55.04 - India in the French Imagination

Instructor: Beasley

The West is often seen as having exerted a civilizing force on an orientalized, inferior, homogenous East. In this course, we will challenge this prevalent view of the relationship between East and West by focusing on France’s encounter with one member of the oriental pantheon, India. We will examine encounters between India and France in architecture such as Versailles and the Taj Mahal, in literary and philosophical discussions and contrast France’s relationship to India with those established with other “orients” using travel narratives, correspondence, novels, theater, newspapers, fables, and the work of cultural historians.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:SOC; WCult:W

FREN 55.06 - Politics and French Intellectuals

Instructor: Kritzman

The modern intellectual was invented in France at the time of the Dreyfus affair. In the twentieth century, French intellectuals were seen as moral guides and social critics. They engaged in philosophical speculations by bridging theory with practice. During political crises, intellectuals engaged in public debate as a means of influencing society. We will examine figures such as Zola, Benda, Breton, Sartre, Camus, Beauvoir, Aron, Foucault, Ben Jelloun, Derrida and Kristeva.

Degree Requirement Attributes: Dist:TMV; WCult:W

FREN 55.07 - Propaganda and Public Opinion from Napoleon to World War II

This course studies the political tools used by Napoleon to control public opinion as he enacted his vision of the French nation after the Revolution. We will trace back some of his major philosophical Enlightenment influences

in order to consider the legitimacy of his claim of being an heir of the Revolution and will examine the means by which Napoleon controlled public opinion. Finally, we will examine the failure of Napoleon's propaganda system throughout Europe using the German states as a case study.

Cross-Listed as: HIST 47.02

Degree Requirement Attributes: Dist:SOC; WCult:W

FREN 60 - Gender and French Literature

Instructor: See department website

Intersections of gender and literary expression will be studied from a variety of perspectives: gender and authorship (women writers, *écriture féminine*, comparative analysis of masculine/feminine treatments of genres or themes); gender and reading (do men and women read differently? do certain texts address a specifically gendered readership?); gender and literary form (the lyric, the romance plot); representations of men and women in certain movements or periods (the female body, women/men as subjects or objects of representation).

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

FREN 7 - First-Year Seminars in French Literature

Instructor: Sanders

FREN 70 - New Directions in Francophone Literature and Culture

Instructor: See department website

This course will involve the study of Francophone literature and culture outside Europe. This may include the cultural production of Africa, North Africa, the Middle East, the Caribbean, Québec, and Southeast Asia. The course will introduce students to writing, cinema, and music produced by misfits, outsiders, and figures marginal to France and the French republic of letters. Readings are accompanied by class visits by the authors whenever possible. The course has three main objectives:

1. To situate modern and contemporary francophone literary and cultural production within the context of an aesthetic history: Who and what are the precedents to today's books, cinema, and music?
2. To underscore that the French language is neither French, nor belongs to France: What makes a language so capacious, plastic, and malleable?
3. To enable and empower students to think, speak, and write freely and creatively in their own idiosyncratic version/vision of French: How can a foreign language be transformed into an intimate language?

These will be the principles guiding our explorations of some of the most exciting and provocative cultural

production in French today. Readings may include texts by PNL, Françoise Vergès, Kaoutar Harchi, Elsa Dorlin, Abdelkèbir Khatibi, Assia Djebar, David Diop, Laure Murat, Abdellah Taïa, Georges Henein, Edmond Jabès, Joyce Mansour, Habib Tengour, Abdelwahab Meddeb, Linda Lê, Hubert Aquin, Andrée Chédid, Nadia Tuéni, Aimé Césaire, Édouard Glissant, Maryse Condé, and Évelyne Trouillot.

FREN 70.02 - Francophone Literature

This course will involve the study of Francophone literature outside Europe. This may include the literature of Africa, the Caribbean, Québec and Southeast Asia. A comparative study of urban and globalized Francophone cultures (Port-au-Prince, Dakar, Algiers, Tangiers, Saigon, Brussels, Paris), the attendant challenges and effects of globalization, including immigration, national politics, gender, sexuality, as well as ecology and economics, and how the literary or filmic imagination captures these issues. Readings by Kane, Sembène, Beyala; Lê, Lefèvre; ben Jelloun, Allouache, Chraïbi; Chauvet, Ollivier, Étienne, Césaire, Glissant. Walker.

Degree Requirement Attributes: Dist:INT or LIT; WCult:NW

FREN 75 - French Film

Instructor: See department website

This course will focus on one of the following: an individual filmmaker, a significant movement or period, or a major theme in French cinema. Students will become familiar with aspects of French cinematic history as well as with important concepts in film analysis.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:ART; WCult:W

FREN 75.01 - Faces of the Criminal

Instructor: See department website

This course will examine the history of French film through the prism of its representations of criminality. Assigned films may include works by Marcel Carné, Henri-Georges Clouzot, René Clair, Joseph Losey, Jean Renoir, Louis Malle, Jacques Becker, Jean-Pierre Melville, Alain Resnais, Bertrand Tavernier, Michael Haneke, François Ozon, Bertrand Blier, Agnès Varda, Jean-Luc Godard, Maurice Pialat, Claude Chabrol, Robert Bresson, Luis Buñuel, Gaspard Noé, Alain Guiraudie, and Jacques Audiard.

Prerequisite: A course in the FREN 10 series or permission of the instructor.

Degree Requirement Attributes: Dist:ART; WCult:W

FREN 75.02 - Toward a History of French Cinema

Instructor: See department website

France gave birth to cinema in 1895. Since then, French cinema has influenced not only French society, but filmmakers around the world. In this course, we will explore silent masterpieces, New Wave film, and movies of the 21st century to examine the evolution of French film and its impact on French culture. Our analyses will include in-class film excerpts and a selection of movies that will be available to you on DVD or to stream.

Prerequisite: A course in the French 10 sequence or permission of the instructor

Degree Requirement Attributes: Dist:ART; WCult:W

FREN 75.03 - Cinema and Modern Life

Instructor: See department website

This course will propose a historical overview of French cinema, with a particular emphasis on the relationship between cinema and the idea of the modern or modernity. How was cinema perceived as a modern, technological art? How was cinema positioned in relation to utopian and dystopian visions of industrial capitalist modernity? How did cinema contribute to these visions? To respond to these questions, this course will examine texts and films associated with many of the most important cultural, intellectual, and political movements in twentieth-century France: socialism, communism, anarchism, naturalism, surrealism, modernism(s), poetic realism, Left Bank cinema, the New Wave, *cinéma vérité*, formalism, *le cinéma du look*, postmodernism(s).

Degree Requirement Attributes: Dist:ART; WCult:W

FREN 75.04 - French Cinema From the Golden Age to the Present

An overview of French cinema from the silent era to the contemporary. Examines films associated with major social and cultural movements in France – surrealism, modernism(s), poetic realism, Left Bank cinema, the New Wave, social cinema, postmodernism(s), feminist and queer cinema, postcolonial cinema – as well as genres like melodrama, comedy, romance, crime film.

Degree Requirement Attributes: Dist:ART; WCult:W

FREN 8 - Exploring French Culture and Language

Instructor: See department website

Practice in the active use of the language combined with an introduction to major aspects of French society. Each week students will write papers and participate in discussions based on books, articles, and films emphasizing social and historical concepts. Not open to students who have received credit for FREN 09.01.

Prerequisite: FREN 3, or equivalent preparation.

Degree Requirement Attributes: Dist:SOC; WCult:W

FREN 87 - Honors Thesis Reading and Research

A program of individual study directed by a faculty member. A proposal signed by the faculty advisor must be submitted to the department for approval by June 1st of the student's junior year.

Offered: Fall, Spring, Summer, Winter.

FREN 88 - Independent Reading and Research

Students may arrange a program of study and research with an individual faculty member. A student proposal, signed by the independent study advisor, must be submitted to the chair of the department by the fifth day of classes of the relevant term.

FREN 89 - Honors Thesis

Honors students will arrange a program of study and research during the winter or spring term of the senior year with an individual faculty member. A thesis written in French and a public presentation are the standard culmination of this course. A student proposal signed by the faculty advisor must be submitted to the department for approval by the fifth day of classes of the designated term. For more information about application procedures, please review the department website.

Offered: Fall, Spring, Summer, Winter.

FREN 9.01 - French Civilization LSA

Studies in such aspects of the cultural heritage as French art, music, and history from the Middle Ages to the modern period. Credit for this course is awarded to students who have successfully completed the Dartmouth Language Study Abroad Program at one of its university centers in France. Not open to students who have received credit for FREN 008.

Degree Requirement Attributes: Dist:INT; WCult:W

FRIT - French and Italian in Translation Courses

To view *French and Italian in Translation requirements*, [click here](#) (p. 397).

FRIT courses are taught in English. Students taking the course for major or minor credit in Italian or French, will attend a weekly x-hour and do all written work in Italian or French.

FRIT 31 - How Languages are Learned

Instructor: Convertini

Many approaches to language teaching and learning have been proposed and implemented over time. From learning grammar rules and lists of vocabulary to memorization and practice of correct sentences to natural communication, project work, communicative language teaching, and

content-based learning, this course will introduce students to some of the language acquisition research that will help them understand how languages are learned. Topics explored in the course will include language awareness, bilingualism, early-child language learning, the major trends in twentieth-century language teaching, and the role of technology in language learning. The course will also offer students the opportunity to reflect on language learning on a personal level, to find out how they think as language learners and how they can empower themselves to learn languages in an active and engaged manner. Hands-on activities, including class observations, textbook evaluations, and interviews with language learners, will complement the course. Open to all students. Text, lectures, and discussion in English. Students taking the course for major or minor credit in Italian will attend a weekly x-hour and do all written work in Italian. Not open to students who have received credit for FRIT 093.

Degree Requirement Attributes: Lang:LRP; Dist:SOC; WCult:W

FRIT 37 - Topics in Literature and Culture

Offerings of this course will consist of various topics in Literature and Culture.

Open to all students. Text, lectures and discussion in English: Students taking the course for major or minor credit in French or Italian will attend a weekly x-hour and do all written work in the target language.

FRIT 37.04 - European Fairy Tales

Instructor: See department website

In this course we will study the evolution of the forms and contents of the rich European fairy-tale tradition, from the Renaissance to our times. Along the way we will address questions concerning canon formation; the role of “marvelous” genres such as the fairy tale in socialization and the expression of national identity; the relation between oral folk narratives and written literary tales; and the reworking of fairy-tale subjects and motifs in contemporary culture. We will also acquaint ourselves with a variety of critical approaches to the fairy tale, and create tales of our own in a special storytelling workshop.

Cross-Listed as: COLT 39.03

Degree Requirement Attributes: Dist:LIT; WCult:W

FRIT 37.07 - Do the Right Thing! Creativity and Public Engagement in Italy and the United States

Instructor: See department website

This course explores the confluence of art, literature, cinema, political engagement, and activism in the nineteenth, twentieth, and twenty-first centuries between

Italy and the United States. Students will familiarize themselves with the most controversial and influential artists and intellectuals of these periods from both countries and they will also have the opportunity to spend two weeks collaborating with an Italian street artist on a project that integrates learning and awareness into practice.

Cross-Listed as: COLT 56.02

Degree Requirement Attributes: Dist:ART; WCult:W

FRIT 37.08 - Obsessive Affinities Contemporary French & American poetry

Instructor: See department website

This deeply experiential course examines the rich history of transatlantic desire, negotiated over the love of poetry. The United States has always figured heavily in the collective French imaginary ever since the American Revolution, for instance in the works of Tocqueville and Chateaubriand. American literature, however, gains particular prominence toward the mid-twentieth century with the transatlantic travels of Simone de Beauvoir, André Breton, Jean-Paul Sartre, and Philippe Sollers among authors, to the point that French writers began wondering how one can even be French in the first place. The course explores this crisis in national identity through a series of important poetic Franco-American friendships and collaborations: Edmond Jabès and Rosmarie Waldrop; Emmanuel Hocquard and Michael Palmer; Serge Pey and Allen Ginsberg; the Fondation Royaumont; the poetry collective *double change*; among others.

Cross-Listed as: COLT 31.02 CRWT 40.09

Degree Requirement Attributes: Dist:LIT; WCult:W

FRIT 37.10 - French Gastronomy: Culture et Cuisine

For over 300 years the world has associated France with the gastronomic arts. In 2010 the “gastronomic meal of the French” was inscribed by UNESCO on its list of the “Intangible Cultural Heritage of Humanity.” In this interdisciplinary course, we will examine the culture of French gastronomy from its origins to the present. We will use the case of France to illustrate how a country’s culinary culture illuminates its history, politics, economics, and “mentalités,” thought patterns. There are no prerequisites for the course; students taking the course to count towards their French major/minor should only enroll if they have already received credit for FREN 008.

Degree Requirement Attributes: Dist:INT or LIT; Lang:LRP; WCult:W

ITAL - Italian Courses

Italian Introductory Language Sequence

An introduction to Italian as a spoken and written language. The work includes regular practice in class and scheduled drill-sessions in understanding and using the

spoken language. Written exercises and elementary reading materials serve for vocabulary building and discussion.

ITAL 1: Introductory Italian I

An introduction to Italian as a spoken and written language, with emphasis on practical conversation. The course includes regular practice in class and scheduled drill-sessions in understanding and using the spoken language. Does not serve in partial satisfaction of the Distributive or World Culture Requirements. This course is not open to students who have received credit for ITAL 11.

ITAL 2: Introductory Italian II

Rapid review and continued study of the fundamentals of Italian, with intensive work in vocabulary building. The course will also include an introduction to the culture and civilization of Italy. Open to students by qualifying placement or to students who have passed ITAL 1. Does not serve in partial satisfaction of the Distributive or World Culture Requirements. This course is not open to students who have received credit for ITAL 11.

ITAL 3 Introductory Italian III

This course is designed to reinforce and refine spoken and written language skills through a review of grammar, exposure to a broad spectrum of language ranging from colloquial to literary styles, and the use of samples of Italian language from multiple sources such as advertising, comics, television and literature. Frequent compositions, quizzes, plus linguistic and thematic analysis of texts. Open to students by qualifying placement or to students who have passed ITAL 2, ITAL 11 or ARTH 12. Does not serve in partial satisfaction of the Distributive or World Culture Requirements.

ITAL 11 Intensive Italian

1-credit course is designed for students with little or no knowledge of the Italian language, but who have a strong background in another Romance language (i.e. Spanish, French, Rumanian, Portuguese, Catalan, or Latin). Italian 11 is an accelerated course that combines Italian 1 and 2 in one term offering an exciting and fast-paced atmosphere to learn Italian. The course will have a hybrid component, that through cultural, grammar and multimedia introductory exercises will prepare students for the in-class activities. In this course, students will learn to talk about familiar events in the present and the past, as well as formulate plans for the future. Weekly cultural videos will situate in context the grammatical content of the course making it relevant and meaningful. Students will be actively engaged in a variety of creative written and oral activities that will help them develop their language skills. Upon successful completion of this course, students

will be able to sign up for Italian 3 or apply for our Italian LSA+ program in Rome. Students who have not yet taken ITAL 003 may take the course after completing ITAL 011. The goal is to facilitate the acquisition of the target language, therefore this course will be conducted entirely in Italian. This course is not open to students who have received credit for Italian 1, 2 or 3.

Italian Upper-Level Courses

ITAL 9: Italian Culture

Expands on the skills acquired in the Italian language sequence (Italian 1, 2, 3, and/or the LSA) as well as offering a transition to Italian 10 and our upper-division literature and culture courses. This course introduces students to modern and contemporary Italian literature, culture and society through a focus on topics such as evolving political and regional identities, gender relations, the role of the media, and the culture of daily life. Students expand their active use of Italian, refine communicative, reading, and writing strategies, and comprehensively review grammar. Course work includes active participation in class discussions, oral presentations, and regular reading and writing assignments in the areas of narrative and poetry, cinema, music, and journalism. Instructors usually choose one or several "anchor" texts around which coursework revolves. Prerequisites: ITAL 3 or permission of the instructor.

ITAL 10: Italian Texts and Contexts

An introduction to Italian literature, culture, and media across time that provides students with the tools to read and analyze texts critically. Through a selection of literary works, films, and other cultural artifacts, students will explore key themes such as the city, food culture, the environment, and evolving artistic forms. The course examines how ideas, genres, and narratives develop and intersect. Topics and materials vary based on the instructor's focus, allowing for an engaging and dynamic exploration of Italy's literary and cultural landscape. Not open to students who have received credit for ITAL 10.01-10.99. Prerequisites: Italian 3 or permission of the instructor. W and LIT.

Please refer to the website for the upper-level Italian courses offered.

ITAL 1 - Introductory Italian I

Instructor: See department website

An introduction to Italian as a spoken and written language, with emphasis on practical conversation. The course includes regular practice in class and scheduled drill-sessions in understanding and using the spoken language. Does not serve in partial satisfaction of the Distributive or World Culture Requirements. This course is not open to students who have received credit for ITAL 11.

ITAL 2 - Introductory Italian II

Instructor: See department website

Rapid review and continued study of the fundamentals of Italian, with intensive work in vocabulary building. The course will also include an introduction to the culture and civilization of Italy. Never serves in partial satisfaction of the Distributive or World Culture Requirements. This course is not open to students who have received credit for ITAL 11 or ARTH 26.03.

Prerequisite: ITAL 1 or qualifying placement

ITAL 3 - Introductory Italian III

Instructor: See department website

This course is designed to reinforce and refine spoken and written language skills through a review of grammar, exposure to a broad spectrum of language ranging from colloquial to literary styles, and the use of samples of Italian language from multiple sources such as advertising, comics, television and literature. Frequent compositions, quizzes, plus linguistic and thematic analysis of texts. Does not serve in partial satisfaction of the Distributive or World Culture Requirements.

Prerequisite: ITAL 2, ITAL 11 or ARTH 12 or qualifying placement

ITAL 4 - Reading Rome

Instructor: Canepa

This course introduces students to various topics of Italian culture through specific examples taken from the context of Italy's capital, largest city, and one of the West's most complex symbols: Rome. Topics include stereotypes and the idea of national identity, society and politics, youth culture, family and gender roles, the arts, and gastronomy. Students will learn to engage with Italian cultural phenomena through in-class lectures and discussions, frequent site visit sites pertinent to the material we study, as well as 6 half-day guided tours of important monuments and museums of Rome.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ITAL 7 - First-Year Seminars in Italian Literature

Instructor: Canepa

ITAL 8 - Exploring Italian Culture and Language

Instructor: See department website

This course will serve as an introduction to Italian culture and society in the past and the present. It will focus on topics such as evolving political and regional identities, gender relations, the role of the media, and the culture of daily life, as they appear informs as diverse as narrative and poetry, cinema, music, and journalism. Students will also focus on specific grammatical and stylistic issues in order to improve their fluency in Italian. Course work will consist of frequent essays, student-led discussions and experiential learning laboratories in the city.

Prerequisite: Acceptance into the Dartmouth Language Study Abroad Program or Advanced Language Study Abroad Program.

Degree Requirement Attributes: Dist:SOC; WCult:W

ITAL 9 - Advanced Language Through Culture

Instructor: Convertini

Italian 9 expands on the skills acquired in the Italian language sequence (Italian 1, 2, 3, and/or the LSA) as well as offering a transition to Italian 10 and our upper-division literature and culture courses. This course introduces students to modern and contemporary Italian literature, culture and society through a focus on topics such as evolving political and regional identities, gender relations, the role of the media, and the culture of daily life. Students expand their active use of Italian, refine communicative, reading, and writing strategies, and comprehensively review grammar. Course work includes active participation in class discussions, oral presentations, and regular reading and writing assignments in the areas of narrative and poetry, cinema, music, and journalism. Instructors usually choose one or several "anchor" texts around which coursework revolves.

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 11 - Intensive Italian

Instructor: See department website

This 1-credit course is designed for students with little or no knowledge of the Italian language, but who have a strong background in another Romance language (i.e. Spanish, French, Romanian, Portuguese, Catalan, or Latin). Italian 11 is an accelerated course that combines Italian 1 and 2 in one term, offering an exciting and fast-paced atmosphere to learn Italian. The course will have a hybrid component that will prepare students for in-class activities through cultural, grammar and multimedia introductory exercises. Weekly cultural videos will situate

in context the grammatical content of the course, making it relevant and meaningful. Students will be actively engaged in a variety of creative written and oral activities that will help them develop their language skills. Upon successful completion of this course, students will be able to sign up for Italian 3 or apply for our Italian LSA program in Rome. The goal is to facilitate the acquisition of the target language; this course will be conducted entirely in Italian. Students who have not yet taken ITAL 003 may take the course after completing ITAL 011. This course is not open to students who have received credit for ITAL 1 or ITAL 2.

ITAL 12 - Advanced Writing and Speaking in Italian

Instructor: See department website

An advanced language and composition course in which students will work with a wide range of linguistic and cultural materials in order to achieve competence in Italian grammar, and oral and written expression.

Prerequisite: Acceptance into the Dartmouth Advanced Language Study Abroad Program

Degree Requirement Attributes: WCult:W

ITAL 14 - Journey to Italy: An Introduction to Italian Culture

Instructor: Convertini

This course introduces students to Italian culture through a representative selection of texts and topics from past to present, as well as encouraging students to think critically about notions of culture and identity. Topics include stereotypes and the idea of national identity, modern history, society and politics, food culture, the visual arts, music, cinema, religion, science and technology, the environment, Made in Italy, immigration, sports, and mafia. In many units, guest lecturers will widen the discussion by considering the global impact of Italian cultural production across time and space. Students will actively engage with Italian cultural phenomena through in-class lectures and discussions, hands-on exercises, and site visits.

Degree Requirement Attributes: Dist:SOC; WCult:CI

ITAL 21 - Early Italian Literature and Culture

Instructor: See department website

This course will offer an introduction to medieval Italian literature and culture through readings of literary masterworks of the period. The approach will be interdisciplinary: we will consider connections between literary texts and medieval art, music, philosophical currents, and historical events. Specific topics will vary for each offering; themes may include the importance of writing in the vernacular, discourses of love, conceptions of sex roles and gender, personal and political aspirations of the self in society, and the constitution of ideal forms of

social organization. Readings will be selected from Dante, Boccaccio, Petrarch, Caterina da Siena, and others.

Prerequisite: Italian 10 or permission of the instructor

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 22 - Humanism and Renaissance

Instructor: Canepa

This course explores the extraordinary cultural production of Italy from the late fourteenth to the end of the sixteenth century—the Renaissance. Specific topics will vary for each offering; students will examine broader social and historical contexts through themes such as the birth of humanism; attitudes toward the ancient world and the “discovery” of new worlds; developments in the visual arts and in science; court society; sexuality and courtesan culture; gender and family life; religious reform. Authors may include Petrarch, Alberti, Machiavelli, Michelangelo, Isabella di Morra, Veronica Franco, Ruzante, Castiglione, Ariosto, Bandello, Tasso, and others.

Prerequisite: ITAL 10, or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 23 - Seventeenth and Eighteenth-Century Italian Literature and Culture

Instructor: Canepa

This course explores the transformations that marked Italian literature and arts over the course of the seventeenth and eighteenth centuries, from the Baroque culture of crisis and change to the Enlightenment's reassessment of earlier forms of knowledge and representation. Specific topics will vary for each offering; themes may include the poetics of the marvelous, popular culture, the *nuova scienza*, evolving gender identities, the dialogues among the arts, the "cult of reason," and the relevance of both Baroque and Enlightenment categories to post-modernity. Emphasis is on the fundamental interdisciplinarity of this period's culture and on its formal innovations in genres including the fairy tale, travel literature, the *commedia dell'arte*, the novel, and the opera. Authors and artists may include Basile, Marino, Galileo, Tarabotti, Isabella Andreini, Monteverdi, Bernini, Caravaggio, and Goldoni.

Prerequisite: ITAL 10, or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 24 - Nineteenth-Century Italian Literature and Culture

Instructor: See department website

This course examines the changes in literary vision and artistic forms from the beginning of the nineteenth century, through the country's unification, to the First World War. Emphasis will be placed on Italy's growing self-awareness as a nation and on analysis of aesthetic and intellectual

issues. Specific topics will vary for each offering; themes may include the emergence and significance of popular art such as satire and cookbooks; opera and national identity; and women's literature as an innovative cultural force. Readings and artists may include Foscolo, Leopardi, Manzoni, Verga, Verdi, Puccini, Marchesa Colombi, Collodi, Artusi, Montessori, Grazia Deledda, and F. T. Marinetti.

Prerequisite: ITAL 10, or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 25 - Twentieth and Twenty-first Century Italian Literature and Culture

Instructor: See department website

This course examines the radical transformation of literary form and vision that characterizes twentieth and twenty-first century Italy with its two World Wars, its colonial conflicts, and the challenges to Italian identity posed by modernization, immigration, and globalization. We will use poetry, fiction, autobiography, political writings, television, documentaries, and film to explore cultural movements such as the avant-garde and neo-realism. Specific topics will vary for each offering; themes may include modernism, fascism, the resistance movements, and terrorism. Readings will be both canonical and non-canonical and may include, for example, recent immigrant and minority writers. Readings and films may include works by Bontempelli, Montale, Moravia, Morante, Calvino, Pavese, Maraini, Fellini, Tornatore, Wertmueller, and Jadelin Mabiala Gambo.

Prerequisite: ITAL 10, or permission of the instructor.

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 25.01 - Terrorism Made in Italy

At the end of WWII a number of amnesties allowed former fascists, some of them guilty of genocide, to go free. Italy did not have a postwar process of truth and reconciliation. While fascism was deemed unconstitutional in the newly born republic, fascist groups continued to flourish, attempting numerous coups-d'etat aimed at re-establishing a fascist regime. Consequently, terrorist groups of the extreme left emerged and targeted those in government who had been so tolerant of fascists. Through historical documentation, films, literature, and personal testimonies, we will explore these tumultuous thirty years of Italian history.

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

ITAL 26 - Italian Cinema

Instructor: See department website

Conducted in Italian, this course introduces students to classic Italian cinema, including its history and its predominant genres—from the silent film to comedy and melodrama and thriller. Students will become familiar with Italian cinematic movements such as Neorealism, directors such as Federico Fellini and Roberto Benigni, and with important concepts in film analysis. Not open to students who have received credit for ITAL 15.

Degree Requirement Attributes: Dist:ART; WCult:W

ITAL 27 - Topics in Italian Literature

Offerings of this course will consist of various topics in Italian literature.

ITAL 27.01 - Animals and Animality in Modern Italian Literature and Thought

Instructor: See department website

With the modernization of their country, Italian authors have been increasingly interested in animals, using representations of non-human creatures to reflect upon themselves and their changing relationships with the environment. This course focuses on modern Italian literary and philosophical texts (from Leopardi's *Operette Morali* to Agamben's *L'aperto*) which strongly feature non-human animals and animality, in order to explore how modern Italian culture offers an original contribution to the re-thinking of the limits of anthropocentric humanism.

Prerequisite: Italian 10 or permission of the instructor

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 27.02 - Crossing Cultures: Translation in Theory and Practice

Instructor: Canepa

Human communication depends on translation. Much of what we know about worlds different from our own comes through translations and the dialogues between languages and cultures that they create. In this course we will focus on translation between Italian and American cultures, and consider the larger question of the representation of "foreignness." We will explore the theory and practice of translation in various contexts—literature, film, popular media—and gain direct experience in the art of translation through workshops and a final project.

Prerequisite: Italian 10 or permission of instructor

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

ITAL 27.03 - Miracolo! Italy, 1958-63

The years of the economic "boom," or "miracle" following post-WW II reconstruction were, for Italy, a time of unprecedented economic growth and social transformations, of new hopes about also new challenges. As Italy left behind its predominantly agrarian past and

entered full force into the global industrial economy, Italians rapidly made themselves modern: investing in new status symbols and consumer goods in the form of cars, TVs, and refrigerators, listening to new music, cultivating new pastimes and lifestyles, and even making more babies. Yet with modernization came contradictions. Optimism for the future was accompanied by a loss of traditional points of reference and community; economic expansion, by a widening of the gap between Northern and Southern Italy; mass exodus from rural areas to cities, by the creation of the no-mans lands of the urban *borgate* or shantytowns; and the proliferation of goods, by the perils of unbridled consumerism and existential crisis.

In this course we will explore how the developments and radical shifts of these years were investigated and represented in literature, film, and music, by a remarkable group of writers, film directors, and including Pier Paolo Pasolini, Italo Calvino, Natalia Ginzburg, Alberto Moravia, Anna Maria Ortese, Dario Fo and Franca Rame, Federico Fellini, and others.

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 27.04 - The Revolutionary Classroom. Lessons from Great Italian Educators

Great educators continue to speak to us long after they are gone. This course explores the values and lessons of visionary Italian educators. From Maria Montessori's child-centered approach to Don Milani's focus on social justice, Gianni Rodari's imaginative storytelling, and Alberto Manzi's educational television—we will examine how their ideas reshaped education. Through readings, films, and hands-on projects, we will reflect on their relevance in the classroom and beyond today.

Degree Requirement Attributes: Dist:SOC; WCult:W

ITAL 33.01 - Into and Beyond Dante's Inferno -

The work of Dante Alighieri (1265-1321) stages from beginning to end a struggle between personal desire, social obligation, and the conflicting cultures of Christian religion and the body politic. The unprecedented fusion Dante made of these elements in the *Commedia* [The *Divine Comedy*] has guaranteed his great poem a vast public, extending across world cultures and the seven centuries since it initially traveled among elite readers in north-central Italy in the early decades of the fourteenth century. This course will first examine the development of Dante's poetic voice in *La vita nova* [The *New Life*, ca. 1293-94] and then focus on its subsequent expansion into an all-encompassing vision of life and death in *Inferno* [Hell, ca. 1306-09], the first of the three canticles of the *Commedia*. Situating Dante in his own time and place will be essential to our analysis of his poetry, but attention to the multiple ways that Dante's work has been interpreted, translated, and appropriated in other periods, languages, and media will provide a critical framework for

understanding its enduring appeal, why – in the words of Italo Calvino – it “has not finished saying what it has to say.” Readings, lectures, discussion, and written work – to include a mid-term exam, two short essays, and a final digital project – will be in English. Students taking the course for major or minor credit will attend a weekly X-hour and write the two essays in Italian.

Cross-Listed as: REL 32.02

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 34 - Renaissance Studies in Translation

Instructor: See department website

An examination of Italian Renaissance masterpieces in translation, which will explore the centrality of Italian ideas and ideals to the development of literary and cultural norms in Italy and Europe. Topics offered under the ITAL 034 rubric will vary.

Open to all students. Text, lectures and discussion in English. Students taking the course for major or minor credit in Italian will attend a weekly x-hour and do all written work in Italian.

ITAL 34.01 - Sex and Gender in the Italian Renaissance

This interdisciplinary course explores conceptions of sex and gender in Italian Renaissance literature and visual art. We'll trace a social history of love and sex in Renaissance Italy, examine how sex and sexual bodies were represented in literature and in images, and look at how governments and the Church attempted to manage and punish sexual transgression. Themes we will investigate include representations of male and female bodies, gender roles for both men and women, sexual violence, same-sex desire, and cross-dressing.

Open to all students. Text, lectures and discussion in English. Students taking the course for major or minor credit in Italian will attend a weekly x-hour and do all written work in Italian.

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 35.01 - From Dagos to Sopranos

Are Italians white? Where does the word “dago” come from? What is “dago red”? Can Italians be “Afrocentrists”? Are Italians racist? What do you know about the mafia? These and other questions will be at the center of this course. We will also work on the portrayal of ItalianAmericanness in “The Sopranos,” “The Godfather,” and Jim Jarmush's “Ghost Dog.” The last week of the course will be devoted to the music by Italian Americans such as Sinatra and Madonna.

Open to all students. Text, lectures and discussion in English. Students taking the course for major or minor

credit in Italian will attend a weekly x-hour and do all written work in Italian.

Cross-Listed as: COLT 57.02

Degree Requirement Attributes: Dist:LIT; WCult:CI

ITAL 35.02 - How to Be a Fascist

How do people become fascists? How do they rise to power? Why did people support fascism? We will focus initially on the original model for fascist dictatorships, that is Italian fascism, but we will also have in-class presentations by Dartmouth professors on German, Spanish, French and Japanese forms of fascism. This is a course that will concentrate on history, film, literature, and fashion in order to talk about the slippery definitions of fascism.

Cross-Listed as: COLT 57.09 INTS 17.10

Degree Requirement Attributes: Dist:INT; WCult:W

ITAL 35.03 - Migration, Ecology, and the Mediterranean

Why do people migrate? How does their migration impact the places they cross? How have migration trajectories changed in the last 150 years? Why do people embark on a risky journey across the Mediterranean Sea? How do their destination countries react to their arrivals? How does migration change Europe? These are some of the questions we will try to answer in this class. Using an interdisciplinary approach, we will look at the impact of migration on the environment and the changing of old ideas about what Europe looks like now. Through an interdisciplinary approach using material that originates from both the humanities (film and literature) and the social sciences (mainly geography and sociology), we will explore the present and discuss the possible futures of migrations across the Mediterranean.

Cross-Listed as: COLT 57.11

Degree Requirement Attributes: Dist:INT; WCult:W

ITAL 37 - Topics in Literature and Culture

Instructor: Canepa

Offerings of this course will consist of various topics in Literature and Culture. Open to all students. Text, lectures and discussion in English. Students taking the course for major or minor credit in Italian will attend a weekly x-hour and do all written work in the Italian.

ITAL 37.01 - Nature: A Cultural History

Civilization's essence lies in its distinction from nature. Both physically and symbolically, city walls separate the world of citizens, societies, and cultures from the uncultivated land, the wild beasts, and the illiterate savages that lie without. But how solid are these walls? And how real or even desirable are the distinctions they seek to

make? We may prefer the civilized to the wild, but do we not also, paradoxically, prefer the natural to the artificial? Is nature to be dominated, or revered? Is it our nemesis or our mother? Exploring texts in the Italian tradition, this course will trace the history of nature from the beginning of civilization to the present time, and uncover our ever changing, ever contradictory opinions about it. Students will explore how the human/nature relationship is imagined and represented in Italian literature, cinema, and art. They will also examine how these representations reflect, critique, and animate the approach that Italian culture has had toward the physical environment and its ecology, both inside and beyond the Italian peninsula. Open to all students. Texts, lectures, and discussions in English. Texts and x-hour in Italian for major or minor credit in Italian.

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

ITAL 37.04 - Italian Fairy Tales

We will study the rich and precocious Italian fairy-tale tradition, from the Renaissance to our times, and the ways in which its forms and contents have evolved. We will address questions concerning canon formation; the role of “marvelous” genres such as the fairy tale in socialization and the expression of national identity; and the appropriation of fairy-tale subjects and motifs by contemporary popular culture. We will also acquaint ourselves with a variety of critical approaches to the fairy tale, and consider some of the other European fairy-tale traditions, especially the French and the German.

Degree Requirement Attributes: Dist:LIT; WCult:W

ITAL 37.10 - Mafias

What is “mafia”? Organized crime, global big business, shadow state, deeply entrenched mentalities, glamorized myth, all of the above? This course focusses on Italian mafias (primarily the Sicilian Cosa Nostra) and, to a lesser degree, other Italian and Italian-American mafias. We will examine the conditions in which mafias emerged; those that make it possible for mafias to continue to thrive today; the social “codes” of the mafias, such as honor, omertà, and vendetta; and the forms that mafias take in the collective cultural imagination, in particular as they have been translated and represented in fiction and film on both sides of the Atlantic. In the process, we will explore Italian history and contemporary society and discuss topics such as the uses and abuses of power and the attraction of outlaw cultures.

This course is not open to students who have received credit for ITAL 07.07.

Cross-Listed as: COLT 57.12

Degree Requirement Attributes: Dist:INT or SOC; WCult:W

ITAL 37.11 - Migrants, Sopranos, Race, and Italian American Film

This course considers the role of culture and identity, migration, evolution of language, gender, race, and class issues, and studies the diverse cultural and artistic productions (literary, cinematic, musical, multi-media) that exemplify the tensions and negotiations between cultures and people.

Cross-Listed as: COLT 57.02

Degree Requirement Attributes: Dist:LIT; WCult:CI

ITAL 37.12 - A Bite-Sized History of Italy: The Story of how Italy became Italy through Food & Beverage Culture

While Italy as a nation-state has only existed since 1861, a sense of Italian identity long pre-existed that reality, thanks largely to a deeply-rooted, shared enogastronomic culture that became the envy of the world. Departing from the dormice and garum of the Roman Empire and arriving at the heresy of pineapple pizza, “A Bite-Sized History of Italy” will present a long-view, wide-lens portrait of a place that has become so well-known for its food as to almost preclude interrogation, even as it might be said that food is the very reason for its existence. Open to all students. Texts, lectures, and discussions in English. Reading, writing, and x-hour in Italian for major or minor credit in Italian.

Degree Requirement Attributes: Dist:INT or LIT; WCult:W

ITAL 85 - Independent Reading and Research

Instructor: LaGuardia

Students may arrange a program of study and research with individual faculty members. Open only to Italian, Italian Studies, and Romance Language Majors or by permission of the instructor. A proposal, signed by the faculty advisor, must be submitted to the Department for approval by the fifth day of classes of the term.

ITAL 88 - Senior Independent Reading and Research

Instructor: LaGuardia

A program of individual study directed by a member of the staff. Open only to senior Italian, Italian Studies, and Romance Language (whose primary language is Italian) Majors. A proposal, signed by the faculty advisor, must be submitted to the Departmental Committee on Independent Studies and Honors Theses for approval by the fifth day of classes of the term.

Students are awarded one course credit for successful completion of this course at the end of the third term of study. Students subsequently register for ITAL-089 and continue with their coursework into a third term. Students do not register for a third term. A final grade will replace

the “ON” for both ITAL-089 and this course upon completion of this course at the end of the third term of coursework.

ITAL 89 - Honors Thesis

Instructor: LaGuardia

Honors students will arrange a program of research and writing during the winter or spring term of the senior year with an individual faculty member. A thesis written in Italian and a public presentation are the standard culmination of this course. A student proposal signed by the faculty advisor must be submitted to the department for approval by June 1 of the student's junior year. For more information about application procedures, please review the department website.
