## Burning Movies to a DVD

Once you have exported your finished iMovie or Final Cut project as a movie file, you can use iSkysoft to burn your movie to a DVD disc. This will create a DVD that will allow you to play your movie on a computer or standard DVD player.
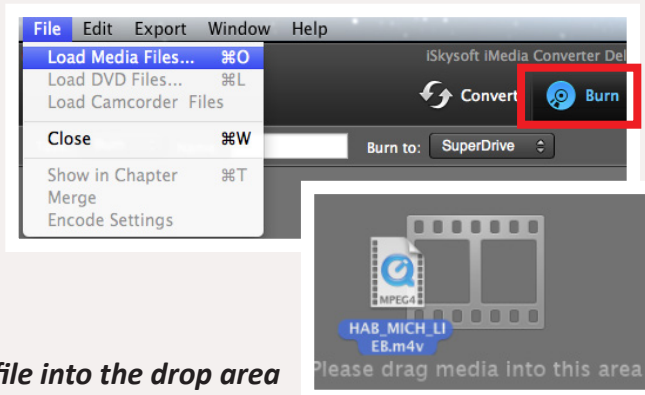

### Steps to burn a movie file to a DVD:

1. In iSkysoft, select the **Burn** option
2. Import your movie file into iSkysoft:
   **File > Load Media Files> Choose your File > Load**

   *Or*

   **Simply click and drag your movie file into the drop area**

3. Leave **Task** set to **Burn** & type **Title** in the **Name Box.** Leave **Burn To** set to **SuperDrive**

4. Select a **Template** for your **DVD menu** or choose **No Menu**
5. Select your appropriate **Aspect Ratio**: **4:3 for Standard** or **16:9 for Widescreen**

6. Insert a blank DVD into the computer's optical drive (blank DVDs are available for purchase at the front desk)
7. Select your desired quality (the colored status bar indicates the amount of space you have on your disc. If it is red, your movie file is too large, and you will need to reduce the quality)
8. If you are burning a Dual-Layer DVD, select DVD-DL. Otherwise, leave it set to DVD

9. To preview your DVD's menu & video , Click the **Play Button**
   If you are satisfied with the preview,  Click **Burn**
